Napheys' Medical Therapeutics—Sixth Edition.

We have to announce that the fifth edition of this highly esteemed work, although published no longer ago than last January, is completely sold out. No better testimony as to its value could be offered; unless it is the fact that we have always advertised our willingness to take the book back, when ordered by mail, and refund the money, if it proved unsatisfactory; and that, in *not a single instance* have we been asked to do so.

Recognizing the estimate put upon the work by this large demand, we have another, *the sixth*, edition now in press, on which a great

deal of labor has been bestowed to make it a representative book. The monographs, papers and journals of the last eighteen months have been carefully searched, and all their important suggestions respecting treatment, new remedies, etc., incorporated. The sixth edition will be somewhat larger in size than preceding ones, as it will have both new matter and several new headings; but its price will remain the same ($4.00, cloth), making it at once the cheapest and the most useful book the actual working doctor can buy. The new edition will be ready in December.

Acetic Acid Injections in Carcinoma.

Acetic acid, used subcutaneously, in cancer, is by no means a novelty, but does not deserve to be forgotten. It has been revived of late by Dr. T. Gies, who states, in the *Zeitschrift fur Chirurgie*, that he effected marked improvement in a case of cancer seated on the ramus of the lower jaw, which had returned after operation, and had attained the size of a fowl's egg, by the injection of acetic acid in the proportion of one part of the acid to three of water. The tumor speedily underwent reduction of size, and was ultimately no larger than a hazel nut. The same patient had a second tumor, of the size of an egg, beneath the ear, which almost entirely disappeared in the course of twenty-one days, after twenty-five injections of strong acetic acid. In a woman, again, who had a carcinoma of the size of a pigeon's egg, in the left mammary gland, ten injections effected its removal, in great part, in the course of a month, reducing it to the size of a hazel nut.

Singular Plan of Counter Irritation for Stings.

The Southern darkey, to cure a toothache, will put a piece of red pepper in his eye. We had always taken literally his explanation, that he "soon done got enuff to do with dat eye, dat dar war'nt no time to think of de tooth." But according to Dr. Lucas, of the Bombay army, the proceeding is rational, after all. This writer describes a similar treatment for scorpion stings. He says: "The sting is at first like a sharp prick from the point of a needle or a finely-pointed nail, and in a very few seconds it assumes a very agonizing form, as if innumerable pins and needles were thrust into the part. It then shoots up the limbs, along the course of the main nerve-trunk, and is afterward of a darting and most excruciating nature, reaching its climax in from three to five minutes. When a pinch of powdered alum is put into the eye (the eye of the affected side being preferable), the pain of reflected irritation ceases almost instantly as the conjunctival mucous membrane begins to smart; the local pain, perhaps less severe than before, gradually subsides after some hours, and its disappearance is, I am inclined to think, expedited by firm and steady pressure. In regard to the *modus operandi* of the alum cure, I will refrain from saying anything beyond that it probably acts by distracting pain and irritation elsewhere."

The Digestive Principle in the Gizzard.

Dr. N. L. Folsom, of New Hampshire, writes us:—

"I published, June 5th, 1873, in the Boston *Medical and Surgical Journal*, vol. 88, page 587; an article on gizzard skins as a domestic pepsin, far superior to that made from pigs' stomachs. Shortly afterward the above article appeared in one or more pharmaceutical papers.

"In 1876 A. F. Shelly, M.D., of Philadelphia, gave the above medicine the name of *Ingluvin*, and called it his own prescription, and praised it in the highest manner."

If Dr. Folsom will turn to Dr. Shelly's article, in this journal, he will find that the latter did not claim a discovery, but states that the gizzard had been long and widely esteemed as a domestic digestive preparation.

Cotoin as an Anhydrotic.

The London *Medical Record* states that Dr. Fronmüller observed, in the case of a phthisical patient, suffering at the same time from colliquative diarrhœa and sweating, that, under the use of full doses of tincture of coto, both these symptoms disappeared. After this, he gave tincture of coto in ninety-one cases of excessive sweating; in thirty-four with complete, in thirty-six with partial success, and in twenty-one without result. The beneficial action of coto, which seems to have as its basis the raising of the energy of the blood-vessels of the skin, generally lasted only one night, but often for a longer time. Digestion was not interfered with; the appetite was, indeed, often increased, so that Dr. Fronmüller was led to give the tincture as a stomachic in the morning, in some cases of anorexia. This absence of any injurious effect on digestion gives coto a great advantage over other remedies used to arrest sweating,

such as tannin, lead, nitrate of silver, aconite, alum, etc.

Dr. Fronmüller has given cotoin and paracotoin in eighteen cases of diarrhœa of various forms; in nine with complete and in six with partial success, and in three without result. He has also given them in eighteen cases of night-sweat; in eight with complete, in nine with partial success, and in one without result. Paracotoin was given in five cases; cotoin in thirty-one.

The West India Islands as Health Resorts.

On this subject Dr. R. H. Bakewell says, in the *Practitioner*—

The best for the invalid is undoubtedly Barbadoes. It is a coral formation, and so dry that all the prayer of the planters is for rain. The roads are dry ten minutes after the heaviest shower. The resident gentry are a highly educated, most hospitable, and courteous set of men. The best time to arrive would be by the end of September, or beginning of October. This would give the whole of the winter in the tropics.

Yellow fever rarely makes its appearance in Barbadoes, and if it does a chronic invalid runs no danger from it. It is your florid, healthy, beer and brandy drinking Britons who die from yellow fever. Besides, it is almost confined to the barracks, and to low unhealthy places in Bridgetown.

The Poison of Milk Sickness.

This is one of the most remarkable and subtle poisons known. All attempts to fix it on certain plants or certain elements of soil or water have failed. Yet it is of the most permanent and virulent character. A writer in the North Carolina *Medical Journal* gives this illustration:—

"Captain Thompson lost thirteen of his cattle from milk sickness as he was driving them from the Millstone Knob (a noted spot for the disease). He had them skinned, and the hides were hung on poles between his cribs; the rats being quite numerous, they gnawed the cellular substance from the hides, which was so poisonous as to kill every rat about his cribs."

He adds:—

"This poison differs from all the known poisons in the world, in the following particulars:—

"1st. It lies quietly in the system for a long time, without exhibiting any of its toxical powers, until the person or beast is forced to take exercise.

"2d. It is more ethereal and diffusive than any poison known to me. Most of the poisons with which I am acquainted affect the stomach and bowels, the brain and nervous system; this pays no court to either, but extends through every muscle, bone, and tendon, affecting the whole system; yes, even the skin and cellular substance under the skin."

Correspondence.

Sanitation in Yellow Fever.

Ed. Med. and Surg. Reporter:—

In your editorial, volume xxxix, page 275, after quoting extracts from letters from several sources, descriptive of the horrors of the present visitation of yellow fever in the Southern States, you ask, "Whether such dreadful scenes, such destruction and deterioration, are to be allowed to occur every few years, when they can be prevented?"

I believe that I do not misstate your opinion in saying that you believe that the maintenance of street cleanliness in Southern cities and towns would certainly prevent the development and spread of yellow fever. Far be it from me to say aught in detraction of cleanliness, which is ranked next to godliness, or to extenuate the criminal neglect of sanitation in some Southern cities and towns. The question of rigid enforcement of sanitary measures in all cities and towns is no more debatable than the question of personal cleanliness. But since you have read us so severe a lecture on our uncleanness, and have essayed to show us how easy it would be to exclude yellow fever from our midst, and have warned us that we shall call in vain for help and pity unless we amend our ways, we feel constrained to say something in reply to all this.

Would it were true, as you assert, that cleanliness can exclude this pestilence. In that case, only those places which are unclean would be capable of developing, or having received the infection by importation, could propagate it. Now comes the question—are all places where the fever is now prevailing, and were all places where it has hitherto prevailed, in an unclean condition? Undoubtedly, *no!* If yellow fever is essentially a filth disease, how do you account for its prevalence in cleanly localities? It is probable, however, that the presence of filth aggravates the type of the disease, as it does that of many others. Of course, I cannot assert from personal knowledge what is the sanitary condition of all the places infected with yellow fever, but of many of them I can speak. Look at the beautiful and cleanly villages that dot the coast between

New Orleans and Mobile, Baton Rouge, Canton and Holly Springs, and many other places which the most fastidious would admit to be in good sanitary condition.

So far from contenting ourselves with the easy philosophy of the Mexicans, who say that if it is the will of God that the fever should come, it will come, we would urge that no precaution be neglected, and no expense spared to prevent the beginning and development of the dreaded scourge. But I do assert that the infection of yellow fever, like that of smallpox, in its season of prevalence, will take hold of the human system regardless of sanitary conditions and surroundings.

In addition to its prevalence in well-kept towns, do we not, in numberless instances, see it invade the most refined and cleanly country homes, and under these apparently favorable conditions often assume the most malignant type?" For these reasons it would be unwise to rest our hopes of exemption entirely upon a strict enforcement of regulations for the maintenance of cleanliness.

As to the efficacy of quarantine, much need not here be said. Osyka and Holly Springs courted the disease, and it came, alas! to claim their noblest spirits. Many places, it is true, attempted in vain to prevent its ingress, while others, no more cleanly, but perhaps better guarded, are blessed with exemption.

Perhaps we can all agree in ascribing to New Orleans the unwilling distinction of being the *fons et origo mali.*

I will venture to ask the question, in order that it may provoke discussion, what ought to have been done when it first became known that the fever existed in New Orleans? To me it seems that the yellow fever poison, once developed or introduced, the conditions being favorable, will disseminate itself and destroy, as inevitably as that a spark introduced into a dry powder magazine will explode the mass.

New Orleans, perhaps, develops or receives from abroad this disease every year. Its sanitary condition does not vary in such manner as to render it in some seasons barren and in others prolific soil for the growth and spread of the disease. What, then, are the conditions favorable for its propagation?

It is a fact, I think, that this disease never becomes epidemic in the country. It is disseminated by people going where it is, or receiving it through fomites or persons affected by it. Hence, people residing in the country are comparatively safe.

Except New Orleans, the towns and cities of the State are rarely visited by it. Very many of them never had it.

On this bayou, Teche, the garden of the State, the fever rarely comes. It visited some points in 1853, others in 1867, and it now prevails at Pattersonville and on some plantations near by. I cannot close without noticing a remark of "a gentleman living in a country town of Southern Louisiana," quoted by you. He speaks of the people living along his route from Shreveport homeward, as "always inhospitable and avaricious," but now "positively more inhuman and cruel than savages." This language bears the impress of gross exaggeration. Many of them are ignorant, and all, doubtless, afraid of yellow fever, but to say that they are always inhospitable and avaricious, much less, more inhuman than savages, is as unjust as it is false.

Jeanerette, La. W. M. Richardson, M.D.

News and Miscellany.

The Philadelphia Medical Colleges

Have all opened, with large classes and every sign of increased prosperity. They are all increasing the number of collateral professorships, hospital facilities, clinical and anatomical instruction. We have not the space to give the opening lectures in any detail. That at the Jefferson was by Dr. DaCosta. His subject was, "Harvey and His Discovery," which the speaker treated with admirable scholarship, and in the most finished style.

Weekly Report of Epidemics for Week Ended October 12th, 1878.

The Surgeon General United States Marine Hospital Service furnishes the following:—

New Orleans, La.—There were 988 cases of yellow fever and 340 deaths, during the week ended yesterday afternoon. For the last 24 hours, 164 cases and 49 deaths. The disease now prevails throughout the city. Total cases 11,206, total deaths 3400.

Port Eads, La.—One death from yellow fever occurred in the past week.

Baton Rouge, La.—397 cases of yellow fever and 35 deaths for the week ended 9 A.M. yesterday. Total cases 1869, deaths 113.

Morgan City, La.—During the week ended yesterday there were 128 cases of yellow fever and 23 deaths. Total cases 428, deaths 71.

Ocean Springs, Miss.—25 new cases of yellow fever and 6 deaths for the week ended at noon yesterday. Total cases 103, deaths 28.

Pass Christian, Miss.—For the past week there were 35 cases of yellow fever and 3 deaths. Total cases 94, deaths 9.

Bay St. Louis, Miss.—During the past two weeks ended yesterday evening there were 208 cases of yellow fever and 36 deaths. Total cases 286, deaths 56.

Biloxi, Miss.—From commencement of outbreak of yellow fever to the 11th instant there have been 275 cases and 28 deaths.

Port Gibson, Miss.—The yellow fever has spread into the country; at least thirty plantations surrounding Port Gibson are now infected. The deaths to date are estimated at 190.

Friar's Point, Miss.—There have been 13 cases of yellow fever and 4 deaths, to yesterday evening.

Crystal Springs, Miss.—Total cases of yellow fever to yesterday evening 81, deaths 36.

The fever first appeared at Dry Grove neighborhood, 12 miles N. W. of Crystal Springs.

Hernando, Miss.—The first case of yellow fever—a refugee from Memphis—occurred August 31st. 23 cases and 10 deaths during the past week. Total cases to yesterday evening 83, deaths 33.

Grenada, Miss.—6 cases of yellow fever and 2 deaths for the past week. Corrected total deaths to yesterday evening, 323.

Spring Hill, Grenada Co., Miss.—15 cases of yellow fever and 6 deaths to yesterday. First case October 1st.

Vicksburg, Miss.—For the past week there were 33 deaths from yellow fever. 96 deaths have occurred in Warren county, outside of Vicksburg. Total deaths in city and county 978.

Holly Springs, Miss.—Total cases of yellow fever to October 8th 1064; total deaths to that date 241.

Jackson, Miss.—Between 30 and 40 cases of yellow fever reported to October 5th.

Memphis, Tenn.—There were 157 deaths from yellow fever for the week ended the evening of the 10th instant. Total deaths 2784.

Brownsville, Tenn.—139 cases of yellow fever and 35 deaths for the week ended yesterday afternoon. Total cases 413, deaths 121.

Paris, Tenn.—The first case of yellow fever among the inhabitants occurred September 6th. The first case of the fever among refugees August 23d. Total cases to yesterday evening 52, deaths 22.

Cairo, Ill.—Total cases of yellow fever to yesterday evening, 31, beside 5 doubtful cases, total deaths 25. Assistant Surgeon Waldo, of the Marine Hospital Service, taken sick on Thursday, probably with yellow fever.

St. Louis, Mo.—No cases of yellow fever in the city. 3 deaths at quarantine during the past week, two of which were refugees. The Superintendent of the quarantine station is sick with yellow fever.

Louisville, Ky.—For the week ended yesterday evening there were 10 new cases of yellow fever and 8 deaths, of which number 9 cases and 7 deaths were among the inhabitants residing in the infected portion of the city referred to in previous reports. Total cases 112, deaths 49; of these, 88 cases and 34 deaths were refugees.

Cincinnati, Ohio.—No new cases or deaths have occurred since last report up to the 9th inst.

Mobile, Ala.—There were 7 cases of yellow fever and 3 deaths since noon of October 4th to the 11th inst. Total cases 37, deaths 20.

Decatur, Ala.—The first case of yellow fever occurred September 7th. Total cases to yesterday evening, 82, total deaths, 15.

Key West, Fla.—Two cases of yellow fever occurred this week; the first since the 21st of September. Total cases 37, deaths 16.

Canton, Miss.—From October 4th to October 10th there were 90 new cases of yellow fever and 26 deaths. Total cases to that date 810, deaths, 139.

Havana, Cuba.—26 deaths from yellow fever and 3 from small-pox, week ended October 5th. No reports received from the following places where yellow fever exists—Greenville, Miss., Mississippi City, Miss., Water Valley, Miss., Chattanoga, Tenn., Grand Junction, Tenn., Hickman, Ky., South Pass, La., Plaquemine, La., etc.

The Yellow Fever in Memphis.

Dr. Greensville Dowell, who has charge of the Market Street Howard Infirmary, Memphis, writes us:—

"The mortality has been perfectly fearful, fully fifty per cent., and in the last two days as bad and as fatal as ever; but the mortality is in the surrounding country. About thirty physicians have died, and about 300 nurses from different parts of the United States; twenty-two out of forty-one physicians have died (and all except three have had the disease) of those who came here to assist, besides the doctors who live here. Two are now reported dying, and one Memphis physician, Dr. Otey. The disease is a typhoid type, and no treatment does much good; but I have returned to the practice given in my book, and I find it more successful than any other. I have been serving in the Market Street Infirmary since it was opened, assisted by Dr. Gelzer, of Mobile. We have lost 101 cases out of 226 up to last night. Some have come in pulseless, and many with black vomit; only very few have turned yellow, not more than one in ten; they die before they can turn yellow, by congestion of the brain or kidney, or black vomit. Some look hopeless when taken, and the question is, what can we do? We have tried almost every plan, but all fail, and this is the almost universal report. We have doctors from Mobile, Charleston, Savannah, and every part of Texas, but all make the same report. Dr. W. E. Rogers is down, but convalescent. I have not had any time to make *post-mortems*, but many have been made by Drs. T. O. Summer, Thornton and Chevis, and will be duly reported."

The Yellow Fever Commission.

A liberal and benevolent lady, Mrs. Elizabeth Thompson, of New York, came forward and offered to defray the expenses of organizing a commission, and Surgeon-General Woodworth, of the United States Marine Hospital Service, appointed Professor S. M. Bemiss, M. D, of New Orleans; Jerome Cochran, M. D., of Mobile; and Professor E. Lloyd Howard, M. D., of Baltimore, to act as such commission. Dr. Elisha Harris, President of the American Public Health Association, has consented to join the Yellow Fever Commission in the field, about the 20th of October.

Should the contributions of money be sufficient, or Congress so direct, two or three scientific experts will be attached to the commission, for the purpose of extending the line of inquiry.

The importance of the work is so obvious, that the cause will appeal to all classes, and the additional funds necessary should be raised without delay. Subscriptions are to be asked for in all the cities of the Union, and, in order to bring the subject before the benevolent of this city, a number of prominent physicians have issued the following appeal:—

To the Citizens of Philadelphia:—The undersigned physicians of this city most earnestly commend to your attention the appeal of the Surgeon-General of the Marine Hospital Service, for funds to defray the expenses of an inquiry into the conditions attending the cause and development of the present epidemic of yellow fever, and heartily recommend you to extend material aid to the project. The appeal is specially directed to the mercantile communities, in view of the great depression in trade and interruption of commerce, that necessarily attend the prevalence of epidemics. They believe that practical results may be achieved that will materially lessen the possibilities of the recurrence of such visitations, with their attendant distress and suffering, to the people of the South, and their danger to the health of Northern cities.

Mr. George W. Riggs, of Riggs & Co., bankers, Washington city, has consented to act as treasurer, to receive and disburse the funds contributed, which will be devoted exclusively to the expenses of the Commission, and publicly accounted for.

Malaria in Illinois and Iowa.

Dr. G. G. Shannon wrote us, in September, from Industry, Ill.: "We are having the most wonderful epidemic of malaria ever witnessed in central Illinois."

A letter from Dubuque, Iowa, says: "A large number of people residing on the flats in the eastern part of the town are afflicted with the ague, and half the time they are either burning or freezing. This is a bad time for poor people to have the ague, as winter is close at hand and the price of quinine is uncommonly high."

Hog Cholera.

Word comes from the West that the hog cholera is prevailing to an alarming extent in that section, and is fatal beyond precedent. Some of the farmers have lost their entire stock by this disease, while others are selling out at very low figures in order to save themselves from the risk of total loss. Although there are medicines which are claimed to be specifics for the disease, the claim has not been substantiated in practice. At one time we had charge of five military hospitals in Illinois, and to consume the slop, laid out a portion of the "Hospital Fund" in pigs, buying about forty. They were seized with the cholera, and we put those unfortunate pigs through a course of experimental therapeutics that surpassed a Parisian hospital. Not a single drug seemed to have the least effect. The mortality was exactly 100 per cent. of the cases, and the cases precisely 100 per cent. of the pigs.

Personal.

We regret to learn of the illness of Dr. E. S. Gaillard, editor of the Richmond and Louisville *Medical Journal*, and the *American Medical Biweekly*. He has been suffering severely from malarial fever. He has our best wishes for an early recovery.

—Dr. Peyton Grymes, of Orange county, Va., died at his home, August 23d, 1878, in his 88th year. He conducted for many years the largest practice of any physician in the county.

—A melancholy example of the power of the emotions is reported from Paris:—Dr. Deleau had an only daughter, aged 16, in whom all his affections were centred. This young lady died on August 29th, from pulmonary phthisis, and the father's grief was so intense that, in embracing his daughter, in taking his last adieu, he fell on her corpse and breathed no more! Both were buried in the same vault, in the midst of a large concourse of mourning friends and patients. Dr. Deleau was a rising man; he took his degree in 1863, and distinguished himself as an aurist and laryngoscopist.

QUERIES AND REPLIES.

MR. EDITOR:—I was called to Mrs. S. in her third confinement, which proved to be a shoulder presentation. Turning being the "order of the day," I at once placed her in position, and introduced my right hand and found *no feet*. On introducing my left found *no feet*. At my wits ends, but bound to "Hold the Fort," I placed my patient on her *knees and elbows* and again inserted my right hand, and without any difficulty whatever caught the feet and turned, and delivered the head with the forceps. Failing in the first two attempts, the question in this case arises, "What was the *position* of this baby's feet? L. B. B.

Penna.

MARRIAGES.

ANDERSON—BARTLETT.—On Wednesday, October 2d, 1878, by Rev. Thos. M. Penick, at the residence of the bride's parents, P. S. Anderson, M.D., of Ga., and Miss Eusebia A., daughter of Dr. J. W. Bartlett, of Kiskmansville, Ky.

JACKSON—WEIDEMEYER.—On Thursday, October 3d, at the residence of the bride's parents, Montclair, N. J., by the Rev. S. M. Jackson, George T. Jackson, M.D., of New York, and Caroline G. daughter of John W. Weidemeyer.

LANE—FULKERSON.—In Rochester, Minn., October 10th, 1878, by Judge J. W. Fulkerson, N. S. Lane, M.D., Stanton, Nebraska, and Emma V. Fulkerson, Rochester, Minn.

DEATHS.

ALLEY.—At St. Paul, Minn., September 17th, Dr. James T. Alley, formerly of New York city.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

DUCRO'S ALIMENTARY ELIXIR

A Combination uniting the properties of ALCOHOL and RAW MEAT. It has been Mr. Ducro's aim in preparing this elixir to present under the form of a pleasant cordial the nutritive and restoring properties of raw meat and the stimulating properties of alcohol. In this he has been eminently successful, judging from the great number of physicians who prescribe and use this food medicine. This preparation, which has been used with great success in the hospitals of Paris since 1868, is adapted to the treatment of all diseases requiring the administration in a small volume of a tonic able to stimulate and support the vital forces, as in *Pulmonary Phthisis*, *Depression* and *Nervous Debility*, *Adynamia*, *Malarial Cachexia*, etc. It is especially adapted for delicate ladies and children, debilitated old people and convalescents.

Paris: Place de Vosges, 20. **New York: E. FOUGERA & CO., Depositaries.**

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUGERA & CO., Agents,

NEW YORK.

TO PHYSICIANS.

THE scarcity and high prices of Cinchona barks and Sulphate of Quinia, and the prospect of only a slight reduction in these prices, makes the present a favorable opportunity of calling the attention of the profession to the *combination of all the bark alkaloids.*

Much attention has been given to this subject in Europe and India.

The growing appreciation by the medical profession of the United States of

CINCHO-QUININE

is due to the fact that it retains the important alkaloids IN COMBINATION, — a combination which in practice is *preferable to perfect isolation or separation* of these alkaloids.

In addition to its superior efficacy as a tonic and anti-periodic, it has the following advantages, which greatly increase its value to physicians : —

1st, *It exerts the full therapeutic influence of* Sulphate of Quinine, *in the same doses*, without oppressing the stomach, creating nausea, or producing cerebral distress, as the Sulphate of Quinine frequently does : and it produces much less constitutional disturbance.

2d, It has the great advantage of being *nearly tasteless.* The bitter is very slight, and not unpleasant to the most sensitive, delicate woman or child.

3d, It is *less costly :* the price will fluctuate with the rise and fall of barks, but will always be much less than the Sulphate of Quinine.

4th, It meets indications not met by that Salt.

The following well-known Analytical Chemists say : —

"UNIVERSITY OF PENNSYLVANIA, Jan. 22, 1875.
"I have tested CINCHO-QUININE, and have found it to contain *quinine, quinidine, cinchonine, cinchonidine.*
F. A. GENTH,
Professor of Chemistry and Mineralogy."

"LABORATORY OF THE UNIVERSITY OF CHICAGO, Feb. 1, 1875.
"I hereby certify that I have made a chemical examination of the contents of a bottle of CINCHO-QUININE; and by direction I made a qualitative examination for *quinine, quinidine*, and *cinchonine*, and hereby certify that I found these alkaloids in CINCHO-QUININE.
C. GILBERT WHEELER,
Professor of Chemistry."

"I have made a careful analysis of the contents of a bottle of your CINCHO-QUININE, and find it to contain *quinine, quinidine, cinchonine*, and *cinchonidine.*
S. P. SHARPLES, *State Assayer of Mass.*"

TESTIMONIALS.

"WELLFLEET, MASS., Nov. 17, 1876.
"I have used CINCHO-QUININE, and can say without any hesitation it has proved superior to the sulphate of quinine. J. G. JOHNSON, M.D."

"MARTINSBURG, MO., Aug. 15, 1876.
"I use the CINCHO-QUININE altogether among children, preferring it to the sulphate.
DR. E. R. DOUGLASS."

"LIVERPOOL, PENN., June 1, 1876.
"I have used CINCHO-QUININE, obtaining better results than from the sulphate in those cases in which quinine is indicated.
DR. I. C. BARLOTT."

"RENFROW'S STATION, TENN., July 4, 1876.
"I am well pleased with the CINCHO-QUININE, and think it is a better preparation than the sulphate. W. H. HALBERT."

"ST. LOUIS, MO., April, 1875
"I regard it as one of the most valuable additions ever made to our materia medica.
GEORGE C. PITZER, M.D."

"RICHMOND, VA., March 28, 1877.
"I believe that the *combination* of the several cinchona alkaloids is more generally useful in practice than the sulphate of quinine uncombined.
"Yours truly, LANDON B. EDWARDS, M.D.
Member Va. State Board of Health, and Sec'y and Treas. Medical Society of Va."

"CENTREVILLE, MICH.
"I have used several ounces of the CINCHO-QUININE, and have not found it to fail in a single instance. I have used no sulphate of quinine in my practice since I commenced the use of the CINCHO-QUININE, as I prefer it. F. C. BATEMAN, M.D."

"NORTH-EASTERN FREE MEDICAL DISPENSARY.
908 East Cumberland St., Philadelphia, Penn., Feb. 29, 1876.
"In typhoid and typhus fevers I always prescribe the CINCHO-QUININE in conjunction with other appropriate medicines, the result being as favorable as with former cases where the sulphate had been used.
"F. A. GAMAGE, M.D."

SYRUP-GLYCEROLE
OF
FERROUS CHLORIDE.

The Combination which all Forms of Iron must assume before Assimilation.

Superior to all other Iron Salts in that, while it is readily taken into the circulation, and does referruginate the blood, it does not ordinarily cause constipation nor headache. It is very pleasant to the taste, and is unalterable.

Ferrous Chloride is a neutral salt, consequently it has no action upon the teeth, and may be administered fearlessly. This fact and the delightful taste of my preparation render it an advantageous form for administration to children. Each fluid drachm contains one grain of Ferrous Chloride, which, owing to the certainty of its assimilation, is a full, active, adult dose.

FILARIA IN THE EYE.

BY CHAS. S. TURNBULL, M.D., PH.D.

paper read before the Alumni Society of the Auxiliary Department of the University of Pennsylvania, at its Stated Meeting, Sept. 27th, 1878.

Filaria in the Eye of the Horse.

Hearing, through the kindness of a friend, that there was on exhibition, at a stable on Sansom street, a horse with a living worm in his eye, I at once made search for the curiosity. After finding and making a critical examination of the case, I was convinced that it was one of more than usual interest. At my desire Prof. Joseph Leidy visited the animal with me, and as he had never seen such a case before, he expressed himself emphatically concerning its novelty and interesting nature.

As all physicians are more or less interested in horses, I have described the case mentioned, as well as two others, both of which occurred in this country, have visited some of our most prominent veterinary surgeons, and consulted the best authorities on helminthology and hippophysiology, so as to be able to present a reliable and succinct account of the disease in question.

A heavily built dun horse, twelve years of age, which had been raised and worked upon a farm near Rochester, N. Y., was led out to the light, and through the partially opaque cornea of his left eye could be seen a worm, several inches in length. It was white in color, and without the aid of any artificial means could be distinctly seen floating, wriggling and twisting about in the anterior chamber. The eye seemed very much irritated, as the horse continually endeavored to rub it, and the stimulus of light caused profuse lachrymation, and, what is characteristic in such cases, *at times only*, was the cornea hazy, and the aqueous humor cloudy. The horse appeared perfectly healthy, was in excellent condition, and did not seem to be particularly annoyed by the presence of his unusual guest. The iris was of a good color, the action of the pupil perfect, lens clear, and remainder of the eye free from irritation.

The horse had been turned out early last spring (which will be remembered as an unusually wet one), and about that time the worm, which was one inch in length, was first discovered. Since then it has grown several inches, and at the time of this writing looks like a piece of cat-gut from four to five inches in length. On account of its incessant motion no details concerning the parasite's exact shape could be made out. As the present owner bought the horse for his eye, no one will be likely to have that satisfaction.

This case makes the *third*, which so far as I can ascertain, has occurred in this country. The *first* on record was exhibited in this city in the latter part of the last century, and was reported by the late Judge Francis Hopkinson, in a paper read before the Philosophical Society, September 26th 1783.* He says, "This worm was of a clear white color, in size and appearance much like a piece of white bobbin. It seemed to be from two and a half to three inches in length. The creature was in constant

* *Trans.* Am. Philos. Soc., 1st Series, Vol. ii.

lively vermicular motion, sometimes retiring so deeply into the eye as not to be seen at all. I could not distinguish its head, neither end being perfectly exhibited while I viewed it; and, indeed, its motion was so brisk and constant as not to admit of so nice an examination. The horse's eye was exceedingly inflamed, swollen and running, so that it was with difficulty the eye could be kept open for more than a few seconds at a time, and I was obliged to watch favorable moments for a distinct view of the tormentor. I believe (the Judge goes on to say) the horse was quite blind in that eye, for it appeared as if all the humors were confounded together, and that the worm had the whole orb to range in."

This worm, I think, must also have been in the anterior chamber, for if the eye had been in the disorganized condition represented by the Judge, the parasite could not have been seen at all.

The *second* case, which was never reported, occurred in the practice of Dr. Th. N. Corbyn, PH. D., V. S., of this city, who kindly gave me the following interesting account of it. "I have had but one case in an experience extending over fifty years, and this occurred in the year 1833. The horse, the property of a physician in Alleghany City, Pa., had periodic attacks of ophthalmia. After the inflammation had subsided, I discovered the parasite floating in the aqueous humor. It was about two inches long. The case created quite a sensation at the time. I operated by penetrating the cornea, making the opening above; the humor spurted out, and with it came the worm, which looked like a fine piece of catgut. I prescribed low diet, with aperient medicine, and kept the eye covered, so as to exclude light. In fifteen days the eye recovered entirely."

In searching the literature of this subject, the accompanying cuts, taken from Müller's Zoologica Danica, vol. 3, p. 49, t. 109, f. 12, were chosen as best exhibiting the characteristics of the parasite under consideration.*

Fig. 1 represents the *Filaria papillosa Rudolphi*, natural size.

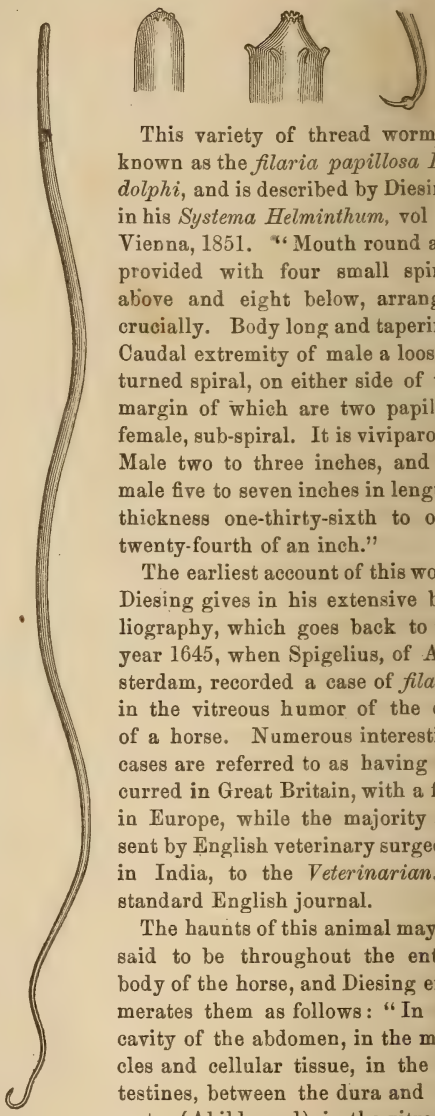
Fig. 2, the head, magnified.

Fig. 3 again shows the magnified head with the papilla squeezed out.

* For those who are anxious to look up the minute anatomy of this worm, I would recommend "Gurlt's Pathological Anatomy of the Horse," and Leuckart's "Menschlichen Parasiten."

Fig. 4. Magnified caudal extremity, supposed to be of a male.

FIG. 1. FIG. 2. FIG. 3. FIG. 4.



This variety of thread worm is known as the *filaria papillosa Rudolphi*, and is described by Diesing, in his *Systema Helminthum*, vol II., Vienna, 1851. "Mouth round and provided with four small spines above and eight below, arranged crucially. Body long and tapering. Caudal extremity of male a loosely turned spiral, on either side of the margin of which are two papilla; female, sub-spiral. It is viviparous. Male two to three inches, and female five to seven inches in length; thickness one-thirty-sixth to one-twenty-fourth of an inch."

The earliest account of this worm Diesing gives in his extensive bibliography, which goes back to the year 1645, when Spigelius, of Amsterdam, recorded a case of *filaria* in the vitreous humor of the eye of a horse. Numerous interesting cases are referred to as having occurred in Great Britain, with a few in Europe, while the majority are sent by English veterinary surgeons in India, to the *Veterinarian*, a standard English journal.

The haunts of this animal may be said to be throughout the entire body of the horse, and Diesing enumerates them as follows: "In the cavity of the abdomen, in the muscles and cellular tissue, in the intestines, between the dura and pia mater (Abildgaard), in the vitreous body (Spigelius), in the anterior chamber (Hopkinson, Morgan, Greve and many others), and still more rarely between the coats of the eye. In the ass and mule, in the abdomen and thorax (Gurlt). In the domestic cattle, in the abdomen, rarely in the anterior chamber (Chaignault and Gurlt)."

Diesing says that he saw such a filaria, and for hours observed it, in the anterior chamber of

the eye of a horse. It was several inches long and very white, and in continual lively movement like a serpent.—Veterinary School in Vienna.

Mr. Twining, a resident at Poonah, in India, for sixteen years averaged twenty cases annually, more than fell to the lot of any other individual in Hindostan. The worm or worms, for there are sometimes two or three floating in the aqueous humor at the same time, by their presence, cause symptoms of ophthalmia, with great intolerance of light. The worm, he says, is a species of filaria or thread worm, called *filaria equi.*

Sir Everard Home informs us that (filaria equi) are found in the circulating blood of the horse, and it is supposed to be transmitted through that medium. Worms have been found in the cœliac artery of the ass, but of greater magnitude. Naturalists have discovered numerous genera and several species—the ascaris, tænia, filaria, strongula, ligula, etc.—as inhabitants of the body of the horse, sheep, ox, hog, deer, etc.

The most succinct account of this phenomenon is by Sir Chas. Percivall, v.s., in 1825, and published in the London *Veterinarian*, for 1828. He says, "in low, humid situations in India, where frogs are prevalent, or where there is stagnant water, especially after an unusually wet season, worm in the eye is a very common occurrence. It is also seen in other parts during the cold months, from the beginning of October to the latter part of February, and especially during the continuance of an east wind. The symptoms are those of a conjunctivitis; the cornea is obscured by a 'nebulous effusion,' the eyelids are closed, and there is intolerance of light.

"On close inspection a small, white worm can be discerned floating in the aqueous humor, at one time rising to the superior, at another sinking to the inferior portion of the anterior chamber.

"The method of treatment is by puncturing the cornea at its upper and inner margin, and allowing the parasite to escape with the aqueous humor. This spot is selected for the operation because the cornea is here least dense, and because the aqueous humor, which gradually re-forms, will be least likely again to escape while the wound is healing.

"These worms find their way into the animal's body along with the water he drinks, either as fully developed parasites, or as ova. Both the parasites and eggs are found in the stagnant waters of India."

The *Veterinarian* for 1864, p. 218, contains the account of a case where this species of worm was removed by the operation just described, one from either eye. Beer's cataract knife was used to make the incision. The Edinburgh *Veterinary Review*, vol. 6, for 1864, also contains a very interesting and humorous account of a similar case.

A fact of intense satisfaction to the lovers of horseflesh is, that in no case of operation for the removal of filaria has the function of the eye been more than temporarily disturbed.

Since commencing this paper I have learned, through a friend, that Dr. Chas. J. Kipp, of Newark, N. J., exhibited, at a recent meeting of the New York Ophthalmological Society, a fine specimen of filaria which he had removed from the anterior chamber of the eye of a horse. The Doctor will doubtless publish a detailed account of the case.

Filaria in the Eye of Man.

Although it seems a shocking thing to contemplate, it is, nevertheless, true, that filaria, and living ones, too, have been found in the human eye.

Dr. Nordmann,* of Odessa, describes the circumstances which led him to discover the existence of entozoa in the eyes of several vertebrates; and he gives a minute account of them, illustrated by beautiful figures, representing their form and internal structure. His researches, during the years 1830 and 1831, embraced numerous eyes of horned cattle, sheep, pigs, frogs, lizards and fishes, with some from the human subject, and birds. He found entozoa of the genus *filaria* in the human eye, in that of the haddock (gadus aeglefinus), of the genus *ascaris* in the frog, of the genus *oxyuris* in the perch, of the genus *cysticercus* in the pig, and *trematoda* in great abundance in fishes generally. In fishes he first found entozoa in the vitreous humor, but he subsequently met with them in the crystalline lens and the capsule, between the laminæ of the cornea, in the iris and retina and in the aqueous humor (*Lib. cit.* pp. 1–6). In the crystalline lens of some fishes they are so numerous as to render it more or less opaque, and thus to impair or injure sight. (*Lib. cit.* pp. 19, 20.)

* Nordmann, "Mikrographische Beiträge zur Naturgeschichte der Wirbellosen Thiere, Erstes Heft," pp. 11-13.

A species of filaria (*filaria medinensis?*) has been seen under the conjunctiva oculi, in the West Indies. Schön has quoted some facts of this kind. A case was related to him by Dr. Gaertner, who resided in the West Indies, and considered it to be the guinea worm.*

Dr. Thos. G. Morton, of this city, has given an interesting account of a filaria ("*Dracunculus*, or *Filaria loa*) removed by a native woman from beneath the conjunctiva of the eyeball of a negress at Gaboon, West Africa, with a brief history of the parasite, and Professor Leidy's description of the specimen."†

Cobbold says, "these worms are identical with those described by Guyot as dwelling beneath the conjunctiva of negroes at Congo, and the Gaboon region generally."‡ Davaine has reported several similar cases, and refers to them as *La filairie de l'orbite* ?

The *filaria lentis* (Cobbold), and what is identical, the *filaria oculi humani* (Nordmann), was discovered by the last named investigator, in the year 1831.‖ Dr. Nordmann examined two lenticular cataracts taken from an elderly man, half an hour after they had been extracted by Prof. von Graefe. In one of these, which was partially surrounded by the capsule, he observed in the Morgagnian fluid two very small and delicate rings, which he clearly recognized under the microscope as convoluted filariæ. One of the two had been injured in the middle, so that the intestines had come out of the body, and were visible as slender threads. The other was uninjured, of uniform thickness, three-quarters of a line long, and extremely narrow. It was spirally convoluted and dead. A simple intestinal canal, a mouth with visible papillæ, a uterus, and a prominent anal aperture could be distinguished (*Lib. Cit.*, pp. 7, 8).

In 1832 he was present at two operations of extraction, performed on old women, by Prof. Jüngken, and found a living filaria, five lines and a half long, in the act of casting its skin (in der haütung begriffene), in the lens of the first patient (a case of green, lenticular cataract); no living extraneous body was found in the other lens. The second case was more interesting, as it presented the first example of microscopical entozoa, possessing suckers (*Trematoda Rudolphi*), being found in the human eye; eight individuals of the genus *monostroma* were found in the substance of the lens. These minute beings were situated in the upper strata of the crystalline; they were one-tenth of a line long, and moved sluggishly when placed in warm water. The examination took place immediately after the operation. In neither case was the opacity complete, and the lenticular substance was soft. (Lib. cit. Zweites Heft. Vorwert, p. 9.)

M. Davaine also mentions a comparatively recent case of filaria in the anterior chamber of the eye, but full particulars do not appear to be published. The case previously cited is by Sichel,* from whom we gather that the specimen was brought forward by Quadri, of Naples. The living worm was in the vitreous humor of a woman, thirty years of age. The function of the eye was perfectly normal. The latter authority exhibited the parasite *in situ* at a meeting of the Ophthalmological Congress held at Brussels.

Von Ammon found a filaria in a lenticular cataract, of which the nucleus was firm and the exterior pulpy. The cataract was extracted. He has figured the animal, of its natural size and magnified.†

Then, again, there is the case observed by Gescheidt,‡ in which Von Ammon operated for congenital cataract. In this case there were four filariæ, of the genus *distoma*. The largest measured one-sixth, the smallest one-fifteenth, of an inch.?

Cobbold considers them embryonic *nematodes*, which have accidentally or otherwise selected the human body as their intermediary host.

Mauthner‖ says he saw what he supposed to be a dead filaria floating about in the perfectly clear vitreous humor of a man forty years of age.

Von Wecker, the author of the second half of the fourth volume of "Graefe and Saemisch's

Augenheilkunde," gives no new cases, but mentions a case of supposed filaria spiralis (?) which he considered a rudimentary persistent hyaloid artery.

The presence of filaria within the human eye is, beyond a doubt, of rare occurrence, no instances on record are of recent date, and our more modern text books and works on ophthalmology either omit them altogether or else refer but briefly to the few cases herein mentioned.

Having occurred once, filaria will doubtless be found again, and if there exists a "*filaria sanguinis hominis*," as Drs. T. R. Lewis, of India, Bancroft, of Australia, and especially Dr. Manson,* of China, have pointed out, we must look for it wherever the blood circulates.

Seldom is it that the oculist in his busy round stops to scrutinize the cataractous lens he so dexterously extracts, or to examine in minute detail every floating opacity in the vitreous body, and I must confess I am of the opinion that it behooves us to be more on the lookout for the phenomena in question.

(The writer of this paper will be exceedingly in debted for any reliable account of a worm or worms in the human eye.)

SEVERE GUNSHOT WOUND.

BY J. L. PERRYMAN, A.M., M.D.
Of Illinois.

About a year ago I was called to see a little boy, aged eight or nine years, for a gunshot wound of the inferior maxillary bone. The piece was discharged only a few feet from the patient. The breach in the soft parts and point of fracture commenced about an inch and a half to the right side of the median line of the chin, or the symphysis, extending fully an inch and three quarters upon the opposite side of the bone. The hemorrhage was considerable, from the facial artery, which had to be ligated. The wound in the soft parts extended to within an inch and a quarter of the left ear. One shot entered the face just below the right eye; two, striking the head above the right eye, deflected and were cut out over the occipital bone.

Dr. L. P. Stookey, who assisted me, put the patient under the influence of chloroform. I removed the teeth that were loose, and the fragments of bone, with the exception of two large pieces of the chin, that I did not think prudent, owing to the anatomical connections, to remove. I then brought the wound in the soft parts together, as far as practicable, with silver wire sutures. Made cold applications of carbolized water. Dismissed the patient for the night with a hypodermic injection of morphia and atropine. He slept quietly until next morning.

Second day. Saw the patient; pulse full, reaction having been fully established; ordered the cold applications continued; prescribed two grains of quinine every four hours; ordered beef tea and milk as nourishment.

Third day. Wound looking well; no hemorrhage; continued the treatment.

Fourth day. The patient exhibited no untoward symptoms, suppuration having been fully established.

The patient progressed favorably, with no signs of tetanus or erysipelatous inflammation. On the fifteenth day suppuration had so far loosened the two fragments of the chin that they were removed without difficulty with a pair of forceps. On the twentieth day the wound had so far healed that I deemed it advisable to devise some means by which to fix and steady the two portions of the maxillary bone.

Drs. Moore, Stookey, Patrick and Burns assisting, we again put the patient under the influence of chloroform, and I drilled a small opening through each portion of the fractured bone, about half an inch from the point of fracture. I had two silver pins made and put in each of the openings, tied a piece of tape in the eye of each, and then tied them in the centre, over the part where the symphysis of the chin should be. By this simple procedure the fractured bone was held in place. The wound was carefully cleansed ever day, carbolized water being used in the meantime as a

* In a paper entitled "Report of Hæmatozoa," Patk. Manson, M.D., of Amoy, China, says—"1. That a large ratio of the population of this province, and probably of other parts of China, is infested with the *filaria sanguinis hominis*. The exact ratio cannot yet be stated, but if my observations are a fair guide, one in thirteen is near it. 2. That the filaria sanguinis hominis may be present in the blood, and yet the hosts be in good health and exhibit no morbid phenomena. 3. That in the same persons it may be present at one time and absent at another. 4. That at one time or another it is generally associated with *elephantoid disease*, and is almost certainly connected with the causes of such affections. 5. That it is sometimes associated with a diseased condition characterized by frequently recurring attacks of fever, accompanied by general anasarca, unconnected with heart or kidney disease.

dressing. What was interesting to observe in the progress of the case was, that notwithstanding the great extent of the wound, and the excessive suppuration, there was developed a complete and perfect chin. In this newly developed bone there has appeared two teeth. However, second dentition may not have been completed.

The case progressed well, and healed in three months, leaving a cleft in the left side of the lower lip, from which the saliva was constantly trickling, to the great annoyance of the patient and his friends. We again put the patient under the influence of chloroform. There were several extensive adhesions found, which it was necessary to dissect up in order to relieve the lip and mouth. I then pared the edges of that portion of the mouth that had healed fistulous, and brought the wound together with silver pins, and had the satisfaction of seeing them heal kindly by the first intention, and the function of the inferior maxillary and mouth restored.

Hospital Reports.

JEFFERSON MEDICAL COLLEGE HOSPITAL.

SURGICAL CLINIC OF S. W. GROSS, M.D.,
SEPT. 18th, 1878.

Gentlemen:—By an opportunity offered me through the abundance of interesting material presenting itself at this clinic, I am enabled this morning to bring before you, for operation, a series of cases, each one of which illustrates a different variety of tumor, ranging from the simplest form of benign growth to the case of carcinomatous disease with glandular involvement. The subject of the pathology of these tumors will be reserved for discussion in a more exhaustive manner at a future meeting; at the present time I will only indicate very briefly the salient characteristics of each form of pseudoplasm, or neoplasm, that appears before you, and will devote the hour and a half allotted to me to illustrating the proper methods of operation, and indicating the prognosis and after treatment. The first case is one of

Hæmatoma of the Ear.

George C., aged 37, a saw filer, has, as you will notice, a prominent, soft, fluctuating swelling on the upper portion of the pinna of the right ear. It includes part of the helix and the fossa of the helix, and fills entirely the fossa of the antihelix. It is about half an inch in thickness, and about one inch and a quarter in diameter. The surface is smooth, and the skin is normal. In regard to the history, the patient informs us that he first noticed it five weeks ago, and thinks it appeared during the night, as he saw it in the morning and it was not there when he went to bed. It is not painful, and he had not received any injury; he had slept on a soft pillow.

There is a tumor of the pinna of the ear, which is most common in male insane patients, and which I have never seen in any other class of subjects, that is termed hæmatoma auris, or bloody tumor of the ear, generally caused by lying persistently upon one side of the head. Such tumors are generally dark-colored, and when opened, some trace of their original character will always be found, either in the contained blood clots, or an examination of the fluid under the microscope, will reveal the presence of blood corpuscles, or of crystallized hæmatin.

The tumor before us is soft, and might be an abscess, but appears to be really cystic in character. This point may be cleared up by the use of an exploring needle. This is followed by the escape of a clear, serous, orange-colored fluid, which I catch in my hand, which clears up the diagnosis. The tumor is cystic, and I am led, from the history, to consider it a hæmatoma similar to that occurring in the insane, and to believe that this fluid is blood which has undergone degenerative changes from breaking down of the corpuscles, and hence contains abundant crystals of hæmatin.

I have never seen a case exactly like this before. I will lay the cyst open, and pack its cavity with absorbent cotton, saturated with tincture of iodine, having first plugged the meatus, to prevent the iodine from accidentally entering the auditory canal. The cyst wall is smooth on its inner surface; but the irritation set up by this tent will excite the granulating process, as a result of which the cavity will be obliterated. The iodine tent will be removed to-morrow morning.

Nævus Maternus of the Scalp.

Harry C., three years of age, shows over his left ear a bluish vascular tumor of the scalp. It is irregular in shape, not much elevated above the skin; it is yielding upon pressure, and swells up when he cries. It occupies a space that is equal to a circle about an inch in diameter. It is evidently made up of dilated capillary vessels, and is similar to several cases you have recently seen, and the characters of which have been explained to you. One, you will remember, occupied the forehead; a second the top of the nose; and the third the entire lower lip; all were congenital.

From the appearance of the child, its poor development, imperfect and carious teeth, and the depressed state of the bridge of its nose, it will be perceived that it is suffering from the syphilitic cachexia. In such cases, the nose is flattened, because infants laboring under inherited or congenital syphilis are subject to

chronic catarrh of the Schneiderian membrane; the inflammation ultimately leading to ulceration and destruction of the nasal bones. The difficulty in breathing accompanying this condition is termed, very expressively, "the snuffles," the nostrils being stopped up; the nutrition of the infant is often impaired, on account of the trouble this occasions in nursing.

I find, upon inquiring of the mother, that my impression, drawn from its appearance, is confirmed by the fact that it has been under treatment for mucous patches about the mouth and anus, and other manifestations of inherited syphilis.

After giving the child a few whiffs of chloroform, I will transfix the base of the growth with several pins, and strangulate it with a tight ligature passed under them. Chloroform is used very much in this clinic for children, in whom it is not a dangerous remedy in experienced hands; when improperly administered it has proved fatal in adults, although not in my experience.

After leaving the room the child may have a few drops of laudanum to relieve its pain and keep it quiet. The mass will drop off in four or five days, and the resulting ulcer will heal under simple treatment. This is probably the most effectual manner of dealing with the ordinary forms of vascular tumors.

Lymphatic Tumor of the Parotid Region.

This young lady, aged nineteen years, discovered, three years ago, a movable lump, of the size of a pea, in front of and under the lobule of the right ear, which is now apparently as large as a medium-sized hickory nut. It is neither painful nor tender to the touch; rolls under the skin; is lobulated, dense, and firm; and is distinctly circumscribed. The overlying integument is normal.

It is extremely difficult to pronounce positively upon the true nature of neoplasms of the parotid region before their removal. Whether they originate in the gland itself, or in the connective tissue, or the lymphatic glands on and around the parotid, they are essentially of the same structure, the most common being enchondroma, either pure or variously combined with other tissues, carcinoma, fibroma, cystoma, sarcoma, myxoma, and adenoma, or parotid glandular tumor. The mobility, density, and lobulation of the present growth, its slow progress, and its occurrence at an early age, point to its being a cartilaginous tumor; but these signs may also indicate a fibroma, an adenoma, or merely a lymphoma in the form of an enlarged lymphatic gland. The symptoms of malignant disease are entirely wanting; and from the frequency with which I have met with enlarged lymphatic glands in this region, particularly in young subjects, I am disposed to regard the case as being of this nature.

The patient having been anæsthetized, a semicircular incision, with its convexity downward, to admit of free drainage in the event of failure of primary union, was made, and the mass dug out of its investing capsule. It was found to be an enlarged gland, which lay beneath the dense parotid fascia. After oozing had ceased, the wound was approximated by the hare-lip suture, and dressed with oiled lint confined by narrow adhesive strips.

Adenoid Fibroma of Mammary Gland.

Emma H., 24 years of age, comes to us with a swelling in her right breast. She is married, menstruates regularly, and has no children, but six months ago had a miscarriage, and soon afterward accidentally noticed a lump in the upper and inner part of the right breast. It was quite small, and was not the seat of pain. It has now attained the size of an almond, is of a firm, elastic consistence, ovoid in shape, and rolls under the skin. This little growth is a source of annoyance and anxiety, not so much for what it is as for what it may become. As it seriously affects her comfort, and may develop into a larger growth, I will extirpate it, which may be done without much difficulty, as it lies at the circumference of the mammary gland.

This is ordinarily known as a glandular tumor, or adenoma, since it contains the proper structure of the breast, or gland tissue. In my experience these growths are either fibrous or sarcomatous, and include some of the secreting, or proper glandular structure. If it were a sarcoma it would by this time have attained a much larger volume; hence I conclude that this is an adenoid fibroma, which in itself is a benign growth, but may become cystic, or it may eventually, by taking on sarcomatous action, form a cystic sarcoma. It is better, on this account, to remove it while small.

After anæsthetizing the patient, I make my incision over the growth, in the direction of the lobules radiating from the nipple, and not across the milk tubes. The tumor projects through the incision, but is firmly attached to the gland tissue, from which I dissect it, with curved scissors. This tumor was movable in the mammary gland, although it was attached to it, a sign which is of great importance in the distinction between fibroma and sarcoma, in their early stages, and carcinoma, since scirrhous growths are inseparably incorporated with and move with the breast. Adenoid fibroma is most common in unmarried or barren females, and is generally met with between the age of puberty and the thirty-fifth year.

Thyro-Hyoid Hygroma.

A laborer, forty-six years of age, first observed, about six months ago, a swelling in the middle and upper portion of his neck, which gradually increased in size until it is now of the volume and shape of a large hen's egg, and extends from the hyoid bone to the level of the cricoid cartilage, above which it is somewhat constricted, and the tapering smaller end deviates from the middle line to the right side. It distinctly fluctuates; moves with the larynx on deglutition; the skin is natural and unadherent,

and the exploring needle gives vent to bloody, grumous fluid.

Cystic tumors in the middle region of the neck are not very infrequent, and may originate in various ways. Thus, commencing from below, we meet with cystic degeneration of the follicles of the isthmus of the thyroid gland, thereby constituting the affection known as cystic goitre, or, as it is termed by the German pathologists, cystic struma. In addition to the sebaceous tumor, which I have once met with in the thyro-hyoid region, there are other encysted growths developed in the middle line, which are due to enlargement of certain synovial bursæ. One, situated between the skin and the pomum adami, gives rise to the affection known as antethyroid bursal tumor, or hygroma. The second lies between the thyro-hyoid membrane and the posterior surface of the hyoid bone, and is sometimes double; through its enlargement arises the affection variously termed subhyoid, or thyro hyoid hygroma, or sub-hyoidean ranula. Of these two forms of disease, the latter is the more common, as the bursa itself is almost constantly present, whereas the antethyroid bursa, according to the investigations of Verneuil, is absent in about two-thirds of all persons. A third bursa, named after Fleischmann, of Erlangen, who first accurately described it, is seated above the hyoid bone, between the genio-glossi muscles; but its presence is to be regarded as accidental rather than normal.

Any of these bursæ may be the seat of enlargement, and accumulation of their contents, which may be clear and viscid, or sanguineous and grumous, as in the case before us. The situation of the tumor being accurately determined, there need be no difficulty in determining its origin. When the bursa of Fleischmann is involved, in addition to a fluctuating swelling, which is liable to be found to one side of the middle line of the upper portion of the neck, another swelling will be very apparent on the floor of the mouth, which, it need scarcely be said, is not present in the other forms of bursal tumors. Careful examination shows that our patient is affected with enlargement of the thyro-hyoid synovial bursa.

In the treatment of this affection, the object being to set up adhesive inflammation of the sac, various remedies may be used. Obliteration may be effected by evacuation of its contents, and the injection of tincture of iodine or carbolic acid; or the sac may be opened and a portion of it be snipped off; or it may be traversed by a few threads of silk. In this case I will lay the cyst open and insert a tent wrung out of tincture of iodine. This will be removed in twenty-four hours, and the granulating process be afterward favored by the slippery-elm poultice.

Chronic Scirrhous Carcinoma of the Breast.

At our last meeting you will remember that I removed the left mamma of a spinster, fifty years of age, on account of an acute hard cancer of that organ, along with some enlarged lymphatic glands of the axilla. The case before you is, so far as the extent of the disease is concerned, very similar to the previous one, the main points of difference being that this subject is comparatively young, and that the affection has pursued a chronic course.

Mrs. H., aged forty years, of good general health, is the mother of six children, of which she nursed the youngest, now twenty one months old, up to five months ago, when the secretion of milk gradually ceased, but in the affected breast sooner than in the sound one. She first noticed a small nodule in the right mamma four years ago, which has gradually and progressively increased in size until it has attained a diameter of somewhat more than two inches, and is discoid in shape. It is densely hard, slightly bosselated, adherent, to a limited extent, to the subjacent pectoral muscle, and slightly tender on manipulation. The nipple is unchanged and prominent; the skin is discolored, adherent, and thrown into radiating, brawny lines, and the seat of an eczematous eruption; and the several secondarily enlarged lymphatic glands can be detected in the corresponding axilla, where the patient first discovered them about a year ago. There is no family history of cancer. Both breasts are atrophied and flabby, and I have no doubt that the withering process, similar to that which takes place during the involution of the mammary glands, has predisposed these organs to the atypical growth of epithelium which gives rise to carcinoma.

This case is a peculiar one. In a woman of this age, scirrhus should pursue a rapid course, the more especially if the breasts have been functionally active, as is here witnessed. Instead of this, however, the disease is chronic, and represents the atrophic form of carcinoma, which is usually met with much later in life.

In removing the diseased structures, as I now do by the ordinary elliptical incision extended into the axilla, to give me free access to the implicated glands, I am going as far as I can beyond the apparent limits of the disease, and cut away the involved portion of the pectoral muscle. As I remarked the other day, I do not anticipate a permanent cure; but I hope to delay the progress of the disease, and relieve the patient of mental suffering, and prolong her life. If a cure is ever effected, I have never been so fortunate as to meet with an example.

The breast having been extirpated, and the enlarged glands removed with the finger, the flaps were dissected off the pectoral muscle, to favor approximation of their edges. Seven vessels were ligated, and after the oozing of blood had ceased, the wound was closed by five points of the interrupted suture and narrow adhesive strips, a tent having been inserted in the axillary end of the incision, to favor subsequent drainage. An oiled compress was then confined over the wound by a roller, and the arm was secured to the side of the chest.

MEDICAL DEPARTMENT OF THE UNIVERSITY OF NEW YORK.

CLINIC FOR DISEASES OF THE NERVOUS SYSTEM.

BY PROFESSOR WILLIAM A. HAMMOND.

Reported Expressly for the MEDICAL AND SURGICAL REPORTER, by WASHINGTON MYERS, A.M. M.D.

Cerebral Congestion.

GENTLEMEN:—It being impossible to give you more than a superficial idea of the brain and its connection with the spinal cord, I now commence with cerebral congestion, which may be active or passive, arterial or venous. These are divided into two parts, which may make their appearance in one of six different ways, viz: Apoplectic, convulsive, paralytic, soporific, maniacal and aphasia. Each of these varieties is preceded by its premonitory symptoms, but you cannot tell always, from these symptoms, how the case is to terminate. They are common to all the forms, and not difficult to manage. Ninety-five out of one hundred recover.

One of the first stages of congestion is a proneness to feel tired, with inability to sleep; the moment the head touches the pillow the thoughts are occupied with the affairs of the day. The dreams of such patients are terrible, with incoherent talking in sleep when the affection is highly developed. Headache is present, ideas confused, tendency to vertigo, a feeling of tightness about the head, a feeling of weight, a cold or hot sensation, tearing of the scalp. These feelings and sensations do not exist in a state of health, and are indicative of disease. There is also more or less mental disturbance. Patients thus affected are inexpert in adding columns of figures. Bank clerks are peculiarly affected. Any concentration of mind produces all these troubles. Then, occasionally, we have hallucinations of some kind. Patients do not interpret things as they should; a false sensorial impression, a delusion; all are not subject to these sensations or aberrations. Then, frequently, a change occurs in disposition and character; patient quarrels upon slight pretext; considerable irritability present.

In unison with the cerebral symptoms, physical ones are also present, viz: Numbness of one or both sides; motorial functions affected; twitching of mouth or limbs—sometimes produced by the use of tobacco; the urine scanty and high colored, with irritability of the neck of the bladder. Constipation is also present. Patients require strong purgatives or enemata. This hyperæmic stage may remain for months or years, and if the patient is careful he may remain in semi-health for years, and be tolerably comfortable. These premonitory symptoms are present in nearly all cases, although they may be dormant. I have seen them developed very suddenly, under great emotion.

The Apoplectic Form.—The patient may be quietly walking in the street, something occurs to attract his attention, his face flushes and he falls to the ground. He gradually drops. Not as in an epileptic convulsion, where the patient drops suddenly. Now, if you see the patient, his limbs are in a state of resolution. No paralysis present, but located on one side or other there is loss of motion, in one arm or hand, or in a single group of muscles. If you speak in a loud tone he will answer, and only when so spoken to, and will not originate any conversation. Pupils at first dilated, afterward they may alternate with dilatation and contraction. If there is congestion at the base of the brain the pupils are contracted. Pinch the foot or arm and he draws it away. Speak in a low tone and he pays no attention; in a loud tone and he answers incoherently. Does not carry on any course of conversation. Pulse slow and hard, 60 to 80. Respiration slow and hurried; rarely stertorous, except when he first falls, but breathes heavy and full; breathes more with the diaphragm. This condition may last a few moments, or a day or two, or he may not recover at all. Time gives no diagnosis as to recovery. If it is favorable the patient gradually recovers, but feels weaker on one side than on the other. One attack predisposes to another. I have had several under my charge who have had two or three attacks.

The Paralytic Form.—Here there is no loss of consciousness. He loses power in some of the muscles. It may be the tongue or one side of the face. It may exist on one side of the body or on both. This form is distinguishable from the other in there being no loss of consciousness which may be due to hemorrhage or congestion.

The Convulsive Form.—This resembles a true epileptic convulsion. He falls suddenly, on his face; rarely utters a cry, which is the true form of epilepsy; at first of a tonic character; respiration impeded; circulation retarded, from pressure on jugular veins. After a few seconds there is relaxation, afterward contraction, of the muscles. During the tonic contraction he may froth at the mouth or bite the tongue; he passes, after a little, into a state of stupor, which may last from a few moments to several hours. He may have another attack within a week, but not often—the characteristic difference between epileptic cerebral congestion and true epilepsy.

The Soporific Form is, probably, the most dangerous. Patient passes into a state of stupor from the onset. No paralysis; no shock; no apoplectic seizure; stupor not preceded by any sudden shock. Brain torpid, and requires the excitation of another mind to bring it into action. A great many cases terminate badly, whatever plan of treatment you adopt, followed by secondary phenomena—cerebral softening or hemorrhage.

The Maniacal Form.—Epilepsy sometimes assumes a maniacal form. A man may have epilepsy, and then develop into this form. There is no systematization of the mind; he will talk in an incoherent manner; a constant panorama of hallucinations and delusions

occupying his mind, and, in consequence, he acts in obedience to his peculiar ideas. In true cerebral congestion patients only have one attack, and that ends it.

The Aphasia Form.—In which the patient is affected with loss of speech. No paralysis of tongue or vocal organs present; he loses all idea of sound or manner of forming; no paralysis of any kind; attack comes on suddenly. He is not aware of it until he attempts to talk; and is characterized by inability to articulate words.

Case.—Pain in head; sleeplessness; dizziness; noises in ears; numbness in both hands; age thirty-three. Patient says she has had intermittent fever, for which she took considerable quinia. She suffered none of these symptoms before taking the drug. Now, quinia possesses the property of producing cerebral congestion, or symptoms analogous to it, if used for any time. If it is administered in hydrobromic acid it will not cause cerebral congestion, as that possesses the property of obviating all its unpleasant symptoms. With its use there is no throbbing of the carotids; no noises in ears, or fullness in the head.

In the present case, we will order ℥j of the bromide of potass., ℥ss of the iodide of potass., to f.℥iv of water, of which a teaspoonful is to be taken four times daily, and ask the patient to return in one week, when we will look more fully into her condition.

Medical Societies.

THE U. S. HAY FEVER ASSOCIATION.

[The following extract from the proceedings of the adjourned meeting of this Association, last month, will be found of general interest to students of the disease.]

The adjourned meeting of the United States Hay Fever Association was held in the parlor of the Sinclair House, Bethlehem, N. H.

The meeting was called to order by the newly elected Secretary of the Association, Mr. Edmund S. Hoyt, and in the absence of the President, Mr. F. B. Fay was elected temporary chairman.

The Chairman stated that a letter from Dr. Woodward, of Worcester, Mass., had been received. This gentleman took positive ground against the pollen theory of Dr. Marsh, of New Jersey, and others, and has made very elaborate microscopic investigations as to the effect of pollen upon hay fever patients, particularly as applied to his own case, which is a pronounced one. The letter is as follows:—

Worcester, Aug. 25th, 1878.

To Mr. Frank B. Fay:

Dear Sir.—Your letter, enclosing one from Dr. Marsh, came to hand. I could not answer it at that time, because, the common plants not being in bloom, I could not make the observations upon pollen that I desired to do before I communicated with you. Since the season of flowering commenced I have carefully observed, under the microscope, the pollen of a large number of the common weeds and flowering plants of the garden and field. I find that pollen grains have but two or three definite shapes or forms, especially those of the weeds and common vegetables. These are, oval with pointed ends, musk melon shaped, as I shall call it; oval with rounded ends, or water-melon shaped; globular with smooth surface; globular with surface ridged into facets, and globular covered with hairs or spires, like the envelope of a horse-chestnut burr. It must be remembered that all pollen grains are so minute that they must be magnified from one to two hundred diameters before they can be studied at all. I have subjected all I have experimented upon to a constant power of one hundred and fifty diameters. I have found no plant that, to my knowledge, has been accused of producing hay fever that has pollen of any other shape than globular. And this is the order in which the accused now stand: globular with the surface covered with little hairs or spines, rag-weed, buckwheat, may-weed, golden-rod, blue ageratum and purslane or parseley. The morning glory has pollen of this shape, but much larger than the rest. This, you will see, is a very important class. Next, globular with smooth surface, indian corn, wild amaranth, pig-weed, butter-cup, sorell, or oxalis, and plantain. Globular, with the surface ridged into facets, the phloxes, geraniums and nasturtiums. Now, these pollen grains in each of these three classes so closely resemble each other that they cannot be easily distinguished. I do not believe that from a quantity of pollen grains floating in the air, collected upon a pane of glass covered with adhesive material, it would be possible to pick out these as the pollen of rag-weed, or others of golden rod, or May weed, or Indian corn or plantain. Examined together upon the same slide it is only by the most careful observations and measurements that they can be distinguished, if they can be distinguished at all. On the eighth of August I first found the rag-weed in flower. From that time to this I have kept a bouquet of it in flower, fresh, upon my office desk. The pollen has been scattered all over my books and papers, but not a sneeze did I have until the afternoon of the 20th. I have had tassels of Indian corn and bunches of golden rod upon my table till it was all covered thick with yellow pollen, and yet I had entire freedom from the disease till that time. It must have been that they would have caused the usual symptoms if an irritant cause was contained in them. I have worked at my microscope for the last four weeks, almost every day, and have examined the pollen of nearly one hundred plants, of all classes and kinds, and yet have not had a symptom till the appointed day came.

You will remember that, last season, when I was in Bethlehem, I brought in five specimens of the rag-weed, which I found growing right

by the public path, where every one that went by might have swept it with their clothes, and yet no one had discovered it by any symptoms it had caused. I conclude, then, that the disease is in me; that no irritation will develop it till the appointed time, but that after that irritants of different kinds will excite and aggravate its symptoms. They, however, in no way can be set down as the cause. They do not operate on the 18th and 19th of August; they do on the 20th. Have they developed a new force or have I developed a new condition? Which is the most probable? Yours most truly,

R. WOODWARD, M.D.

On motion of Mr. Cory, a vote of thanks was unanimously tendered Dr. Woodward. Mr. Cory also presented the following resolution, which was heartily adopted, the mover taking occasion to make several very complimentary allusions to the gentleman referred to:—

Resolved, That a vote of thanks be and is hereby tendered to the Hon. B. F. Fay, for the faithful services which he has rendered this Association, as Secretary, since its formation.

Mr. Fay, in reply, thanked the members for the honor they had conferred upon him.

BRITISH MEDICAL ASSOCIATION.

SECTION D—PUBLIC MEDICINE.

(*Concluded from p.* 341.)

Revaccination During an Epidemic.

Dr. P. M. Braidwood, in this paper, stated the arguments in favor of regarding revaccination as necessary and as advantageous. The principal reason for enforcing revaccination is, that the capability for receiving variolous and vaccine contagion, as also for receiving these diseases by inoculation, returns in the human subject, for the most part, at or about puberty. He next referred to the legal enactments in different European countries enforcing revaccination, and stated the results thus reached. In the Würtemberg army, from 1846 to 1856, there were 202,184 revaccinations performed, and of these 69.6 per cent. were successful, and 30.4 per cent. failed. In the Bavarian army, during 1856-60, there were 60,171 soldiers revaccinated, and among these 45 per cent. were successful, 18 per cent. showed modified results, while 37 per cent. failed. As regards the proper time for the performance of revaccination, while most medical men consider puberty to be most suitable, from physiological reasons, this opinion can be based also on the numerical results of revaccination at different ages. In the Würtemberg army the failures of revaccination among those under twenty years of age were 338.7 per 1000; among those from twenty to thirty years old were 455.2 per 1000; and among those over thirty years old were 366.2 per 1000. From puberty to thirty years of age, the receptive power in the human body for variolous and vaccine disease conveyed by contagion and by inoculation is most marked. In the table showing 616 revaccinations performed by the author in the last epidemic of small-pox in Birkenhead, during last year, there is to be observed the relative numerical proportion of the sexes, the ages of the revaccinated, the number and characters of the cicatrices from primary or infantile vaccination, and the results of revaccination. The cases are further subdivided into two groups, 262 having been private patients, and 424 having been revaccinated at the public vaccination stations. By this means, the results of revaccination in two separate classes of the community can be compared. From the large proportion of success, both among the "private cases" and among those revaccinated in the public vaccination stations, it is proved that revaccination is not only advantageous, but must be regarded as necessary for the proper and complete protection of the population against small-pox. Another point illustrated by the tabulated cases of revaccination from private practice is the imperfectness of their infantile vaccination, as evidenced by the number and character of the cicatrices. The revaccinations performed at the public vaccination stations show a closer relative proportion among the sexes; a much larger number of persons below puberty applied at and were revaccinated in the public stations; and these cases also illustrate the imperfect protection afforded by infantile vaccination, as shown by the number and character of the cicatrices.

"False Diphtheria," or "Spreading Quinsy."

The author of this paper, Dr. Cornelius B. Fox, states that for nineteen years he has had unusual opportunities for studying diphtheria, and his attention was first directed, in October, 1875, to a disease which the union medical officer termed "spreading quinsy," and which has subsequently been referred to as "cynanche pharyngea" and "false diphtheria." After reading the four principal signs that are characteristic of true diphtheria, namely, (1) the production of a tough, leathery, false membrane (διφθέρα, a prepared hide); (2) the presence of albumen in the urine; (3) a great depression of the vital powers; and (4) subsequent paralysis in a certain percentage of cases, Dr. Cornelius Fox thus summarizes the conclusions to which he has arrived respecting a complaint that has doubtless been frequently confounded with it. 1. The disease consists essentially in an inflammation of the tonsils, which extends more or less into the pharynx, and sometimes to the neighboring submaxillary and other cervical glands. 2. Although yellowish spots are sometimes seen on the tonsils, from an accumulation of mucus in the follicles of these glands, no ash-gray, tough, leathery membrane (characteristic of true diphtheria) is ever seen during the course of the disease. 3. The individuals affected present an anæmic appearance. 4. The disease is communicated from one to another, generally through the medium of schools, gleaning, etc. 5. Unlike diphtheria, it is rarely fatal, unless

those who suffer from it have been long exposed to most unwholesome conditions. 6. It is never followed by paralysis of sensation or motion, as diphtheria often is. 7. It is not accompanied by albuminuria. 8. The pulse is full, as is noticed in cases of acute quinsy; whereas in true diphtheria it is small and feeble, indicating great prostration. 9. It presents characters dissimilar from those exhibited by cases of scarlet fever without the rash, from which it does not confer an immunity. 10. It may prevail in a district where no true diphtheria is known. 11. The average duration of the disease is about ten days. 12. It is essentially a filth disease, being always associated with some organic impurity of air or organic impurity of water. Overcrowding, saturation of soil around dwellings with slop water, employment of pond water for drinking purposes, are the most common insanitary conditions found in connection with infected houses. Quinsy differs from this disease in that it is not a communicable malady, although it may affect several members of a family at the same time who have all been similarly exposed to the same influences, or who may all have a family tendency to throat complaints. In quinsy, moreover, suppuration generally takes place, and the sudden discharge of pus is accompanied by a speedy relief of all the symptoms. In false diphtheria this mode of termination does not generally occur. The reasons for thinking that this disease is not a mild form of true diphtheria or an erysipelatous affection of the throat are then given, although, if Dr. Thorne Thorne's theory as to the evolution of infective properties be adopted, the disease might possibly be regarded as originating in erysipelas.

The Battle of the Ligatures.

Mr. C. G. Wheelhouse said, in the address in surgery, before the British Medical Association, on this subject—

During the last few years, I have been watching carefully and curiously the efforts that have been made to adapt the material of which ligatures are made, and to harmonize their necessary presence in wounds with the requirements of antiseptic surgery.

First, I have noted that various materials, elastic threads, catgut, horsehair, jute fibre, and silk of different kinds, all carbolized, of course, have, one after another, been employed. Secondly, the methods of their application have been almost as varied as the material of their structure; some surgeons have inclined simply to close the arteries without wounding their coats; and some, as of old, to cut into these. One will cut off one end only of the ligature, while another will take away both and leave the knot to be dealt with by absorption.

The conclusion at which I have arrived is that, as regards the whole subject, we are, for the moment, off the track, and are erring from true principles. I hold that the laws laid down by Jones as long ago as 1805, and afterward affirmed and substantiated by the late Mr. Hodgson, based as they were upon the safe ground of exhaustive experimental research, are as true now as they were when first promulgated, viz., that the only safe way of securing an artery is fairly to divide the inner and middle coats of the vessels, and that the only ligature to be trusted to do this efficiently is a well made firmly twisted round cord of silk; that elastic threads, after dividing the coats, if they do so at all, lose their elasticity, yield when they should hold on firmly, and thus permit the efflux of blood; that catgut softens too readily, bursts or slips, and is thus unsafe; that silk ligatures, when cut off at both ends, fail to become absorbed, and become prolific sources of after mischief; and that horsehair fails not only to be absorbed, but acts as a source of direct irritation from first to last. With both these two last, when cut short, I have seen wounds heal perfectly, and all seem well; but later on small abscesses have formed in various parts of their track, and from each of these, when they have given way, I have had to remove the unabsorbed knots and minute circlets of ligature before they have finally become firm and sound.

Epidemics of Contagious Pneumonia.

The *Lancet*, August 24th, says:—

Epidemics of pneumonia have been described from time to time, chiefly on the Continent, and an account of recent outbreaks, having almost an epidemic form, which occurred at Moringen, in Hanover, has been given by Dr. Kühn. In this place he has more than once observed pneumonia to have an epidemic character, and on one occasion it broke out in the jail, when overfilled. All other conditions being favorable—position, soil, drainage, ventilation, drinking water, clothing, and food—the cause of the outbreak appeared to be the impurity of the air of the cells. The individual cases presented the aspect of a well-marked infectious disease, with much prostration, a considerable enlargement of the spleen, albuminuria, and, in two-thirds of the cases, diarrhœa. It is notable that the

disease did not begin, as in ordinary acute pneumonia, with a sudden onset and rigor, but was ushered in by four or eight days of prodromal symptoms. The pyrexia came on usually without an initial rigor, and ran a severe course. The pneumonic consolidation was recognizable usually on the third or fourth day of the fever, was frequently seated in the upper lobes, and exhibited a marked tendency to migrate. Often it was accompanied by inflammation of the serious membranes; pleurisy was almost constant; in one-fourth of the cases there was pericarditis; and of forty-five cases well-marked meningitis was present in five. Angina and stomatitis were not unfrequent accompaniments. The temperature sometimes attained a height of 107°, and began to remit on the fifth to the seventh day. Post mortem examination showed fatty degeneration of the heart, acute swelling of the spleen to three times the normal size, and a parenchymatous nephritis. Frequently the intestinal follicles were swollen. The disease was distinctly infectious. The attendants of the institution were affected, and the disease was conveyed by visitors to other persons who did not come near the prison or its inmates. In one epidemic Kühn observed eighty-three, and in another seventy cases. In each epidemic abortive attacks of the disease were also observed. He urges that this form of pneumonia must be distinguished from the genuine croupous pneumonia, and that its character approximates it to typhoid disease; and he suggests that possibly it may be due to the same poison as typhoid, modified by some unknown conditions—a sport, as Dr. Roberts would put it, of the typhoid germ.

Precautions in Cataract Operations.

In an article in the New York *Medical Journal*, on cerebral complications in cataract, Dr. J. S. Fernandez reaches the following practical conclusions:—

1. Persons of advanced age, or in a state of marked senility, should not have one eye operated on while retaining vision in the other.

2. In cases of blindness from cataract, no matter how old the patient, the operation should be performed, even at the risk of subsequent cerebral manifestations, inasmuch as these very phenomena may occur from the absence of sight resulting from non interference.

3. To avoid the occurrence of such cerebral manifestations, due in the majority of instances to moral impression, patients should be surrounded with every comfort before and after the operation.

4. These cerebral disorders are also observed in practice independently of the operation for cataract; but this fact makes their recognition no less important, inasmuch as we may easily admit that this operative procedure may play an important *rôle* in exciting or avoiding them.

5. Delirium after the operation for cataract may be produced by atropine, either by its absorption through the lachrymal ducts, which has occurred; by the solution dropping into the mouth; or by its being swallowed through mistake.

On Baby Foods.

Dr. Benjamin Edson talks in this strain about these popular articles, in the *Proceedings of the King's County Medical Society*:—

Peculiar malignity seems to have been manifested in the "murder of the innocents" through the multitude of "Baby Foods" thrust before the public, by the liberal display of catch pictures and printers' ink; each accompanied with the inevitable certificate of analysis by Prof. Quidproquo, vouching for the presence of everything essential to nutrition and the absence of anything deleterious. How many young lives have been sacrificed in demonstrating the utter worthlessness of scores of these preparations, not even the mathematical ability of the registrar of vital statistics can accurately determine. Of course I do not presume to intimate that these preparations are all worthless; but when the intelligent advocate of any one of them proceeds with deliberate coolness to practically dissect the claims, and demonstrate the comparative, if not the utter, worthlessness of all but his, the inquiring mind is led to suspect whether there may not be considerable truth in what all these parties say of each other. It is to be hoped, if not expected, that ere long there will be a healthful reaction in regard to the assumed need of *aids* to digestion; and that, as regards "Baby Foods," the greater portion of them will, in due time, be consigned to merited oblivion.

Peripheral Hysteria.

Dr. Lasègue, in a recent volume, applies this name to a class of hysterical affections. He gives as his first example of "peripheral hysteria" the case of a girl, fourteen years old, who, having suffered for a few hours from epiphora and some redness of the eyelids after a playmate had thrown some sand into one of her eyes, awoke the next morning with a spasm of the eyelids on that side, which rendered it impossible for her to open that eye; and it remained closed during four months, notwithstanding various remedies were tried. At the end of that time the spasm ceased suddenly one night, and never returned.

Dr. Lasègue considers that the irritation produced by the sand was no doubt the immediate cause of the spasm, but cannot be regarded as adequate to account for its long duration, which he looks upon as a hysterical phenomenon; and his view is confirmed by the fact that the patient became afterward the subject of various hysterical manifestations, although previously to the conjunctivitis she had been free from anything of the kind.

Several other cases are brought forward as examples of "peripheral hysteria," provoked by some local external cause. One of Dr.

Lasègue's patients, whose voice and singing were much admired, suffered for nearly two years from complete extinction of voice, and this came on during her convalescence from a very slight attack of bronchitis, which had not affected the voice, or but very little. Another, after an attack of indigestion, fearing to bring on the pain again, refused to touch either food or drink for twenty-four hours; and when, at the end of that time, she attempted to drink a cupful of milk, the whole came back, evidently in consequence of a constriction of the pharynx or œsophagus. This constriction lasted for some weeks, and even after it ceased the spasm would return occasionally. Space will not allow us to enumerate the many other examples of peripheral hysteria cited in Dr. Lasègue's interesting paper. He concludes by saying that it is evident there are certain subjects in whom the slightest traumatic irritation may determine a spasm of exceptional obstinacy. Such spasms he would designate rather by the name of *hysteroid* than *hysterical*. If they are found in certain cases to be merely the precursors or successors of the ordinary hysterical "attacks", they may also be, for some years, at any rate, the only manifestations of the disease.

Reviews and Book Notices.

NOTES ON CURRENT MEDICAL LITERATURE.

——The *Revista Mensual Medico-Quirurgica* is the title of a medical journal, in the Spanish language, commenced in New York city by Dr. Antonio de Tejada. It is an octavo, of 16 pages, to appear monthly at $2.00 a year (address 237 Fifth avenue). The first number contains an extract from the Edinburgh *Medical Journal*, on Heaton's operation for hernia, and a paper by Dr. Dagnino, of Caracas, on yellow fever, which latter is also translated into English by the editor. The venture promises "as well as could be expected."

——The *Ecole de Médecine et Chirurgie de Montreal* graduated twenty-five last May. The whole instruction is in French, and from the circular of the school which is before us, and the character of the French medical journal published in Canada, we derive a high opinion of the French practitioners of the Dominion.

——After a suspension of some length, the series of American Clinical Lectures starts with one by Dr. A. Vanderveer, on the operation for closure of the cleft of the hard and soft palate. It is well printed and illustrated, and, of course, is instructive concerning the operation for this deformity. For sale by G. P. Putnam's Sons, 182 Fifth Avenue, N. Y. Price 25 cents.

——Dr. Horatio R. Storer has published, in reprint, his paper on the Treatment of Strumous Disease, by what he calls the Solfatara Method, that is, by the natural sulphur exhalations around Mount Vesuvius. His pamphlet gives considerable information about the health resorts of southern Italy. To be had of the author, Newport, R. I.

——Lindsay & Blakiston's Physicians' Visiting List for 1879 is now ready. It is a neat and convenient list, of considerable popularity, and by many esteemed very highly.

BOOK NOTICES.

A Monograph on the Treatment of Diphtheria, Based upon a New Etiology and Pathology. By William C. Reiter, A. M., M. D. Philadelphia, J. B. Lippincott & Co., 1878. 12mo, pp. 48.

A very few words will serve to give the views this little work is written to advocate. The new pathology of diphtheria is that it "consists of excess of fibrin in the blood;" the treatment, which is not so new, is large doses of calomel, colossal, heroic doses, as, for instance, half an ounce in less than three days, to a child three years old!

The calomel treatment, we say, is not new. Dr. Hillier, in his *Treatise on Diseases of Children*, published ten years ago, spoke of it then as a plan with which he was quite familiar, as, indeed, one almost obsolete. He adds that he is not prepared to give it up, and that in some of the worst cases he ever saw, recovery plainly followed the use of the calomel. His dose was half a grain to a grain every two or three hours; Dr. Reiter gives five to ten times this much, but the object of both was to bring about well-marked greenish stools. Dr. Duer, of this city, years ago testified to the benefit of the "calomel and soda" treatment of diphtheria.

Dr. Reiter does not seem to have read much of the literature of the disease, or he would not have put the word "new" so prominently on his title page. The treatment he advocates is mentioned by many writers beside those we have quoted; it is, in certain cases, a good one, but it is as far from a specific treatment as any of the score of other plans proposed to combat this dreaded malady.

THE

Medical and Surgical Reporter.

A WEEKLY JOURNAL,

Issued every Saturday.

D. G. BRINTON, M.D., EDITOR.

The terms of subscription to the serial publications of this office are as follows, payable in advance:—

Med. and Surg. Reporter (weekly), a year,	**$5.00**
Half-Yearly Compendium of Med. Science,	**2.50**
Reporter and Compendium, - - -	**7.00**
Physician's Daily Pocket Record, - -	**1.50**
Reporter and Pocket Record, - - -	**6.25**
Reporter, Comp. and Pocket Record, - -	**8.25**

For advertising terms address the office.

Marriages, Deaths, and Personals are inserted free of charge.

All letters should be addressed, and all checks and postal orders drawn to order of

D. G. BRINTON, M.D.,
115 South Seventh Street,
PHILADELPHIA, PA.

1879.

PREMIUMS FOR NEW SUBSCRIBERS.

Special Offer to Our Old Subscribers.

From and after October 1st, any new subscriber will receive the REPORTER

15 MONTHS FOR $5.00,

to wit, from Oct. 1st, 1878, to Dec. 31st, 1879.

To enlist the interests of our Old Subscribers in the extension of our circulation, we offer, if they will send us, along with their own renewals, the amount for ONE new subscriber for one year (who will be entitled to the 15 months mentioned) to send them either (1) the HALF-YEARLY COMPENDIUM, for 1879; or (2), the PHYSICIAN'S POCKET RECORD, for 1879; or any of our other publications, to the amount of $2.50. These publications will include the following works now in press:—

GOODELL. Lessons in Gynecology.
LANDOLT. Manual of Examination of the Eyes.
SAYRE. Organic Materia Medica.

Besides, already published, Napheys' *Surgical Therapeutics*, Napheys' *Medical Therapeutics*, Dobell *On Cough and Consumption*, Bernard & Huette's *Operative Surgery*, Butler's *Medical Directory of the United States, etc., etc.*

THE GRADUAL EXTENSION OF GENERAL PARALYSIS.

A strange and formidable disease is stealing upon this country, a disease whose march is slow, but sure, whose grasp is fatal to mind and body, whose touch defiles as well as destroys. This terrible disease is general paresis, or paralysis. Thirty years ago it was hardly or at all known in this country; even yet a local case of it has probably not yet occurred in Louisville, in St. Louis, or in New Orleans. On the other hand, in Boston, New York, and Philadelphia it is far from uncommon. In England it has long been known, while in Germany and France it is frequent.

Its exciting causes and its early symptoms are alike obscure. Some attribute it to excessive sexual indulgence or to intemperance. True it is that these depravities seem often to precede it; but it is the opinion of the most expert that they are symptoms of the early cerebral degeneration, not a cause of it. Bad temper, irascibility, profanity, and a want of moral balance also attend its prodromic stage. So also does an inclination to theft. Dr. D. M. MCCULLOUGH, Superintendent of the Monmouth Asylum, Wales, speaks of this in his last report. He says—

"During the past year two patients were admitted, laboring under this disease—paralysis of the insane—who had been convicted of larceny, and who came to the asylum in a debilitated state, as a result of prison diet and discipline. Inquiry into the history of these cases left no doubt that the disease existed at the time the articles were stolen, and in one of the cases certainly for months before. It is well for magistrates to bear in mind that such cases occur, though I can understand their feeling a difficulty in discriminating them. In general, it will be found that a change of character and habits has preceded the stealing, and that the stealing is usually irrational and without any regard to the probability of discovery."

To this stage follow the delusions of grandeur. The patient has married a harem of beauties; he owns a dozen bonanzas; he is ruler of men, and his word is law over kingdoms. Ask him of his health, and the palsied wretch will tell you he never was better in his life, and is as strong as a Samson.

This fearful malady strikes men in their prime, about forty-five to fifty years of age, and often singles out as its victims those of vigorous body and active mind. Its early signs do not even suggest the existence of a serious morbid process. The slight paralysis of the muscles of the lips, which is one of the first hints of its approach, tends to bestow on the face a benevolent and kindly expression, well calculated to deceive the observer.

Dr. Jung, of Leubus, in Germany, tells us that of late years this disease has, among women of the lower orders, considerably increased in frequency. This increase is only a further expression of the increasing misery and decreasing power of resistance (*widerstandskraft*) among these classes. The disease generally makes its appearance at the time of the menopause, whether this be normal or premature; it is, in fact, a disease of the climacteric. An individual weakness of the nervous system (either congenital or acquired) and a soil prepared or fitted for vaso-motor disturbance are necessary to the development of the disease; heredity also plays an important part in its causation. The affection occurs in women, on an average, ten years later in life than in men; *i. e.*, usually between thirty-five and forty-five. It lasts on the average, from one to two years; its course is seldom stormy and rapid, but rather of a chronic character. In the nature of the delusions no difference exists from those observed in men of the same social position.

Few complaints deserve more earnest study; and it is not one to be relegated to the specialist in mental disease; for its earliest manifestation, the stage when, if ever, there are some slight hopes of subduing it, is wholly within the scope of the general practitioner. By the time the patient is so far gone as to require sending to an asylum, his condition is absolutely hopeless.

A description of this disease, from the hand of a master, will shortly be presented in these columns.

Notes and Comments.

Preliminary Medical Courses.

The John Hopkins University, of Baltimore, proposes to organize, at the commencement of the session 1878–79, a course of instruction preliminary to the study of medicine. This course will have the object of giving the student an extended education, but one rather scientific than literary, and including a thorough knowledge of the structure and functions of the human body in health. At its completion the student will be ready to enter upon his medical studies proper. The course will extend over three years, and will include the following: —

First Year.—Experimental Physics, Elementary Mechanics, Chemistry, French and German, Drawing.

Second Year.—Chemistry, General Biology, Elementary Course in Comparative Anatomy and Zoölogy, Elementary Course in Physiology and Histology, Human Osteology and the Anatomy of the Ligaments and Joints, Logic.

Third Year.—Human Anatomy, Advanced Course in Physiology and Histology, Elements of Embryology, Psychology.

This scheme has met with considerable praise in some quarters. But all that can be said about it is not in its praise. There is much in favor of the doctrine that what is called a "liberal" education, one devoted to "the humanities" in the old sense of the word, is the very best preparation for any of the professions. To sacrifice this to a special technical course, warped and directed to any one business from boyhood, is, in the opinion of some educators, and those not the least capable ones, a grave and serious error, destructive to that wide intellectual sympathy known as true culture. The self-made man, the man of one idea, is, perhaps, the highest type of individual energy, but he is very far from being the noblest ideal of the race; and we like these ideals in our profession, and could stand more than we have of them.

Theoretic Treatment of Fever.

The present accepted theory among our German friends—and unfortunately they lead by the nose a great many non-German disciples —is that the main fact in fever is the increase of bodily temperature; and that, therefore, the main indication is to reduce the temperature.

Senator, of Berlin, and Buss, of Basel, have lately been reiterating this. The latter has published a book of 250 pages on the subject, this year, largely devoted to "the antipyretic methods." These may be briefly summed up as cold water externally, salicylic and cresotinic acids, to lessen existing temperature, and quinine and alcohol, to diminish the production of heat. He thinks a judicious combination of all these will prove "extraordinarily efficacious."

This deductive plan of treatment is interesting to read about, but there is large room for doubt as to whether the bodily temperature is the main fact of fever. It is very far from proven, and there is a good deal to say against it; and the antipyretic treatment has already been shown to have very large limitations. Since the days of Niemeyer, it is the present writer's opinion that German practice has decidely retrograded.

Copyrighted Medicines.

The question has been put to us a number of times, whether a copyrighted and registered trade name of a medicinal preparation can be taken out by a physician without violating the professional proprieties. The general principle, which should govern in such matters, is that no step is justifiable which narrows the benefits of a valuable discovery; and none is proper which gives to a preparation a fame it does not deserve. As to the application of this doctrine in these instances, we shall be glad to hear some expression of views from those of our readers interested in such topics.

Treating the Infant in Utero.

Numerous experiments have been recorded by German physicians, demonstrating the possibility of certain substances, especially iodine, chloroform, and salicylic acid, when administered to the mother, finding their way into the blood or secretions of the fœtus in utero. Professor Gusserow, of Strasburg, seems to have examined with great care the subject of the interchanges between the fœtus and the mother. His experiments, about eight in number, on the lower animals did not yield any positive results, which may probably be accounted for by the comparatively short time the parent was subjected to the action of the medicine. In fourteen instances he gave patients pretty large doses of iodide of potassium for some days or weeks before delivery; and then he tested for iodine in the liquor amnii and the fetal urine, when these could be obtained. Specimens of the urine were got in only eleven of these fœtuses, and five of the specimens contained iodine, while in six of them it was absent. The length of time the mother had been taking the medicine seemed to influence the result of the experiment. Benicke reports giving salicylic acid to twenty-five women during labor, and found it in the urine of the children immediately after birth.

The Function of Intelligence in Brutes.

This was the topic of a paper by Mr. Romanes, before the last meeting of the British Association for the Advancement of Science. He illustrated his remarks by quoting incidents which he had observed in connection with his own dogs, and described at some length observations which had been made on neglected deaf mutes. His general conclusion is that the only difference in kind between animal intelligence and human intelligence consists in this—that animal intelligence is unable to elaborate that class of abstract ideas the formation of which depends on the faculty of speech. In other words, animals are quite as able to form abstract ideas as we are, if under abstract ideas we include general ideas of qualities which are so far simple as not to require to be fixed in our thoughts by names.

Relative Dangers of Version and Forceps.

A Belgian writer, Dr. Kuborn, has examined the recent statistics of the Russian hospitals, to determine the relative dangers to the infant of deliveries by version and by the forceps. He has collected the respectable number of 7100 cases of labor where one or the other method was used. The results are in favor of the forceps. They showed a mortality of but five per cent., while version was followed by the death of the infant in eight per cent. of the cases.

Sulphocarbolate of Quinia in Diphtheria.

From an experience with this drug in his practice, an Italian physician, Dr. Marchionneschi, thinks he can claim for it a special value in the treatment of diphtheria. The particulars of its administration are not given in the *Journal des Sciences Medicales de Louvain*, from which we borrow the statement.

Correspondence.

FOREIGN.

Brief Notes From London.

Ed. Med. and Surg. Reporter:—

The British Medical Association held its meeting in Bath this year (Aug. 5th, 1878), with an attendance which I was informed was about an average one in numbers, and was about equal to an average meeting of the American Medical Association.

The general business of the Association is transacted in the great body of the meeting; the professional and scientific papers are all read in the Sections, as with us.

The delegation from the American Medical Association present consisted of Dr. J. Marion Sims, of N. Y., Professors Auger and Cleaver, of Iowa, Professor W. H. Pancoast, of Philadelphia, and your correspondent.

Of the addresses before the Association, that of Mr. Wheelhouse, of Leeds, on Surgery, was probably the event of the meeting, and was characterized by its clear and able history of the progress in surgery, and the appliances and inventions which have been made in this branch of the healing art.

There was possibly just a few oversights in giving credit to American surgery; for example, when the high tribute to the operation of ovariotomy was spoken, the name of Spencer Wells *was* mentioned, and deservedly too, but the illustrious name of McDowell, the father of the operation, *was not* mentioned. It seemed to me, as an American, that while names were being honored, it should be understood that medicine and surgery is broader than any mere country, and that in honoring the name of McDowell, as Spencer Wells himself does in his book, one can but do honor to his own manhood; and in failing to do so one commits an oversight, to say the least. Mr. Wheelhouse is well informed in surgery and its history.

I was, to-day, shown a case by Mr. Thomas Smith, of St. Bartholomew's Hospital, of extrophy of the bladder, in which he had conceived and performed an operation for its relief, by cutting down, as for the operation for artificial anus, and seizing the left ureter, detaching it from the bladder and making a small incision into the colon, united it there by means of four carbolized catgut sutures, so as to drain the urine into the colon; this was accomplished temporarily by the operation, as the urine came away with the fæces for several days, without inconvenience, but the attachment of the ureter and colon failed to result in confirmed union, owing, as Mr. Smith believes, to the use of the catgut instead of the wire suture. Only one ureter was operated on, fortunately, and what is to become of, and what harm the urine secreted by the left kidney will cause, is a question that time will soon develop; meanwhile the patient, a lad about seven years old, is in a decidedly unfavorable condition.

At Guy's Hospital the surgery is, as usual, interesting, and every operating day brings with it a large number of cases of an instructive nature.

One more case of malignant pustule has been treated since my last writing.

A short time since I saw Mr. Howes operate for the relief of stricture with false passage into the bladder, by means of supra-pubic cystotomy, the bladder being first fully injected, to carry it sufficiently high to enable the operator to avoid the peritoneum, and then entered through the incision in median line, and a sound passed from the internal extremity of the urethra outward, to the seat of an incision made in a former operation of perineal urethrotomy. The case, I am informed, has been successful.

This gentleman is a bold and skillful operator, and has recently had three cases of cancerous disease, requiring the operation of gastrotomy, two of which have been successful in affording a means of nourishing the patients, who are still alive. The third case was unsuccessful, the patient dying on the second or third day.

A case of gastrotomy is reported from Germany, which is highly successful, the patient being able to chew food and insalivate it, then deposit it in a tube below the mouth, which conveys it directly to the stomach through the artificial opening in the epigastric region, the tube and silver plate attachment being held in place by means of a belt.

The operation for straightening knock knees (genu valgus) and curved thigh and leg bones, by means of artificial fracture, either by the saw or chisel, is extensively performed here, and certainly there is plenty of material, as the percentage of rickety children is very great in London, among the poorer classes. In these operations Mr. Barwell, of the Charing Cross, and Mr. Davy, of the Westminster Hospital, prefer and use the chisel for dividing the bone.

The gentlemen at Guy's and St. Bartholomew's whom I have seen operate for these deformities use the saw, washing out the wound with carbolized water, to remove the bone finely divided by the saw. For neatness and ability to make a more subcutaneous operation, the chisel seems to be the instrument, leaving, as it does, only a small superficial wound.

The operations at the Royal London Hospital, Moorfields, every morning, are numerous, and in the main well performed. The extent of the material is very great, this being probably one of the largest, if not the largest, eye clinic in the world, their in-patients last year numbering over two thousand, their new out-patients over twenty thousand, and the whole number of patients seen over one hundred thousand. It is a sight truly never to be forgotten, to see the vast throng of blind, half blind and weak-sighted poor that flock to Moorfields to avail themselves of the advice of such masters in the opthalmological art as Mr.

Solberg Wells, Lawson, and their colleagues, some of whom, with their large corps of assistants, are to be found there every morning.

Yours truly, W. H. Daly, M.D.
London, England.

DOMESTIC.

Some Notes From Practice.

Ed. Med. and Surg. Reporter:—

I have jotted down some points of experience which I think are worth preserving. Let your readers take them at their value:—

1. Hydrobromic acid is a good brain and nerve sedative in acute melancholia (dose ʒj to syr. simp. ʒss), but after a week's use disorders digestion. It is too disagreeable to administer to females.

2. Tannic acid, in powdered form, applied to wounds constituting compound fractures, will convert them, when the wounds are not extensive or torn, into simple fractures, by rapidly forming a cicatrix, and thus save from one-third to one-half the usual time of healing.

3. An ounce or two of oil of turpentine in half a pint or a pint of tepid menstruum, arrests, like a charm, intestinal hemorrhage, even when patients seem moribund.

4. There is a form of bilious puerperal fever in which, by means of severe diarrhœa, nature effects a cure. To arrest this is bad practice and uniformly fatal.

5. I have reduced gradually to normal frequency, and thus saved the patient, a pulse in puerperal fever that ran 150 beats per minute, by half-drop doses Norwood's tincture veratrum viride, with one grain quinine, administered every two, three and four hours.

6. I recently examined several patients in Brigham Hall Asylum, by "cranial percussion," with a view to "cerebral localization." In a respectable percentage I succeeded. In one epileptic lady, whose skull was broken many years ago, I was enabled to point out distinctly the seat of fracture.

7. In summer diarrhœa of children (attention to all other hygienic conditions understood) the following treatment has almost worked miracles in my hands:—

℞.	Calomel,	gr. j
	Soda bicarb.,	grs. vj
	Ft. chart No. vi.	

Sig.—One every hour until used, then one teaspoonful of castor oil, after which—

℞.	Ext. hæmatoxyli,	grs. xvj	
	Tr. kino,	ʒss	
	Syr. simplicis,		
	Aq. menthæ pip.,	āā ʒj.	M.

Sig.—According to age ʒss to ʒj, twice daily.

8. Pleasant, odorous substances are of greater value, curative and preventive, than the faculty accredit them.

A form of administering iron, more natural, convenient and efficacious than hypodermically, a form in which it will be borne, liked and appropriated by every patient in whom it is indicated, from the infant to the aged, is as follows:—

℞.	Oil of wintergreen,	gtts. xvj
	Alcohol,	ʒx
	Whisky,	ʒxij
	Shake and add	
	Water,	ʒxxxij
	Sugar,	℔j
	Fl. ext. gentian,	ʒj
	Iron, pyrophosp. (or) am. cit.,	ʒj¾
	Shake well.	

Sig.—A teaspoonful twice daily, before meals, in ʒss water.

P. S.—All these are, so far as I know, original, save 7 and 8; 8 is very ancient; part of 7 I got from Vogel, part from West.

R. J. Hutton, M.D.

Partial Placenta Prævia.

Ed. Med. and Surg. Reporter:—

Mrs. Brosner, aged twenty-five, multipara. Previous labors normal, speedy, and comparatively easy. Duration of this gestation ten lunar months. Has had numerous slight hemorrhages within the last two months. While standing at the hydrant, she was taken with a severe hemorrhage, which continued about half an hour, during which time I arrived. She had fainted once and been restored before I got there. I found her bleeding profusely. Hands and feet cool; considerable emesis; pulse very weak and rapid. I at once raised the foot of the bed, then made an examination per vaginam; found the os rather thick, and dilated to about the size of a twenty-five cent piece; I could feel a pulpy mass on the upper lip. I at once passed my finger between this mass and the uterus, clearing the "zone of danger." A little gush of blood followed, and then hemorrhage ceased. Labor pains were very slight and far between, and growing less. On consultation, it was thought the patient could not live through a natural labor, and that the os had better be dilated as soon as possible, then turn and deliver. Some delay was caused by having to wait for a colpeurynter; during this time the pains ceased. About twenty minutes after introducing the colpeurynter, labor pains again began, at first weak, but gradually getting stronger. I gave her thirty drops of whisky hypodermically, every half hour from the first. One hour after introducing colpeurynter, the os was fully dilated and labor pains quite frequent, but not very effective; head engaged. I sent for forceps. During the absence of the messenger I passed my arms around the nearly exhausted woman, and with each pain I produced all the pressure I could upon the upper border of the abdominal tumor, by squeezing her. I kept this up until the child was born, without instrumental interference. There was slight post-partum hemorrhage, which was controlled by introducing ice within the body of the uterus.

I ordered one drachm spiritus frumenti every hour, all the beef juice and milk she could take, and—

℞. Cinchonidiæ sulph., ℥j
Tr. ferri mur., ℥j
Aquæ, q.s. ft. ℥iij. M.

Sig.—Take one drachm every four hours.

She rapidly recovered. Two points in the above treatment I think deserve especial notice. 1. The clearing of the "zone of danger," by separating the placenta from the uterus as far as the finger can reach. 2. The use of the colpeurynter to dilate the os, and also thus induce labor pains. WINFRED WYLIE, M.D.
Brooklyn, N. Y.

Fracture of the Larynx.

ED. MED. AND SURG. REPORTER:—

Wm. A. Walker, age fifty-one years, laborer, in good health, while feeding a team, at noon, August 22d, 1878, was struck by the heel of a mule, in the throat, producing a complicated fracture of the larynx. Was seen an hour afterward, and found him vomiting blood, which was flowing from seat of injury. Respiration difficult, attended with cough. Neck and dependent portions were emphysematous. Could remain in no position except sitting or standing, with head and shoulders bent forward. Unable to swallow anything or to speak distinctly. Applied ice, externally and internally, with anodynes. By eight P.M. was resting easier, spoke plainer, and respiration better. On day and night of 23d remained in about the same condition, with the exception of growing weaker, from loss of sleep and nourishment. At six A.M. on the 24th a recurrence of dyspnœa took place, and proved fatal, fifty-two hours from time of injury. Autopsy showed two rings of the cricoid cartilage fractured; upper ring in three places; literally crushed, from the anterior backward. Larynx above and below seat of injury did not show evidence of much inflammation. The operation of tracheotomy, no doubt, would have given him a good chance for recovery. Tubes and instruments were at hand, but he would not permit the operation to be performed.
Catlin, Ill. A. M. F. MCCOLLOUGH, M.D.

—A young Italian surgeon, of high reputation, committed suicide last month, in a fit of professional pique. He was a delegate to the Italian Medical Congress, sitting at Pisa. He had worked hard as one of the organizing committee, and was the responsible superintendent of the exhibition of medico-chirurgical instruments. He had just been worsted in an animated discussion in one of the sections, after which he leaped into a cab, purchased a revolver, and made way with himself. His father commited suicide in an equally unaccountable way.

NEWS AND MISCELLANY.

Report of Epidemics for Week Ended October 19th, 1878.

NEW ORLEANS, LA.—During the week ended yesterday afternoon there were 976 cases of yellow fever and 235 deaths, of which eighty-nine cases and thirty-six deaths occurred in the last twenty-four hours reported. Total cases 12,182, deaths 3635.

No cases of yellow fever at PORT EADS or SOUTH WEST PASS during the past week.

MORGAN CITY, LA.—There were 16 deaths from yellow fever during the last week. The number of cases was incorrectly given for last report. Total cases to date reported to be about 432, total deaths 87.

MOBILE, ALA.—For the week ended yesterday noon there were 56 cases of yellow fever and 12 deaths. Total cases 93, deaths 32.

DECATUR, ALA.—73 cases of yellow fever and 12 deaths during the week ended yesterday. Total cases 155, deaths 27.

OCEAN SPRINGS, MISS.—During the week ended yesterday noon, there were 25 cases of yellow fever and one death. Total cases 128, deaths 29.

PASS CHRISTIAN, MISS.—There were 32 new cases of yellow fever and four deaths for the week ended yesterday. Total cases 126, deaths 13.

BAY ST. LOUIS, MISS.—During the week ended yesterday evening there were 52 cases of yellow fever and 12 deaths. Total cases 338, deaths 68. The fever is on the decrease for want of material. The cases occurring now are more malignant.

FRIAR'S POINT, MISS.—Eight cases of yellow fever and two deaths during the week ended yesterday evening. Total cases 21, deaths 6.

CRYSTAL SPRINGS, MISS.—The yellow fever is confined principally to the country around Dry Grove and Lebanon Church. No case has yet occurred within the limits of the village of Crystal Springs. During the past week there were 31 cases and 8 deaths. Total cases 112, deaths 44.

BATON ROUGE, MISS.—During the week ended yesterday at nine A.M., there were 301 cases of yellow fever and 16 deaths. Total cases 2170, deaths 129.

PASCAGOULA, MISS.—Total cases of yellow fever at quarantine to October 12th, 5, deaths 2.

SCRANTON MISS.—Total cases of yellow fever to October 12th, 5, deaths 3.

VICKSBURG, MISS.—For the past week there were 32 deaths from yellow fever in the city, and 64 in the county of Warren, outside of the city. Total deaths in city and county 1074.

HOLLY SPRINGS, MISS.—Total number of cases of yellow fever to yesterday evening 1117, deaths 285. About 200 cases under treatment. The fever is spreading into the surrounding country. A slight frost occurred in the night of October 16th.

GRENADA, MISS.—For the week ended yester-

day evening there were 4 new cases of yellow fever and 2 deaths. The fever is spreading into the country. In fourteen families, containing 97 unacclimated persons, there occurred 41 cases and 2 deaths during the past week. Total deaths in Grenada and adjacent country 327.

Bolton, Miss.—Total cases of yellow fever to yesterday evening 117, deaths 31. The first case occurred August 12th.

Hernando, Miss.—During the week ended yesterday evening there were 50 cases of yellow fever and 23 deaths. Several of the cases from one to three miles in the country. Total cases 133, deaths 56. Slight frost was observed this morning.

Memphis, Tenn.—For the week ended the evening of the 17th inst., there were 108 deaths from yellow fever. Total deaths 2892. Dr. Thornton, in charge of the Marine Hospital Service at Memphis, has the fever.

Chattanooga, Tenn.—101 new cases of yellow fever, and 30 deaths, for the week ended at 4 o'clock, p. m., yesterday.

Paris, Tenn.—No cases of yellow fever or deaths for the week ended yesterday afternoon. A frost has occurred, and no further trouble is expected.

Milan, Tenn.—The first case of yellow fever, a refugee, occurred August 26th. The first case among inhabitants, October 12th. Total cases to yesterday 3, deaths 3.

Cairo, Ill.—No report of cases or deaths received. Assistant Surgeon Roswell Waldo, of the Marine Hospital Service, died of the fever at his post yesterday.

St. Louis, Mo.—4 deaths from yellow fever at quarantine during the past week.

Louisville, Ky.—For the week ended yesterday there were 15 new cases of yellow fever and 5 deaths. Of these numbers, 14 cases and 5 deaths were among the inhabitants in the locality before described. Total cases 127, deaths 54, of which 89 cases and 34 deaths were among refugees.

Key West, Fla.—No new cases of yellow fever during the week; one death occurred the 12th instant. Total cases 37, deaths 17.

No report received from the following places, where the yellow fever exists:—Plaquemine, La., Port Gibson, Miss., Mississippi City, Miss., Greenville, Miss., Spring Hill, Miss., Water Valley, Miss., Biloxi, Miss., Canton, Miss., Brownsville, Tenn., Grand Junction, Tenn., Hickman, Ky., and Gallipolis, Ohio.

Hot Springs and Hot Tempers.

Among the many wonderful properties of the Arkansas Hot Springs must be that of making equally hot the tempers of residents. Of all places in the United States, we know of none where the local physicians seem more ready to flay each other at the slightest notice. Then, at the last session of Congress a mysterious body, called the Hot Springs Commission, set the press of the country and the House of Representatives by the ears because they did not bag a lot of the public money. Finally, the contagion has seized even the patients, and if a small-sized civil war does not make things lively for the residents it will be because the demand of the United States Marshal for "troops" is promptly complied with by the Executive. Some of the patients, who are not so disagreeably affected as are some other patients, object, it seems, to the disagreeably affected patients bathing in a certain spring called the Rat hole. This is not because the Rat hole is immediately contiguous to the other springs, but because the volcanic formation is suspected of being sufficiently porous to permit the waters of the Rat hole to penetrate to the other springs, to their contamination. The people who have found comfort in bathing in the Rat hole object, for their part, to bathe anywhere else, and refuse to recognize the merits of efforts that have been made in their behalf by conducting the waters of the Rat hole to a distant point where there will be no occasion to apprehend any disagreeable consequences from it to the other patients. The Rat hole patients, in spite of their peculiarly disagreeable affections—or, perhaps, because of them—seem to be a particularly lively set of people, and they are standing up for what they assume to be their rights in such a vigorous fashion that the United States Marshal contends that he is unable to keep the peace unless he has "troops" to back him up. These springs had better be fenced in until we want to fire up for another war. Their source must be too near the favorite spot of Pluto's realm.

Cooking by the Sun.

Among the curiosities of the Paris Exhibition is an apparatus for using the heat of the sun for purposes of cooking. It is very simple, and is the invention of M. Mouchot, a French missionary. It consists of a deeply concave reflector, which admits of being always turned toward the sun. In the centre of this reflector is fixed a cylindrical glass vessel, upon which the sun's rays are directed by the containing reflector. In tropical climates, in subtropical climates, such as Algeria, and even in the south of France, it is found possible to prepare coffee, and even to cook meat, with this exceedingly simple machine, which, in one respect, the consumption of fuel, certainly eclipses all others.

Castor Oil Production in Illinois.

The people of some sections of Southern Illinois are now busy gathering their crop of castor beans, which, though a native of Asia, are successfully raised in that part of the country, St. Clair county alone yielding, it is said, about 300,000 gallons of the oil, of which there are several large manufactories in St. Louis.

The oil of Illinois is asserted to be fully equal to that produced in the Levant, in Spain, Provence, Brazil or the West Indies, and is steadily improving in quality. The ground is prepared

as for other crops, and the bean planted as corn is, with the exception that one bean is put into each hill, and at every fourth row a space is left for the passage of a wagon to gather the crop.

About twenty bushels to an acre is considered a fair yield, which begins in September. Commonly used for medicine, it will answer for lamps and machinery, and is often so employed. The streets of Lima are, or were very lately, lighted with castor oil, which also lubricates most of the mills on the sugar plantations of Peru. The raising of the bean and manufacture of the oil is a growing industry, and several firms in St. Louis have made themselves rich by it.

Belleville, Ill., capital of St. Clair county, is a centre of the bean product, and being but fourteen miles from St. Louis, the raw material is easily transported to that city, whence it is shipped to various places, most of the oil being consumed in the United States.

The Medical Corps of the Turkish Army.

In a book on the recent war, Dr. Lebovicz shows that the serious defects of this corps are a necessary result of the system on which the medical *personnel* of the Ottoman army is constituted, and that scarcely any improvement can be hoped for until its organization is radically reformed. The army surgeons are chiefly educated at the School of Medicine of Constantinople, at the expense of the State. In return, they are bound to give a certain number of years of service to the Government. The length of time that the courses of instruction last varies, as does also the number of Government pupils, according to the wants of the army and political circumstances. Hence, at the commencement of hostilities in 1876, a large number of pupils, who were very far from having completed their studies, were sent to do duty with bodies of troops or in the hospitals. Not having had any practical experience in the treatment of patients, they were frequently quite at a loss how to deal with the cases which fell under their care. Those who were sent to regiments were particularly to be pitied; being often detached and isolated with their respective battalions, deprived of the counsel of their superiors, they had to assume all the responsibility of the service, and to depend entirely upon themselves. As the author remarks, it makes one shudder to think of the lives which these unfortunate surgeons held in their keeping.

Longevity in England.

The mortality returns for England and Wales in the year 1876, which have recently been completed, record the death of 183 men and 409 women registered as 95 years old or upward when they died. Fourteen of the men had reached 100 or upward, and one was 106. Forty-three of the women had completed a century of life or more, and one, who died at Sedgefield, in Durham, was 108 years old. Their respective ages were: four men and twenty-one women, 100 years; two men and seven women, 101; five men and four women, 102; two men and three women, 103; two women, 104; three women, 105; one man and two women, 106; and one women, 108.

Items.

—A crematory has been opened this month in Gotha, Germany. The building is said to be tasteful, and supplied with several furnaces, numerous columbaria, etc.

—Dr. N. Wulfsberg, of Göttingen, has been experimenting with the intra-venous injection of milk, as recommended by Dr. Gaillard Thomas, of New York, but thinks it is much less efficient than transfusion of blood.

—In 1793 Philadelphia had about 40,000 inhabitants. When the yellow fever broke out in that year a fourth of them probably left. Yet the deaths from the disease numbered about 4000. In those days Dr. Rush's grand specific was "repeated bleedings."

—The great Swedish University of Upsala has a vacant professorship of anatomy which it cannot get anybody to fill, because there are no foreign savants in this department who understand the language. In former centuries no such difficulty was encountered, since university lectures were everywhere delivered in Latin, which the learned of all nations understood.

Personal.

—Dr. T. C. Rogers, of Harrington, was found dead in bed last week.

—Two medical editors have recently deceased, Dr. Fr. Gravell, editor of "*Gravell's Notizen*," and Dr. Laussedat, of Brussels, editor of "*L' Art Médical*."

—Dr. H. H. Muhlenberg and wife, of Reading, Pa., celebrated the twenty-fifth anniversary of their wedding a week or two since, at their home.

—Dr. Luke P. Blackburn has been one of the most faithful yellow fever physicians. With one voice the Kentucky papers declare that he must be the next Governor of their State.

MARRIAGES.

RULISON—NEWHOUSE.—At the Baptist Church, on the 2d instant, by Revs. Van Doren and Stevens, Elbert T. Rulison, M.D., and Libbie Newhouse, both of Bath-on-the-Hudson, N. Y.

INGERSOLL—CHAPIN.—On Wednesday, October 9th, 1878, by the Rev. S. S. Chapin, of Michigan, uncle of the bride, Edwards J. Ingersoll and Julie A., daughter of R. S. Chapin, M.D., all of New York.

MARCH—STEVENSON.—At Pittsfield, Mass., Oct. 3d, 1878, by Rev. Daniel March, D.D., Daniel March Jr., M.D., of Pittsburgh, Pa., and Miss Jennie H Stevenson, eldest daughter of the late John M Stevenson, of Cambridge, N. Y.

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

SAVORY & MOORE, 143 New Bond Street, London.

PARIS, 1867. 1868. 1872. 1873, VIENNA.

Prize Medal. Silver Medal. Gold Medal. Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Pharmacien, No. 40 Rue Bonaparte, Paris without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUCERA & CO., Agents,

NEW YORK.

TO PHYSICIANS.

THE scarcity and high prices of Cinchona barks and Sulphate of Quinia, and the prospect of only a slight reduction in these prices, makes the present a favorable opportunity of calling the attention of the profession to the *combination of all the bark alkaloids.*

Much attention has been given to this subject in Europe and India.

The growing appreciation by the medical profession of the United States of

CINCHO-QUININE

is due to the fact that it retains the important alkaloids IN COMBINATION, — a combination which in practice is *preferable to perfect isolation or separation* of these alkaloids.

In addition to its superior efficacy as a tonic and anti-periodic, it has the following advantages, which greatly increase its value to physicians : —

1st, *It exerts the full therapeutic influence of* Sulphate of Quinine, *in the same doses*, without oppressing the stomach, creating nausea, or producing cerebral distress, as the Sulphate of Quinine frequently does ; and it produces much less constitutional disturbance.

2d, It has the great advantage of being *nearly tasteless.* The bitter is very slight, and not unpleasant to the most sensitive, delicate woman or child.

3d, It is *less costly ;* the price will fluctuate with the rise and fall of barks, but will always be much less than the Sulphate of Quinine.

4th, It meets indications not met by that Salt.

The following well-known Analytical Chemists say : —

"UNIVERSITY OF PENNSYLVANIA, Jan. 22, 1875.
"I have tested CINCHO-QUININE, and have found it to contain *quinine, quinidine, cinchonine, cinchonidine.* F. A. GENTH,
Professor of Chemistry and Mineralogy."

"LABORATORY OF THE UNIVERSITY OF CHICAGO, Feb. 1, 1875.
"I hereby certify that I have made a chemical examination of the contents of a bottle of CINCHO-QUININE ; and by direction I made a qualitative examination for *quinine, quinidine,* and *cinchonine,* and hereby certify that I found these alkaloids in CINCHO-QUININE.
C. GILBERT WHEELER,
Professor of Chemistry."

"I have made a careful analysis of the contents of a bottle of your CINCHO-QUININE, and find it to contain *quinine, quinidine, cinchonine,* and *cinchonidine.*
S. P. SHARPLES, *State Assayer of Mass.*"

TESTIMONIALS.

"WELLFLEET, MASS., Nov. 17, 1876.
"I have used CINCHO-QUININE, and can say without any hesitation it has proved superior to the sulphate of quinine. J. G. JOHNSON, M.D."

"MARTINSBURG, MO., Aug. 15, 1876.
"I use the CINCHO-QUININE altogether among children, preferring it to the sulphate.
DR. E. R. DOUGLASS."

"LIVERPOOL, PENN., June 1, 1876.
"I have used CINCHO-QUININE, obtaining better results than from the sulphate in those cases in which quinine is indicated.
DR. I. C. BARLOTT."

"RENFROW'S STATION, TENN., July 4, 1876.
"I am well pleased with the CINCHO-QUININE, and think it is a better preparation than the sulphate. W. H. HALBERT."

"ST. LOUIS, MO., April, 1875.
"I regard it as one of the most valuable additions ever made to our materia medica.
GEORGE C. PITZER, M.D."

"RICHMOND, VA., March 28, 1877.
"I believe that the *combination* of the several cinchona alkaloids is more generally useful in practice than the sulphate of quinine uncombined.
"Yours truly, LANDON B. EDWARDS, M.D.
Member Va. State Board of Health, and Sec'y and Treas. Medical Society of Va."

"CENTREVILLE, MICH.
"I have used several ounces of the CINCHO-QUININE, and have not found it to fail in a single instance. I have used no sulphate of quinine in my practice since I commenced the use of the CINCHO-QUININE, as I prefer it. F. C. BATEMAN, M.D."

"NORTH-EASTERN FREE MEDICAL DISPENSARY, 908 East Cumberland St., Philadelphia, Penn., Feb. 29, 1876.
"In typhoid and typhus fevers I always prescribe the CINCHO-QUININE in conjunction with other appropriate medicines, the result being as favorable as with former cases where the sulphate had been used.
"F. A. GAMAGE, M.D."

SYRUP-GLYCEROLE

OF

FERROUS CHLORIDE.

The Combination which all Forms of Iron must assume before Assimilation.

Superior to all other Iron Salts in that, while it is readily taken into the circulation, and does referruginate the blood, it does not ordinarily cause constipation nor headache. It is very pleasant to the taste, and is unalterable.

Ferrous Chloride is a neutral salt, consequently it has no action upon the teeth, and may be administered fearlessly. This fact and the delightful taste of my preparation render it an advantageous form for administration to children. Each fluid drachm contains one grain of Ferrous Chloride, which, owing to the certainty of its assimilation, is a full, active, adult dose.

McKELWAY, APOTHECARY,

Successor to O. S. HUBBELL.

1410 CHESTNUT ST., PHILADELPHIA.

WYETH'S

DIALYSED IRON.

(FERRUM DIALYSATUM.)

A Pure Neutral Solution of Peroxide of Iron in the Colloid Form. The Result of Endosmosis and Diffusion with Distilled Water.

PREPARED SOLELY BY

JOHN WYETH & BRO.,

PHILADELPHIA.

This article possesses great advantages over every other ferruginous preparation heretofore introduced, as it is a solution of iron in as nearly as possible the form in which it exists in the blood. It is a preparation of invariable strength and purity, obtained by a process of dialysation, the iron being separated from its combinations by endosmosis, according to the law of diffusion of liquids. It has no styptic taste, does not blacken the teeth, disturb the stomach, or constipate the bowels.

It affords, therefore, the *very best* mode of administering

IRON

in cases where the use of this remedy is indicated.

The advantages claimed for this form of Iron are due to the absence of free acid, which is dependent upon the perfect dialysation of the solution. The samples of German, French and American Liquor Ferri Oxidi Dialys. which we have examined give acid reaction to test paper. If the dialysation is continued sufficiently long, it should be tasteless and neutral.

Our dialysed Iron is not a saline compound, and is easily distinguished from Salts of Iron, by not giving rise to a blood-red color on the addition of an Alkaline Sulpho-Cyanide, or a blue precipitate with Ferro-Cyanide of Potassium. It does not become cloudy when boiled. When agitated with one part of Alcohol and two parts of Ether (fortior), the Ether layer is not made yellow.

Physicians and Apothecaries will appreciate how important is the fact that, as an antidote for Poisoning by Arsenic, Dialysed Iron is quite as efficient as the Hydrated Sesquioxide (hitherto the best remedy known in such cases), and has the great advantage of being always ready for immediate use. It will now doubtless be found in every drug store, to supply such an emergency.

Full directions accompany each bottle.

Physicians will find our DIALYSED IRON in all the leading drug stores in the United States and Canada.

It is put up in bottles retailing for **ONE DOLLAR**, containing sufficient for four months' treatment Large size is intended for hospitals and dispensing. Retail at $1.50. Price Lists, etc., senton application.

THREE CASES OF HERNIA REDUCED BY UNUSUAL METHODS.

BY S. STEVENSON, M.D.,

Of New Bedford, Pa.

At about 4 P.M. July 20th, 1878, I was summoned to see J. B. Found him lying on a bed, evidently in great pain. He soon disclosed to me the seat of the trouble—scrotal hernia, left side. Upon inquiry I learned that he had been afflicted with double inguinal hernia for several years, that the portion of intestine frequently descended into the right side of the scrotum, and was always readily reduced by himself, but that the protrusion as it then existed (in the left side) was very uncommon. He claimed that while moving, on the morning of the same day, the tumor appeared, owing to some defect in his truss. He labored on until, owing to the severity of the pain, he was compelled to cease. When I saw him he had been manipulating the tumor for about six hours, without effect, except to cause considerable tumefaction and tenderness of the external opening. I placed him in the usual position for reduction, but utterly failed to reduce by taxis. I went home, and returned armed with a syringe, a bottle of chloroform, and two ounces tincture of lobelia. I thought best to use the syringe first, in order to empty the lower part of his bowels. I at once injected a quart of water to which I had added one ounce tincture of lobelia. During the process I directed the patient to place his hand over the tumor and make firm pressure. After the injection I noticed that the lump was smaller, and while he was on the chamber, by keeping up the pressure as the water flowed from the rectum, a complete reduction was effected.

On the 24th of same month, while passing the residence of J. M. C. to visit a patient, I was requested to stop and see his little girl, aged about five years. She had been ruptured for about two years, and during that time had worn a truss. The truss, however, had not been adjusted for several days, and as a result a small lump appeared in the left groin, constituting femoral hernia. I attempted a reduction, but as the child was very irritable, and having no chloroform with me, I stated to the father that I would apply a strip of adhesive plaster over the tumor, and call again in the evening. The plaster was so placed that when the child's limbs were stretched firm pressure was produced on the hernia. I accordingly returned prepared for any emergency, but imagine my surprise, as well as gratification, when I saw the child running around, all right. I learned that the child had went to sleep after I left, after which time the tumor disappeared.

August 1st, 1878, I was hastily summoned during the night to see J. D. Soon found that I had another case of scrotal hernia to deal with. Like the previous case he was compelled to wear a double truss, and it was very unusual for the enlargement to appear where it was then located. He was at once placed in a semi-recumbent position, thigh flexed and adducted, and taxis commenced. Failing to succeed in this position, I directed his son to raise him up by the feet until only his head and shoulders

rested upon the bed, but a failure was the result. I then administered an enemata, consisting of one quart water, and one ounce tincture lobelia. After the water, with considerable fecal matter, had passed from his bowels, I observed that the tumor was somewhat smaller, which encouraged me to repeat the process. When the bowels had been emptied after the third injection, but slight taxis was required to reduce the hernia entire.

CONTRIBUTION TO THE THERAPEUTICAL USE OF IODOFORM.

BY M. LANDESBERG, M.D.,
Of Philadelphia.

Iodoform, an old preparation, discovered by Sérullas as early as 1822, introduced into practice about the year 1837, by Dr. M. R. Glover, of London, and M. Bouchardat, of Paris, has since enjoyed but little favor with the profession, notwithstanding the high eulogies bestowed upon it by some eminent practitioners (Pick, Demarquay, Voelker, Nunn, Kennedy, Hamilton, etc.). The scientific medical world ignored it almost totally. In the clinics and clinical hospitals it was not used; in the text-books of therapeutics it was hardly mentioned.

In his Materia Medica, published 1863, a book in high favor with the medical students during the time of my studies at Berlin, Lessing treats of iodoform in the following manner: "This preparation belongs to a more recent time, and needs closer examination and wider recognition."

Not much better is iodoform treated by Nothnagel, in his "Handbuch der Arzneimittellehre" from 1878. "The use of iodoform has been recommended in neuralgia, painful tumors, and the like, but without much benefit."

C. Binz seems to be the first one in Germany who, in his "Grundzüge der Arzneimittelehre" from 1874, and in subsequent scientific articles, has drawn the attention of the profession to the therapeutical value of iodoform.

More recently Jacob Moleschott, of Turin, reported the most successful results from the use of this remedy.

The enthusiastic praises bestowed upon iodoform by Moleschott induced me to try it as a last resort in a desperate case of neuro-retinitis descendens, which lately came under my treatment.

This case, which presents points of special interest to the oculist, in regard to the very important question of impairment of vision subsequent to hemorrhage, cannot fail to attract the attention of the general profession by the very remarkable cure effected through the application of a remedy the nature and properties of which are still so little known.

August 1st, I was called to see B. C., 23 years old, who, after violent metrorrhagia, upon abortion in the third month of pregnancy, began to complain of impairment of vision of both eyes. Abortion had taken place about 40 hours previous to my first examination.

I found patient in the highest degree anæmic, deadly-pale, hardly able to sit up. Her eyes were sunken, surrounded by broad, dark lines. Pulse and action of the heart very feeble. Anæmic murmurs. Uterus contracted. No bleeding at the time. Vision of the right eye $\frac{15}{30}$, of the left eye $\frac{15}{40}$. Power of accommodation and fixation impaired to the utmost. Field of vision upward somewhat limited. With the ophthalmoscope both eyes showed beginning neuro-retinitis descendens.

Here I had to deal with one of those sad cases of intraocular affection consequent upon severe hemorrhage, the morbid process of which terminates generally in blindness.

The prognosis was here the more unfavorable as the only method of treatment which afforded some hope of success could not be applied. In this condition of highest degree of anæmia and physical exhaustion of the patient, I did not dare to undertake an acute mercurialization, which in those cases of acute inflammation and infiltration had proved, until then, the only means of checking the progress of the disease and of favoring resorption of the serious effusion. I had to restrict myself to quinine and iron, to stimulants and roborantia.

Under this treatment the general condition of the patient improved somewhat in the following two days, but the condition of the eyes became worse. Vision decreased, and the picture of neuro-retinitis descendens was complete.

Just at this period, when the sad fate of my patient reminded me so forcibly of the limits of our science, and when the total loss of vision was, in my estimation, only a question of time, I received numbers 24, 25 and 26, of the *Wiener Medicinische Wochenschrift*, of this year, where Jacob Moleschott had published his article, "über die Heilwirkungen ders Iodoforms."

According to him iodoform unites antiphlo-

gistic, dissolving, resorbent, resolvent and anæsthetic properties, embracing a field of therapeutics from neuritis to neuralgia, from leucoma to meningitis tuberculosa, from lymphatic glandular tumors to effusions in serous sacks, from attacks of gout to hygroma.

What struck me most, in his article, were the following remarks on the use of iodoform in hydrocephalus acutus of infants. "But by far the greatest satisfaction iodoform afforded me was in hydrocephalus acutus of infants. Of five cases of this fatal disease, which I lately treated with this remedy, three resulted in total recovery. Two of these cases seemed to me quite hopeless. Staring, glazed gaze, unconsciousness, sopor, convulsions, dilated, unequally large pupils, etc. Either iodoform, collodion, or iodoform ointment was applied to the neck, mastoid processes, forehead and temples, three or four times a day, with the most excellent effect."

Impelled by this statement, I at once determined to try iodoform in my case of neuro-retinitis descendens. The new method of treatment I began on the evening of August 2d, in the following manner. The neck, the mastoid processes, the forehead and the temples, the inner surface of the thighs and the sides of the chest were carefully rubbed in with an iodoform ointment, containing one part of the remedy to eight parts of cosmoline, and then covered with a double sheet of gutta-percha paper, to be kept on during the night. On the following morning the parts were cleansed with lukewarm soap water, subjected to another inunction of the ointment, and covered with gutta-percha paper, to remain undisturbed until the evening. Thus the procedure was repeated twice in twenty-four hours. Beside, I gave internally, pills of iodoform in doses of two grains, four times a day.

On the morning of August 3d (after the first inunction) the morbid process was still in progress. There were some hemorrhagic patches near the macula lutea and some plaques. V. R. $= \frac{15}{50}$, V. L. $= \frac{15}{100}$.

On the morning of August 4th the morbid process was not only arrested, but there was a remarkable improvement. V. R. $= \frac{15}{40}$, V. L. $= \frac{15}{70}$. Of iodoform about one ounce was used. From that time the improvement went on steadily, and very rapidly, ending in complete recovery. At discharge there was V. R. $= \frac{15}{15}$, V. L. $= \frac{15}{20}$. Patient bore the treatment very well; except a little headache and palpitation of the heart, there was no inconvenience.

I think I am fully justified in attributing this remarkable result of restitution ad integrum, in such a hopeless case, solely to the rapid and vigorous action of iodoform. The only chance of salvation we had was to introduce into the system rapidly such large quantities of a remedy of great absorbent and resolvent powers as to break the acute process of exudative inflammation, and to secure at the same time the absorption of the exudation previously to its having become organized. The acute mercurial treatment, otherwise our last resort in such cases, was contra-indicated, in consequence of the poor general condition of the patient. Iodoform proved to be not only a substitute for mercury, but had this great advantage over it, that it did not exert any of those deleterious influences so much to be dreaded in a case of such utter prostration.

1605 *Arch Street.*

TREATMENT OF GENERAL PROGRESSIVE PARALYSIS (DEMENTIA PARALYTICA).

BY PROF. LUDWIG MEYER,
Of Göttingen.

Translated from the German, for the MEDICAL AND SURGICAL REPORTER, by GUSTAVE LIEBMANN, M.D., of Baltimore, Md.

That disease of the mind generally known by the name of "General Progressive Paralysis" has for more than half a century been pretty accurately investigated, as to its symptoms, and though it is only lately that scientific examination of its underlying pathology promises a satisfactory conclusion, yet one fact seemed from the beginning to be settled with an almost fatal certainty, that is the hopeless end of the disease and its not being amenable to treatment. Those again and again occurring publications about spontaneous recoveries could not, isolated as they were, shake the axiom of the incurability of general progressive paralysis.

My conviction, based upon clinical and pathological investigations, that the disease from the beginning is but a chronic encephalitis, had, some time ago, set me to thinking about the feasibility of making use of an energetic local derivation, as another indication could be named, that the inflammation in the primary stages of the disease is limited to the cortical layer of the convexity, and particularly so of the anterior half of the great hemispheres, and

that the morbid process took its starting point very frequently in the meninges, or was complicated, at least, with meningitis. The conditions, therefore, were, a priori, a great deal more favorable to the derivative method than in analogous affections of the spinal marrow, in whose treatment, even lately, the energetic application of the hot iron has met with favor. Recall to mind the sinews, muscles and ligaments which separate the cauterized integuments from the vertebræ, and how considerable is the distance of the latter from the marrow, whereas the counter irritation established on the anterior part of the head is in the immediate neighborhood of the seat of the affection.

The method of counter-irritation I made use of in all cases, is that of Jacobi, of Liegsburg, in the treatment of those chronic disturbances of the mind which, according to his view, threatened to pass into dementia. But having myself experienced the difficulty of establishing upon the scalp a sufficiently energetic seton, to be kept open for months, I deem a more explicit description of the procedure here not superfluous, inasmuch as I must desire that this treatment of general progressive paralysis be not postponed until the patient's often too long delayed reception into an asylum, but be instituted, as soon as possible, in private practice. The practitioner, on the other hand, has rarely sufficiently skilled assistants at his disposition, and has, for this reason, to give them the most accurate directions, or has frequently to act himself.

The hair should be shaved off from the scalp in the region of the great fontanelle, to the extent of half a hand, and then as much tartar emetic ointment (1 : 4, Germ. Pharm.) be rubbed in the central portion of the shaved surface as would cover a silver dollar. Much depends on the first application being accurate and energetic. A portion of the salve, about as big as a pea, I cause to be rubbed on twice, by means of a firm and smooth pledget of linen, of the size of a finger, and then I cover the reddened surface with a piece of linen saturated with the ointment. The second application, which has to take place twenty-six hours later, ought to be made with the greatest care and precaution, in order to save the already loosened epidermis. Such denudation would cause considerable pain, and beside, would not benefit the procedure any, for this latter's success depends entirely on the feasibility of bringing the scalp, in its greatest possible depth, to swell and gradually to slough. Two applications, as a rule, suffice, but to be cautious it is well to spread, on the third day, a small portion of the ointment (without any further rubbing being done) on the already elevated surface, or if desirable, to leave a piece of linen besmeared with some tartar emetic ointment, on the sore a little while longer. During the third and fourth day the swelling increases, extends to the frontal region, and even to the face, rarely to the occiput and neck. The eruption of pustules under this procedure is not considerable, those which do form being solitary, small, and drying quickly. As soon as the swelling increases, warm poultices should be applied freely. In a few days the integuments are detached by the abundant suppuration, and, as a rule, no further interference is necessary for their entire separation. More resistent adhesions at the edge or in the depth of the sore are removed, either by caustic potass., or by means of scissors. The whole procedure requires, on an average, fourteen days, and leaves a regular, round, deep, and copiously suppurating sore, which, by means of basilic ointment, should be kept open for two or three months. During this whole time, and beyond it, if tolerated well, the patients are put upon iodide potassium, in moderate doses (3·5, 0, aq. dest, 180, 0, a tablespoonful four times a day). The diet, especially during the first weeks of this treatment, ought to be easily digestible but vigorous. Disturbances of digestion, particularly constipation, are not troublesome, and are easily relieved. The patient should be sent into the open air as soon and as often as possible ; should, if his strength allows it, do light work in the garden, but is to be guarded against great warmth. For this reason it is advisable, in summer time, to use the early hours for work, the evening hours for promenading in the open air, but at noon to remain in the room, or at least in the shade. Baths in any form are to be avoided, for they are, under these conditions, only too apt to produce congestions of the head.

The above treatment I have, in the course of about fifteen years, applied on seventeen insane persons suffering from general progressive paralysis. Of this number I exclude two, which have undergone this treatment only about fourteen days, yet I would state that with one of these patients already such a remarkable

improvement has taken place (the intellectual disturbances have decidedly decreased), that I deem, according to my experience of late, a successful result is highly probable; of the remaining fifteen cases eight were cured. One of these, who was taken away too early, has had a relapse lately, after having attended to his official position as a jurist during two years, without any trouble. With a second one I could, three years after his discharge, note entire mental health. With four of my cured cases I am still in communication, and I have found the opportunity (after their dismissal) to convince myself again and again of their satisfactory condition.

These results of my mode of treatment, favorable far beyond my expectation, I am the least willing to consider as constant. For once I am free to say that, in a measure, I share the superstition, that in therapeutics the goblin of accident is wont to play his droll games, to put into the hands of one success after success, whereas another draws but blanks. I was very cautious in the selection of this first series of experiments. The most rigid skeptic might not refuse to admit that what I have attained warrants further trial on a more extended scale, and with that I shall have reached the aim of this publication.

Naturally enough I have, *par excellence*, selected cases of proportionally recent date. But others I have not excluded, in which I had reason to suppose that permanent lesions of the affected brain-portion had not yet taken place. I may be permitted to quote the closing sentences of a treatise on the pathology of this disease,* which lays down this indication much better than I could do. Above all, I particularly lay stress on the fact that the characteristic intellectual, as well as motory disturbances, may be completely developed without any other changes in the brain than the process of inflammation in the blood-vessels, and disturbances of circulation in intimate connection with them. This accords fully with the course of symptoms, especially those of the first stage of the disease. The often surprisingly rapid change of them; the transition from a state of complete dementia into at least an apparently intact activity of reasoning, in the course of a few days, the retrocession of grave disturbances of motility in a still shorter time, point with necessity to a similarly rapid compensation of the morbid processes underlying these changes, which compensation is only conceivable in the slighter disturbances of circulation and nutrition.

* Virchow's Archiv. für Path. Anat., vol. lviii, p. 301.

The histories of cured cases which form the actual basis of the method of treatment recommended by me, I hereby subjoin in a short sketch. It suffices when, from the published facts the correctness of diagnosis and course of disease can be made out. Because of the lack of more accurate notes at present with regard to the case treated in the General Hospital in Hamburg, I only wish to report, that some months after a grave lesion of the head (the patient, a coachman, was struck by one of his horses on the vertex), the characteristic symptoms of the disease (intellectual weakness, mental euphony) made their appearance; that they lasted about a quarter of a year, when the seton was applied, and that after six months more the apparently hopelessly sick man returned to his occupation cured.

Case 2.—N. N., Custom-house officer, age 31, was, in the middle of September, 1869, upon the certificate of Dr. Brandes, of Hanover City, brought to the Insane Asylum at Göttingen, suffering from general progressive paralysis. As a Hanoverian soldier, he had taken part in the campaign of 1865, and in the battle of Langensalza. In the year 1865 he contracted syphilis, and was treated for it in the general hospital of Hanover; later on he had a relapse. Soon after his marriage, in 1867, he was run over by a wagon, and suffered considerable contusion of the occiput. Since then a headache from which he had suffered at times when a child, returned more frequently. In the summer of 1868 he was seized with an apoplectic attack, in consequence of which he could not read or write for four days. In July, 1869, he complained of severe headache; thought himself syphilitic; this melancholy depression increased rapidly; he refused to eat, tore his clothing, would not urinate, tried to tear off his genitals, etc. After calmness had set in a high degree of intellectual weakness could be noticed. Later the excitement increased again; paroxysms of violent mania, of some length, came on, during which he would destroy everything within his grasp, scratch the walls over and besmear them with his fæces. Toward the end of September his speech appeared hesitating, awkward; the tongue was put out with difficulty, showing fibrillary tremor; the pupils different in size, left one larger than right one. At times he showed

himself more intelligent, assisted in the housework. On December 3d inunction with the tartar emetic ointment was commenced, which, on account of repeated resistance, had not a quick enough effect; yet the slough came away on the 14th, and from that time an abundant discharge was kept up by basilicum ointment. Inwardly, iodide of potassium, (4:180) a tablespoonful four times a day. On the 20th, the usually very reticent patient reported that he felt a great deal freer in his head, and was able to make, in a sensible and coherent manner, communications about his taking sick and his former life. From this time on manifest improvement in every direction; already, in the middle of January, not a single symptom of mental disturbance could be distinguished any longer. The nutrition was excellent; patient acted in a free and easy manner; complained but rarely about a slight dullness. At his discharge, on May 15th, 1870, he was sane; pupils alike; yet a slight hesitation in his speech was still present, which, when I saw my patient, two years later, had rather increased. I must mention that the originally beautiful and plain handwriting had, during the sickness, become indistinct and crooked. After recovery he wrote again as well as before.

Case 3.—Mr. B., merchant, age 34, married, father of two living children, was admitted into the Hospital for the Insane, at Göttingen, on April 3d, 1872, after having left the "Insane Department" in the Charité Hospital at Berlin, in which he was, since August 26th, 1871, treated as suffering from general progressive paralysis. In his 25th year he had a chancre, with bubos; secondary symptoms, it appears, did not follow. The mental trouble came on suddenly. After he had, in midsummer, exerted himself mentally and emotionally to a high degree, and after fatigue brought on by traveling, constant sleeplessness with violent congestion of the head set in, which was followed at once by maniacal excitement. He showed flight of ideas, "exaltations of grandeur;" he pretended to be possessor of large manufacturing establishments, to dispose yearly of hundreds of thousands, styled himself Egon, Count of Lichtenstein, etc. Even after re-establishment of quietude, the exaltation of grandeur had lost nothing of its strength; besides this, distinct signs of considerable weak-mindedness presented themselves. Repeatedly apoplectiform and epileptiform attacks, with unconsciousness of several days' duration and high fever (40°) occurred, especially so during January and February of 1872. The speech, as during his last stay at the Charité, was distinctly hesitating, for about six weeks; tongue quivering; pulse weak and small, notwithstanding the good nutrition of the powerful man. The state of health of the patient, even during the same day, showed great fluctuation. On April 5th the application of tartar emetic ointment was ordered; on the 19th a sufficiently large suppurating surface was established, which was kept running by basilicum ointment until the beginning of July. At the end of May occasional dullness of the head, spells of painful head congestion, tremor of the tongue, a slight hesitancy, were yet noticed. The patient was cautiously employed in the open air; after the beginning of July there was an increase of strength and flourishing appearance; no symptom of sickness of any kind. He was discharged cured on August 23d, 1872. For more than four years he has filled the office of bookkeeper in a large machine shop.

Case 4.—Mr. K., merchant, age thirty-one, was, upon the certificate of the Health Commissioners, received into the Institution affected with "exaltation of grandeur." As reported to me he had been examined before by the Superintendent of the lunatic asylum at Hamburg, Dr. Reye, who made the diagnosis of general progressive paralysis. Already, since the beginning of the year, he had called forth general attention by his reckless domineering, sexually shameless behavior, and by his excessive speculations. At Göttingen he showed, besides moderate maniacal excitement, an enormous *exaltation de grandeur;* disposed of millions; wanted to purchase and remodel all railroads and factories. Several letters, which he wrote to his pretended sweetheart, of noble rank, (in reality a woman of the town), showed the formerly elegant handwriting clumsy and unequal. The tongue quivered; no disturbance of speech; considerable intellectual weakness; dullness against painful impressions (needle punctures, electric currents); pupils different in size. On June 1st the seton was applied at the front part of the scalp, and kept open until the middle of August. At the same time iodide of potassium internally (5,0–180,0, a tablespoonful four times a day). On June 20th diminution of exaltation and talkativeness; in general a more reasonable behavior; yet at the beginning of July he still writes letters to his alleged intended. In

August he speaks freely about his morbid ideas, gives up his intended, and shows generally a more modest and sensible conduct. The slight tremor of the tongue and inequality of the pupils disappeared only at the beginning of September; handwriting at discharge, on October 18th, 1872, was plain and handsome. He is superintending his business again, and conducts it in a thorough business-like manner. Since then he has repeatedly consulted me, at one time about a journey to China, which he omitted on my advice.

Case 5.—Dr. H., for eight years a practicing physician, age thirty-four, was received on August 7th, by request of his family. As a very busy country practitioner he had exerted himself during the last years to a great extent; had indulged in books more than was good for him, and had also committed sexual excesses. Since 1873 he felt himself tired out and his head confused, and frequently fell asleep when sitting down in the daytime. This condition, since the Spring of 1874, had given way to an opposite one, to almost complete insomnia, along with great excitement and a craving for alcoholic and sexual debaucheries. Since June he was seized with several incomplete apoplectiform attacks, in which he lost his consciousness each time for about an hour. He became afflicted with forgetfulness, made mistakes in his accounts, and was unable to find the residence of his patients. Since July he considered his sexual functions extinct.

At his reception, moderate maniacal excitement, excessive delusion of greatness; for instance, the Secretary of the Interior had offered him the choice among all positions of honor; he was proprietor of sixteen mills, many foundries; his fortune was footing up to at least two hundred millions of dollars. Difficult, hesitating articulation, occasional stammering, which he detected himself, and caused him to remark that he suffered, probably, from progressive paralysis. The tongue, when being put forward, showed fibrillary quivering. Pupils of different size. On August 8th inunction of the fore part of head with tartar emetic ointment, and simultaneously iodide of potassium (4 : 180, a tablespoonful four times a day). On August 16th separation of the parts, with considerable suppuration; seton discharging up to December, and not closed completely when patient was discharged on December 11th. Almost coincident with the more copious secretion on August 16th, an improvement of the whole condition took place. Not only that greater tranquillity had manifested itself, but he was ashamed of his delusions; his memory gained in strength, and he acknowledged that he felt lighter and more free in his head. At his discharge no more mental deviations could be discerned, except some slight disturbance in articulation, which, even a year later, when I saw the patient again, could still be observed. The past two years Dr. H. is again active as a popular and extremely busy practitioner, enjoying excellent health.

Case 6.—Mr. I., lawyer, aged forty-six, married, father of three children, was received on December 3d, 1874, suffering from general progressive paralysis, according to the certificate of Dr. Brandes. In his younger days he was addicted to drinking and an excessive votary of sexual pleasures; he had, while a student, suffered for a long time from gonorrhœa and syphilis, but had later become well and strong. In the spring of 1874 he was, on account of a melancholy condition (two suicidal attempts), sent to a cold-water establishment, after having been subject for two years to severe headache. In the fall a maniacal exaltation, with the sensation of the greatest well feeling (euphony), extravagance and a braggadocia not peculiar to him, developed themselves. At his reception into the asylum he presents considerable maniacal excitement, walks about a great deal, raps at the doors, smashes windows and attacks the attendants. He would roar at the surrounding persons in a heroic manner; would introduce himself to them as Supreme Judge of the Realm, as President of the Ministry, as the Representative of an old, noble family, with a large estate, most intimately connected with the royal family of Hanover; would distribute salaries or orders; wanted to go with a corps of students, in full corps-dress, to the city of Hanover, in order to fight a duel before the Emperor and King George, etc. The left pupil considerably dilated; slight hesitation in speaking; a shaking on turning around; clumsy gait; insensibility against painful impressions.

Ordered iodide of potassium (5 : 180, a tablespoonful four times a day); inunctions of front part of the head with tartar emetic ointment. On December 15th, copious suppuration. The patient has become calm, he does not express his delusions any more, praises the treatment, and says that he feels free in his

head. At the end of January, 1875, pupils alike; still hesitating in speaking; judgment confused. On February 2d taken away from our hospital and committed to another one. After the final discharge from the latter, the patient had resumed his vocation once more, and conducted it without trouble for over eighteen months, when, for a short time, I understood him to be again deranged.

Case 7.—Mr. H., merchant, aged forty-two, was received suffering from general progressive paralysis, according to the certificate of Dr. Brandes, on May 18th, 1876. Father and sister insane; he himself has for a long time carried on a life of dissipation. The first symptoms of insanity, mania, with "*exaltation de grandeur*," manifested themselves suddenly, toward the end of April. He talked at random, became uncleanly, and showed the above exaltation universally. He is a celebrated physician and scholar, enormously rich, marries two princesses at once, is going to have Jerusalem rebuilt, etc. Pupils alike; of slow reaction; articulation very hesitating; gait clumsy, shaky; almost complete analgesia against painful impressions. On May 22d inunction commenced, and kept up until about the middle of August. Administration of the iodide toward the end of June, on account of bad nutrition, dispensed with. Excitement and uncleanliness made a regular isolation until September necessary. Although the patient, after calmness was re-established, considered the former delusions as nonsense, yet a decided intellectual weakness was still present, also articulation considerably disturbed. The mental well feeling (euphony), alongside of the wretched appearance of the patient, was strange indeed. A decided improvement could b made out about the middle of October. In December the mental defects had disappeared; the movements became safe; disturbance of articulation but slightly noticeable. In February, 1877, the somewhat drawling articulation was the only thing amiss. On April 24th, 1877, Mr. H. was discharged, entirely cured, in an excellent condition, both with regard to nutrition and appearance.

Case 8.—Mr. J., shoemaker, aged thirty-four; received on January 23d, 1877, after having suffered during the summer of 1876, at first from hypochondriac melancholy, and then from maniacal excitement, after having been treated for that in a private asylum. On his former sojourns in large cities, being supplied well with means, he had lived fast, and became infected with syphilis again and again. He manifested considerable intellectual weakness; forgets what just now has been said or read, on dictating word for word. The usually good handwriting had become indistinct, pointed; the gait tottering; speech heavy, often stopping and stammering; the tongue, on being put forward, quivered; left angle of mouth depressed; decided mental euphony, with the appearance of a sufferer. After nutrition and state of health had been improved somewhat, on February 12th the fore part of the head received a rubbing with tartar emetic ointment and iodide potassium (3 : 180, a tablespoonful four times a day). The seton is still open (end of April). Toward the end of February, after the seton had copiously discharged for a few days, a truly surprising improvement was to be noticed. Conduct free; answers given rapidly and correctly; patient remarked a heavy weight had been removed from his head. In spite of the discharge, and the use of the iodide, the nutrition had, toward the middle of March, become excellent. At the end of the month the patient corresponded, in sensibly and correctly written letters, with his father, read newspapers and light literature, and assisted at work. At the end of April there was no more defect in intellect or motility; only the tongue still quivered.

I would add a few epi-critical remarks to these extended histories of disease. It being, as stated above, of the utmost importance to cause a piece of the scalp as deeply and as quickly as possible to slough, it is obvious that the periosteum is co-affected sometimes, and that in consequence of this smaller or larger pieces of the skull exfoliate. I have noticed this process repeatedly, and can testify to its entire harmlessness. Before me lie three such exfoliated pieces, of from three to five lines in diameter, and not inconsiderable in thickness. One belongs to Case number five; the patients from which the two remaining were taken were still alive several years after the procedure. Only with one could it be supposed that the process had extended to the external layer of the dura mater, as it was more adherent to the bone at that point. I observed no other injurious effects. Even the loss of hair, notwithstanding the severe contraction of the cicatrix soon after the healing of the seton, is limited to a very small space, which can easily be concealed by the neighbor-

ing hair. In order to explain in our cases the modus operandi of the seton, it is hardly necessary to resort to the theory of derivative pain, so frequently used in psychiatrical therapeutics. In case of complete success of the operation the pain should last but a few hours, with those patients whose sensitiveness against such procedures is blunted, that is, during the transitory stage between inflammation and suppuration. But I am fully convinced that such a large and active seat of inflammation with such an energetic discharge must stimulate in a high degree the circulation in the blood vessels and lymphatics, removing stagnation and advancing absorption of exudations. In favor of this view, I may adduce the repeatedly mentioned and almost suddenly occurring cessation of the sensation of intracranial pressure, as soon as a copious flow of pus has been established.

In conclusion, I would warn against a too energetic anti-syphilitic treatment of our patients. The importance attributed to syphilis, in an etiological point of view, in relation to general progressive paralysis, in the meritorious work of Heubner on luetic diseases of the brain, has, in not a few cases known to me, caused the application of mercurial inunction and injections of sublimate, etc. The result was invariably an unfavorable one. That a syphilitic history is not prejudicial to my mode of treatment, the majority of the reported cases clearly shows.

Reported by P. Brynberg Porter, M.D.

Epithelioma of Cervix Uteri.

Gentlemen:—Our first case to-day presents several points of great interest. The patient's name is Jane C.; she is a native of Scotland, and is forty-three years of age. She has been married sixteen years, and has had five children, and, possibly, one miscarriage. Her last pregnancy occurred five years ago. I shall now ask your close attention to the history which she gives of herself.

How long have you been sick, Mrs. C.? "A little more than a year." Were you healthy up to that time? "Always." In what way did you suffer at first? "My bowels were very much constipated." Do they still continue so? "I am still very often costive." What other trouble have you had? "Bleeding." Where from? "The womb." Anything else? "Pain in the back." Have you pain anywhere else? "Across my bowels, like labor pains." Do you feel these pains more at any particular time? "They always come on in the afternoon." Never in the morning? "No." Is the pain very violent? "Yes, sometimes." Is it ever so severe that you have to send for the doctor? "Oh yes." Is he able to give you relief? "Yes." Does he ever have to give you morphia? "I think there is some morphia in his prescriptions." He has never injected morphia under the skin? "No." Do you have any other trouble beside this pain which comes on in the afternoon or evening? "My tongue gets coated, and I have a great deal of fever." Anything else? "I have a burning heat in the top of my head." Are you able to walk about with comfort? "Not for the last two or three weeks." Why not? "A pain takes me when I walk, like the feeling of sand on a cut or sore." Where do you have this feeling? "Across the bowels." How is it about your monthly sickness? "I can't be certain when it comes on, on account of the bleeding."

Here, you see, we have a very intelligent history. Putting aside the constipation, which need not concern us, the most prominent symptom is the uterine hemorrhage, which is not merely menorrhagia, but amounts to metrorrhagia. This has been relieved, to a certain extent, by the patient's medical attendant, but is still very troublesome. I will venture to say that when the flow first commenced (as well as for a good while afterward) both she and all her friends supposed it to be due to the change of life; and now the patient informs me that this is really the case. I would, therefore, put you on your guard against ever taking a thing of this kind for granted, but always insist on making a vaginal examination. By making an early examination you can often be of the greatest service to your patient, while if you neglect this, her life may be needlessly sacrificed, or at least shortened to a considerable extent.

On resorting to an examination in the present case, I found, in the first place, that the uterus was in its normal position, but my finger at once detected the diseased condition of the cervix, which I roughly represent for you on the blackboard. The examination gave rise to so free a gush of blood that it was necessary to tampon the vagina in consequence. To one who is accustomed to meeting with the affection which is here present, the diagnosis would already be complete, and such it was to me.

There is only one condition that gives such an impression to the educated finger, and that is carcinoma uteri. That found here is of the superficial variety. Formerly, great stress was laid upon the distinction between epithelioma, such as this, and deep-seated cancer of the uterus. But though the distinctions between

the different varieties may still be of interest to the pathologist, they are all malignant; and it has been found to be of no service to discriminate between them in actual practice. There is scarcely one of the diseases of women, with the exception of uterine fibroid, in regard to which so many mistakes in diagnosis are made as in cancer of the uterus. According to the books, there is apparently no difficulty whatever about the matter; but though it is true that in some cases all the typical symptoms are present, there are a vast number of other instances in which some of the most prominent of them are altogether lacking. For instance, the patient now before us has said nothing whatever about any fetid discharge; and on inquiring particularly as to this point, I find that only very rarely has she noticed anything of this kind. Then, again, there are no deep ulcerations here, such as we would be led to expect from the descriptions of the books. I have seen several cases in consultation with gentlemen of at least as large an experience as my own, which it was necessary to keep under observation for months before we were able to arrive at a positive diagnosis. I recall at this moment the case of a lady in whom I had reason to suspect malignant disease some time ago, but who is now, apparently, entirely well; but I have not as yet informed her friends that she is no longer in danger, for fear that there may be some return of the symptoms.

There is a condition occasionally found in unmarried women, to which Everett Kennedy, of Edinburgh, has given the name of cock'scomb excrescence of the cervix, from which hemorrhage is excited by so slight a cause as the gentle stream of water from a syringe, and which very closely resembles epithelioma. Yet it is entirely unmalignant, and can readily be cured by local applications. It is, however, in my experience, a very rare affection.

Another condition resembling cancer is laceration of the cervix, where the deep indentations, the everted edges of the wound, and the oftentimes offensive leucorrhœal discharge, are not infrequently mistaken for the characteristics of malignant disease. Under this impression a great many needless operations of the greatest severity have been performed.

Still another condition which gives rise to many of the appearances and symptoms of cancer is the retention of some portion of the product of conception, as, for instance, a small piece of the placenta. In such cases the fetor is often so marked that it might very naturally mislead the medical attendant. As this is not a didactic lecture, I cannot pause to mention all the conditions which are liable to be mistaken for carcinoma uteri; but merely refer to a few of the most prominent of them.

Some years ago a woman went the rounds of the different clinics of this city, who had a very fetid discharge from the uterus, and an excoriated condition of the cervix, and who was much exhausted, and presented many of the symptoms of septicæmia. One diagnostician, while making an exploration of the cavity of the uterus with the curette, brought away a small piece of sponge; whereupon he introduced a pair of forceps and withdrew the half of a sponge-tent which had been left in the uterus three years before. While the physician who introduced it was attempting to withdraw the tent, it had broken off, half of it being left *in situ*, and he had not had the moral courage to say so. And so this retained piece of sponge-tent also gave rise to nearly all the symptoms of carcinoma.

Only to-day Professor Clark sent to me a woman who was believed to have fibroids developed about the cervix. I am perfectly certain, however, from the sensation which these growths give to the finger, that they are in reality scirrhous cancer.

In the present case the diagnosis is undoubtedly epithelioma of the cervix. The patient has brought me a note from her medical attendant in Brooklyn, in which he states that the diagnosis of carcinoma uteri has been made, that amputation of the cervix has been advised, and that he now sends her here for operation, as her only chance of life. Such cases as these it is necessary for us to make a matter of conscience. If I advise that amputation shall be performed, the patient will, probably, have it done; and she will, no doubt, abide by my decision, whatever it may be. I will, therefore, tell you upon what I shall base my advice in the case.

Supposing you had a patient suffering from carcinoma of the arm, which not only involved the elbow joint, but also extended more or less above it, and that it was only possible to perform amputation through the middle of the joint. Would there be any object in such an operation? If we know anything at all about malignant disease, it is clear that the result will be almost, if not quite, as rapidly fatal as if no amputation had been undertaken. In cancer of the cervix it is seldom that we can remove the whole mass of diseased tissue. Why is this? In cancer of most portions of the body the part is so exposed that the disease is detected in its very incipient stages, while in cases like this six months or more of the time that is of the most vital importance to the patient are allowed to pass without a physical examination ever being made, while the symptoms noticed are usually referred, in a hap-hazard sort of way, to the "change of life." By the time the real condition of affairs is discovered, the disease has ordinarily made such progress that any amputation of the cervix must necessarily pass through the middle of the affected tissue. The only question of practical importance to be asked here is, then, Has the cancerous growth yet extended beyond the point of vaginal junction? and the examination which I have made renders it necessary for me to say, in reply, that it unquestionably has. In this particular instance the cervix is unusually short, and so the disease has spread beyond the vaginal juncture more rapidly than is ordinarily the case.

Amputation of the cervix is always a serious

operation. Although it is very much less so when performed by the galvano-caustic wire than in any other way, it is still a procedure by no means to be lightly undertaken. If it were done here, the patient would, probably, be somewhat improved for six, eight, or ten months, but she would have undergone the risks always attendant upon a capital operation like this, and would really be no better for it in the end.

What then? Is nothing to be done for the patient? Yes, we can assist and relieve her not a little, and this is mainly to be done by controlling the hemorrhage, which is now keeping up such a drain upon her system. The best means for doing this, in my experience, is the local application of strong mineral acids, and the plan which I would advise is the following: A glass speculum (or Sims' speculum, if the operator is thoroughly accustomed to its use) having been introduced, the diseased surface of the cervix should be carefully cleaned with warm water, and afterward dried with a sponge. The whole surface should next be saturated with chemi cally pure nitric acid, and then a tampon of cotton soaked in glycerine or vaseline inserted. In twenty-four hours the tampon should be removed, and after that, detergent injections, for which carbolized water answers as well as anything else, should be kept up regularly. The application of the acid should be repeated perhaps once a month, or as often as it seemed called for. Under this treatment the patient would undoubtedly grow stronger, the hemorrhage would cease, and the time of the return of the menstrual flow could again be noted. If you had not had much experience with it, you would in all probability feel that you had made an awful error in diagnosis. I use the term awful advisedly, for it certainly is a very serious matter indeed, to make a mistake in a case such as this. I see now before me more than one gentleman whom I have met in consultation in a case of cancer of the uterus, who will bear witness to the fact that I said to them: "Almost surely you will hear that you have made an error of diagnosis, because the patient will get fat and apparently well." Why do patients thus improve? By reason of the treatment which I have just indicated. Therefore, I always make it a point to speak in this way to those whom I meet in consultation in cases such as this.

Allow me now to briefly relate two cases which will come in appropriately in this connection, and which may serve to impress more forcibly upon your minds the points which I am endeavoring to make clear. Some time ago a lady came to me from Texas, with a history of carcinoma, and in a very exhausted condition. Notwithstanding the fact that she had remained in a recumbent position all the way, and had traveled by easy stages, she had been continually losing blood freely, and was constantly obliged to make use, during the journey, of vaginal suppositories of tannin, which her physician had ordered for her. When she arrived here, the vagina was so packed with tannin (which hardens somewhat like plaster-of-Paris) that I could not at all make out the condition of the uterus; but by means of a serrated scoop I gradually scraped out the mass, which was almost of the consistence of celluloid (a substance now used, to a considerable extent, as a substitute for ivory), and then found more extensive malignant disease than is present in the case now before us. While she remained in New York, I pursued the plan of treatment which I have described, and when she returned home, wrote to her physician in Texas, advising him to continue the same. She went away from here eighteen months ago, and then I saw or heard nothing of her until six months since; when she unexpectedly came into my office one day, and asked me if I did not remember her. She had grown so stout that I utterly failed to recognize her; and she had also regained, to a great extent, the beauty which was natural to her before she had become exhausted by the carcinomatous disease. Both she and her husband said they thought I must have made a mistake in my diagnosis; and so I asked them why, if they were of this opinion, they had come back to me. The lady then replied that though she had felt perfectly well since she had left New York, the hemorrhage had never disappeared entirely, but would occasionally return; though it was not free enough to give rise to any unpleasant consequences. I then made an examination, and was astonished to find the condition which I here show you on the blackboard. The malignant disease had continued to extend until it had eaten out almost the entire structure of the uterus, and there was nothing left of the organ but a mere external shell. It was a most extraordinary case, and I have never seen another one like it. The patient's physician had been accustomed to make his applications by means of a Sims speculum, which I had sent him, and the cavity of the uterus thus scooped out had appeared to him through it simply like the elongated vagina. This was very natural under the circumstances, and it was the impression that I myself received when I first commenced the examination. Yet, notwithstanding this very serious condition of affairs, the patient's general health remained unimpaired, because her medical attendant strictly carried out the plan of treatment advised. I have heard from this lady during the past week, and she is still doing remarkably well. But I have no doubt that at no distant day the case will suddenly terminate in fatal peritonitis, due to the giving way of the attenuated uterine walls at some point.

The second case of which I spoke to you is that of a lady whom years ago I knew personally very intimately, and who moved away from New York a considerable time since. When I knew her she had one marked peculiarity, and that was a mortal terror of cancer. Four years ago she came to me from Canada, suffering from what she supposed was undoubtedly cancer of the breast. When I found that it

was a simple phlegmon, and evacuated its contents for her, she was exceedingly relieved, and I heard no more of her until quite recently, when I learned that her medical attendant, though a gentleman of ability and experience, had mistaken the condition following laceration of the cervix for malignant disease of the uterus. The announcement that she was affected with cancer made such a terrible impression upon her that her mind gave way under the apprehension, and four months ago she was committed to an insane asylum. She lost her reason entirely from fright, and nothing else. She has been under the care of one of our best alienists, and has constantly been improving ever since her admission into the institution. Last week I myself had an interview with her, and the only remaining evidence of insanity that I observed was that once she spoke of a tooth, which had lately been troubling her, as if she feared that it might become the seat of carcinomatous disease; showing that her mind was still dwelling upon the same subject. I asked the Superintendent of the asylum if he had ever met with similar cases, and he said that he had seen several, and mentioned particularly that of a young man who became insane through fear that he had an indurated chancre.

Perhaps you may desire to know if, when I find on examination that a patient is affected with cancer of the uterus, I make it a rule to acquaint her with this fact. On this point I am guided entirely by circumstances. If the patient is a stranger, I always wait until I can find some estimate of her character before deciding whether it will be best to tell her the truth or not. Some women it is impossible to deceive, and in the case of others this is useless; but the great mass of women can be deceived, if it is desirable. As a general rule, I may say that I do not tell the patient herself; but I always make it a point to acquaint the relatives with the facts of the case, and then allow the responsibility to remain with them. But, you may say, is it not often necessary, then, to speak untruthfully to the patient? It is not, for the reason that when a woman suspects the presence of cancer, she will seldom press the physician with a point-blank question, because she does not wish her worst fears confirmed. I never knew but the one case in which a female became insane through the fear of cancer; but I have not infrequently seen it almost deprive the patient of reason.

Periscope.

A Means of Lowering the General Temperature.

Mr. Spencer Wells, in his lecture on the diagnosis and treatment of abdominal tumors, states that as a means of lowering temperature in cases when it has risen after ovariotomy, he has tried aconite in small doses, quinine in large doses, salicylic acid in the form of salicylate of soda, in fact, almost every medicine that has been suggested as effecting this purpose, but all these trials have ended in disappointment. He has, however, succeeded distinctly in lowering temperature and in keeping it low by the application of ice or iced water to the head. The first trials were made after a suggestion of Dr. Richardson, by putting an ice-bag round the neck. Dr. Richardson believed that by iceing blood that went through the carotids to the brain, and blood that came back through the jugulars, we should directly lower the temperature of the brain itself; and probably it may have been done experimentally, but in practice it was not found easy to do. It was difficult to keep any kind of cravat or collar that was tried, filled with ice, round the neck of the patient; it slipped off, and the old India-rubber bag or ice helmet, so well-known in lunatic asylums, had to be resorted to. After a time Mr. Thornton combined a particular form of cap which answers the purpose extremely well. A pail of water with a large lump of ice in it is placed above the bed of the patient, and the stream of iced water runs through the cap, which is formed of a coil of India-rubber tubing lined with linen. That is placed upon the patient's head, and it is made of different sizes and shapes to fit the patient; the other extremity of the tube is put into a second pail at the side of the bed, and by this means the head is iced. The effect in lowering temperature is very marked, the thermometer in almost all instances indicating a fall of temperature within an hour. If the temperature be rising it is checked, and if very high it can be lowered, and so time is gained for the recovery of the patient.

Value of Sleep and Rest.

Mr. C. G. Wheelhouse remarked, in his address before the British Medical Association—

Sir James Paget, in his recent charming work, entitled *Clinical Essays and Lectures*, tells us that, in estimating a patient's prospect of recovery after an operation, he finds his "capacity to sleep" one of the best measures of his probable power of endurance; and just as, with the system in general, sleep or rest may be

regarded as the great healing balm of nature, so, in the case of individual organs, may we look upon "physiological rest," when attainable, as one of our greatest aids. Time forbids that I should do more than point at the direction in which, at this moment, I am aiming to lead your thoughts, and I will only, therefore, adduce a single instance in illustration of my meaning.

Take a case of "irritable bladder;" suppose all extraneous causes carefully sought out and removed, and a diagnosis established that the condition is one dependent upon disease inherent in the bladder itself, say, of congestion, of inflammation, or of ulceration; is there any method by which we can place this organ physiologically and mechanically at rest? Its natural work being to retain the urine, it is clear that rest can only be procured by depriving it of its power to do this, for a time at least, by paralyzing its sphincter. In the second volume of the *Lancet* for 1875, at page 765, you will find an interesting paper, by Mr. Teale, on this subject, in which he proposes in such cases, especially in the female, temporarily to paralyze the bladder by forcibly dilating and overstretching the urethra. Sir Henry Thompson, Mr. Teeven, Dr. Otis, and other authorities on such subjects, are all agreed that in attempting to cure such irritability, when the result of stricture, it is necessary very freely to dilate, indeed, to overdilate, the urethra, and thus, as I would put it, to place the bladder for the time being in a condition of comparative rest; and we, *i.e.*, my colleagues and myself, in order to carry this principle to its logical conclusion, in several cases of serious ulceration of the bladder, have gone so far as to operate as if for lithotomy, with a view to procure absolute quietude of that organ for a time, and we have met with encouraging success. The principle is exactly the same as that on which the physician relies when he prescribes prolonged rest and freedom from work for an exhausted brain; and on which we ourselves act when, for the cure of fistula *in ano*, or of ulcer in the rectum, we divide or stretch the sphincter ani.

Arsenical Poisoning in the Arts.

Dr. J. T. Arlidge says, in a recent address—Arsenic, it so happens, forms certain salts of great brilliancy of color, which are comparatively cheap, and therefore much used as colors. The preparation known in trade as emerald-green is the most employed. It affords color for wall papers, artificial flowers, fruits and seeds, and at times, most shamefully, for articles of confectionery; it also is an ingredient in the colored compositions used by printers and lithographers, and gives the gay green hue to the muslin-like material worn by ladies under the name of "tarlatan." The chemical properties of emerald-green are such that it is readily separable from the materials it is attached to, and withal it is soluble. We owe to Dr. Guy the fullest account of this poisonous color; it is to be read in the fifth report of the Medical Officer of the Privy Council, published in 1863.

Arsenic acts as a local irritant to the surface of the body, and when absorbed, gives rise to its characteristic symptoms. But it is remarkable, considering the virulent nature of the poison, that in the industrial processes wherein it is brought into contact with work-people, it is attended by so little harm, as reliable evidence shows it to be; and there is this further singularity about it; that some individuals seem almost insensible to its poisonous effects. Dr. Guy observed this fact, and Mr. Reed, of Poole, in Cornwall, where the arsenical ores are roasted, and the workmen largely exposed to the arsenical dust in the course of collecting it from the wide flues which they enter and clean, kindly informs me that there are individuals among them who "literally wallow in it" and do not suffer at all.

The Percussion of Bones.

The New York *Medical Journal* says that Professor Lücke discusses this subject in the *Centralbl. f. Chir.*, iii, 43. It serves to discover painful places in the bone, and, by the change in the normal percussion tone of the bone, morbid changes in the latter may be recognized. The author has entered more deeply into the latter, and has arrived at the following results: In tubular bones the extremities give a higher tone than the intermediate portion. The corresponding bones of a healthy individual give on both sides a tone of the same elevation. Newly-healed fractures give a deeper tone. The closure of a medullary cavity and the presence of increased bone substance may also be diagnosed by the help of percussion. Diseased articular extremities—chronic central ostitis—give a deeper tone. It was found, on the contrary, in a case of chronic inflammation of the knee, that the diaphysis of the diseased tibia, which was osteoporotic, gave a much higher tone than the healthy tibia. The percussion is made either with the fingers or with the aid of the percussion hammer, and it is always best to hold the limb to be percussed free in the air, so as to avoid the disturbing influence of resonance.

Reviews and Book Notices.

BOOK NOTICES.

The Principles and Practice of Surgery. Being a Treatise on Surgical Diseases and Injuries. By D. Hayes Agnew, M.D., LL.D., Professor of Surgery in the University of Pennsylvania. In two volumes. Vol. i. Philadelphia, J. B. Lippincott & Co., 1878. Royal octavo, pp. 1062. Price, cloth, $7.50; sheep, $8.50.

This book, long delayed by the pressure of

the professional duties of the author, will be greeted with pleasure by all those who desire a practical surgical treatise combined with sufficient theory to render the subjects scientifically and thoroughly understood.

With characteristic modesty the author selects to append to his name only one title, the one which adds most to his honor as a teacher—"Professor of Surgery in the University of Pennsylvania." It is, indeed, as a teacher that his conquests have been made, and in the preface he at once demands consideration to his utterances by his introductory sentence: "For a quarter of a century I have been unceasingly occupied in the study of anatomy and surgery, and during most of that time have been actively engaged as a public instructor, in communicating the great truths of these closely allied branches, in the hospitals of Philadelphia, and in the halls of the University of Pennsylvania, to thousands of young men." Those who have listened to his clear, practical method of adapting the subject to meet their wants, will recognize in these pages many familiar expressions and sentences.

It must prove a satisfaction to Philadelphians to see the surgical heads of her two great medical schools each putting forth a book which will be everywhere acknowledged as a standard authority. The work is issued in Lippincott's best style, with good paper and clear type, and is well indexed. It bears evidence of having been written in hours stolen from the time usually allotted to the repose of body and mind, and after the daily labors of an exacting public and private practice.

The practical character of the author's mind is seen in the opening sentence: "Surgery is both a science and an art, and he who aspires to the possession of its principles, and their successful application, will be confronted at once with a process so universal in its operation, so constantly recurring, that to ignore its diligent study is to enter upon one of the most responsible of the learned professions with the certainty of disaster and defeat. This process is inflammation."

The first chapter, of 150 pages, is then devoted to the consideration of "Inflammation," with its results—suppuration, ulceration and mortification.

This portion of the work evinces much patient study and observation, and the modern theories of the process are fully endorsed. The "Nature of Inflammation," a subject usually beset with many difficulties in the minds of both student and practitioner, is treated in such a manner that no one can fail to obtain from it an intelligent and correct idea of the process—his descriptions of the stages of *determination*, *congestion*, *stagnation*, *passage of vessel contents through the walls*, and *change in the perivascular tissues* being particularly lucid. This portion of the work is well illustrated, several of the cuts being from original work by Dr. Shakspeare, under Professor Agnew's direction. Figure 8 gives one an excellent idea of the stages which occur in the process of "transudation." Figure 10, also, illustrative of the contraction of fibrin, is exceedingly well done.

Our author acknowledges the impossibility of giving a concise definition of "Inflammation," as the term is a generic one, and comprehends several very distinct series of phenomena; yet his summing up, on page 55, cannot fail to strike one as being exceedingly appropriate, when he states that "inflammation is *hypernutrition*, carried on under such an extravagant plenum of supply that the germination and mutation of cell-life are generally too hurried to mature, and are, therefore, unstable and short lived.

Under "Treatment," we find, and justly, that irrigation, both hot and cold, occupies a prominent position. Anodynes, by the mouth, or hypodermically administered, are extolled, and depressants are, as a rule, condemned.

Under the head "Diet," he speaks in the strongest condemnation of the modern plan of stuffing patients with food during the early stages of the inflammatory process. "A sick man, with his system aflame with fever, with headache, dry skin, torpid bowels, scanty urine and a disgust for food, does not want broth or other articles of nourishment." Cold water, barley water, toast water, or milk, will supply all needed food. Later, however, in the stages of depression and of suppuration, a generous diet is insisted upon, but it should be given with the regularity of medicine.

In discussing the "Origin of Pus," on page 93, he sums up by fixing its derivation from both leucocytes and connective tissue corpuscles.

In the "Diagnosis of Abscess," on page 96, the lines are clearly drawn between cysts, aneurisms, tumors, abscesses, etc., and this same accuracy of diagnostic observation is continued throughout the entire volume; in fact, it constitutes one of the chief points of excellence in

the work, showing careful observation and clear judgment. We are glad to see that he magnifies the importance of the exploring needle, that most useful of instruments in all cases of doubt.

On page 107 he justly lauds the Aspirator, yet does not consider it a positively necessary instrument in the opening of cold abscesses, as he shows more simple means. The dangerous symptoms following the emptying of such cavities he regards as being caused by a rapid transudation and an acute inflammatory process set up by the withdrawal of the pressure from within the sac, the patient dying from depletion, "consequent on the loss of liquid albuminates, and the corpuscles of the blood." In order to obviate this, he is inclined, although he confesses his experience has not as yet been sufficiently extensive to warrant a positive assertion, to open these abscesses as soon as they are discovered, notwithstanding all the teachings of venerable practice.

On page 123 Boynton's method of stripping ulcers receives its well-merited praise, as it is one of the most potent of stimulants to indolent surfaces, especially when assisted by the pressure of a well-fitting bandage.

Skin grafting is favorably viewed by our author, and illustrated by Bryant's curious if not commendable experiment of making a black patch upon a white man by placing upon the former grafts obtained from the skin of a negro.

The chapter on inflammation closes with a most complete history of "hospital mortification."

Chapter II is devoted to "Wounds," which are treated of under the heads, of "incised," "lacerated," "contused," "punctured," "poisoned" and "gunshot wounds."

Under "Closure of Vessels," our author records several valuable experiments made, under his direction, by Dr. Mastin, and microscopically examined by Dr. Shakspeare. The crural arteries of dogs were ligated, and thorough examinations made at the end of twenty-four and forty-six hours, and four, eight and twenty days. Both the text and the illustrations are particularly clear at this point.

Torsion and acupressure are described, but do not receive a hearty endorsement.

The animal ligature is decidedly our author's favorite, and he believes that the dangers of softening and untying are more than counterbalanced by its desirability.

He directs, on p. 174, that ligatures be soaked in carbolized oil for a long period of time, and that the ends be left a quarter of an inch in length.

On p. 195 he gives a timely warning against the production of tetanus by careless exposure. "I view with horror," he says, "a surgeon who dresses a healing wound while a draught of cold air is blowing upon it."

Under "Healing of Wounds," p. 204, he gives more original investigation, and shows several microscopical illustrations of the process. He concludes as follows: "After examining this subject with no small degree of care, I reiterate the doctrine which I have taught for several years, that nature follows but one method in the repair of wounds, and that is through cells, intercellular substance and blood vessels; in other words, though granulative tissue, alike present whether the wound be great or small, open or subcutaneous."

All forms of "Poisoned Wounds" are thoroughly discussed, and to "Gunshot Wounds" he devotes twenty-five well written pages. His formulation of conditions requiring amputation (p. 247), will form a conservative and safe guide to the military surgeon. In his comparison of amputation and excision for gunshot injuries he has drawn largely and well from the statistics of the War of the Rebellion, thus giving a proper estimate to the value of American surgery as there set forth.

"Injuries of the Head," forms the subject of chapter III, the wounds of scalp, skull and of brain contents, each receiving special consideration. The diagnostic differences between concussion and compression are drawn as sharply as the conditions permit.

The rules governing the operation of Trephining are carefully prepared, but the cut illustration of the operation is a very poor one; attention to the latter defect, however, is noticed under "errata."

Gunshot wounds of the head, face and neck, with their complications and sequelæ, are carefully discussed.

Chapter IV is occupied with the consideration of "Injuries of the Chest and Abdomen." In hemorrhage from the intercostal arteries, the author's needle and compressor seems to us to be efficient and practical. We are glad to see that he extols the operation of making a free opening and introducing a drainage tube into the chest when empyema exists.

Many curious cases of heart wounds are

noticed, and Robert's table of cases of paracentesis pericardii, is published, with the favorable comment that these statistics yield forty-six per cent. of recoveries. Penetrating wounds of the abdomen, that most difficult class of cases to treat, are considered, and the prognosis made very guardedly.

Chapter v takes up the "Injuries of the Upper Extremities." In the surgery of the hand, his plain, practical dealing with such injuries, being in conformity with his usual bent of mind, is worthy of especial commendation. He never sacrifices any portion of this most useful member, unless it is absolutely necessary, since the abundance of blood-vessel supply, and the ease with which irrigation can be applied, renders the saving of even badly lacerated portions quite hopeful. In wounds of the palmar arch he adopts the plan of cutting down and tying both bleeding ends.

Chapter vi, "Diseases of the Abdomen," follows, the most valuable article being the one upon "Intestinal Obstruction," with a description of colotomy and laparotomy. The affections of the anus and rectum are very fully considered. For pruritus ani he highly recommends burnt sulphate of zinc and alum as an injection, an old remedy, but a good one. Fissure of the anus, that disease so frequently confounded with piles, and wrongly treated, is clearly defined by the author, and its great influence upon the health and mental condition of the patient properly credited. His discussion of the treatment of hemorrhoids is full and practical.

The fifty pages given to the subject of "Hernia" are full of sound teaching, showing accurate anatomical knowledge and good observation. His diagnostic differences between hernia, varicocele, hydrocele, sarcocele, hæmatocele, undescended testicle, and abscess, are good.

Chapter vii is given to the discussion of "Diseases and Injuries of the Blood vessels." Alcohol is looked upon as being more actively concerned in bringing about atheroma than all other causes combined, page 535.

It would be impossible, in the short space of this review, to enter into the merits of the hundred pages given to the subject of aneurism; but again we find, on page 548, one of the strong points of this work presenting itself, namely, diagnosis.

The anatomical, statistical and tabular information in Chapter viii, "Ligation of Arteries," etc., is complete and reliable.

"Surgical Dressings" is the subject of Chapter ix. We turn at once to Chapter x, and for the next three hundred pages find plain, practical mechanical suggestions and teachings upon the important subject of "fractures." Our author is undoubtedly a skillful manipulator in the treatment of a broken bone, and we think that he has infused sufficient of his tact into these pages to render the careful reader thoroughly competent to manage almost any case that may come into his hands. We can give no synopsis; it must be read to be appreciated. We are glad to see that "immovable dressings" are endorsed. "Ununited Fractures" receives very full notice, the tables prepared by Dr. F. Muhlenberg showing great research, and giving much valuable information. Another large table, p. 815 (the largest collection ever made), comprises all the fractures treated in the Pennsylvania Hospital from 1830 to 1874, being 8667 in number, the relative proportion of different regions being as follows: lower extremity, 45 per cent.; upper extremity, 44 per cent.; head, 6 per cent.; trunk, 5 per cent. Full statistics are given in regard to bone, form, position, age, sex, side of body, result, amputation, deaths, and occupation.

Fractures of the thigh, of course, receive large attention, but too many useless forms of apparatus are shown. The same mistake is made in the discussion of the treatment of fractures of the patella. His remarks concerning compound fractures of the leg, on p. 997, are timely and well chosen.

The volume closes with "Diseases of the Bones," necrosis, sclerosis, rachitis, osteomalacia, fragilitas, etc.

We can only say, in conclusion, that in spite of its defects, which are acknowledged by the author, it is destined to be found upon the shelves of every practitioner who desires a safe, sure and conscientious guide in the treatment of his surgical cases. We regret that the author has not drawn even more largely upon his rich store of personal experience.

We are glad to record that the book is profusely illustrated, many of the cuts being from original specimens. In amount, they far exceed those of any other surgical treatise, being nearly nine hundred in number.

THE

Medical and Surgical Reporter.

A WEEKLY JOURNAL,

Issued every Saturday.

D. G. BRINTON, M.D., EDITOR.

The terms of subscription to the serial publications of this office are as follows, payable in advance:—

Med. and Surg. Reporter (weekly), a year,	**$5.00**
Half-Yearly Compendium of Med. Science,	**2.50**
Reporter and Compendium, - - -	**7.00**
Physician's Daily Pocket Record, - -	**1.50**
Reporter and Pocket Record, - - -	**6.25**
Reporter, Comp. and Pocket Record, - -	**8.25**

For advertising terms address the office.

Marriages, Deaths, and Personals are inserted free of charge.

All letters should be addressed, and all checks and postal orders drawn to order of

D. G. BRINTON, M.D.,
115 South Seventh Street,
PHILADELPHIA, PA.

1879.

PREMIUMS FOR NEW SUBSCRIBERS.

Special Offer to Our Old Subscribers.

From and after October 1st, any new subscriber will receive the REPORTER

15 MONTHS FOR $5.00,

to wit, from Oct. 1st, 1878, to Dec. 31st, 1879.

To enlist the interests of our Old Subscribers in the extension of our circulation, we offer, if they will send us, along with their own renewals, the amount for ONE new subscriber for one year (who will be entitled to the 15 months mentioned) to send them either (1) the HALF-YEARLY COMPENDIUM, for 1879; or (2), the PHYSICIAN'S POCKET RECORD, for 1879; or any of our other publications, to the amount of $2.50. These publications will include the following works now in press:—

GOODELL. Lessons in Gynecology.
LANDOLT. Manual of Examination of the Eyes.
SAYRE. Organic Materia Medica.

Besides, already published, Napheys' *Surgical Therapeutics*, Napheys' *Medical Therapeutics*, Dobell *On Cough and Consumption*, Bernard & Huette's *Operative Surgery*, Butler's *Medical Directory of the United States, etc., etc.*

WHY THERAPEUTICS IS OF SO LITTLE ACCOUNT.

That earnest thinker, Dr. BENJAMIN W. RICHARDSON, has been giving, this summer, in Glasgow, some lectures on "The Positive in Remedial Art." He begins somewhat after the style of the Irish Naturalist, who headed his chapter, "The Snakes of Ireland," and followed it with the words, "There are no snakes in Ireland," by showing that there is at present nothing positive in remedies. To illustrate it, he tells the following true story:—

"A leading provincial physician brought to London a sick man, for consultation. It had been arranged that six physicians should see the sick man independently of each other, and should diagnose and prescribe independently. The case was a clear one, and comparatively simple. In diagnosis there was, practically, no real difference of opinion; there was no difference as to the actual character of the disease, and but trifling difference in respect to the extent of the disease. There was no essential difference as to the prognosis; not one of the physicians consulted would have admitted the life of the sick man at an insurance board, and not one proved to be many weeks wrong in estimating the duration of his life. There was a concensus of opinion as to the general mode of life which the patient ought to pursue; and one hand might have drawn out all the reports that were presented on the disease in its pathological aspects. Altogether, in fact, the six minds were as one mind until the all-important subject of use of remedies came into question. To say that now there were not two minds alike is to tell but half the story. The fact is, that the prescriptions written were as opposed the one to the other as any kind of opposition could possibly be. If the six prescriptions had been placed in the hands of a physician who knew nothing of the facts of the case, he could not from them have made a guess as to the precise nature of the case. One prescription suggested a mere placebo; a second, what some would call a nervine tonic; a third, an alterative medicine; a fourth, a warm stomachic mixture; a fifth, cod-liver oil and iron; the sixth, an antiphlogistic, with a counter-irritant."

This utter bewilderment in therapeutics may again be illustrated, from another nationality, by the plans of treatment recommended in the *Encyclopædia of Medicine*, edited by ZIEMSSEN, and lately scattered so widely over this country. The therapeutics of this work is of the crudest and most unreliable character, the outcome of theories and hypotheses about dis-

ease which are far from proved. This has been repeatedly stated by American and English critics. Thus, the *Lancet* says (April 13th, 1878,) of the work—

"The characteristic of the line of treatment is the adoption of a rational system of therapeutics and neglect of mere empirical methods. But the rational is pushed to an extreme which, in some places, verges on the impracticable, and the empirical is sometimes unduly discredited."

Prof. J. Lewis Smith, six months before (*American Journal of Science*, October, 1877), in speaking of the treatment of diphtheria, remarked—

"These volumes occupied the centres of our private libraries, and were pointed out as the means which would be likely to elevate the profession of the country to a higher standard of medical knowledge. The treatise on diphtheria contained in this Cyclopædia, the longest and most minute of any in the English language, was eagerly sought for and read, and an immense amount of harm done."

Another independent thinker, Dr. J. R. Black, writes: (Cincinnati *Lancet and Clinic*, August 24th, 1878)—

"That therapeutical improvement moves very slowly, any one can readily see by examining almost any of the leading articles of Ziemssen's Cyclopedia. The wealth of description as to all the phases of morbid action, the thorough analysis of its pathology and pathogeny, involuntarily lead one to think such a masterly grasp of disease must certainly be able to give us something new and better as to its cure—the great goal of all our work. Keen disappointment first, then a thought akin to contempt at such barren and impractical learning, arise in the mind."

There seems little doubt but that in regard to the all-important matter of the *treatment of disease*, this elaborate production of the German mind is frequently valueless and sometimes dangerous.

This is a most disappointing conclusion, and it is worth the intensest thought to discover why these laborers have failed so completely.

We submit that nearly all of this failure can be traced to one or the other of three sources.

1. *A Theory of Disease.* The writer makes up his mind that the disease has a particular etiology; that it is owing to bacteria, or sepsis, or algous growths, or what not, and treats it accordingly, on the principle *tollere causam.*

2. *A Theory of Drugs.* Experiments on healthy subjects and lower animals have given him a knowledge of what is called "the physiological action of drugs," and on this he bases his treatment.

3. *The Belief in the Uniformity of Disease.* There is no greater fallacy than the notion that the most successful treatment of a disease in one locality, will also be the most successful in another. "Time, clime and circumstances" make vast differences in the same complaint. "*Cœlum et animum mutant, qui trans mare currunt*" may be said of diseases. The treatment must differ, to correspond. Even intermittent fever varies vastly in its response to cinchona alkaloids in different regions. What our grandfathers called croup and "typhous" do not correspond in character, nor did they answer to the same remedies as the diseases we know by those names. As is well remarked by one of those German writers we were referring to, "Diseases differ in extent and character at different periods, as they do in different places. Experience teaches this, and the more fully we recognize it, the better will it be for the art of medicine." (Dr. Eugen Kommerell, in *Deutches Archive für Klinische Medicin*, Aug. 1878.)

These are the three fatal proclivities to avoid. Let us not seek to study out plans of curing disease in the laboratory, nor in the library, but by the bedside. Nor let us accept as applicable to the patients we have the plans extolled by writers in Paris or Peru; but rather, by close and intelligent observation, by the employment of that "empiricism, guided by the methods of reason," which Bacon recommends, let each of us discover for himself the modes of procedure adapted to the place and period of activity.

When we shall have done all this, we have still to look sharply that our drugs are what they profess to be; for it is an open secret that adulteration and sophistication are sadly common in the drug market, and the most skillful therapeutist will fail when he is deceived in this respect.

Notes and Comments.

The Thermal Death Point of Septic Organisms.

Some very careful experiments on this subject have lately been rehearsed to the Royal Society by the Rev. W. N. Dallinger. He found septic organisms living after exposure to a heat of 250° Fah. He proceeds in his narrative:—

I followed this with four more experiments, separately and successively made. Two of them were at a temperature of 248°, and two at 252° F. In both of the former, at the end of nine or ten hours, the complete organism in full vigor could be seen; and in one of the cases it was discovered in the still condition shown at Fig. 20, Plate 2, and watched until the organisms had attained the condition indicated in Fig. 24, Plate 2.

But in the two latter instances (heated up to 252°) the living form did not reappear during the six days following, although repeatedly looked for.

I concluded, therefore, that the temperature of 250° F. was the limit of endurance which the spore of this form could bear by this method of heating.

Boiling water, therefore, would not destroy these germs.

Location of the Special Senses in Insects.

The eminent French naturalist, Père Montrousier, details the following experiment that he has made. He immersed a long-snouted weevil so as to cover it, all but the tip of the antennæ, with a coating of wax. On presenting to it oil of turpentine it became violently excited and endeavored to escape. Another now had the tips of its antennæ only coated with the wax, and neither turpentine nor any other strong smelling substance at all affected it. He places the faculty of the "perception of sound" equally in the antennæ.

After-Treatment of Tracheotomy Cases.

Dr. Vogt, quoted in the *Medical Press and Circular*, proceeding from the fact that with the present methods of treating tracheal croup most children perish, even after operation, from continued formation of the membrane, suggests glycerin as a means of hindering the formation. It is known that when this substance is applied to the mucous membrane a profuse watery serous secretion is excited; and this is relied upon by Dr. Vogt to remove or prevent the adhesion of the false membrane. In the case of a little six-year-old girl treated in this way a cure resulted. Glycerin mixed with an equal quantity of water was inhaled, by means of an inhalation apparatus connected with the tracheal tube, every half-hour. Dr. Vogt has also used this treatment in recent cases of croup, where tracheotomy has been thought unnecessary or unadvisable. Disinfection of the original patch in the pharynx by means of chlorine or bromine water preceded the use of inhalation.

Strychnia in Nocturnal Enuresis.

Dr. Kelp, according to the *Medical Times and Gazette*, has obtained success in obstinate cases of this troublesome affection by the hypodermic injection of the nitrate of strychnia. He inserts in the vicinity of the rectum a single very small dose, sufficing to arrest the malady for a time. When it returns, the injection is to be repeated. His last case was a woman, aged eighteen, previously in excellent health, who had suffered from enuresis during several months, consecutive to scarlatina. The first injection procured her a respite for several nights, after which the treatment was repeated, and the cure became complete.

The Cause of Goitre.

In spite of the marked local character of goitre, its cause remains quite undetected. Some recent theories are mentioned in Dr. Dobell's Reports. Thus Dr. J. Dudgeon writes that, in China, goitre is frequently found in the absence of the supposed ordinary producing causes. M. Nivet says not only that, in the Puy-de-Dome, bronchocele is rife in certain districts the substratum of which is neither calcic nor magnesic, but also that, in some localities the subsoil of which is magnesio-calcareous, this disease is almost unknown. Without absolutely denying the influence of a magnesic or calcic soil upon the development of goitre, M. Nivet believes that this affection results from the conjunction of various causes, such as low and damp localities, and possibly some rheumatic affection of the vaso-motor nerves of the thyroid gland. Dr. Braxton Hicks supposes both exophthalmic and single goitre to be the results of local congestions. The tendency to local congestions being greater in women, this circumstance accounts for the greater frequency of both these affections in the female. Lastly, Professor Klebs con-

siders the *navicula* developed in drinking-water the only cause of the disease in Salzburg, in which city dogs often have goitre.

Gnoscopine, a New Alkaloid of Opium.

The well-known English chemists, T. and H. Smith, announce the discovery by them of a hitherto unknown alkaloid of opium, which they have named gnoscopine. This new principle is characterized by forming readily crystallizable salts, which have an acid reaction. That its salts possess this reaction, as also the fact that gnoscopine is quite insoluble in water, marks its strong resemblance to the papaverine group. Hence, also, it is easily separated from narceine, which is moderately soluble in boiling water, and freely so in alkalies. Gnoscopine, when pure, is in the form of long, thin white needles, having a wooly character when dried. It is soluble in 1500 parts of cold water, and melts at 233° C.

Parental Resemblances and Preferences.

Dr. G. Gregory writes to the *British Medical Journal* :—

For several years I have noticed, in hundreds of instances, that the first-born son frequently resembles, in facial appearance, his mother, or one of her ancestors, most frequently her father. The first-born daughter, in about six out of every seven cases, partakes of her father's likeness, or of his mother's features. When parents have four or five children, the children which follow are most frequently compounds of both parents in personal appearance. A large majority of women have a greater affection for their first-born son than for any other child, sometimes than for all their children. Mothers seldom readily confess this ; but, if asked in a confidential sympathetic tone, as though there was nothing improper in having a favorite child, they will generally admit as much as warrants the conclusion to which I have come.

Gastric Ulcer Simulating Poisoning.

For a long time the French believed that Napoleon was poisoned at St. Helena, in spite of the autopsy showing gastric ulceration. More lately, M. Littré has maintained that the alleged poisoning of Henrietta, of England, Duchess of Orleans, was really nothing else than perforation of the stomach from a simple ulcer, all the symptoms of which she had experienced for some time. M. Grasset (of Montpellier) relates a similar case. A young man, twenty years of age, robust, and always in very good health, was attacked by severe colic after a walk of eleven kilomètres (more than twenty miles), and a hurried breakfast, and died in twenty-four hours. His family thought that he had been poisoned, and caused a necropsy to be made, when an ulcer of the stomach was demonstrated, which remained latent till just before his death, and then produced perforation, followed by acute peritonitis. The legal physician, therefore, should not lose sight of the fact that the absence of pathological antecedents and perfect external health do not exclude the idea of chronic ulcer of the stomach and spontaneous perforation of that organ.

Correspondence.

Artificial Respiration.

Ed. Med. and Surg. Reporter :—

In the absence of myself and partner, Dr. Whitley, an earnest message came, Friday, P.M., December 21st, 1877, to call at the residence of Mrs. S., an American, about forty-two years of age. On returning, Dr. W. answered the summons, but found Dr. M. in attendance. The latter had just administered morph. sulph., for nervous excitation, in part the result of some family trouble, therefore the case was left in charge of Dr. M.

In about an hour Dr. W. was re-summoned. Returning, he found the patient cold, comatose, unable to swallow, and apparently dying. She drew her last gasping breath as he re-entered her room. Artificial respiration was at once resorted to. A subcutaneous injection of atropia sulph. was administered, cold applied to the head, and heat, stimulants and friction to the body and extremities. I was then called in consultation.

The atropia was repeated, and the general treatment continued. In about an hour the pupils began to dilate, and the body to regain slight warmth ; yet no other signs of returning life appeared. There was no pulse at the wrist ; and if artificial respiration was momentarily suspended, the heart's tremulous motion ceased. Much of the time the tongue was drawn forward and held ; otherwise no air could be forced into the lungs.

This treatment was energetically continued, with alternating hopes and fears, about seven hours. Feeble, unaided respiration was then resumed, and maintained about half an hour. It then ceased, and artificial was again resorted to. After about the same length of time she again began "to spin the brittle thread of life," and was able to swallow.

Partial consciousness returned Saturday morn-

ing, and hopes of recovery were entertained during the day, and a portion of the following. In defiance of precautionary efforts, however, pneumonic congestion came on Sunday afternoon, the patient relapsed into a profound coma, and died Monday evening, about seventy hours after taking the morphia.

The remarkable features in this case were the length of time during which artificial respiration was maintained, and the small amount of morphia, just one-sixth of a grain, alleged to have been given. The patient was previously healthy.

S. B. Chase, M.D.

Osage, Iowa.

News and Miscellany.

The Illinois State Board of Health Attacking Quackery.

In Chicago, in October, Judge Williams rendered a decision, in the case of Aikin vs. The State Board of Health. The complainant belongs to a class known as "advertising doctors," and held a certificate granted by the State Board, which permitted him to practice, and placed him on the list of the recognized physicians of the State. Recently he was warned that unless he desisted in his method of bringing himself before the public, his license would be revoked. The complainant then commenced the present suit, asking for an injunction, restraining the board from taking any action of the character, setting up that the board had no authority under the statutes, and that his course had not been unprofessional in any sense. An effort was also made to show that the law under which the board came into existence was unconstitutional.

The advertisements of Aikin professed his ability to cure all manner of diseases, and a number of reputable physicians were brought into court to testify that in a great many instances they were false, and liable to mislead ignorant people. As it was this class to protect which the State law was especially framed, it was held that the board had a right to discipline any member of the profession, and to decide what was unprofessional conduct in one of their calling. The court held that a board of this character must necessarily be vested with large discretionary power, and in the proper exercise of it should not be controlled by individual tribunals. It had, therefore, a right, in considering the sanitary conditions of the people, to decide what was "unprofessional," and what was not. In this sense a physician may be guilty of unprofessional conduct, and not criminal. Independent of the right of the board to exercise its authority without the intervention of the courts, it had been shown that the complainant had made statements in his advertisements which had been considered by a number of eminent practitioners as false as well as disreputable.

In discussing the constitutionality of the statute, the court spoke at considerable length, and said that the right to practice medicine was not descendable from its possessor to his heir, and may be lost by misconduct or immorality on the part of the practitioner. (12 Miss. 270; 5 Ohio, 22; 50 Ala., 486.) As the right to practice is a mere statutory privilege, there is no reason why it should not be denied to one man and extended to another in the discretion of the legislature. (See 12 District 17 Cal., 547; 22 Cal., 321.) The prayer for the injunction was therefore denied.

The Texas "Screw Worm."

The following extract is from the *Intelligencer*, of Dallas, Texas. We should be glad to have further particulars of such cases from readers in that State.

Samuel Myers is now lying bed-fast at his home in this place, afflicted with that terrible malady, the screw worm. It appears that Mr. Myers has been sick, of late, with fever, and that on Monday last, while resting in bed, one of the flies alighted near his nostrils, where there were some few drops of blood. It requires but a few moments for one of these flies to deposit hundreds of eggs, which are hatched and grown inside of an hour, many of them as much as one-half an inch in length. Mr. Myers, upon awakening, felt a slight tickling in the nose, and it was not until his eyes and face had become fearfully swollen, that the physician discovered the presence of the worms. The only known remedy was applied—calomel and carbolic acid—by injection into the nostrils. At first a few would drop their hold and force themselves out. Application after application was made with like results up to last night, at which time 152 was the number passed. The patient is in a critical condition, with but slight hopes of his recovery. The fly is much dreaded by our stock men, and is represented as a dark-colored and fuzzy insect, which generally attacks cattle or any other animal that is unfortunate enough to have blood upon which they can alight.

Absinthe Tippling.

The researches of Dr. Ernest Magnan have abundantly proved the peculiarly poisonous nature of the liqueur called absinthe. But his warnings have little influence on his fellow citizens, if we may judge from the following extract from a recent Paris letter:—

"The quantity of absinthe consumed is astonishing, for as you pass the cafés, you see the tall glasses of greenish white liquid on every other table. From what we read at home of the wickedness of it, and the dreadful effects of absinthe, one would expect them to retire behind a latticed door to take it, and not flaunt their indulgence on the curbstones. The women drink it, too, and it is quite common, in passing, to see a sedate couple sitting down to a social absinthe."

We may add that absinthe is largely sold in

Philadelphia, at ten cents a glass, and probably contains more poison for the money than a man can buy in any other shape.

The Trommer Extract of Malt.

From further use of this preparation we are more and more impressed with its excellence as a nutritive agent. In some cases where cod-liver oil is indicated, but is very repugnant to the patient, we have substituted the malt extract with very satisfactory results. Most persons take it without objection, and it assimilates readily. There are many conditions in infancy, old age, and debility, where a physician, once familiar with the value of the extract, would be at a loss to suggest anything to replace it.

Items.

—The *Druggist and Chemist*, of this city, proposes to enter on the new year with increased size of pages and other improvements.

—In a discussion on cremation at a London club, a member is credited with the argument, "We earn our living, why should we not urn our dead?"

—A laboratory has been attached to the Prefecture of Police, at Paris, for the purpose of testing wine, brandy, beer, etc., offered for sale.

—The last miracle heard from was down in North Carolina. There is a miraculous well there, and a negro bathing in it was turned white. The Cincinnati *Inquirer* is our authority (at second hand). We think it must have been a "cracker," who had never washed in his life before, and was amazed to discover the natural color of his skin.

—Prof. J. Gibbons Hunt, M.D., of this city, in a recent lecture, stated that, in his opinion (and he is one of the most experienced microscopists in this country), England, which first introduced cheap instruments, sits at the feet of America in respect to both lenses and mechanical appliances He says it is affectation or stupidity for Americans to send to Europe for microscopes when they can purchase better ones at home.

Personal.

—Many readers will have learned with regret of the death of Dr. Hermann Lebert, of Vevay. It took place on August 1st. He was born in Breslau, and at the time of his death was 66 years of age. From 1852 to 1859 he was professor of Medicine in the University of Zurich, and from 1859 to 1875 held the same chair in the University of Breslau. In 1875 he resigned his professorship, on the score of ill health, and since then has practiced medicine in Vevay. He was the author of several valuable works, and of a highly esteemed paper on Gastric Ulcer, which was presented to the International Medical Congress which met in this city in 1876. The paper was translated and published in its volume of *Transactions*.

—Dr. Alexander Stewart, son of the Director-General of Hospitals in the British Army, died September 28th, in San Francisco. Dr. Stewart entered the British Army, in the Nineteenth Regiment of Foot, in 1853, and served through the Crimean war, in the field; was then promoted to the Royal Artillery, and after the war, having received the medals of the class, was given an honorable position in the East India service. He went thence to Australia, South America, and finally to California. His tastes drew him to military organizations, and he accepted the position of Surgeon on the staff of the First Cavalry Battalion, National Guard of California, to which he was reappointed only a few days before his death.

OBITUARY.

T. C. ROGERS, M.D.

Died, at his residence, Harrington, Delaware, on the 15th of October, 1878, Dr. T. C. Rogers, aged about fifty years. Dr. Rogers was an alumnus of the University of Pennsylvania, class 1855. He practiced his profession with great industry, over a very wide field in Delaware, and across the line into Maryland, for more than twenty years. As is too often the case in our profession, his life's labors have neither profited him nor his family, in a pecuniary point of view. His experience was to have a very extensive and burdensome practice, and very meagre pay.

Dr. Rogers was a regular subscriber to, and an attentive reader of, the MEDICAL AND SURGICAL REPORTER, for more than twenty years. He was a member of his State Medical Society, and of the American Medical Association.

Dr. Rogers was justly regarded by all who knew him as an able and faithful practitioner, and an honest man. His labors, and "life's fitful fever" are now over! That rest and peace, which was all he asked for, may attend his ashes, is the fervent hope of his life-long friend and college-mate.

W. STUMP FORWOOD, M.D.

Darlington, Md., Oct. 21st, 1878.

[We gladly add our testimony to the kindly disposition and high professional character of Dr. Rogers. His death will be regretted by many to whom his services were always ready, without money and without price.—ED. REPORTER.]

MARRIAGES.

CALDWELL—BELDIN.—October 17th, 1878, by the Rev. Dr. G. Morgan Hills, Dr. George W. Caldwell, of Philadelphia, and Lizzie W., daughter of the late Elisha Beldin, of Burlington, N. J.

CROCKER—RUSSELL.—On Tuesday, the 15th instant, by Rev. Edward W. French, D.D., at the residence of the bride's mother, Franklin B. Crocker, M.D., and Martha Russell, daughter of Eliza and the late Richard Russell, all of Jersey City, N. J.

EATON—SOUTHERLAND.—On Saturday, September 28th, at the residence of the bride's parents, Peoria, Ill., by the Rev. J. F. Wood, assisted by the Rev. A. A. Peters, Dr. M. M. Eaton, of this city, and Miss M. E. Southerland.

GRIFFITH—RICHARDS.—On Wednesday, October 9th, 1878, by the Rev. C. F. Turner, William M. Griffith, M.D., and Miss Cecelia S. Richards, both of Philadelphia.

DEATHS.

HUNT.—On Sunday, October 20th, Prof. Franklin W. Hunt, M.D., in his sixty-eighth year, at No. 235 East Fifty-ninth street, New York.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

DUCRO'S ALIMENTARY ELIXIR

A Combination uniting the properties of ALCOHOL and RAW MEAT. It has been Mr. Ducro's aim in preparing this elixir to present under the form of a pleasant cordial the nutritive and restoring properties of raw meat and the stimulating properties of alcohol. In this he has been eminently successful, judging from the great number of physicians who prescribe and use this food medicine. This preparation, which has been used with great success in the hospitals of Paris since 1868, is adapted to the treatment of all diseases requiring the administration in a small volume of a tonic able to stimulate and support the vital forces, as in *Pulmonary Phthisis, Depression* and *Nervous Debility, Adynamia, Malarial Cachexia,* etc. It is especially adapted for delicate ladies and children, debilitated old people and convalescents.

Paris: Place de Vosges, 20. **New York: E. FOUGERA & CO., Depositaries.**

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

NEW YORK.

TO PHYSICIANS.

THE scarcity and high prices of Cinchona barks and Sulphate of Quinia, and the prospect of only a slight reduction in these prices, makes the present a favorable opportunity of calling the attention of the profession to the *combination of all the bark alkaloids.*

Much attention has been given to this subject in Europe and India.

The growing appreciation by the medical profession of the United States of

CINCHO-QUININE

is due to the fact that it retains the important alkaloids IN COMBINATION, — a combination which in practice is *preferable to perfect isolation or separation* of these alkaloids.

In addition to its superior efficacy as a tonic and anti-periodic, it has the following advantages, which greatly increase its value to physicians : —

1st, *It exerts the full therapeutic influence of* Sulphate of Quinine, *in the same doses*, without oppressing the stomach, creating nausea, or producing cerebral distress, as the Sulphate of Quinine frequently does ; and it produces much less constitutional disturbance.

2d, It has the great advantage of being *nearly tasteless.* The bitter is very slight, and not unpleasant to the most sensitive, delicate woman or child.

3d, It is *less costly :* the price will fluctuate with the rise and fall of barks, but will always be much less than the Sulphate of Quinine.

4th, It meets indications not met by that Salt.

The following well-known Analytical Chemists say : —

"UNIVERSITY OF PENNSYLVANIA, Jan. 22, 1875.
"I have tested CINCHO-QUININE, and have found it to contain *quinine, quinidine, cinchonine, cinchonidine.* F. A. GENTH,
Professor of Chemistry and Mineralogy."

"LABORATORY OF THE UNIVERSITY OF CHICAGO, Feb. 1, 1875.
"I hereby certify that I have made a chemical examination of the contents of a bottle of CINCHO-QUININE ; and by direction I made a qualitative examination for *quinine, quinidine,* and *cinchonine,* and hereby certify that I found these alkaloids in CINCHO-QUININE.
C. GILBERT WHEELER,
Professor of Chemistry."

"I have made a careful analysis of the contents of a bottle of your CINCHO-QUININE, and find it to contain *quinine, quinidine, cinchonine,* and *cinchonidine.*
S. P. SHARPLES, *State Assayer of Mass.*"

TESTIMONIALS.

"WELLFLEET, MASS., Nov. 17, 1876.
"I have used CINCHO-QUININE, and can say without any hesitation it has proved superior to the sulphate of quinine. J. G. JOHNSON, M.D."

"MARTINSBURG, MO., Aug. 15, 1876.
"I use the CINCHO-QUININE altogether among children, preferring it to the sulphate.
DR. E. R. DOUGLASS."

"LIVERPOOL, PENN., June 1, 1876.
"I have used CINCHO-QUININE, obtaining better results than from the sulphate in those cases in which quinine is indicated.
DR. I. C. BARLOTT."

"RENFROW'S STATION, TENN., July 4, 1876.
"I am well pleased with the CINCHO-QUININE, and think it is a better preparation than the sulphate. W. H. HALBERT."

"ST. LOUIS, MO., April, 1875
"I regard it as one of the most valuable additions ever made to our materia medica.
GEORGE C. PITZER, M.D."

"RICHMOND, VA., March 28, 1877.
"I believe that the *combination* of the several cinchona alkaloids is more generally useful in practice than the sulphate of quinine uncombined.
"Yours truly, LANDON B. EDWARDS, M.D.
Member Va. State Board of Health, and Sec'y and Treas. Medical Society of Va."

"CENTREVILLE, MICH.
"I have used several ounces of the CINCHO-QUININE, and have not found it to fail in a single instance. I have used no sulphate of quinine in my practice since I commenced the use of the CINCHO-QUININE, as I prefer it. F. C. BATEMAN, M.D."

"NORTH-EASTERN FREE MEDICAL DISPENSARY, 908 East Cumberland St., Philadelphia, Penn., Feb. 29, 1876.
"In typhoid and typhus fevers I always prescribe the CINCHO-QUININE in conjunction with other appropriate medicines, the result being as favorable as with former cases where the sulphate had been used.
"F. A. GAMAGE, M.D."

SYRUP-GLYCEROLE
OF
FERROUS CHLORIDE.

The Combination which all Forms of Iron must assume before Assimilation.

Superior to all other Iron Salts in that, while it is readily taken into the circulation, and does referruginate the blood, it does not ordinarily cause constipation nor headache. It is very pleasant to the taste, and is unalterable.

Ferrous Chloride is a neutral salt, consequently it has no action upon the teeth, and may be administered fearlessly. This fact and the delightful taste of my preparation render it an advantageous form for administration to children. Each fluid drachm contains one grain of Ferrous Chloride, which, owing to the certainty of its assimilation, is a full, active, adult dose.

STAUFER'S
UTERINE INSTRUMENTS.

The readers of this Journal are familiar with this Series of Instruments, during their rise and progress upwards of ten years. Many have introduced them into their practice, and have written complimentary letters even to this office.

The above late engraving represents—1. The new ***Retroversion Cup***, with a broad lever of which the corners are rounded and less liable to irritate than the former. 2. ***An Intra-Uterine Stem Cup***. The Intra-Uterine Stem (hard rubber) is made to order in length and thickness, after a pattern, when desired. The stem is supported as A. Fig. 1 On either belt, and same in price. (*See large plate.*) The stem is inserted after the cup is in position, and locks in a square socket. This gives a reliable and yet yielding base. ***Exchanges.***—To obviate the risk of purchasers, the Hard Rubber part is made exchangeable as all the others are on the catalogue, now aggregating about 150, in size and style of instruments. Over one half belong to the class of Uterine Supporters—the balance to examination and diagnosis. 3. ***Anterversion C.*** The modification consists in a concave rest for the cervix, to retain it in position.

)Obtained through this Office, and Catalogues sent on application.

CHRONIC CHLORAL POISONING.

Read before the Philadelphia County Medical Society, May 18th, 1878.

BY FRANK WOODBURY, M.D.,
Physician to the German Hospital.

Since 1869, when it was brought to the notice of the profession by Liebreich, chloral rapidly gained general favor. Standing as it does in the front rank of cerebral spinal sedatives, it is now almost universally employed, being, according to Fothergill, in conditions of sleeplessness due to vascular excitement, "the hypnotic *par excellence*," and is "far superior to opium." This and the other advantages of the internal administration of the drug, in acute mania, in convulsions, whether puerperal, hysterical, epileptic, or infantile, and most markedly in tetanus, and in alleviating the paroxysms of hydrophobia, its use in whooping cough and other nervous affections, having been frequently referred to in our discussions, are sufficiently known, and are familiar as household words. I would, however, ask the indulgence of this Society, while I invite its attention to some peculiar effects that have been observed after the long continued administration of this drug, in what has been considered ordinary medicinal doses. From the fact that death has occurred immediately after the administration of single large doses, and a sufficient number of such cases has been recorded to establish this fact, we are justified in making the assertion that chloral hydrate is capable, when introduced into the system, of causing death, as a direct effect of its administration. It is, however, to the effects of chloral short of the fatal result, from doses sufficient to produce decided toxic symptoms without determining the final cessation of the vital functions, that our attention may, perhaps not unprofitably, be directed this evening.

As to the fatal dose, and its relation to the ordinary dose of chloral, there is a wide latitude observed in the experience and opinion of different individuals. Dr. Richardson, of London, says that 180 grains is a fatal dose, and that it would not be safe to give more than 120 grains in 24 hours, as the system cannot decompose, and eliminate more than five or seven grains per hour. On the other hand, in the experience of members of this society, this has been largely exceeded, not only without a bad result, but apparently with great benefit to the patient. And yet Dr. Fuller (*Lancet*, March, 1871) reports a case of death following the administration of 30 grains in a healthy young lady; and Dr. Schwaighofer, of Vienna, records (*Irish Hospital Gazette*, 1873) a similar result from the same dose, in a drunkard. Dr. E. F. Ingalls (Chicago *Medical Journal and Examiner*) reports a case of death in a healthy German woman following the administration of ten grains of the remedy, a similar dose having been administered an hour before without ill effects, and no other medicine having been given.

How can this be reconciled with the fact that more than once, in the treatment of delirium tremens, one full ounce has been given in the twenty-four hours, not only without danger, but with the best results?

Now, in these cases, the fault lies either with the drug or the individual. The statement may

be made that an impure article had been used in the fatal cases, and that some of the secondary products of decomposition, being more noxious than the chloral itself, had caused death. The justice of this observation is acknowledged, and it may be accepted as a sufficient explanation for some of the cases, but others yet remain in which the same article had been given to other patients with only the ordinary effects; and we can safely assume that, as a rule, in practice every ordinary precaution is undoubtedly taken to obtain the medicine in a state of integrity. Moreover, in Europe it has been commonly prescribed in much larger doses, and almost uniformly without bad result. We have all met with patients who cannot take opium. In many cases there is, probably in like manner, a chloral idiosyncrasy, either natural or acquired; the latter class including persons suffering from such disorder of the nervous system, or heart, as renders them peculiarly susceptible to the poisonous action of the drug. Fothergill points out the fact that in an anæmic condition of the nervous centres chloral is contra-indicated; and DaCosta advises caution in its administration, and remarks that "in cases of cardiac debility, and in dilation, or much obstruction of the heart, it is generally contra-indicated" (DaCosta, Clinical Notes on Chloral, *American Journal of Medical Science*, April, 1870).

Without lingering upon this interesting question of the causes of such idiosyncrasy, it will doubtless be conceded that individual peculiarities render certain persons peculiarly susceptible to chloral, so that in a large number of patients we may reasonably expect to find a few in which unusual and alarming symptoms may follow the ordinary dose, as in the cases reported by Dr. Ingalls and Dr. Fuller. This is so well established that Dr. Wood (Therapeutics and Materia Medica, Second edition, Phila., 1877, p. 326) says, "I think the practical deduction from these facts is that twenty grains is the highest safe dose of the remedy, that this dose should not be repeated oftener than once an hour, and after sixty grains has been taken, not for some hours, unless in very urgent cases."

I have been the more particular in establishing the ordinary medical dose of chloral, because in many of the cases reported, where this drug has been given for a length of time, it is merely stated that it was given in the usual dose. I have had under my notice several cases where the effects of chloral in these generally considered safe doses, have been so much liked by the patients, that they continued taking the prescription for months, on their own responsibility. These cases, however, when in the male sex, are so generally associated with an indulgence in alcoholic stimulants, as to render it a matter of uncertainty whether the nervous symptoms were produced by the chloral or the alcohol. In the following case, under the care of Dr. Da Costa, it was clearly shown that delirium tremens was directly produced by the chloral, no alcohol having been taken for several months previously.

Mr. A., thirty-five years of age, American, a man of fortune and indulgent in his habits, had been always a free liver. Without preparation, he was induced to absolutely resign all alcoholic stimulants. Shortly afterward he sought medical advice for sleeplessness and nervousness. He was ordered chloral, and found it very soothing in doses of twenty or thirty grains, at night. Being pleased with the effect of the prescription, he discontinued his visits to Dr. DaCosta, and of his own accord, had the medicine repeatedly renewed, gradually increasing the frequency and the amount of the dose, so that he constantly took from a drachm to a drachm and a half daily. He kept up this practice for several months, all the time being free from medical supervision. Although he was remonstrated with by several members of his family on this new indulgence, he considered the remedy not injurious to him, and as he liked the calming effects from it, he could not be dissuaded from its use. After continuing the chloral thus for a period not far short of four months, he lessened the dose, and then stopped, rather abruptly. The consequence was that his weakened nervous system showed signs of great disturbance and an attack of characteristic delirium tremens supervened, with the wildest fancies and great sleeplessness. The pulse was feeble and moderately accelerated; the first sound of the heart was weak. There was general prostration of the muscular system, and much tendency to sweating. No odor of chloroform was detected in his breath, and of course, no alcohol. He complained of nausea and loss of appetite; his tongue was coated. One of the prominent features in the case was a disposition to leave his bed and walk about the room, while the muscular weakness was strikingly shown in the fact that he was very soon fatigued. However,

it required a man to watch over him constantly, to prevent his leaving the bed and trying to escape from his room. The case perfectly recovered, though slowly, under the use of small doses of morphine, a nourishing diet, and a moderate amount of alcoholic stimulants.

It is not my intention to make any comments upon this interesting case, but simply to present it before the Society in the hope of contrasting it with the experience of others. I may state, however, that a somewhat similar case of delirium tremens has been reported by Dr. Elliot (*Lancet*, 1853, I, 754).

On the other hand, a member of this Society, Dr. Laurence Turnbull, in his recent work on "Anæsthesia,"* reports a case in which he "directed the employment of chloral hydrate in medicinal doses for one year, as a sedative and narcotic, and the only disagreeable result complained of by the patient was that it caused a hot feeling, with free perspiration, as if she were in a hot bath; it was withdrawn at the end of that time without producing the least disturbance of the brain, inflammation of the skin, or loss of memory or intelligence," and he inclines to the opinion that "other causes besides the hydrate of chloral may have produced some of the recorded results."

AURAL SURGERY.

BY G. T. FOX, M.D.,
Of Bath, Pa.

In looking over a pile of old REPORTERS, I came across a communication by Prof. J. J. Chisholm, of Baltimore, which he contributed some years ago, and which I read with a great deal of interest, in which he stated that in former times, when surgery was taught in the best medical schools of the country by one professor, during the few months in which he was expected to teach his class surgery, he considered it waste of time to study the common defects of the eye and ear, when such great operations as the ligation of the iliac or the cutting for stone had to be understood. Much time was absorbed in explaining operations which the young practitioner would, probably, never elsewhere see, while the every day items in surgical practice were ignored. As a professor of surgery, he says, I fell into the error myself, and I know that it is universally done to-day by those who embrace all surgica teaching under one professional chair. When I was a medical student otology was taught in scarcely a medical college in the land, except the University of New York, where Prof. Alfred C. Post embraced it in his course of surgery; but within the past few years much attention has been devoted to this department of pathology, and professorships for specialties have been established in most of the leading medical schools; thus the members of the profession can prepare themselves for the common troubles which affect the individual organs of our bodies.

Every medical practitioner is constantly meeting with cases of disease peculiar to these organs, some of which may be classed among the most formidable affections. In the large cities not a few devote their exclusive attention to the practice of their chosen specialty; still they are unable to treat every case that occurs, and consequently the general practitioner is almost daily encountering cases which demand special treatment. Hence it is important that the general practitioner should be acquainted with the literature of these specialties, and the best means of diagnosis and treatment. It is within the grasp of any physician who will content himself with this knowledge; but unfortunately, from a want of proper appreciation, a large mass of general practitioners know nothing of the rational treatment of aural diseases. Thus many promising cases from which good results might be obtained are never treated; they are, perhaps, diagnosticated, but inasmuch as these physicians "never meddle with the ear," they go down to their fate. In order to treat intelligently any aural disease, we must carefully and thoroughly examine the parts involved, and in making an examination a definite plan should be followed, even in the seemingly simple cases. In a synopsis of the diagnosis of diseases of the ear, we should give, First, a record of the history and general condition of the patient. Second. The hearing power should be tested—we have three tests, the human voice, the tick of a watch, and the tuning fork. Third. An examination of the external ear, auditory canal, and anterior surface of the membrana tympani. For this purpose several instruments are necessary—an angular forceps, an aural speculum, and an otoscope; thus in a few minutes the drum membrane can be examined, which not a few physicians have never seen in the living subject. Fourth. An exami-

* "Advantages and Accidents of Artificial Anæsthesia," by Laurence Turnbull, M. D., Philadelphia, 1877. p. 128.

nation of the pharynx and nares, and mouths of the Eustachian tubes. For this purpose we need a tongue depressor, head mirror, throat mirror, and an anterior nares speculum. Fifth. An investigation of the condition of the Eustachian tubes, and cavity of the tympanum. For this purpose we use the Eustachian catheter, Politzer's bag, Valsalva's method. This comprises the armamentarium of a general practitioner as regards aural surgery.

The diseases of the ear which the practitioner daily encounters, and which present themselves for treatment, may be divided into three classes. First, deafness from inspissated cerumen. Second, deafness inflammatory in character. Third, nerve deafness. Fourth, a variety of deafness might be mentioned which is due to parasitic inflammation of the external auditory canal. The fungus aspergillus is not uncommonly found in the ear, where it produces an inflammation, and it may be mistaken for an eczema, which it may accompany or excite. I have, some years ago, seen a case at the Manhattan Eye and Ear Infirmary, one at the Ear Clinique of Bellevue College, and since, in my own practice. Professor Schwartz, of Halle, was the first one to call the attention of the profession to the fact, and since the publication of Schwartz' cases Dr. Wreden, of St. Petersburg*, Orne Green, of Boston,† Knapp and Roosa, of New York,‡ have reported cases.

I will now describe the plan of treatment in the various forms as they present themselves. It contains nothing startlingly new; I profess simply to give the method of working followed by the various gentlemen whose services it was my pleasure to attend at the Manhattan Eye and Ear Hospital, as well as the result of observations made in my private practice. First, the treatment of deafness from wax impaction: this is exceedingly simple; the hardened wax should be removed by the use of the syringe and warm water. I have never yet found a solvent necessary prior to the use of the syringe. This useless habit of prescribing medicines to be dropped in the ear for loss of hearing, is indulged in quite frequently by members of the profession, but the one thing essential, viz., examination of the auditory canal and membrana tympani, is forgotten. Some three years ago an old gentleman came from a distance to consult me in regard to aural trouble. He gave me a history of his case, and I found he had been seen by a number of physicians, all of whom had prescribed medicine to be dropped in his ear, but none had examined the canal and condition of the drum. One, however, went through a process of probing his ears, to no effect except to hurt the patient. This is a dangerous procedure, unless employed under a good illumination with the otoscope. I had considerable trouble to persuade the old gentleman to submit to an examination; he feared I would treat him in the same manner as had another physician who had probed his ears; he thought nothing was in his ears any more, as the doctor took "lots of stuff" out, and had told him it was all out.

I made an otoscopic examination, and found the ear filled with oils and cerumen, which I removed; the drum membrane was sunken, for which I resorted to Politzer's method of inflating the middle ear and the Eustachian catheter, and soon restored my patient's hearing to normal power. To remove a plug of cerumen, a suitable syringe is necessary; the common glass syringe for aural patients is useless; the rubber bag syringe, Mattson's or Davidson's, does well, but by far the best is the hard rubber syringe, so constructed that it can be worked with one hand; thus the physician can, with his left hand, straighten the auditory canal so that the stream can be directed down to the drum membrane. When the ear is not drawn backward, the stream of water injected strikes the posterior wall about half way down and rebounds, without having approached, by half an inch, the bottom of the passage. After the syringing another inspection with the otoscope is necessary. Thus the physician can make sure whether the plug is removed or not, for the smallest particle left in the drum membrane sometimes keeps up disturbing symptoms. Should the drum membrane be sunken, "as in the case alluded to," the air douche, according to Politzer's method, or the Eustachian catheter, must be resorted to.

Second. The treatment of deafness from inflammation consists in leeching, blisters behind the ears, and the warm douche. If the membrane is ruptured the pus should be removed at least three times a day by careful syringing, at the same time inflating the ear according to Politzer's method. This gives no pain when carefully done, it improves the hearing power,

* Archives für Ohrenheilkunde, B. II, page 7.
† Trans. American Otological Society.
‡ Am. Jour. of Med. Science.

helps to cleanse the ear, and it prevents the formation of adhesions in the tympanum. In some cases syringing will not remove the odor; this may be overcome by the use of antiseptics, carbolic acid, permanganate of potass., or salicylic acid. Astringents should be used after the syringing. Almost all aural surgeons have agreed upon certain astringent substances which are safe. I usually use the sulphate of zinc, two to four grains to the ounce; should the suppuration continue unduly, I use salicylic acid mixed with calcined magnesia, or a strong solution of argentum nitras. The general practitioner sees a great deal of this disease as a sequela of the exanthemata, and it is a mistake to wait the subsidence of the general symptoms before the aural ones are alleviated; in fact, they are as important as the constitutional symptoms; and yet there are medical men who think light of this matter, and advise their patients not to meddle with a discharge from the ear; even go so far, as I have heard myself, when a patient applied for relief, as to tell him that it was dangerous to arrest the discharge. No; this is an erroneous idea, and I do not believe there is a pathological experience on record that will sustain it; but this much I do know, that he who wishes to preserve the integrity of the organ must be prompt, or the drum and ossicles will be swept away, and the patient is liable to all the fearful consequences of the disease. In the worst event of all, the suppuration may extend into the brain and circulation. Two cases occurred in my practice illustrating the casual connection between suppuration in the ear, of old standing, and meningeal and cerebral symptoms, causing death.

Third. Nervous deafness. Unfortunately the treatment of this class of cases is not promising. I have seen at least a dozen cases of profound deafness follow cerebro-spinal meningitis, and there is no doubt in my mind but what this disease leads to labyrinthian trouble by transition of the inflammation; and when the deafness is absolute, we must conclude that the auditory nerve is invaded. The principal remedies that we are taught to place reliance on are leeches, blisters, counter-irritation, potass. iodidi, electricity. In those cases where the deafness is not so profound, the physician can advise his patient to use an ear trumpet. My experience in this class of cases has been limited, and thus far I have seen no improvement in any forms of nerve deafness.

The treatment of parasitic inflammation is simple, yet tedious. It consists in the entire removal of the fungus and its spores; the flakes and epidermis must be removed daily, by the use of the forceps, "the ear being well illuminated" and the syringe; after the syringing, the topical application of argenti nitras in solution, to the canal, or the instillation of alcohol, either diluted with water or in full strength, should be employed several times a day. The ear, should be examined every day, with mirror and speculum, and the treatment modified to the stages of the disease.

In conclusion, I would say that the detection and efficient treatment of these diseases are so simple, that it seems wonderful that it should ever be neglected. These suggestions, which embody the every day experience of general practitioners, are received very slowly by the profession at large, and in reviewing the subject of aural surgery, as rationally practiced, when contrasted with the stereotyped course of treatment as followed by physicians, many deductions may be drawn; we not only find much to learn but much to unlearn. I myself am a country practitioner, and have not attained, neither can I expect, the amount of operative success of those who practice this branch exclusively. Yet I have the almost daily gratification to see some living and enduring evidence that my labors in this branch of surgery have not been in vain; and the surest way of gaining that end is by studying and paying due respect to, but not following blindly and invariably the rules, methods and precepts of the acknowledged "lights" in aural surgery. Step by step their course must be followed, and conscientiously carried out each day, to the end.

If my hasty and imperfect review, which I have endeavored to condense in a few short pages, should startle some mind hitherto inattentive on this subject into a realization of its importance, I shall have accomplished my object.

EXCISION OF SCAPULA.

BY E. B. WOLCOTT, M. D.,
Of Milwaukee, Wis.

A tumor of two years' growth, involving the right scapula of a gentleman fifty-five years of age, came under my observation some time in February last, which I diagnosed osteo-sarcoma, and advised an early operation for its removal.

It had attained a large size, was rapidly approaching the shoulder joint, and already seriously impeded its movements. After examination by several of the most eminent surgeons of the country, including those of Philadelphia and New York, all of whom confirmed both diagnosis and proposed treatment, a suitable place being secured, and very complete arrangements having been made, the operation was performed in the afternoon of April 23d, as follows: Five physicians, in capacity of assistants, were present, each having specific duties to perform; one to compress the subclavian artery as it passes over the first rib, with an instrument I had prepared; another, with a finger on the pulse at the wrist, to see that it was complete; another to administer the anæsthetic, *chloroform*, and the other two with hands at liberty to give any assistance required A curvilinear incision, beginning at the lower angle of the scapula and tumor, following along the posterior border to the superior angle of the scapula, thence along the superior costa, crossing the spine at its termination in the acromion process. This flap was next raised from the tumor and reflected over the arm, out of the way. The muscular and all other structures confining the mass, were now detached. I found the acromion process and one-third of the spine supporting it sound. I, therefore, passed a chain saw under the spine and cut through it, close to its articulation with the clavicle. I then removed a V-shaped piece from the spine with bone forceps, which favored the elevation of the tumor and gave easier access to parts beneath. All being now detached, to the neck, which I also found sound, I passed under it the chain saw, bringing it through the notch in the superior costa, ran it through the neck, leaving the glenoid cavity and coracoid process intact, joint undisturbed. The mass was then removed. But two arteries required tying, and when bleeding entirely ceased not over four ounces of blood had been lost. The flap of skin was now brought back and secured accurately in place by fourteen interrupted sutures of *silk*. With a large sponge the surfaces were now brought together, and all air and bloody serum thoroughly pressed out. A dressing of cotton batting, graduated so as to press on all sides and bottom of the concave as near equally as possible, secured by a suitable bandage, ended the operation.

The patient was now placed in bed, and half a grain of morphia administered. A quiet, comfortable night followed. Thirty-eight hours after the operation he left the bed, sat in a chair and walked around the room before lying down. From that time on, his daily walks increased through the house, and within a week he sat and walked in the balcony in front of the house. Six days after the operation the dressings were removed for the first time. Union by first intention had taken place throughout the entire extent of the wound. Stitches were removed and dressing reapplied as before. On the twelfth day he took a half-mile walk in the open air, and on the eighteenth day he attended a sheriff's sale, five miles from his residence. Within four weeks he commenced attending to his business in his office, two and a half miles from his residence.

A few facts connected with this operation make me think it worth reporting. If heretofore, in similar operations, the subclavian artery has been compressed on the first rib, thereby absolutely controlling the hemorrhage, I am not aware of it. Again, it will be observed that no antiseptic, either during the operation or subsequent thereto, was used, and yet union by first intention was perfect. Again, not a particle of medicine prior to it, by way of preparation, or subsequent to the operation, was used, yet during the first twenty days he gained ten pounds in weight.

I mention these facts in justification and illustration of the "vis medicatrix naturæ," which idea in these latter days has become almost obsolete, the surgeon, in many instances, claiming what clearly belongs to the healing powers of nature

The main mass of the tumor was enchondroma; the lower one-third of the scapula was much enlarged and clearly osteo-sarcoma. The whole mass excised weighed four pounds.

HEATED APPLICATIONS EXTERNALLY TO ARREST POST-PARTUM HEMORRHAGE.

BY GEORGE HAMILTON, M.D,
Of Philadelphia, Pa.

One of the most important papers presented for the consideration of the American Gynecological Society, during its late session in this city, was that by Professor Penrose, of the University of Pennsylvania, upon Post-partum Hemorrhage. Important, because of its danger

and the frequency of its occurrence, and on this account interesting to the obstetric practitioner beyond any other condition except, perhaps, that of puerperal inflammation. Among the various remedial measures adduced for the arrest of hemorrhage in the case alluded to, was the recently proposed injection, per vaginam, of hot water or other heated liquids. Since the delivery of this lecture an extract has appeared in the Medical and Surgical Reporter, from remarks upon the subject by Dr. Norman Kerr, of the British Medical Association, in which the application of heat, externally, is recommended, especially when collapse is imminent from excessive loss of blood. This is the first official proposition of the kind that has fallen under my observation; yet, more than forty years ago, while practicing in the country, a case was brought to my notice by a nurse, in which, all other means having failed to arrest the flow of blood, she was directed by the physician in attendance to place a folded napkin upon a hot stove, and when heated nearly to the scorching point, to hand it to him. The napkin was instantly applied to the region of the uterus, the woman cried out that she was being burned, and the hemorrhage at once ceased. Thus it appears that a practice now authoritatively proposed would, at the time referred to, have been almost universally regarded by authors and practitioners as irrational, injurious and reprehensible.

The dashing of cold water over the region of the uterus has been found, in desperate cases, to be one of the surest means of arresting the flow of blood, its efficacy depending apparently upon a sudden and powerful impression upon the nervous system, inducing reflex movement, and simultaneously, contraction of the uterus and its vessels. A chill, or at least some approach thereto, is nearly always the result of cold suddenly applied to the body; and it is not improbable that the sudden application of heat, as in the case cited, depends, when beneficial, upon a similar action. We observe, nearly always, in cases of severe burns or scalding, that chills supervene, amounting sometimes to rigor, and the same effect, although in a slighter degree, will generally follow the application of a very hot napkin, or other heated material, under the conditions in view. It is not in my power to say anything regarding the efficacy of this practice, having had no experience in this mode of treatment. Now, however, that this method has been prominently brought to the notice of the profession, it will doubtless undergo the test of experiment, and the utility of this treatment be determined, and any special conditions that might render heated applications unadvisable or possibly dangerous be made known to the profession. When trials of this sort are contemplated, it should be remembered that a sensation of burning ought to be experienced, as a merely warm application might tend rather to increase than diminish the discharge; and it seems probable that hot would act better after the previous failure of cold applications. As before stated, Dr. Kerr regards heated applications as most useful in approaching collapse. This view is probably well founded, for although a sense of chilliness quickly follows the sensation of burning, the first impression upon the nervous centres is the sense of burning, and thus a stimulus, momentary it may be, is given to the nearly paralyzed centres, provoking them to reaction.

OVARIOTOMY—REMOVAL—DEATH.

BY S. P. DAVIS, M.D.,

Of Lancaster, Pa.

Mrs. D. L. aged thirty-five. First seen April 30th, 1877. Family history good. Menstruated at fifteen, which became regular at once, and continued so. She was married at seventeen; once pregnant, which labor, at full term, was easy and her recovery good. Always worked hard, both in and out of doors. She states that six years ago she sprained herself in the right side while pitching hay, and has experienced more or less pain in that locality ever since. One year from that occurrence she noticed "a small lump," as large as an orange at the painful point, which continued to enlarge gradually, until the abdomen attained the circumference of thirty-six inches. She was tapped first by another practitioner, November, 1875, the fluid, she says, being of a greenish color. The cyst filled so rapidly as to necessitate tapping again in three months. In May she was tapped the third time, after which the cyst filled more slowly than before, eleven months intervening between the last two operations. The fluid obtained on these occasions was not examined by the physician then attending the case, hence its character was unknown.

May 2d, 1877, removed, with aspirator, four pints of fluid of a greenish color, sp. gr. 1.018,

highly albuminous and extremely viscid. The fluid was examined by Dr. Drysdale, and found to contain the "granular cells," as first described by him.

May 7th four pints, and May 12th three pints were removed. These operations were performed with a view of getting the patient in as favorable a condition for ovariotomy as possible.

May 21st, at 3 P.M., accompanied by several medical gentlemen, I went to extirpate the tumor. We found the patient suffering greatly from distention, respiration frequent and labored. Pulse 103, temperature 100°. She was anæsthetized by the use of ether sulphate and chloroform, two parts of former to one of latter, by weight. The incision was commenced half an inch below the umbilicus, and extended downward six inches in the median line. The cyst was exposed without any difficulty, but found to be adherent very firmly, except on the left side, where there was some peritoneal fluid between it and the abdominal walls. After carefully freeing the cyst on either side of the incision, a trocar was introduced, and the greater portion of the fluid withdrawn. I then began enucleation of the cyst, which was found firmly adherent to the omentum and a fold of the large intestine. I succeeded, with great difficulty, in detaching them without injury to either intestine or omentum. At this point it was discovered that the bladder was attached to the anterior surface of the tumor, over a space three inches wide, and extended upward about five inches; the trocar had entered only a quarter of an inch above its margin at a previous tapping, although introduced at the usual site. After breaking up the adhesions, I was surprised to find no pedicle, the vessels being small (almost all capillaries); the adhesions at the base were broken up, and the tumor removed; very trifling hemorrhage followed. After carefully cleansing the cavity, all bleeding having ceased, the wound was closed with interrupted sutures. A dressing of carbolic acid and linseed oil was applied, supported by a pad of cotton and bandaged. The patient was put to bed in one hour from the time the anæsthetic was administered; pulse 94, respiration 18, and temperature 90°.

The after treatment consisted of measures calculated to bring on reaction—brandy, beef tea, milk, etc.—which, unfortunately, never took place. The patient's condition remained the first few hours in statu quo, then the vital power began to fail, and death ended the scene on the third day after the operation.

The only comment I have to offer is to enter my solemn protest against the criminal practice of delaying ovariotomy or any other operation until the patient is so far exhausted that there is not sufficient vitality left to enable reaction to take place after the operation. If a man is not capable of rendering the necessary relief to his patient himself, he should not baffle a consultation until it is too late, and then abandon his patient, as is often the case.

There was a good sound constitution. The patient, though prostrated at death's door, was hopeful and in good spirits. Scarcely four ounces of blood was lost, and no inflammation took place, but the system was worn out. Had she been operated on sooner, she would, without a doubt, have recovered.

Hospital Reports.

COLLEGE OF PHYSICIANS AND SURGEONS, NEW YORK.

CLINICAL LECTURE ON DISEASES OF WOMEN,

BY PROF. T. GAILLARD THOMAS.

Reported by P. Brynberg Porter, M. D.

(*Concluded from page* 384.)

Laceration of the Cervix—The Correct Method of Managing Breech Presentations.

The next patient is Margaret B., a native of Ireland, and thirty-five years old. She has been married fifteen years, and has had five children, but no miscarriages. The last child was born seven years ago, and she says she has never been well since. In what way have you suffered, Mrs. B.? "From pain in the back." Anything else? "Pressure downward." (This is a better phrase than "bearing-down pains," but probably has about the same significance.) Anything else? "Pain in the stomach" (placing the hand on the hypogastric region). Anything else? "Pain in the crown of the head and about the eyes." Is your monthly sickness regular? "Yes." Do you lose more blood than you ought? "No; just enough." Do you have the whites? "Yes." Do you have any trouble with your bladder? "No."

I will now run briefly over, for you, the prominent points of the history which she has thus given us. Here is a woman who was perfectly well up to the birth of her last child, seven years ago; but who has never been well since. The symptoms from which she has principally suffered are, pain in the back and pelvic region, leucorrhœa and certain nervous disturbances, characterized by pain about the eyes and top of

the head. The whole history points to some abnormal condition in the pelvic viscera, and, accordingly, I made a physical examination of this part of the system. The uterus I found a little lower in the pelvis than it ought to be, and the cervix is badly lacerated; the injury being greater upon one side than upon the other. From the torn surfaces a profuse leucorrhœal discharge was pouring down into the vagina. The uterus was larger and softer than in its normal condition, or, in other words, was in a state of congestion.

Now all these symptoms are, in my opinion, attributable to, and fully explained by, a single cause, viz.: the laceration of the cervix. In the first place, we have seen that the leucorrhœa is due to it. Next, the backache is caused by it, in two ways. First, by the direct dragging upon the uterine ligaments by the abnormally large and heavy uterus (this condition being due to the congestion of the organ resulting from the laceration), and, second, through reflex nervous influence. Finally, the other pain is due alone to the same strain upon the ligaments kept up by the enlarged organ. If this is all there is about the case, you ask, perhaps, why I have brought such a simple one before you?

It is true that this is all there is about the case at present, but its chief interest lies in some points in connection with the past history of the patient which have not yet been touched upon. She informs me that her first labor was a very difficult one, lasting from Wednesday night until Saturday morning; but that the child was born alive. It was a head presentation. In the second labor, also, the head presented, but it was a forceps delivery, and the child was still-born. The third and fourth labors were breech presentations, and both children were still-born. The fifth labor was also a breech case, but the child was born alive. Eight years ago she came to me with the melancholy history of having lost three out of four children during delivery, and asked me to attend her in her fifth confinement, which she was expecting in the course of the next four months.

Now comes the important point which I wish to make in connection with the case; and that is, that if you treat your breech presentations properly, you will seldom lose the child. If you will examine the authorities on obstetrics, you will find that some give the proportion of deaths at one in six cases, others at one in five, others at one in four, and still others, if I remember rightly, at one in three. I do not wish to boast about the matter; but I can truthfully say that out of twenty-five cases, I have not lost a single child. In this list there are none of version by the feet; but all are genuine original breech cases. This happy result is not to be attributed at all to any special skill on my part, but simply to the method of treatment which I have adopted, and which any one can employ.

Of course, there are some cases of breech presentations which are necessarily fatal, and among the conditions causing such a result, I may mention deformed pelvis, narrow vagina, and unusually large head. But aside from cases where such conditions exist, I am convinced that a vast number of children's lives are needlessly sacrificed in breech cases.

The plan which I would advise in these cases is the following: As soon as you have discovered that the breech is presenting in any particular instance, at once make every preparation for the delivery. Then wait quietly until the breech comes down into the vagina. If the ordinary course is pursued, the chances are very great that the child will be lost. In vertex presentations the head distends everything, and the child is practically independent of the mother as soon as the external air reaches the nose and mouth. But the case is very different when the breech comes first, for by the time it is born the uterus is exhausted, or if it continues to contract, is very likely to cast off the placenta. It may be that one minute more will finish the delivery, but that one minute is quite enough to finish the child also. The above is one great factor in ordinarily causing the death of the child. The other is furnished by the physician himself. When the child comes down, the accoucheur works at a great disadvantage, on account of his position in relation to the patient. In such cases, if you listen carefully, you will not infrequently hear a little crack, which is nothing more or less than the breaking of the child's neck. The *processus dentatus* enters the spinal cord, and the life is forever destroyed. But to resume the recital of the method advised. Do not hurry the early stages of a breech case, and never put your finger (and still less a blunt hook), around the child's groin. At this period the breech is aiding you very materially, all the time, by its action in dilating the parts. But the instant that you find it distending the perineum you should change your tactics entirely. Having placed the patient on her back across the bed, with her feet resting on two chairs, give one limb into the care of the nurse, and the other into that of a competent physician, whom you have previously summoned, and who should always keep one of his hands free, so that he may assist you as required. The chief principle in the delivery is this: that the force that is to expel the child must come from above, and not from below. Therefore, now give a large dose of ergot hypodermically, in order that it may produce a powerful effect instantaneously upon the uterus. As soon as the cord comes within reach, get hold of it; and then ask the physician who is assisting you to press down upon the head with all his force. The patient, if she is a woman of any force of will at all, ought not to be under the influence of any anæsthetic, and you should call upon her to bear down as strongly as she possibly can; telling her that the life of her child depends upon her exertions. When all these forces are called into play, the result is usually a very speedy delivery. In a second or two you can get two fingers into the child's mouth, and

thus make traction by means of the inferior maxilla.

When this patient came to me, as I have mentioned, I told her that I thought she could be delivered of a living child, even though it should present by the breech, as seemed altogether likely. Her fifth labor, like the two which had preceded it, really proved a breech. I was unable to attend her myself, but my assistant, Dr. Walker, did so, carrying out the plan which I have indicated, and the result was a living child, to the great joy of the mother. It is quite probable that the laceration of the cervix which we have found present here was the result of this delivery; but a human life once destroyed can never be restored, which is certainly not the case with a human cervix.

Fungoid Degeneration of the Uterine Mucous Membrane.

Mrs. Ann E., aged 23. She has been married twice, and has had one child (by her first husband), but no miscarriages. The child was born somewhat more than a year ago. She tells us that she has been complaining for about two months, and that her health was good up to that time. Two months ago, about 12 o'clock one night, she was seized with very violent pains in the hypogastric region, which lasted until five o'clock the next morning. After that she was confined to bed for a week, feeling great soreness over the lower part of the abdomen, and suffering from a constant flow from the vagina. The latter lasted for a fortnight, and then stopped for a time, but soon set in again; and since then she has continued to flow nearly all the time up to the present, there being only an occasional temporary cessation of the discharge. These cessations have been but two or three days in length.

The most prominent symptom here, then (indeed the only symptom, with the exception of those depending directly upon this), is metrorrhagia, and it is certainly very curious that it should have commenced in the way the patient describes.

We are not able, at the present time, to form a correct idea of the nature of the illness of which she has spoken, but she distinctly states that she does not think it was a miscarriage. She is greatly debilitated, and says that she has recently fainted twice from the loss of blood, as she thinks. She feels very faint most of the time, and tells us that she "looks strong only in her face," a statement which I can readily believe; but even her face is ordinarily very pale, though now somewhat flushed, from the excitement of coming before the class. Her pulse is exceedingly rapid and compressible, and her hands are cold.

Up to the time of her illness she was always very regular in her monthly periods, but since then she has not been able to determine the time of their coming on. She has been married five months the second time. This history is quite singular, being entirely unlike that of most cases where patients suffer from the same trouble which she does.

You see here the distinction between metrorrhagia and menorrhagia. It is not long since that I heard a gynæcologist arguing that the two ought to be called by the same name, as they were practically identical. But in my opinion, and that of the best observers, they are entirely different, and ought no more to be called by the same name than pneumonia and pleurisy. Metrorrhagia is a distinct uterine hemorrhage. But now let us continue our investigation of the case until we can arrive at a diagnosis. If *emansio mensium* is only a symptom, so is metrorrhagia. As to what was the cause of the severe pain coming on suddenly at midnight we can only conjecture. At present the uterus is entirely normal in size and position, and the only thing noticeable about its exterior is a slight nicking of the cervix, which was, no doubt, produced at the time of the birth of her child. It is possible that she may have had a small hæmatocele, and that the pain was due to the sudden escape of blood into the peritoneal cavity. Of course, this is only a suspicion in my mind; but it suggested itself as offering some explanation of the symptoms of the attack mentioned. Whatever may have been its nature, however, the fact remains that she has continued to flow freely ever since, with short periods of intermission.

An examination by the speculum showed that this flow did not come from the cervix or any part of the vagina. I thought that there might possibly be some outgrowth from the interior surface of the former; but by separating the lips of the os by means of the tenaculum, I was enabled to look up the cervical canal, and found that this was not the case. It was, therefore, evident that there must be something inside the cavity of the uterus itself which gave rise to the hemorrhage. When you meet with these cases of metrorrhagia, do not, I pray you, imagine them due merely to congestion or to the menopause, if the patient's age is sufficient to suggest that. When the change of life comes on, it is frequently characterized by menorrhagia, but not by metrorrhagia. I thought there might, perhaps, be an internal polypus of the uterus occasioning the hemorrhage, and so I introduced a probe, but I found that it passed to the fundus without meeting with any obstruction. The uterus was found to measure three inches; but this is about the normal length of the canal in women who have borne children, since the organ never quite returns to its original size before pregnancy. As I passed the probe and moved it gently from side to side, I noticed that the hemorrhage was greatly increased, and I now began to feel confident that the cause of the flow was situated about the endometrium. I therefore introduced a small copper curette, such as I now show you, which is so valuable an accessory to diagnosis in these cases, and by its means quickly drew out a very small mucous polypus. The condition which was found here has been called by

some writers *endometritis polyposa;* but this is a false name. These growths, however, are a polypoid or fungoid proliferation of the lining mucous membrane, and they are liable to originate from any cause which keeps up a chronic engorgement of the endometrium. They are, in fact, a vegetative hyperplasia of the latter. Next week, if the patient will return, the walls of the whole uterine cavity will be carefully scraped, the curette being turned in different directions, so that the whole surface can be reached. I know of no instrument which you will find to produce such admirable results. In cases like this it is absolutely curative, and where there is chronic corporeal endometritis it will often be found of the greatest service also. If it is properly constructed, without a sharp-cutting edge, and of copper wire that is sufficiently flexible, it is so free from all danger that it can be used with impunity; though I have had a very large experience with it, I have never met with any accident in its employment, or seen any bad results follow it. The most highly important and beneficial results can often be thus obtained by the use of very simple means, and no little credit reflected upon the physician employing it. Sometimes the little operation has to be repeated once or twice before a complete cure is effected; but this is because it was not done thoroughly at first, the whole surface of the uterine cavity not having been reached by the curette.

Medical Societies.

PHILADELPHIA COUNTY MEDICAL SOCIETY.

At a Conversational meeting held at the Hall of the College of Physicians, Philadelphia, April 10th, 1878, Professor H. H. Smith, President of the Society in the Chair. Dr. F. Woodbury read a paper on the

"Chronic Chloral Poisoning."

(see page 395) which was followed by an interesting discussion.

Dr. M. O'Hara recalled a case of chloral poisoning, in a man, occurring on one of the steamers, while crossing the Atlantic. He was intemperate, and being unable to get his supply of alcohol, took to drinking chloral instead. The effects were very much like those of alcohol, as he had an attack of delirium tremens, which lasted for several days. There was no loss of muscular power in this case.

Dr. Cheston Morris thought that one explanation of the failure to obtain decided effects from large doses of chloral might be due to its not being absorbed. He had seen several cases of chloral poisoning, and in all, the effects were long continued and marked by muscular relaxation. On this account he should hesitate to administer chloral when there was marked debility, especially in organic disease of the heart. The habitual use is to be condemned, on the ground that it favors this debility. He had not seen delirium tremens produced by chloral, but knew that many of the agents which principally influence the nervous system may unexpectedly produce such symptoms. He remembered a case of a carpenter, that he had attended twenty years ago. The man was perfectly sober, but had heart disease. He had been taking tincture of digitalis for several days, in ordinary doses, when he broke out in a violent attack of delirium tremens. He had not been using alcohol. The case was treated as an ordinary one of this affection, and recovered. It was attributed to the want of tone in the heart and an inability to supply sufficient blood to the brain, causing anæmia of the hemispheres.

Dr. Bidlack had a case of nervous disorder, who took half an ounce of chloral hydrate during the night, using up four ounces in the course of one week, and absolutely without bad effects. Another case took it in ordinary doses for more than a year, without any but good results, but he has recently lost sight of the patient and does not know of his present condition.

Dr. Benjamin Lee said that when chloral was first introduced, while it was still somewhat of a curiosity, he gave a mixture, containing ten grains to the ounce, to a lady just starting for the South, to relieve nervousness and inability to sleep. She took the first dose the night before sailing. He had given her very strict directions, cautioning her not to exceed the dose of five grains, as he had not then positively determined what the ordinary dose should be. Very shortly after her arrival at her home, he received letters from her telling of the delightful effects of the remedy. She had voluntarily increased the dose, and was depending upon it. She returned, as usual, the following winter, to Philadelphia, when he found that she was habitually taking fifteen to twenty grains every night. As she was doing well in other respects, he did not consider it advisable to interfere immediately. At the end of eighteen months of the daily use of the chloral, probably never exceeding twenty grains in the twenty-four hours, she began to complain of conjunctivitis and smarting of the eyes. By advice the dose was diminished, when the irritation at once disappeared. He concluded that this congestion of the palpebral conjunctiva was only one of the effects of the long-continued use of the remedy. After this she again passed from notice, and resumed the chloral in large doses. She again returned, complaining of pains in the wrists, located in the radial arteries, which was probably connected with a cardiac disturbance, from the action of the remedy upon the unstriped muscular fibres of the heart. Upon discontinuing the chloral the pain in the wrists ceased. This was the second indication that the chloral was doing harm. The patient is still under observation.

Dr. Samuel R. Skillern had given large doses

without bad results. One case in particular he recalled, where a hypnotic was needed to relieve restlessness accompanying paralysis following apoplexy. Less than 120 to 130 grains in the course of the evening would frequently have no effect whatever, and the patient must have averaged at least a drachm each night for nearly a year. The man finally died, but there was no evidence that chloral hastened his death.

Dr. W. R. D. Blackwood had a patient to whom he was giving chloral in half drachm doses, for the relief of neuralgia. For five months he has taken 30 grains three times daily, combined with bromide of potassium. For two weeks he took one drachm of chloral three times a day, and the only bad effect noticed was a conjunctivitis confined to the left side. The chloral was finally stopped abruptly, but no evil effects followed. There were no nervous symptoms, and no muscular tremors or weakness; in two days later he was able to walk down stairs.

Dr. James Collins spoke of a case that came under his care in 1870. An old gentleman, suffering chronic cystitis and enlarged prostate, obtained great benefit from one or two full doses of chloral daily. He was subject to suppression of urine, and at such times he complained of uncomfortable feelings after the medicine, with hot face, flushes of heat, etc., but as soon as the kidneys began to work this would pass away. The dose was increased to 24 grains. The speaker had used the drug frequently, but had never seen any bad effect when the kidneys were acting well.

Dr. Chas. K. Mills believed that an explanation of the unsatisfactory results reported may be found in the fact that there are two classes of nervous cases; in one there is cerebral anemia, in the other congestion; in one the chloral does good, in the other not. He had found that where an idiosyncrasy against morphia existed, a previous dose of chloral would prevent any bad symptoms.

Dr. R. A. Cleeman reported a case where a dose of chloral always produced conjunctivitis in both eyes.

Dr. M. O'Hara recommended chloral as especially valuable in relieving the cough of phthisis, giving at a dose four grains of chloral with five drops of laudanum, and one drachm of syrup of lactucarium.

Dr. Laurence Turnbull thought that the chloral not only acted upon the conjunctival surface, but also upon the retina in certain cases, causing dimness of vision. This effect could be avoided, in his opinion, by combining with the chloral a salt of potassa. In diseases of the kidney it cannot be readily eliminated, and its effect is more marked and continuous. This may serve as an explanation of those cases where ordinary doses are followed by alarming symptoms.

Periscope.

Strychnia or Nux Vomica as a Tonic.

In the *Practitioner*, Dr. T. Lauder Brunton says strychnia is at once a gastric, vascular and nervous tonic. It has, with the exception of quinine, a more powerful action than most other bitters, in preventing putrefaction. It excites the sensibility of the vaso-motor centre, thus exerting a beneficial effect upon the circulation, and likewise directly stimulates the nervous tissue of the spinal cord itself. So great is its effect upon the vaso-motor centre that by its means physiologists have discovered that instead of being confined to the medulla oblongata, as was formerly imagined, this centre extends down the spinal cord. It has just been said that an impression made upon the sensory nerves reflexly stimulates the vaso-motor centre, contracting the vessels and raising the blood-pressure, but when a cut is made across the spinal cord, just below the medulla oblongata, this result is not produced. From this experiment it has been concluded that the vaso motor centre was entirely confined to the medulla oblongata above the place of section; but if a little strychnia be now injected into the veins of an animal in which the cord has been thus divided, and a sensory nerve be then irritated, the vessels will contract and the pressure of the blood will rise. It thus became evident that the vaso-motor centre extends down the cord from the medulla, but that its spinal portion is so feebly developed that under ordinary circumstances it has no power to contract the vessels when reflexly excited by stimulation of the sensory nerve. But strychnia has the power to increase its excitability so much, that reflex stimulation in this way will produce through it a decided effect. Now, when we consider that sensory impulses are proceeding every moment from the skin to the vaso-motor centre, we can readily perceive how a slight increase in susceptibility, produced by strychnia, will have a wonderful effect in raising the tone of the vessels, and aiding the circulation. The mode in which quinine acts is not so clear, but we know from observation, that, also in small doses, it renders the pulse stronger and less compressible.

From what has just been said, then, it would

appear almost that strychnia or nux vomica is one of the most valuable tonics which we possess. When combined with nitro-hydrochloric acid, it is, perhaps, one of the most efficient remedies that we can give for the debility which is so often noticed in warm weather, and when the ordinary tonics, such as gentian, columba, cascarilla, or quinine do not produce the desired results, the addition of a little nux vomica or strychnia to them may give us the wished-for effect.

The Lessening of Pain in Operations.

Mr. G. M. Callender says, in his address before the British Medical Association—

In pleading, then, for the avoidance of pain, let me detain you while I briefly refer to the management of two very ordinary cases—an amputation of the breast and an amputation of the leg; and let me premise that it is necessary to scheme and to prepare beforehand all the dressings you will require. These dressings must insure support and rest and ease.

And here let me mention, if, in dressing a large surface, as after the separation of sloughs after a burn, or when a considerable portion of skin has been of necessity sacrificed in an operation, we find there is much pain complained of in each changing of the dressing, examine the surface carefully, and we shall mostly find there are certain parts painful, and others not so. The painful points are the spots where nerves are lying exposed on the surface; and if such spots be protected with a small piece of isinglass or gutta-percha tissue, all other parts of the wound may be dressed without any hurt to the patient; and this is a means of relief from pain, so often coming under our notice, that it is only necessary to mention it to claim for it attention.

Now, take a wound left after amputation of the breast, and let care have been given to staunch all bleeding, and let the line of incision have been so arranged as to leave an end of the wound in a dependent position. The wound may be drained by the insertion of a tube, say of perforated india rubber, along its entire length, one end being left projecting at the dependent point. I say nothing about the carbolizing of the wound, as I am now dealing rather with the treatment so far as pain avoidance is concerned. Then bring the wound together by means of mainstays. Then close its edges with silver sutures, from which, as the wound swells, tension will be largely taken by the mainstays we have introduced. Apply the dressings, not too tightly, or the movements of respiration will make the costal surface of the wound rub upon the more superficial; and then place the forearm and hand across the chest, and secure them against sudden starts by a bandage lightly passed from the wrist round the neck, supporting the elbow, and to the wrist again. Seven or eight hours later, cut through the strapping with which you will find it the more simple plan to have secured the dressings, and, with a sense of relief to the patient, they will separate an inch or more; a strip of plaster will reunite them, and whenever the wound has to be dressed this strip should be cut through and a new one placed over it, the originally-applied plaster never being removed, because, especially if from a hairy surface, its removal is attended with much discomfort. When the wound has to be dressed, slip the bandage from the wrist, and then grasp the arm above the elbow firmly in one hand, and with the other move the hand and forearm to a straight line with the arm; then, still grasping the arm, move it out from the side so far as you may think fit. By this guarded movement you will prevent the sudden and involuntary contraction of the biceps and of other muscles, which, if the arm be not steadied, will assuredly occur, and will be followed by a corresponding jerk in the pectorals, disturbing the wound and causing the patient to cry out with pain. The dressing is then removed and renewed, and using, as I do, carbolized oil or lint, protected by gutta-percha tissue, this part of the operation is most simple. See that the drainage-tube is acting properly, and renew some tenax in the axilla, or a small sawdust pad, to catch the discharging serum, if any, and then carefully replace the arm and then the forearm to its original position. Tended in this way, we are certain of conducting our case without an ache or a pain, so far as the dressing of the wound is concerned.

The Treatment of Typhoid Fever.

In a recent article in the *Lancet* Dr. H. M. Tuckwell says, on this subject—

The following are the changes in treatment which have been carried out in the last half of my cases; and although it so happens that a remarkable improvement in the results obtained has attended these changes, yet, until a much larger number of cases have been observed, it is unsafe to try to draw any inferences; it is better simply to state the facts. First, the hydrochloric acid mixture has been given up, and a little caraway water is now ordered in its place. Secondly, much less opium is given now than formerly. Whereas it was my custom in former years to try, under all circumstances, to check the diarrhœa, as something detrimental to the patient, either by Dover's powder or some other preparation of opium, I now, provided that the diarrhœa be not excessive (say, not more than six to eight stools in the twenty-four hours), leave it quite alone. Thirdly, more milk and less beef-tea is now given than formerly. If I can get a patient to take milk only, I am quite satisfied, and do not care to press beef-tea. As regards stimulants, I have not changed my belief of twelve years ago, when I first had beds of my own, that many cases of typhoid do perfectly well, from first to last, without any stimulant; but that where the so-called typhoid state is threatening, if the tongue is dry and brown with much sordes, if the pulse

is frequent, feeble, and dicrotous, and above all, if there is tremor in the lips or hands, good brandy, or good old wine, if it can be obtained, given in small doses, at regular intervals, is a most valuable medicine. For hemorrhage, a turpentine mixture has answered best in my hands, and the tendency to sickness which it is apt to cause is best prevented by a good flavoring of peppermint. I have no experience of the cold bath to offer.

Treatment of Erysipelas.

At a meeting of the Calhoun County, Ohio, Medical Society, reported in the Detroit *Lancet*, Dr. Amos Crosby, of Albion, said: "I must confess that I have not seemed to get very decided results from the administration of the muriated tincture of iron in erysipelas. I place more reliance upon quinine than any other single remedy. I give quinine freely in the cases where there is periodicity in fever and other symptoms of the disease. In this as in other diseases which we are called upon to treat, we must study the habits of the disease, if we expect to meet with success. I have sometimes given from three to four grains of quinine every hour for twelve or fourteen hours, then the same dose at longer intervals, with the best seeming results. After from twelve to twenty-four hours the violence of the symptoms would have passed, and my patient would be convalescent. I believe that in many cases, at least, an attack of erysipelas can be cut short by appropriate treatment. For a local application to prevent the spread of the disease, I have more confidence in a strong solution of nitrate of silver than in any of the remedies that have been mentioned. I would use, in some cases, a solution of sixty grains to the ounce of water. I would not use the nitrate of silver in all cases."

Recent Craniology.

At the late meeting of the British Association for the Advancement of Science, in the Department of Anthropology (Biological Section), Professor Huxley presiding, Professor W. H. Flower, F.R.S., read a paper on the "Methods and Results of Measuring the Capacity of Crania." He said that, of all the measurements by which they could determine the difference between the skulls of different individuals of any race, perhaps the most important was that which gave the cubic capacity of the great cavity which contained the brain. The largest capacity in any human head that he had measured was that of a race of long-flat-headed Indians on the West Coast of Africa, which gave 1589 cubic centimetres. The Laps and Esquimaux, who were only small people, had very large skulls. The latter gave a measurement of 1546 as the average capacity. They then came to the English skull, which was of nearly the same size, 1542; but as he had said, these belonged to the lower grades of English skulls. He could tell them nothing about the Irish skulls, for there was not a single specimen of an Irish skull in the London museum. (Laughter.) The President had just suggested that they were always broken. (Loud laughter.) The inhabitants of the Canary Islands gave the capacity of 1498; the Japanese, 1486; the Chinese, 1424; the modern Italian, 1475; ancient Egyptian, 1464; the true Polynesians, 1454; negroes of various kinds, 1377; the Kaffirs, 1345; Hindoos, 1306. They then came to the Australians, about the smallest they had got; they gave an average of 1284. They had only two races below the Australians, and they were the Andamanese, who were a very diminutive people, not above five feet high, the capacity of the skull being 1220; and the Veddahs, of Ceylon, who had the smallest average capacity of all, 1205.

The Therapeutics of Salicylic Acid.

A careful exhibition of the dangers from the use of salicylic acid is contributed to the St. Louis *Medical and Surgical Journal* by Dr. J. W. Compton. He closes it with the remark—

"It is simply due to the claims of this remedy, to say that much more could be said and collected from the experience of warm admirers of salicylic acid in the treatment of a variety of diseases, than can be formulated into an article on its poisonous effects. I shall content myself by guarding the profession against what must be admitted a dangerous element contained in this valuable remedy when rashly or improperly administered. Whether this element of danger to life consists in an idiosyncrasy of the patient, a peculiarly diseased condition of the lung tissue, the brain substance, a diseased condition of the muscular or valvular structures of the heart, or consists solely in the administration of overdoses of the remedy, are questions which should claim the consideration of physicians who prescribe salicylic acid."

The acid has some anaphrodisiac properties. The *Hospital Gazette* says—

"A curious fact, that may have direct and important bearing on the therapeutics of the sexual organs, was brought to light by Dr. C. T. Jewett not long ago, and has since been verified in the case of a veterinary surgeon of this city. The doctor found that a patient who had been under his treatment for rheumatism for some time, began to complain that he was no longer able to obtain an erection of the penis. He had been upon fifteen-grain doses of salicylate of soda five times a day, for some time. The doctor discontinued the salicylate and put the patient upon damiana, when his sexual power began gradually to return.

The veterinary surgeon put himself upon pretty large doses of salicylic acid, for rheumatism, and after a time was surprised at his inability to erect the penis. Although he at once stopped the use of the medicine, he was some three months in regaining his sexual power."

This will not increase the popularity of the remedy.

Cod-Liver Oil Emulsion.

A correspondent of the *Medical Press and Circular* writes—

There are many ways for emulsifying the oil. Alkalies are objectionable, from their chemical action on it, because they neutralize the gastric acids, and from their own individual medicinal properties. What is then required, is a slightly acid and palatable emulsion. This is obtainable by the trifold means of glycerine, wine, and acidified pepsine, as follows: It is palatable, leaves but the faintest oily taste on the fauces after being swallowed, and never produced eructations in the few cases I saw it exhibited in. Half an ounce of it diluted with an ounce of water will retain a uniform milky appearance for half an hour. It is always better, though, to take it without any admixture, immediately after meals, in doses of a dessert to two tablespoonfuls.

℞. Cod-liver oil,		fℨiv
Glycerine,		
Sound sherry,	āā	fℨij
Pepsine porci,		fℨiss
Dilute muriatic acid,		fℨj
Sodium chloride,		ℨij.

Agitate, first, the oil with the glycerine in a clean 12 oz. bottle, and add the wine and pepsine, previously mixed, shaking the whole well together; then add the acid and salt. Of course, it must always be well shaken together before use, as the oil, though completely emulsified, will float on the top, in appearance like cream.

Reviews and Book Notices.

NOTES ON CURRENT MEDICAL LITERATURE.

——Mr. E. Steiger, of New York City, sends catalogues of several medical libraries to be sold in Germany. Collectors should not fail to obtain copies.

——The *American Naturalist* is greatly improved since it has been transferred to this city. Its summaries of scientific news are always carefully prepared.

——"The Relation of Ozone to Disease," a prize thesis by Dr. J. F. Baldwin, gives, in a very condensed manner, the recent researches on this subject. To be had of the author, Columbus, Ohio.

BOOK NOTICES.

Harvey and his Discovery. By J. M. DaCosta, M.D. Philadelphia, J. B. Lippincott & Co. 8vo, cloth, pp. 57.

This volume contains a lecture on the discoverer of the circulation of the blood, originally delivered at the opening of the session of the Jefferson Medical College. It is a very pleasing eulogy of the great investigator, and indicates on every page both the intimate acquaintance of the author with the literature, direct and collateral, of his subject, and also his *curiosa felicitas* in presenting the dry facts of antiquarian research in clear, pure and attractive English.

Yet it is a eulogy rather than a perfectly unprejudiced presentation of Harvey's character. Dr. DaCosta calls him "fair-minded and generous;" but, although Harvey, in his earlier prefaces, promised to give full account of the labors of previous anatomists, there is strong evidence in his works that he failed to do so; he most certainly published, without due credit, more or less that he had learned from his Italian teachers. Dr. DaCosta treats with the severest scorn any and all who question Harvey's claim to the sole and exclusive discovery of the circulation, and speaks of it as the common fate of genius to have its conquests attributed to others. But here he interprets history unfairly. Nearly all great discoveries and inventions occur to several different minds almost simultaneously. The laws of intellectual evolution necessitate this. History is full of examples. Need we mention Adams and Leverrier, Morse and Henry, and the numerous others who reasoned out the same truths at almost the same time, wholly independently? Hence, we think that a perfectly fair account of the discovery of the circulation is not contained in Dr. DaCosta's address. It gives too much to the man, too little to the anatomical culture of the age.

Transactions of the Pathological Society of Philadelphia. Vol. vii. Philadelphia, 1878. pp. 175.

This volume gives cheering evidence of the activity of the society which publishes it. A large number of articles are embraced, and many illustrations aid in conveying accurate conceptions of the specimens presented. Instead of following a chronological order, the specimens presented and their explanations are classified under such headings as the osseous system, the digestive apparatus, the vascular system, the organs of respiration, the genito-urinary apparatus, etc. Very many curious and instructive cases have been examined and their records here preserved.

THE

Medical and Surgical Reporter.

A WEEKLY JOURNAL,

Issued every Saturday.

D. G. BRINTON, M.D., EDITOR.

The terms of subscription to the serial publications of this office are as follows, payable in advance:—

Med. and Surg. Reporter (weekly), a year,	**$5.00**
Half-Yearly Compendium of Med. Science,	**2.50**
Reporter and Compendium,	**7.00**
Physician's Daily Pocket Record,	**1.50**
Reporter and Pocket Record,	**6.25**
Reporter, Comp. and Pocket Record,	**8.25**

For advertising terms address the office.

Marriages, Deaths, and Personals are inserted free of charge.

All letters should be addressed, and all checks and postal orders drawn to order of

D. G. BRINTON, M.D.,
115 South Seventh Street,
PHILADELPHIA, PA.

1879.

PREMIUMS FOR NEW SUBSCRIBERS.

Special Offer to Our Old Subscribers.

From and after October 1st, any new subscriber will receive the REPORTER

15 MONTHS FOR $5.00,

to wit, from Oct. 1st, 1878, to Dec. 31st, 1879.

To enlist the interests of our Old Subscribers in the extension of our circulation, we offer, if they will send us, along with their own renewals, the amount for ONE new subscriber for one year (who will be entitled to the 15 months mentioned) to send them either (1) the HALF-YEARLY COMPENDIUM, for 1879; or (2), the PHYSICIAN'S POCKET RECORD, for 1879; or any of our other publications, to the amount of $2.50. These publications will include the following works now in press:—

GOODELL. Lessons in Gynecology.
LANDOLT. Manual of Examination of the Eyes.
SAYRE. Organic Materia Medica.

Besides, already published, Napheys' *Surgical Therapeutics*, Napheys' *Medical Therapeutics*, Dobell *On Cough and Consumption*, Bernard & Huette's *Operative Surgery*, Butler's *Medical Directory of the United States, etc., etc.*

THE ORGANIZATION OF LYING-IN HOSPITALS.

There are two medical charities which the ordinary run of good people look upon with suspicion—hospitals for venereal diseases and lying-in institutions, entrance to which does not depend on a marriage certificate. We were almost inclined to make the number three, and include foundling hospitals.

The average Philistine thinks that venereal disease is rather desirable in a community, as its existence and prevalence increase the dangers around illicit intercourse, and hence act as deterrents. He would not lessen its ravages among public women if he could; he opposes, as unchristian and irreligious (save the mark), all attempts to stay its contagion.

Lying-in institutions he suspects are encouragements to immorality. If a woman knows she can get good care and attention during confinement, the Philistine believes she will be ever so much more ready to err. In fact, his private opinion evidently is that the only safeguard to virtue in women is the fear of becoming pregnant, or of catching a specific disease. Remove these two terrors if you could, and he apparently would not trust a woman in the land. In this lofty and noble opinion of the sex we must say, in his defence, he is strongly backed by a certain number of philanthropic ladies, who seem to fear dreadfully for the moral stability of their sisters, unless disease, exposure and disgrace are linked as indissolubly as possible to every slip from the path of virtue.

That for any such reasons as these we should oppose lying-in charities, has not seemed to us a sound position. There are many considerations which lead us to believe that a much more extended organization of such institutions, in this country, were very desirable. One of the reasons why feticide is as common as it is, is that there are so few places, even in our largest cities, where a woman can be confined, unless she has a home of her own. Many married women who live in hotels and boarding houses

avoid childbirth because of the difficulties attending their sickness.

The one serious objection to large institutions of the kind is the danger from puerperal infection. In that at Copenhagen, from 1850 to 1864, 1 out of 24 women died; in Vienna, 1865 to 1874, 1 out of 87; in private practice, 1 out of 125 is an average. This shows a strong need for improvement in management. In a report on the subject some years ago, Dr. Bourdon, of Paris, recommended to—

1. Extend home assistance as much as possible.
2. Enlarge the establishments of midwives.
3. Replace the large lying-in hospitals by midwifery schools, by little homes with separated rooms, and then placing them in the vicinity of the large hospitals.
4. The dissemination of small houses about town with private rooms, and complete isolation, and perfect ventilation (Tarnier).
5. The scattering of women delivered in other wards, and leaving unoccupied at least one-third of the beds for the use of confined women.
6. In case of an epidemic, distribution of women in the other wards.

These improvements have been partially put into practice in Paris and St. Petersburg, and the results have been most satisfactory. For a period of ten years no epidemic broke out in these establishments. Besides, it has been found that the mortality diminished in the same ratio as the wards became more numerous and less crowded.

The organization of lying-in hospitals, says a recent reviewer, has not yet arrived at perfection, though the study of this question has made a great step forward. The prophylaxy of lying-in hospitals rests on two preventive measures against infection and contagion. First of all, we must entirely give up large lying-in hospitals, and replace them by small houses, cottage style, divided into five or six rooms, with midwifery school, and a separate house and infirmary to receive women attacked by contagious diseases, who should receive separate medical attendance. The rooms, large and lofty, should be occupied only by five or six women at a time, and successively, so as to admit of being aired and disinfected. Some will be occupied by the women in labor, the others by women already delivered. Whitewashed walls and a stone flooring are indispensable. The beds should be placed far apart, and other hygienic measures used to complete the wholesome dispositions of the ward. The prophylaxy of lying-in hospitals can be condensed into three points—ventilation, the arrangement of the fireplaces, and the disinfectants. Pringle said that air kills more men than the sword; therefore, plenty of pure air is indispensable to replace the air vitiated and contaminated by the presence of the infected subject, without falling into the other extreme of leaving the window wide open all night, no matter how severe the weather, as has been recommended by American and English practitioners.

Notes and Comments.

Effects of an Overdose of Belladonna.

A physician writes to the *Medical Times and Gazette*:—

I once, by mistake, took about two or three grains of the extract of belladonna, and within about half an hour experienced a burning glow over the whole body, with exhilaration of spirits, and a feeling of protrusion of the eyeballs. The throat felt intolerably parched, and the tongue felt swollen, and articulation was indistinct. Within an hour a rash appeared universally over the body—a rash which it would be impossible to distinguish from that of scarlatina; the face was bloated, and the hands were swollen. The pupils were not much affected, which I attribute to a large dose of tincture of opium I took soon after the belladonna.

Dangers of Bromism.

The bromide of potassium is now freely given in large quantities, its use as a hypnotic is constantly becoming more frequent, it has taken an important place in the materia medica of alienists, it has been recommended as a sovereign remedy for epilepsy, and the literature of the subject is already very considerable. All these circumstances render the drug peculiarly liable to abuse. For a long time it was regarded as incapable of doing harm. Drs.

Seguin, Hammond, and others, have shown that its indiscriminate use is greatly to be deprecated, and that the long-continued administration of preparations of bromine may, and often does, give rise to a well-defined disease (bromism), characterized by the following symptoms: feelings of weakness and lassitude, depression of the heart's action, coldness of the extremities, a peculiar heaviness of speech, a pustular or papular eruption of the skin (which may be confined to a few spots, or may be so abundant as to resemble that of variola), and, lastly, a peculiar, sweet, but unpleasant odor of the breath, which Dr. Boettger has invariably been able to distinguish in patients who have taken the drug continuously.

Correspondence.

A Case of Lupoid.

Ed. Med. and Surg. Reporter:—

I have under observation a very healthy man, aged thirty-three, who has lupoid, covering now about one-fourth of his nose. His father, an exceedingly healthy man of sixty-five, has had the same for some years; and by using, locally, pure carbolic acid, has apparently kept it controlled, and has in the last year almost succeeded in curing it, never having an untoward symptom by the use of the acid. The son, a few weeks since, contrary to my instructions, tried the acid, and has since been gradually growing worse. It now threatens ulceration.

What can you or any of your readers tell me of lupoid and its treatment? I have looked through Gross, Erichsen, Hamilton and Smith, as well as Napheys' Surgical Therapeutics, and find next to nothing on this very common and annoying disease. It is so mixed with epithelioma and lupus, perhaps, is the reason that none of them speak of it but Gross. Professor Hamilton has it on his own nose, and ought to have told of it in his surgery. L. W. Hooper, m.d.

Newport, Tenn.

The Ral Hole at Hot Springs.

Ed. Med. and Surg. Reporter:—

In the Medical and Surgical Reporter of October 26th, 1878, in an editorial on "Hot Springs and Hot Tempers," there appears an amusing misapprehension of the name of the free spring over which there appears to be a prospect of a free fight, unless the arrival of United States troops should nip this "small-sized war" in the bud. The name of the spring in question originated in a multitude of jokes at the expense of patients who visited the springs for a cure of a disease not mentionable to ears polite. At this favorite health resort there were found at all times interested patients, who on the arrival of a new patient would inquire, "what disease brings you to the springs to be cured of." Not willing to give publicity to the actual disease, they chose to improvise a substitute in which there could be no reproach, and so the common answer was, "I have got the neu*ral*gia." So it became common to say, when another came, "he's got the ral too." All the springs except one furnished water for the elegant bath houses, for the convenience of patients and for the pecuniary profit afforded the owners. The spring over which there is such contention was not enclosed, and was free to all. It was dug out so as to contain sufficient water for the patients to get into it and bathe the entire body, for the cure of their neu*ral*gia, and many of the worst cases and all of the impecunious ones (for the malady in question is confined exclusively to the wealthy), took advantage of this hole dug in the ground, and so it became known as the *ral hole*, not the "rat" hole. Very respectfully,

Evansville, Ind. J. W. Compton, m.d.

The Bite of a Cat.

Ed. Med. and Surg. Reporter:—

About the 1st of last September (1878), while I was very busy attending cases of remittent bilious fever, dysentery, and diphtheria, then prevailing in our locality, I was requested to see Mrs. J., aged eighty years. The patient informed me that I was the first doctor who ever came to see her, as never, in all her life, had she found it necessary to send for a physician. She informed me, in the history of her unique case, that five days previous, then being in perfect good health, she was playing with her old Tom cat, that has been a domestic about the house for a number of years. While playing, the cat got mad, or cross, and bit her in the right arm, about half way between the elbow and wrist, besides scratching her some. The wound bled about a pint of blood, but there was no difficulty in stopping the hemorrhage. She then applied a cloth wrung out of cold water over the wound, and paid no further attention to it, as it did not seem to hurt her in any way. But three days after the entire arm commenced swelling, accompanied with *intense pain*. She applied several domestic remedies, but without effect.

Upon close examination I found the old lady otherwise in perfect health. The arm was very much swollen, and doubtless was very painful. The patient said, "Doctor, you must give me quick relief or I cannot live long."

Treatment.—I gave the patient one grain of opium, and directed one grain to be given every three or six hours, as needed, to relieve pain. I directed the patient to take ten drops mur. tinct. iron, diluted, every three hours. Externally, over the entire swollen arm, I applied diluted tinct. plantago major.

This treatment gave the patient prompt relief. The treatment was continued for six days when the patient was discharged cured. She remains well up to this writing. I would

not have reported the above anomalous case, but when I saw the following case reported in a New York paper, it reminded me of my case. "A cat bit Mrs. Crittenden, of Middletown, Conn., two years ago. She was strangely ill for a time, and has since been almost helpless, her nervous system being thoroughly disarranged. She cannot speak without stammering, and some of her symptoms are like those of hydrophobia in a mild form." Deeming the subject of some importance I report it for the very valuable MEDICAL AND SURGICAL REPORTER.

JOHN A. HENNING, M.D.

Red Key, Ind., Nov. 1st, 1878.

Altitude of Yellow Fever Epidemics.

ED. MED. AND SURG. REPORTER:—

In your edition of September 14th, page 241, first item, "it is stated that Fort Smith, in Arkansas, 460 feet above the level of the sea, is the highest point at which the yellow fever has ever prevailed as an epidemic in this country." Unhappily this is no longer true, as shown by the fearful epidemic yellow fever prevailing for so many weeks past at Holly Springs, Miss., 710 feet above the level of the sea.

I am much gratified to read in the same number the endorsement by my old friend, Dr. A. R. Kilpatrick, of Surgeon General Woodworth's paper, whose views in the main I have advocated since my first unpleasant personal acquaintance with epidemic yellow fever in New Orleans in 1837. Many facts have come to my knowledge since that date, and in larger numbers during the current year, corroborating the same. D. L. PHARES, M.D.

Woodville, Miss.

The Source of Voluntary Power.

ED. MED. AND SURG. REPORTER:—

Now and then we find a man who has the hardihood to stand up in opposition to the consensus of scientific opinion, and maintain, with the faith and zeal of a martyr, some startling absurdity. A man in England recently wrote an able work to prove that the earth is not round.

In the REPORTER of September 28th appears a letter from Dr. Stonebraker, of Texas, in which, among the paradoxes based on certain experiments alleged to have been performed by Dr. Dowler, I find the following:—

"That voluntary motion is neither directly communicated from, nor regulated by the brain; that the muscles in connection with the spinal marrow perform voluntary motions for hours after having been severed from the brain; that these motions are not only entirely independent of the brain, but may take place, though imperfectly, after the destruction of the cord itself, etc."

When it has been satisfactorily shown that the earth is not round, and that the Copernican system is a mistake, that air is not a mixture, for the most part, of two gases, and that lightning is not electricity, and that the solar beams do not make cucumbers grow, then it will be time to entertain the above proposition. That the cerebrum is the source of all voluntary power, properly so-called, is a scientific doctrine, established by an amount of evidence that is not to be gainsaid by experiments on one alligator, or a dozen. By all means, let Dr. Dowler vivisect some more alligators. E. P. HURD, M.D.

Newburyport, Mass.

[Dr. Dowler's assertion is by no means so outrageous as Dr. Hurd thinks. It is amply supported by a large range of analogies. The elements of *will* and *consciousness* exist in organisms which are wholly destitute of a nervous system. See the REPORTER, vol. xxxiv, pp. 214, 215. ED. REPORTER].

Treatment of "Bilious" Diseases.

ED. MED. AND SURG. REPORTER:—

Apropos of the article upon "Bilious Diseases—What are They and Why so Called?" by Dr. Nowlin, in your last issue, allow me to supplement his remarks by my ordinary treatment of such cases. I fully agree with the Doctor, that the liver has sins enough of its own to bear without its being made the scapegoat of all that is ill in the organs there adjacent. My usual plan, when these cases of so-called "biliousness" present themselves, is to order very small doses of the mild mercuric chloride, not for its at one time supposed specific action upon the liver, but to allay, by its osmotic properties (for it certainly seems to have such) the irritated and congested stomachic and intestinal glands. Usually three or four three-quarter or one-grain doses will be sufficient to do this, when the doses are administered a couple of hours apart. With this I enjoin light diet. As soon as a movement (not a catharsis) is had from the bowels, I stop the mercury. After each meal I then order powders, of either bismuth and pepsin, or of lactopeptin, or else a mixture of the extract of malt, than which there is none that equals that prepared by the Trommer process, with pepsin and bismuth; one powder or a teaspoonful of the mixture is to be taken after each meal, and at bedtime. It takes but a day or two before my patient is completely over his digestive ("bilious") trouble, and both of us are made happy. Since I have adopted this plan of treatment, I have had better grounds for self-satisfaction than when I looked upon the poor patient's liver as an organ delighting in bilious evils.

Detroit, Mich. C. HENRI LEONARD, M.D.

Does the Use of Quinine Impair the Hearing?

ED. MED. AND SURG. REPORTER:—

I was very much surprised to see, in your issue of October 19th, a short extract from an article published by Dr. St. John Roosa, as giving the weight of his authority to the common belief of the laity, that the salts of

quinine produce deafnesss. If deafness could be produced by quinine in any form, would not every man, woman and child be found deaf in our southern and western States? Now, I know that such is not the case, for I have experimented on my own person, and tested the effects of quinine, commencing to take it several days in succession, in one, two, three, four and six grains every hour, without producing the slightest deafness, and only a certain peculiar form of noise, which in a day or two passed away. Again, during my attendance as resident physician, in 1845-46, in the Philadelphia Hospital, I contracted an intermittent fever, and my time being much occupied, and being very desirous, at the same time, of getting rid of a coming chill, I took at one dose twenty-five grains of pure sulphate of quinine, and for several days I had the peculiar noise, but on its passing away it left no deafness. We know that moisture and malaria will produce a certain form of deafness, and often the patient, having to take the quinine to relieve an intermittent or bilious fever, ascribes the deafness which precedes and accompanies this condition to the last article taken. Again, in a practice of over a quarter of a century, almost exclusively devoted to the treatment of diseases of the ear, I have yet to find a well-authenticated case of deafness from quinine alone. I have collected a large amount of information on this very important subject, which I hope, when time will permit, to issue in a second edition of my work on "Nervous Deafness." Yours, very truly, L. Turnbull, M.D.

1502 *Walnut street, Philadelphia.*

News and Miscellany.

Epidemic Report for the Week Ending November 2d, 1878.

New Orleans, La.—There were 83 new cases of yellow fever and 109 deaths for the week ended yesterday. During the week the Board of Health received information of 288 old cases not previously reported. For the past twenty-four hours there were 4 new cases and 8 deaths. Total cases 13,252, total deaths 3973.

Morgan City, La.—During the past week there were 8 deaths from yellow fever. Total cases to date 563, deaths 102.

Baton Rouge, La.—For the week ended yesterday evening there were 75 cases of yellow fever and 16 deaths. Total cases 2415, deaths 160.

Mobile, Ala.—During the week ended yesterday evening there 60 new cases of yellow fever and 10 deaths. Total cases 224, deaths 59.

Decatur, Ala.—There were 10 cases of yellow fever and 2 deaths for the week ended November 1st. Total cases 188, deaths 42.

Bay St. Louis, Miss.—Total cases of yellow fever to yesterday evening 535, deaths 78. Only an occasional case occurring now, and the local health authorities consider the epidemic at an end.

Port Gibson, Miss.—There were about 10 deaths in the country near Port Gibson during the past week; none in Port Gibson, where the epidemic is considered at an end.

Pass Christian, Miss.—During the week ended yesterday evening there were 19 cases of yellow fever and no deaths. Two deaths from yellow fever occurred in the week ended Oct. 25th, which were not reported in that week. Total cases to date 189, deaths 20.

Grand Junction, Tenn.—To Oct. 26th there were 174 cases of yellow fever and 74 deaths.

Milan, Tenn.—For the two weeks ended yesterday evening there were 12 cases of yellow fever and 6 deaths. Total cases 15, deaths 9.

Memphis, Tenn.—During the week ended October 31st there were 22 deaths from yellow fever. Total deaths 2964. The Board of Health announced officially, October 28th, that absentees could return with safety.

Mason, Tenn.—The first case of yellow fever, a refugee, occurred August 29th, the first case among inhabitants, October 4th, since which time to yesterday evening there have been 60 cases and 24 deaths.

Chattanooga, Tenn.—During the week ended yesterday evening there were 28 new cases of yellow fever and 12 deaths. Total cases 433, deaths 127.

Meridian, Miss.—Over 400 cases of yellow fever are reported to have occurred to date. Total deaths 80.

Gallipolis, Ohio.—During the week ended October 30th, one new case of yellow fever occurred and two deaths.

A Prize of $500.

A prize of £100 for an essay on hydrophobia, its nature, prevention and treatment, having been offered by Mr. Stanford, M.P., to be awarded by the Royal College of Physicians of London, the Marquis of Salisbury has instructed the British Minister at Washington to bring the matter to the attention of the Department of State. The essay must be delivered to the college on or before January 1st, 1880. It may be the joint production of two or more authors.

Mr. George W. Callender, F.R.S.,

the distinguished London surgeon, Senior Surgeon to St. Bartholomew's Hospital, and late President of the Surgical Section of the British Medical Association, will leave Liverpool in the steamship Bothnia, on the 23d of this month, on a professional visit to this country.

Mr. Callender will need no introduction to the profession in America, as he is so well known in surgical literature and as a practical surgeon, and he will be a most welcome visitor. He is a genial and kind-hearted gentleman, and very many members of our profession, when abroad, have experienced his courtesy and liberal hospitality.

Mr. Callender will visit the medical institu-

tions of our leading cities, and the medical profession in America will be glad to receive and to honor such a representative of British surgery.

Additional Deaths of Physicians from Yellow Fever.

Memphis, Tenn., October 13th, Dr. F. H. Fonce, of Hot Springs, Ark. October 16th, Dr. M. F. Keating, of New York.

Chattanooga, Tenn., October 13th, Dr. E. M. Baird, Dr. R. N. Barr.

Vicksburg, Miss., October 11th, Dr. Happoldt, of Morgantown, N. C. October 14th Dr. Glass.

Pattersonville, Miss., October 19th, Dr. M. A. Roche.

Cairo, Ill., October 18th, Dr. Roswell Waldo, Surgeon of Marine Hospital.

Delta, Miss., October 22d, Dr. Gilland, Health Officer.

Holly Springs, October 24th, Dr. Compton.

Clinton, La., October 23d, Dr. Covert.

Sanitary Reformation in the Campagna.

The intelligent physician can have very little sympathy with that style of religion which proposes days of fasting and prayer to check the spread of disease. That State or general governments who have no health boards, or other sensible regulations, should seek to supply their place by such means, is a piece of childish folly. Give us rather the solid sense of the monks of La Trappe. Says a recent letter from Rome—

These good Fathers have discovered lately the means of making the vast Roman campagna healthy, a work that has baffled all governments from Romulus to Victor Emmanuel or King Umberto. The mal'aria (evil or bad air) is well known to geologists. The soil of the campagna has little depth. Under it lies a stratum of tufa; in some places this tufa is two metres deep. Under this tufa is other volcanic material, equally hurtful to vegetation. Thus there is no subsoil, and no chance for circulation of water and air. When the heavy rains fall, the water rests on the tufa, and generates unhealthy mists. When the droughts come, as now, the soil is baked to ashes. The wise, good, industrious Trappists began on that very unhealthy land of the Three Fountains, first, with Eucalyptus raising, and made the place comparatively healthy. Lately they have tried, with success, a most remarkable experiment. They have bored the tufa, at different distances, a metre and a half deep; in these holes they have placed dynamite, and by electric conductors exploded the volcanic strata. A dumb rumbling is heard, a little elevation of the ground is seen, in some places the earth is thrown out a short distance. In eight days' time they found a subsoil for a large space of ground, and made it both susceptible of culture and healthy! The expense is about 600 lire for every hectare (2 acres, 1r., 35p.)

Thus these simple, busy Fathers of La Trappe, have done the useful work that lay before them, and by that have solved a problem as old as Euclid, and hitherto as fatal as the Sphynx. Their silent labors will give health to future generations, and cover with luxuriant fields of grain the vast Agro Romano!

Items.

Errata.—On page 332, second column, 18th line from bottom, omit *by* after *way*, and read, the liver is *the* organ at once censured. On page 333, second column, 13th line from top, read, the patient *died* in Richmond, etc. And 15th line from the bottom of the article, after (anasarca) read, and cavities (hydrothorax and ascites), thus terminating life.

—The local Board of Health, of Prague, is attempting to enforce measures of dress reform. It has issued an edict prohibiting the fair sex from wearing long dresses. "Considering," say the doctors, "that trailing robes raise a dust in the streets, which is highly prejudicial to the public health, it is henceforth forbidden to wear the robes in question in public thoroughfares." There are vague apprehensions of a riot.

—The *Students' Journal* is responsible for the following:—"A young lady at home from boarding school for the holidays was asked if she would have some roast beef, when she replied, 'No, I thank you; gastronomical satiety admonishes me that I have arrived at the ultimate stage of deglutition consistent with dietetic integrity?' She was never asked if she'd have anything more again."

—In a paper by Mr. C. Meldrum, in *Nature*, on "Sun-spots and Rainfall," the author finds that the rainfall so recorded at fifty-four stations in Great Britain, from 1824 to 1867, was 0.75 inch below the mean when the sun-spots were below their mean, and 0.90 inch above it when the spots were in excess; and the corresponding values for thirty-four stations in America were 0·94 and 1·13 inch.

—A month ago, says a London paper, there were only eight doctors in all Cyprus, and Larnaca, the capital, possessed but a single apothecary's shop, the proprietor of which complains of no business. The cause is not in the healthiness of the island, but in the want of faith in medicine.

—The loss by the yellow fever, through the destruction of crops by neglect, stoppage of trade, and minor causes, is estimated at $200,000,000.

—The Cremation Society of London is about to erect a crematorium, after the model of that in use at Milan.

—In former times the man ate the cream (if the cat didn't anticipate him), but now they cremate the man.

—James Schenck, of San Francisco, on becoming the father of triplets, publishes a frantic appeal for pecuniary aid.

Mr. Thoms Gives us Ten Years More.

It has been widely known that Mr. William J. Thoms, a keen critic of old records, long denied that there is any authentic evidence of a human being living beyond a hundred years. We rejoice to report, for the benefit of whom it may concern, that he has extended his limit to 110 years. Mr. Thoms lately received from Dr. I. C. Tache, deputy head of the Census Department of Canada, the report of an inquiry into eighty-two cases of alleged centenarianism. Of the eighty-two, no less than thirty one claimed to have attained 100 years, nine claimed to be 101, and eleven to be 102; and while only four claimed to be 103, and the same number. 104, no less than nine put forth the higher pretension of reaching 105. Three claimed to be 106, and the like number 108; only one 109; while four boasted of having reached no less than 110. The three oldest on Dr. Tache's list claim credit for having reached no less than 112, 113, and 120 years respectively. Of these eighty-two cases, Dr. Tache shows that seventy-three have no claim to be considered centenarians, but returns nine as having, in his opinion, claims to be considered as having reached, and in some instances outlived, a century. Two of the Doctor's subjects, he is satisfied, reached the ages of 109 and 113, but some of the other claimants had to submit to a remarkable process of rejuvenation, in one case a man who claimed to be 120 proving to be a mere youth of 90. Mr. Thoms' present opinion is that no authenticated case of an individual's living to be 110 can be produced, but he is prepared to modify it on satisfactory evidence.

Personal.

—L. Brewer Hall, M.D., will give a series of lessons upon ophthalmology, at the Eye and Ear Department of the Philadelphia Dispensary, N. E. corner Thirteenth and Chestnut streets, commencing the last of October.

—Dr. Lewis Royer, of Trappe, Montgomery county, Pa., has been a candidate for State Senator.

—Rev. A. H. Keer was induced to quit preaching and become the superintendent of Minnesota's Asylum for the Insane, at St. Peter. Mr. Keer's books fail to account for $1457.88, but hidden beneath the word "incidentals," in his memoranda, were found charges for lager, whisky, cigars, sherry wine, nuts, and a horse.

—Surgeon J. Winthrop Taylor has been appointed chief of the Navy Bureau of Medicine and Surgery, as Surgeon General of the Navy, in place of Surgeon Grier, who has been retired on account of advanced age.

—The Spanish Government having sanctioned the practice of homœopathy, a school is to be opened at Madrid next month, and diplomas awarded at the end of May, 1879.

QUERIES AND REPLIES.

Gleet.

MR. EDITOR:—Please inform me, through the column of "Queries and Replies," of your opinion regarding the use of medicated bougies in the treatment of a case of gleet, due to an irritable stricture, situated one and a half or two inches within the meatus. Also, please give formula for making them, and oblige S. R.

[The only treatment of gleet of any real value, is by the repeated introduction of sounds. ED. REP.]

Will some of the readers of the REPORTER advise me how to prevent the nausea following the administration of podophyllin and leptandrin, in hepatic congestion. J. N. M.

Iowa.

Dr. *A. H. B.* would like suggestions for the treatment of chronic rheumatism.

MARRIAGES.

BOYSEN—KINZINGER.—On the 27th ult., at Egg Harbor City, New Jersey, by the Rev. C. Cast, Theophilus H. Boysen, M.D., and Kate Kinzinger, both of Egg Harbor City.

CHEATHAM—FARRAR.—In Dawson, Terrell County, Ga., at the residence of the bride's father, Dr. Walter Bichat Cheatham and Miss Sallie Farrar, eldest daughter of Dr. George W. Farrar, of Dawson, Ga. Rev. R. W. Dixon officiating.

JACKSON—PRICE.—On the 10th month, 9th, at the residence of the bride's parents, by Friends' ceremony, Dr. Edward Jackson and Jennie L., daughter of Dr. Isaiah and Lydia H. Price, all of West Chester, Pa.

JONES—CROSBY.—On Tuesday, October 22d, at the Madison Square Church, by the Rev. Howard Crosby, D.D., Gertrude Ralston, daughter of the late Edward N. Crosby, and Dr. S. Beach Jones, Jr., all of New York.

KIDDER—MAYNARD.—On the 18th of September, 1878, at the English Memorial Church, in Constantinople, by the Rev. Charles G. Curtis, M.A., Oxon, Chaplain, Dr. Jerome H. Kidder, U.S.N., and Anne Mary, only daughter of the Hon. Horace Maynard, U. S. Minister to Turkey.

KIRKBRIDE—DOUGHERTY.—In Philadelphia, on the 25th ultimo, at St. Matthias' Church, by Rev. Richard N. Thomas, Mr. Frank Kirkbride, M.D., and Euretta E., only daughter of James Dougherty.

MARCH—STEVENSON.—In Pittsfield, on the 3d instant, by Rev. Daniel March, D.D., Daniel March, Jr., M.D., of Pittsburgh, Pa., son of the officiating clergyman, and Miss Jennie A. Stevenson, daughter of the late Hon. John M. Stevenson, of Cambridge, N. Y.

MUNGER—RICHMOND.—In Woodstock, Vt., Sept. 26th, by Rev. L. W. Hicks, Edson S. Munger, of Carbondale, Pa., and Alice, only daughter of Dr. J. S. Richmond, of Woodstock.

REID—STICKLE.—At Rockaway, N. J., Wednesday evening, October 16th, 1878, by the Rev. D. E. Platter, Robert A. Reid, M.D., of Marion, Ind., and Miss Carrie Stickle, youngest daughter of the late B. K. Stickle, of Rockaway.

VANCE—JOHNSTON.—Thursday, September 26th, near Darlington, Beaver county, Pa., by Rev. Loyal Young, D.D., assisted by Rev. Henry N. Potter and Rev. Theodore Crowl, Benjamin A. Vance, M.D., and Miss Ellie, only daughter of Rev. John W. Johnston.

DEATHS.

WILLIAMS.—At Stockbridge, Michigan, of enteritis, Adelphia J., wife of Ira C. Williams, Jr., M.D., aged 26 years.

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de 1ère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

SAVORY & MOORE, 143 New Bond Street, London.

PARIS, 1867. Prize Medal.

1868. Silver Medal.

1872. Gold Medal.

1873, VIENNA. Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

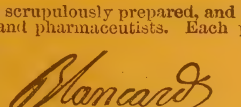
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUCERA & CO., Agents,

NEW YORK.

TO PHYSICIANS.

THE scarcity and high prices of Cinchona barks and Sulphate of Quinia, and the prospect of only a slight reduction in these prices, makes the present a favorable opportunity of calling the attention of the profession to the *combination of all the bark alkaloids.*

Much attention has been given to this subject in Europe and India.

The growing appreciation by the medical profession of the United States of

CINCHO-QUININE

is due to the fact that it retains the important alkaloids IN COMBINATION, — a combination which in practice is *preferable to perfect isolation or separation* of these alkaloids.

In addition to its superior efficacy as a tonic and anti-periodic, it has the following advantages, which greatly increase its value to physicians : —

1st, *It exerts the full therapeutic influence of* Sulphate of Quinine, *in the same doses*, without oppressing the stomach, creating nausea, or producing cerebral distress, as the Sulphate of Quinine frequently does; and it produces much less constitutional disturbance.

2d, It has the great advantage of being *nearly tasteless.* The bitter is very slight, and not unpleasant to the most sensitive, delicate woman or child.

3d, It is *less costly :* the price will fluctuate with the rise and fall of barks, but will always be much less than the Sulphate of Quinine.

4th, It meets indications not met by that Salt.

The following well-known Analytical Chemists say : —

"UNIVERSITY OF PENNSYLVANIA, Jan. 22, 1875.
"I have tested CINCHO-QUININE, and have found it to contain *quinine, quinidine, cinchonine, cinchonidine.* F. A. GENTH,
Professor of Chemistry and Mineralogy."

"LABORATORY OF THE UNIVERSITY OF CHICAGO, Feb. 1, 1875.
"I hereby certify that I have made a chemical examination of the contents of a bottle of CINCHO-QUININE; and by direction I made a qualitative examination for *quinine, quinidine,* and *cinchonine,* and hereby certify that I found these alkaloids in CINCHO-QUININE.
C. GILBERT WHEELER,
Professor of Chemistry."

"I have made a careful analysis of the contents of a bottle of your CINCHO-QUININE, and find it to contain *quinine, quinidine, cinchonine,* and *cinchonidine.*
S. P. SHARPLES, *State Assayer of Mass.*"

TESTIMONIALS.

"WELLFLEET, MASS., Nov. 17, 1876.
"I have used CINCHO-QUININE, and can say without any hesitation it has proved superior to the sulphate of quinine. J. G. JOHNSON, M.D."

"MARTINSBURG, MO., Aug. 15, 1876.
"I use the CINCHO-QUININE altogether among children, preferring it to the sulphate.
DR. E. R. DOUGLASS."

"LIVERPOOL, PENN., June 1, 1876.
"I have used CINCHO-QUININE, obtaining better results than from the sulphate in those cases in which quinine is indicated.
DR. I. C. BARLOTT."

"RENFROW'S STATION, TENN., July 4, 1876.
"I am well pleased with the CINCHO-QUININE, and think it is a better preparation than the sulphate. W. H. HALBERT."

"ST. LOUIS, MO., April, 1875.
"I regard it as one of the most valuable additions ever made to our materia medica.
GEORGE C. PITZER, M.D."

"RICHMOND, VA., March 28, 1877.
"I believe that the *combination* of the several cinchona alkaloids is more generally useful in practice than the sulphate of quinine uncombined.
"Yours truly, LANDON B. EDWARDS, M.D.
Member Va. State Board of Health, and Sec'y and Treas. Medical Society of Va."

"CENTREVILLE, MICH.
"I have used several ounces of the CINCHO-QUININE, and have not found it to fail in a single instance. I have used no sulphate of quinine in my practice since I commenced the use of the CINCHO-QUININE, as I prefer it. F. C. BATEMAN, M.D."

"NORTH-EASTERN FREE MEDICAL DISPENSARY, 908 East Cumberland St., Philadelphia, Penn., Feb. 29, 1876.
"In typhoid and typhus fevers I always prescribe the CINCHO-QUININE in conjunction with other appropriate medicines, the result being as favorable as with former cases where the sulphate had been used.
"F. A. GAMAGE, M.D."

FERROUS CHLORIDE.

The Combination which all Forms of Iron must assume before Assimilation.

Superior to all other Iron Salts in that, while it is readily taken into the circulation, and does referruginate the blood, it does not ordinarily cause constipation nor headache. It is very pleasant to the taste, and is unalterable.

Ferrous Chloride is a neutral salt, consequently it has no action upon the teeth, and may be administered fearlessly. This fact and the delightful taste of my preparation render it an advantageous form for administration to children. Each fluid drachm contains one grain of Ferrous Chloride, which, owing to the certainty of its assimilation, is a full, active, adult dose.

McKELWAY, APOTHECARY,

Successor to O. S. HUBBELL.

1410 CHESTNUT ST., PHILADELPHIA.

WYETH'S COMPRESSED TABLETS
OF
CHLORATE OF POTASH.

For Hoarseness, Bronchial Irritation, Sore Throat, Diphtheria, Croup, etc., etc.

Chlorate of Potash is a remedy of acknowledged value in cases of Diphtheritic Sore Throat, and in Inflammation of the Mouth and Throat, induced by a depressed state of the system. In these instances, as in the milder forms of Croup, it has, besides its depurative and detergent effects, a solvent action on the deposits, characteristic of those troublesome and dangerous affections. It relieves Hoarseness; and in many cases of Fetid Breath from disordered secretions, it proves an efficient corrective. Its virtues in simple Angina, or ordinary Sore Throat, are recognized by many of the most eminent physicians.

As the taste of this article is not disagreeable, we have prepared it in the form of Compressed Tablets, thus giving the patient the full benefit of its action, undiluted with Sugar, Gum, or other vehicles, which would not only prevent its effects, but which sometimes themselves offend the stomach.

The Lozenges usually contain about twenty-five 25) grains of gum and sugar, with two grains of the Chlorate of Potash, while each of these Tablets contains simply five grains of the Chlorate, all of which, dissolved in the saliva, acts on the affected mucous membranes.

If allowed to dissolve in the mouth, the topical effect is much more efficient than a saturated solution, as, while the solution is but temporary, the tablet really acts as a continuous gargle.

FOR SORE THROAT, HOARSENESS.

DIRECTIONS:—Adults should take one every hour or two until relieved, allowing it to dissolve slowly in the Mouth. Children half of one as often.

For Offensive Breath, no remedy will give more certain relief; use one, two or three times a day.

For Diphtheria, Croup, and the more serious ailments, the physician should direct.

PEPTONIC PILLS.

Pepsin, Pancreatin with Lacto-Phosphate of Lime and Lactic Acid.

(COPYRIGHT SECURED.)

This pill will give immediate relief in many forms of Dyspepsia and Indigestion, and will prove of permanent benefit in all cases of enfeebled digestion, produced from want of proper secretion of the Gastric Juice. By supplementing the action of the stomach, and rendering the food capable of assimilation, they enable the organ to recover its healthy tone, and thus permanent relief is afforded. One great advantage of the mode of preparation of these pills is the absence of sugar, which is present in all the ordinary Pepsin and Pancreatic compounds. In this form, the dose is much smaller, more pleasant to take, and is less apt to offend the already weak and irritable stomach. The results of their use have been so absolutely satisfactory, that we are confident further trial will secure for them the cordial approval of the Medical Profession and the favor of the general public.

Each pill contains onegrain of pure PANCREATIN, which is equivalent to 10 grains of the ordinary or Saccharated usually prescribed and dispensed. Physicians will appreciate the great advantage of this mode of administration, the increased benefit to the dyspeptic being due to a full and effective dose of each, freed from unnecessary bulk, and really hurtful addition of sugar. A single pill will give immediate relief.

DIRECTIONS:—Take one pill immediately after eating or when suffering from Indigestion, Lump in the Throat or Flatulence. For children, reduce the pill to powder and give one-fourth or half, according to age.

HAVE SURGEONS BEEN MISTAKEN AS TO THE NATURE OF FRACTURES OF THE BASE OF THE RADIUS? MEDICO-LEGAL BEARINGS OF THE ANSWER.

BY J. S. WIGHT, M.D.,
Professor of Surgery in the Long Island College Hospital.

The object in writing this paper is to establish scientific truth, to lay a foundation for correct practice, and to aid in defending the surgical profession against unjust suits at law for malpractice. It is safe to say that the truth is better than any man; but if the false has been made to seem to be true, and thereby one reputable surgeon has been unjustly ruined in reputation and prospect, it is also safe to say that the responsibility of his ruin rests with those who have, perhaps without intention, made the false seem true. And hence we may say that any man is better than that which is false in surgical science.

In this spirit I must proceed to do what has been, by the combination of various circumstances, imposed on me as a simple and imperative duty. And this is my only apology for taking up valuable time with a subject that has been so long threadbare.

In descriptions of the forearm it is convenient to use such terms as will convey the same meaning, no matter what position the forearm may occupy in regard to the body. Hence a few definitions may be made at the outset.

Let the forearm be in any position—

1. *Outward* means from the ulnar to the radial side of the forearm.

2. *Inward* means from the radial to the ulnar side of the fore-arm.

3. *Backward* means from the palmar to the dorsal aspect of the forearm.

4. *Forward* means from the dorsal to the palmar aspect of the forearm.

5. *Upward* means from the wrist joint toward the elbow.

6. *Downward* means from the elbow toward the wrist joint.

7. The *transverse* diameter of the forearm is from side to side.

8. The *conjugate* diameter of the forearm is forward and backward.

These definitions will apply to the base of the radius, as well as the forearm. And it is proper to define the base of the radius, since our object is to consider the fractures of this part of the radius.

Now, I have more than once pointed out that the compact tissue of the shaft of long bones is expanded into the plates of the cancellous tissue of the articular ends. This fact is beautifully exhibited in the base of the radius by various sections made with a saw. The sections are made in three directions, namely—

1. Several sections are made transversely to the axis of the articular surface of the base of the radius.

2. Several sections are made in the axis of the radius and in the transverse diameter from below upward.

3. Several sections are made in the axis of the

radius, and in the conjugate diameter from below upward.

These sections are all made in the base of the radius, and show the following facts, namely—

First. The compact tissue of the shaft of the radius begins to expand into the cancellous tissue of the articular end, sometimes about two inches above the wrist joint; sometimes about one and one-half inch above the wrist joint; and sometimes about one inch above the wrist joint. And for the sake of convenience we may call the distal end of the radius, that is more or less made up of cancellous tissue, *the base of the radius*. Hence, the base of the radius may be from less than one inch to about two inches in length, according to circumstances. The average length of the base of the radius is about one and one-fourth inch.

Second. There is a layer of quite firm compact tissue, about one-eighth of an inch thick, making up the distal articular surface of the radius. This is the bottom of the base of the radius.

Third. From this layer of compact tissue upward, a distance of about three-eighths of an inch, the base of the radius is nearly all cancellous tissue, the compact tissue being very thin.

Fourth. But the compact tissue, even in the part of the base of the radius just described, begins to be thicker on the anterior than on the posterior surface.

Fifth. At a distance of five-eighths and six-eighths of an inch from the wrist joint the compact tissue on the anterior surface of the base of the radius is about one-sixteenth of an inch thick, while the compact tissue on the internal surface is quite thick, and the compact tissue on the posterior surface is beginning to be thicker.

Sixth. At a distance of about one and one-half inch from the wrist joint, the compact tissue of the base of the radius is nearly of uniform thickness on all sides of the bone.

Seventh. Sometimes at a distance of about two inches from the wrist joint the compact tissue of the shaft of the radius begins to expand into cancellous tissue, and is quite uniform in thickness on all sides of the bone.

Eighth. There is more cancellous tissue on the posterior side than on the anterior side of the base of the radius.

The following statements, based on actual measurements of the base of the radius, may now be made, namely—

(*a*) Pass a plane through the axis of the shaft of the radius and parallel with a plane passing through the transverse diameter of the base of the radius; about three-fourths of the articular surface of the base of the radius will be in front of this plane.

(*b*) Pass a plane through the axis of the shaft of the radius, and parallel with a plane passing through the conjugate diameter of the base of the radius; about two-thirds of the articular surface of the base of the radius will be internal to this plane.

(*c*) The articular surface of the base of the radius has a double obliquity; (1) inward, and (2) forward.

The following table of five cases of measurement of radii, taken at random, will afford a fair indication of the double obliquity of the distal articular surface of the radius:—

NO.	INWARD OBLIQUITY.	FORWARD OBLIQUITY.
1	10°	10°
2	20°	15°
3	10°	10°
4	15°	15°
5	10°	10°

From this table may be drawn the following approximate conclusion, namely: The inward and forward obliquity of the distal articular surface of the radius to the axis of the shaft is from ten to fifteen degrees.

There are some points of importance, relating to the functions of the wrist joint, to be considered in this place: (1) The hand can be flexed nearly to a right angle with the forearm. (2) The hand can be extended nearly to a right angle with the forearm. (3) The hand by lateral ginglymus can be bent inward on the forearm, so as to make an angle of about forty-five degrees with the ulna. (4) The hand by lateral ginglymus can be bent on the forearm, so as to make an angle of about twenty-five degrees with the radius. (5) The hand has but very little rotation on the forearm. (6) The hand can perform considerable circumduction on the forearm. The above motions are supposed to be done by volition. The extent of the motions may be increased by the application of external force; and the rotation of the hand on the forearm can be largely increased by this means. And in some cases the hand can readily be pushed backward so as to make the arc of extension greater than ninety degrees.

The contractile force of the muscles that flex the hand is greater than the contractile force of the muscles that extend the hand, as can be proved by experiments on the living forearm and on the dead forearm, and by mechanical considerations. And the resistance the flexors can make to extension of the hand is greater than the resistance the extensors can make to the flexion of the hand. The muscular resistance to extension of the hand is increased by certain mechanical relations, found in the forward projection of the points of insertion of the muscles that flex the hand. But the general dynamic effects upon the base of the radius caused by forcible extension of the hand may be described under the following heads, namely—

1. The whole hand will represent a lever, which may be called the hand lever.

2. The base of the radius will be the fulcrum on which the hand lever rests.

3. The long arm or the power arm of the hand lever will be the distance from the point of greatest pressure on the base of the radius to the ends of the fingers.

4. The short arm or the weight arm of the hand lever will be the distance from the point of greatest pressure on the base of the radius to the points of insertion of the resisting muscles, modified by the position of the anterior ligament of the wrist joint.

5. Approximately stated, the length of the long arm of the hand lever is about six inches; and the length of the short arm of the hand lever is about one inch.

6. The power and the weight will, therefore, have the ratio of 1 : 6.

7. The power will be the extending force applied to the hand.

8. The weight will be the contractile energy of the flexible muscles.

9. The pressure on the fulcrum, or the base of the radius will exactly equal the sum of the power and the weight. It will be the sum of the extending force and the contractile energy of the resisting muscles, and possibly plus the resistance of the anterior ligament of the wrist joint.

10. The principal component of the muscular contraction acts in the direction of the axis of the shaft of the radius, and, under the conditions named, in the direction of the axis of the base of the radius.

11. It is generally admitted that muscular contraction can and has broken various bones of the body. This takes into account the great power of contracting muscles, and also the possible fragility of bones.

12. Now add to the muscular force the extending force applied to the hand, and we have a pressure that may at times fracture the base of the radius. Suppose, for instance, that a force of fifty pounds is applied to the power end of the hand lever; the force that is applied to the weight end of the hand lever will be 300 pounds, and the force that presses on the base of the radius will be 350 pounds. And if 100 pounds of extension be applied to the power end of the hand-lever, there will be a pressure of 700 pounds on the base of the radius.

Some facts relating to accidents must be introduced now. A patient falls on the palm of the hand. Two dynamic conditions are apt to supervene, in the following order, namely: (1) When the power end of the hand lever begins to meet a resisting surface, the flexing muscles of the hand begin to contract, and the carpus is pressed against the base of the radius, with more or less force, according to the power of the contracting flexors. And the hand will not ordinarily be extended beyond a right angle, so that at present the anterior ligament of the wrist joint may not be taken into account. (2) Consecutively and unavoidably the carpus will meet the resisting surface; of this fact there can be no doubt whatever. The downward and forward motion of the carpus will be arrested, and the downward and forward motion of the base of the radius will be arrested. But the shaft of the radius has a similar motion, and that will be arrested also. Now the reaction of the resisting surface will drive the carpus against the base of the radius, which will be driven against the descending radial shaft. The force of the reaction, which will be equal to the action, will, in a typical case, be upward, backward, and outward. And this reaction will instantly follow, and be more or less combined with the pressure of the hand-lever. The pressure and the reaction will be exerted on the base of the radius.

The facts of structure and function, as well as the mechanical considerations that have already been enumerated, have an important bearing on the causation, the seat, and the direction of fractures of the base of the radius. And let me note in this place, that different writers have given different accounts of these fractures. But it is quite generally agreed that

the base of the radius is ordinarily broken near the wrist joint. And I may add in this connection, that the fracture named after Colles is found, according to different observers, from a few lines to more than one and one-half inches above the articular surface of the base of the radius. In this general way will the phrase *Colles fracture* be used in this paper.

In regard to fractures of the base of the radius, the following general statements may be made, namely:—

1. It is very difficult at times to make out the seat and direction of a recent fracture, especially when the fracture is near a joint, as is the case in Colles fracture. And we may say, that it is sometimes impossible to make out certainly the seat and direction of a recent fracture.

2. When the soft parts are "thin," and there is no swelling, it is not difficult to determine the seat and direction of a recent fracture.

3. It is generally known that there is a great diversity of opinion among surgeons as to the seat and direction of Colles fracture in recent cases on the living subject.

4. Yet it must be, that the gentlemen who have made statements in regard to the seat and direction of Colles fracture have been good observers, and have quite correctly put on record what they have seen. They may have made some mistakes, but they cannot be all wrong always.

5. It is possible that good observers have been, in the main, near the truth in the records of their own observations of the seat and direction of Colles fracture.

6. This would only show that different observers had seen and described different facts. And, for this reason, it would not be necessary to reconcile different views of the pathology of Colles fracture. One who has seen only white horses cannot say that all horses are white; and one who has seen only black horses cannot say that all horses are black; somebody else may have seen a few gray horses.

7. The fact is, that fractures of the base of the radius, and also Colles fractures, have a various pathology, as can be shown by evidence that ought to satisfy any surgeon.

8. It is easy for the surgeon to make out the seat and direction of a recent fracture by a careful post-mortem examination.

9. Our knowledge of the seat and direction of Colles fracture, derived from post-mortem examinations of recent cases, would be exact and reliable.

10. It does not often happen that a patient having Colles fracture has been so severely injured as to cause death. And so only a few cases of Colles fracture have had a post-mortem examination.

Now, before considering some cases of post-mortem examination of Colles fracture, I will briefly as possible describe two fractures of the lower end of the radius, as follows, namely.

During the spring of 1878 two cases of fracture of the lower end of the radius came to my clinic and were treated by me:—

Case 1.—The first patient was forty-five years of age, born in Holland, and had been married about two years at the time of the accident. He had been a nurse, but was a laborer on a railroad when he broke his radius. He was lifting an iron rail with his hands, when he felt something give way in his right forearm. His right radius was broken nearly transversely, not quite two inches above the wrist-joint. The measurement could be made with exactness, because the bones were prominent and there was no swelling. If there was any displacement, the distal end of the upper fragment was forward and inward. There was no apparent shortening of the radial side of the forearm, the hand not falling to the radial side; and the forearm was somewhat flexed and pronated.

The measurements of this patient's lower limbs are recorded in my tables on shortening of the femur. The left lower limb was one and three-eighths inches longer than the right lower limb. On measuring them, the bones of the left upper limb are found longer than the corresponding bones of the right upper limb. This fact seems to point to a defect of development in the patient's bones on the right side. The right radius is broken, and the inference is that the fracture would not have occurred if the bone had been well developed. The right radius was incompetent to sustain a powerful voluntary effort of the flexing and pronating muscles of the hand and the forearm. We may suppose that the strong muscles on the palmar side of the arm and the forearm were suddenly contracted in the attempt to lift the iron rail, and while the hand was kept from flexing at the wrist joint by the weight of the iron rail, the carpus being pressed against the base of the radius, the flexing force of the muscles of the arm and the forearm, especially the pronator

radii teres, the biceps brachii, and the brachialis anticus, was competent to break the radius as described, so that the fracture was the result of muscular contraction under the conditions named. This fracture could not be called a Colles fracture, being rather too far from the wrist joint. It occurred at the upper limit of the base of the radius.

Case 2.—A seaman, twenty-eight years of age, born in Germany, fell on the floor of a ship, striking on the palm of the right hand. He came to my clinic the next day, presenting the following appearances, namely: there was no swelling of the soft parts; there was some pain; there was no crepitus; there was no shortening of the radius; the transverse diameter of the distal end of the right forearm was one-fourth of an inch greater than the transverse diameter of the distal end of the left forearm, indicating that the carpal bones had split the base of the radius like a wedge, as was found in the autopsy of the case reported by Professor Bigelow. Accordingly, it was concluded that there was a longitudinal fracture of the base of the radius. This fracture could not be called a Colles fracture, and yet the force causing it might have produced a characteristic Colles fracture.

Let us now bring forward some cases of post-mortem examination of recent fractures of the base of the radius, pointing out such as may be called Colles fracture.

Case 1.—Professor H. H. Hamilton, in his work on fractures and dislocations, relates the case of M. Lenoir, who supposed his patient had a dislocation of the hand backward. But the patient died, when an autopsy showed that a considerable fragment had been broken from the posterior lip of the articular surface, the line of fracture being from below upward and from before forward.

Case 2.—Professor Erichsen dissected and carefully examined a fracture of the base of the radius of a woman, who died twelve days after the injury. "The lower fragment was split into three portions, between which the upper fragment was so firmly impacted, to the depth of more than half an inch, as to require some force in its removal. The three portions into which the lower fragment was split were of very unequal size; the two posterior ones being small, consisting merely of scales of bone; the third fragment the largest, comprising the whole of the articular surface of the radius, which was somewhat tilted upward and backward, carrying the hand with it. To this fragment were attached the supinator longus, and the greater part of the pronator quadratus; the ligaments and the capsule of the joint were uninjured."

Case 3.—Professor Erichsen also relates the following case, namely, "A man, sixty-four years of age, fell to the ground from a height of twenty-five feet. In his fall he broke his left radius just above the wrist, but also met with such severe injuries of the pelvis and abdomen that he died in an hour after admission to the hospital. On carefully dissecting the arm, about twenty-four hours after death, I found that the radius was fractured transversely, about half an inch above its lower articular end, and the lower fragment was completely comminuted."

Case 4.—Says Professor Gross, in his work on surgery: "In the case of a young man whom I attended along with Dr. Chenowith, the lower extremity of the radius was split in two by a transverse and an oblique fissure, the larger fragment being completely detached, and thrown forward and inward over the ulna, whence, as it was impossible to replace it, I removed it by incision." This case, because of the examination at the time of the operation being exact and certain, may be included with post-mortem examination of fractures of the base of the radius.

Case 5.—Again says Prof. Gross: "In my private collection is a specimen of transverse fracture of the radius, extending into the joint, and detaching the head [part of the base] of the bone by several small, vertical fissures. In this case I had an opportunity of dissecting the parts, in consequence of the removal of the forearm, above its middle, by another surgeon, several weeks after the occurrence of the accident." This case, for obvious reasons, may also be included in post-mortem examinations of the base of the radius.

In the *Medical Record*, for April, 1870, Prof. E. M. Moore describes the post-mortem appearances of two recent fractures of the base of the radius, occurring in the same patient. "In May, 1869, Mary Tumey, aged 45, in a paroxysm of insanity, threw herself from the third story window of St. Mary's Hospital, striking the ground with both hands, receiving also a blow on the spine, opposite the second and third dorsal vertebræ. The spinal cord was crushed, and

both wrists broken, producing Colles fracture. She breathed but twenty minutes."

Case 6.—The examination of the right forearm of Mary Tumey, after the fall, showed a transverse fracture of the base of the radius. The lower fragment was about one-half inch in length, and its broken end was riding on the periosteal surface of the back of the distal end of the upper surface, without the slightest impaction. Crepitus was absent. And the internal lateral ligament of the wrist-joint was torn from the styloid process, separating the scale of compact bone composing the end and inner surface.

Case 7.—The examination of the left forearm of the same individual showed a fracture of the base of the radius oblique in two directions. "Commencing within a quarter of an inch of the wrist joint, on the palmar surface, the line ran back to three-fourths of an inch, inclining to the ulna." Did the lower fragment ride on the upper fragment, as that of the right radius did, at a right angle to the shaft? It can be understood how the oblique broken end could ride on the back of the upper fragment. And this is probably the meaning of Professor Moore's description. The left internal lateral ligament was ruptured, separating more bone than on the right side.

Dr. Hector Cameron, of Glasgow, has made post-mortem examinations of two recent cases of Colles fracture. The description of his cases is taken from the Medical and Surgical Reporter, as follows:—

Case 8.—The fracture was transverse, from side to side, and oblique, upward and backward. As to the lower fragment, the length of the anterior surface was about one-fourth of an inch, and the length of the posterior surface was about one inch. The lower fragment was somewhat comminuted, and the broken surface of the upper fragment was extremely rough and denticulated. A toothed projection on the upper fragment so held the lower fragment in its new position, upward and backward, that it could not be reduced, except by great force.

Case 9.—In the second specimen the fracture was transverse, and about one inch above the articular surface of the bone. In front the break was hardly complete, the periosteum holding the fragments together, but allowing them to bend at an angle there, as upon a hinge, so that the lower fragment is tilted backward and upward, its articular surface being turned backward, upward and outward. On the posterior aspect the fracture was complete, and the dense outer covering of the upper fragment was driven firmly into the substance of the lower, splitting it into three fragments, which held closely and securely together. The impaction was complete and irremediable. Although firm extension improved matters, it did not unlock this connection between the two fragments on the back of the bone.

Now, there can be no doubt about the seat and direction of the fractures of the base of the radius above described, unless we throw doubt on the honesty and accuracy of the reporters; and this we are not justified in doing. From the descriptions may be drawn the following conclusions, namely:—

1. There are nine cases of fracture of the base of the radius above recorded.

2. Eight of these fractures are called Colles fracture by the reporters; two by Professor Erichsen; two by Professor Gross; two by Professor Moore, and two by Dr. Cameron. The other reminds one of the fracture described by Dr. Barton.

3. In one case an oblique piece was broken from the posterior lip of the base of the radius.

4. In two cases the seat of the fracture was one-half inch from the articular surface of the base of the radius.

5. In two cases the seat of the fracture *averaged* about one-half inch from the articular surface of the base of the radius.

6. In one case the seat of the fracture was three-fourths of an inch from the articular surface of the base of the radius.

7. In one case the seat of the fracture was one inch from the articular surface of the base of the radius.

8. In two cases the seat of the fracture was not recorded, but, judging from the descriptions, it must have been very near the articular surface of the base of the radius.

9. The average length of the lower fragments of eight cases of Colles fracture was about $\frac{53}{100}$ of an inch. This is nearly one inch short of the estimate of Colles himself.

10. Two fractures were completely transverse.

11. Two fractures were both transverse and oblique.

12. One fracture was simply irregular, but probably somewhat transverse.

13. One fracture was irregular and vertical.

14. Three fractures were oblique; one was oblique in two directions.

15. There were three fractures impacted.

16. There were six fractures that were not impacted.

17. There were six fractures in which there was more or less comminution.

It may be claimed that the cases of fracture above enumerated were caused by extreme violence; and yet this point cannot be urged, because the reporters do not mention extreme violence as a cause; and because, when death occurred, it was from injury to more vital parts of the body; and because clinical observation, from time to time, shows cases of fracture of the base of the radius, in which have been found impaction, comminution, obliquity and marked deformity. On any supposition as to violence of cause, eight of the cases were claimed by the reporters as Colles fracture.

(*To be Continued.*)

A STUDY OF THE DIGESTIVE DISORDERS OF INFANCY.

BY JOHN M. KEATING, M.D.,

Lecturer on "Diseases of Children," University of Pennsylvania, etc.

I think that most of my readers whose practice has brought them much in contact with children have noticed that of all the hereditary predispositions there are none that show themselves earlier than those terminating in the varieties of dyspepsia, whether from imperfect assimilation or imperfect secretion. I feel convinced that many cases of the various digestive disorders of children, so often said to depend upon improper food, are, in reality, due to imperfect digestive capacity, which renders food, however inert, irritant, by decomposition or fermentation. Who has not noticed the pale, half-nourished infants of literary dyspeptics, with their frequent indigestions, though fed, with a zealous care, on the most nourishishing and simplest of food! They are martyrs to flatulence and acid dyspepsia, exhibiting, from the first hour of their birth, peculiarities acquired by their parents and transmitted to them.

I go still further, by attributing many of the diseases that show themselves later in life, particularly those of the tubercular and scrofulous diatheses, to mal-assimilation in infancy, from hereditary or acquired disturbance in nutrition. I think this point deserves more than a passing notice. So much has been said upon the choice of food for infants, but so little stress is laid upon the preparation of those materials in the alimentary canal of the child that will insure the proper digestion and absorption of all the required varieties of food; in other words, so little has been said of the disturbance of secretion in childhood and how to correct it.

If we lay down the rule that all children are to be fed upon that food which, judged by experience, is *easiest* of digestion, we will invariably fall into the error of omitting some important element of diet, which, though destined by nature to nourish and strengthen, cannot reach the tissues, on account of some digestive deficiency.

This is easily understood if we take an example. Suppose an adult with phthisis is incapable of digesting fats. We do not on that account exclude at once all fatty food, but we use every means to aid him by supplying those elements that are essential to the digestion of oily food. If a child is unable to digest cow's milk, and we give condensed milk that is deprived of oil, etc., we simply avoid the difficulty by a sin of omission; the child will not suffer from a digestive disturbance, but will die of inanition. It would be like feeding a laboring man on dry toast and tea, whose gastric powers were too weak to digest meat, but whose tissues demanded its support. But then, again, we might supply all the nourishment that nature and art teach us are necessary for the maintenance of health and growth, and if imperfect absorption, or none at all, takes place, and some of the elements pass off unchanged, or are fermented or decomposed, it would have been better had they been omitted altogether. From this we see that we are not alone to look to the food in remedying the disturbances of early childhood, but we are to see that each element to be used in nutrition is *supplied*, *digested* and *absorbed*. The reason, I believe, that we find in the market so many varieties of infants' food is the desire to avoid certain constituents of mothers' milk, which, though absolutely necessary for nutrition, are difficult of digestion; the almost invariably absent ingredient is the oil.

Let us for a moment study the condition of the secretion in early childhood. The glands of the mouth, in infancy, seem to

have little to do in the digestive process. As far as we know, the function of the liver is one of the most important, aiding the absorption of oils, checking decomposition and fermentation, and increasing the peristaltic action of the intestines. The pancreatic juice emulsifies the oil, aids the digestion of the milk curds, and is in other ways important. The child in health can then easily digest all the constituents of its mother's milk, but disturb one of these secretions, and that constituent of milk upon which it acts will fail to be digested, and will act as an irritant.

The excessive delicacy of the nervous system in infancy will cause the slightest reflex disturbance in the digestive canal, whether the cause be teething, blood poisoning, improper food, or uncleanliness, each one acting in its own peculiar way, aided by the inherited or acquired weakness of the digestive system of the child. The excessive heat of summer, with the poisoned city air, acting upon the nerve centers, will send a reflex influence that will check the action of the intestinal glands, arrest the activity of the liver. The saccharine food will develop acidity, the undissolved curds will remain as irritants or undergo decomposition, causing an increase in the secretion of mucus, part of which will ferment, and the rest will be made evident by its appearance in the stool. The passages will then assume a curdled, watery appearance, containing oil and mucus; they will be accompanied by pain, and voided continually. These stools are acid from the fermentation of the food and the mucus. So suddenly, indeed, has the arrest of secretion allowed the development of gases to take place in the stomach by fermentation, that enormous distention of this organ has caused a convulsion to be the only evidence of it. Relief in such cases has followed the introduction of a gum catheter into the stomach, resulting in the expulsion of gas. Reflex irritation seems to develop *two** distinct forms of infantile diarrhœa, the one pre-eminently dependent upon teething, and showing itself in general nervous irritability, sleeplessness, very acid eructations and vomiting, frequent white or very light, yellow-colored stools, ofttimes containing mucus and sometimes assuming a constant or subacute type; the other more probably dependent upon high temperature and blood poisoning, having marked cerebral symptoms, with constant vomiting, little acidity, little flatulence, great pain, and frequent, thin, watery, dark-green stools, containing mucus and blood, in fact, frequently being almost black in color, composed of serum and altered blood corpuscles. In midsummer both these varieties may be combined. In a large number of cases I have had the stools tested by litmus paper, and my report shows that though acid in the former variety, the reaction was alkaline in the latter. I believe the alkalinity to be dependent upon serum that exudes from the engorged capillaries, due to vaso-motor paralysis. An examination of the passages of children in health shows very slight alkalinity. Attributing, then, all the diarrhœa of children to three causes, namely, *improper feeding*, of which I shall not now speak, *reflex arrest of secretion* and *intestinal catarrh* (this latter may be the result of the reflex irritation, or it may be due to the presence of undigested food), I regard the matter of treatment as far more simple than a glance at our text books would lead us to suppose.

The first of these causes is easily obviated by attention to diet. The second, occurring as it most usually does in early summer, in our large cities, requires fresh air, attention to the skin, frequent bathing, cold sponging, and light clothing, with ice to the inflamed gums, if needful, before any medicinal treatment will be of avail. Lessen the reflex irritability by means of the bromides, particularly those of potassium and ammonium, and having once prevented the further action of the cause, re-establish the normal secretions within the intestinal track. The association of teething with the various digestive and nutritive disorders of children, is certainly complete, if, indeed, they are not dependent upon one another, as some authors refuse to believe. It may be that teething renders a child extraordinarily vulnerable to outside influences, but I believe that they are more closely connected. Should the case come to us in which intestinal catarrh has been fairly established, our treatment will depend upon which of the two varieties before mentioned we have to deal with. Suppose, for instance, the child be brought to our notice with the following symptoms: a diarrhœa that has lasted several days, of from six to twelve passages a day. The stools are light-yellow or white, watery, curdled and containing considerable mucus. There is pain, described as colicky, which has

* The one usually described as entero-colitis; the other as cholera infantum.

lasted from the commencement, with flatulence. The child has vomited almost immediately after nursing. It has been fed on milk which has heretofore agreed with it; the matter vomited has been extremely acid, and composed almost entirely of curdled milk. The mouth is dry, the tongue coated with a white fur. Emaciation is beginning to show itself. Our first endeavor should be to discharge from the bowel the decomposing curds and mucus, and to re-establish the secretion of the various glands. Often repeated doses of the emulsion ol. ricini, with or without the addition of creasote in minute doses (depending upon the fetidity of the stools), are indicated when the stools are lumpy and mucoid, and when there is much straining; this may be followed by injections of starch water, to act directly upon the mucous membrane of the rectum; otherwise minute doses of calomel with bismuth in full doses, and with or without rhubarb, should be used from the start. It would be folly to attempt to feed a child in this condition upon its usual diet; give pieces of ice to such, if the thirst is excessive; give condensed milk or cow's milk boiled, freely diluted with barley, or rice water; substitute weak beef tea, if the child's stomach will bear it; avoid sugar in any form, and all varieties of solid food. The stools are acid, and the endeavor should be to neutralize the acidity, and to prevent further fermentation. If the diarrhœa should still continue it can be checked by chalk mixture, or preferably the use of large doses of bismuth and soda, in acacia mucilage. Indeed, "soda mint" has acted admirably in many cases. Within the last year my attention has been called to the use of salicylic acid in these cases. I have used it in the following formula, in these acid diarrhœas.

℞. Acid salicylic
Spts. ammon. aromat., q.s.
Aq. menth. pip. M.

Sig.—Beginning with half-grain doses three or four times daily for a child a year old. It may be used in powder with bismuth.

Of the other variety of diarrhœa, I may cite the following as an example. A child is brought in this condition; sudden and profuse diarrhœa, with or without vomiting, has set in, attended with more or less rise in temperature. The stools soon become dark green and very watery; there is scarcely any flatulence, but the child cries with incessant pain, which soon gives evidence of a cerebral origin. The stools may be alkaline; I have previously suggested a reason, which I think plausible. In such cases it has been found that the only certain and effectual treatment, after making use of the hygienic measures before suggested for such cases, is the acid one, the free use of the diluted mineral acids associated with very small doses of morphia and brandy, p.r.n. If necessary, nux vomica, gallic acid, or even ergot, may be added to the mixture. The acids will quickly alter the character of the stools, and their use must be abandoned as soon as they neutralize the excessive alkalinity. The child may be nursed in mild attacks, particularly, if it is very young; otherwise, use condensed milk, or cows milk, diluted, warm and *fresh*. Lime water seems to be injurious, as would be supposed. It may be necessary to give at the commencement a small dose of castor-oil, to empty the bowels and to relieve the capillary engorgement, before using the acids. The bromides are indicated, and cold sponging with acidulated water is also of great advantage.

For internal treatment dilute nitro-muriatic acid is, probably, preferable to any other form, particularly after the very acute part of the attack, on account of its action on the secretions. Aromatic sulphuric acid is decidedly the best in other cases, being most astringent, and should be used where the stools are dark and frequent. Dilute phosphoric acid may be ordered where there is much exhaustion. I have expressed myself highly in favor of condensed milk, partly because it is easy of digestion, on account of the absence of oil; also because there is no danger of it forming large and irritant curds. But when it is used the oil must be supplied in another way.

The rubbing of cod oil has been followed by such excellent results that I again * desire to call attention to it. In all the cases that I thought it advisable to recommend condensed milk, I have invariably found the treatment defective unless associated with the outward application of some of the oils, preferably cod oil, though I may say that cocoanut oil † may be substituted if the odor of the former is too objectionable.

I quote a few cases from my note book to show how much gain can be expected.

A. B., aged two years, delicate from birth,

* See Philadelphia *Medical Times*.
† As recommended by Dr. S. Weir Mitchell.

was brought to the hospital unable to walk, emaciated, from continued diarrhœa. No measurements taken. After two months of cod-oil rubbing, this child grew strong and hearty.

C D., aged three years, very delicate child. After an attack of scarlatina became emaciated and dyspeptic. On the 9th of August, 1876, ordered nothing but beef juice, condensed milk, and cod-oil rubbing. On August 27th the child weighed 24½ pounds. On September 18th weight was 29½ pounds, and after this improvement continued.

E. F., age thirteen months; rapid emaciation following entero-colitis. Placed on condensed milk and cod-oil rubbing. August 23d, weight 14 pounds. October 10th, weighed 17½ pounds.

G. H., aged thirteen months, with same history as last. On September 4th, 18 pounds. September 12th, after treatment, weighed 19 pounds.

J. K. This child was brought to the hospital so weak as to be almost moribund. The emaciation was excessive, and the diarrhœa was continuous. Small doses of brandy and sulphuric acid were administered. Condensed milk freely diluted, and beef juice given at intervals. Cod-oil rubbing twice daily. On September 10th, the date of application, this child weighed 14 pounds. On September 26th, its weight was 16 pounds and 2 ounces. Within a few weeks the child walked into the clinic room strong and active.

These few cases will serve, I think, to show the value of this form of treatment.

The following cases, taken from my note book, will illustrate the above paper.

August 2d. Girl, fifteen months; sick four weeks; four or five passages a day, green and watery. Diagnosis, atony from entero-colitis. Ordered nitro-muriatic acid diluted with tincture nux vomica, in syrup. August 18th, returned as well.

August 2d. Child, nineteen months; sick three days; eight passages, light green, slimy; ordered emulsion ol. ricini. August 6th, stools free from mucus; ordered soda bicarbonate, pulv. rhei, pepsin. August 18th, reported as well.

August 3d. Aged eleven months; slight vomiting; passages dark green and very watery; ordered aromatic sulphuric acid and brandy. August 5th, passages solid, natural; no vomiting; well.

August 24th. Aged thirteen months; watery, light yellow stools; frequent vomiting; tried sulphuric acid mixture. August 27th, passages still acid, child no better; ordered bismuth, salicylic acid, soda bicarbonate in mucilage. August 31st, child well, passages neutral.

August 17th. Seventeen months; continual stools, yellow, watery, and vomiting; tried sulphuric acid mixture with no effect, replaced it by alkaline mixture; child reported as well.

I have endeavored to show that the treatment of the diarrhœas of children is not altogether an empirical one, as would be supposed from reading the many journal articles of the day. The choice between the acid and alkaline treatment is based upon thorough scientific principles, which leaves the practitioner very little room for doubt which form of treatment will be the most serviceable in each particular case. If my report, the result of investigation of over a thousand cases, coincides with that of others of the profession, my labors will not go unrewarded.

22d and Locust streets, Philadelphia.

Hospital Reports.

JEFFERSON MEDICAL COLLEGE HOSPITAL.

CLINIC OF PROF. GROSS, OCTOBER 2d, 1878.

Pathology and Treatment of Scirrhus of Mammary Gland.

Gentlemen.—Amelia T., aged forty years, comes to us with an affection of the right mammary gland, of which the following history has been elicited by my assistant: About two years ago she first noticed, in the substance of the breast, a small, hard lump, about as large as a common marble. There was no pain in the growth, and she discovered it accidentally. Since that period the growth has slowly increased in size, the overlying skin finally becoming reddened and inflamed, and about seven weeks ago it broke down into the ulcer which she now presents for our inspection. During the development of the disease, the breast became the seat of dull, aching pain, extending into the axilla and across the chest. She is losing flesh, her appetite is poor, and her strength has greatly failed in the progress of the disorder.

You observe, upon the upper and outer aspect of this poor woman's breast a small, irregular, ulcerated surface, exuding a thin, sanious fluid. The surrounding skin is discolored, and the edges of the ulcer are ragged and undermined.

Grasping the gland we find that the diseased portion is movable, and evidently is not attached to the aponeurosis of the great pectoral muscle, lying immediately beneath it. The tumor is dense and inelastic; it is decidedly hard throughout its entire extent. Notice the retraction of the nipple. A morbid deposit has here taken place, which has completely involved the substance of the mammary gland. Indeed, upon exploring the axilla, I find some lymphatic glands that are evidently undergoing a similar process of degeneration by migration and infiltration of cells.

The diagnosis of this case will be sufficiently easy for those of you who have already been in attendance upon my lectures. There is no doubt whatever, that it is a case of scirrhus of the mammary gland, hard carcinoma as it is sometimes called, a variety of cancer frequent among women, less so in men. Its cause is obscure; it has been supposed to be connected with some alteration in the constitution of the blood, but in the great majority of cases it arises without any assignable cause whatever. Generally making its appearance after the fortieth year of age or between forty and fifty-five, it occasionally is met with before this period, at the age of thirty-five or even twenty-five, and it is said to have been encountered in the mammary gland of the virgin before puberty; this, however, must be uncommon. In advanced life, also, it is less often met with, though I have seen it occasionally after the age of seventy. The disease may originate near the surface, in which case there will be comparatively early involvement of the skin; in other cases it remains for a long time in the glandular structure, making very slow progress toward the superficial parts. The lining membrane of the tubules may be the part originally at fault, or it may arise in the interlobular areolar or connective tissue, and lymphatic vessels. In some cases it involves the entire mammary gland at a comparatively early period; the deposit around the milk ducts causes contraction, and produces the characteristic depression of the nipple, to which I have called your attention. At first the overlying skin is perfectly natural in its appearance, but ultimately the disease, in its course, invades the lower layers of the derm, and by disturbance of the circulation and plastic deposit, produces discoloration, inflammation and finally ulceration, from interference with the nutrition of the skin. The ulcer thus produced has a peculiar appearance, as if scooped out with a punch, having thick, irregular edges, generally everted, though sometimes turned in. The surface has an unhealthy appearance, being covered by spoiled or cacoplastic lymph, or plasma entirely unfit for purposes of repair, or the development of granulations. The ulcer sometimes bleeds, but rarely to any noteworthy extent. The irritating secretion flowing over the external skin causes redness and excoriation if continued, and the surrounding parts become thickened by plastic deposit. The disease may invade the aponeurosis of the pectoral muscles, or following the course of the lymphatic vessels, may invade other organs, particularly the axillary lymphatic glands. The pain is characteristic; it is sharp and throbbing, even lancinating, worse at certain times in the day than it is at others, liable to be influenced by the weather, coming on in paroxysms, or it may be persistent. At first it is limited to the affected breast, but afterward it radiates into neighboring structures, sometimes shooting down the arm all the way to the tips of the fingers. It finally becomes so severe as to require large doses of anodynes for its relief. The enlarged glands in the axilla may seriously interfere with the circulation of the arm by mechanical pressure upon the blood vessels and lymphatics, and thus produce great œdematous swelling, and almost completely destroy the usefulness of the limb.

The secondary disease may be limited to one of the axillary glands, but there are generally more, sometimes forty or fifty, hard, firm and tender, the absorbent vessels from the breast having carried the cancer cells to this place. As the affection progresses and the corresponding arm becomes heavy from infiltration with serum, the pain and discomfort greatly increase, and the sufferer cannot rest either by night or day. The diseased parts become the seat of constant pain. The patient's mind, from constantly dwelling upon the subject, is so tortured with apprehensions for the future that she is utterly unfit for the ordinary occupations of life. The tumor, so hard at first, finally becomes soft and juicy at its centre, and commences to disintegrate. Under the microscope, a section of the growth presents an immense number of cancer cells, which are characteristic in their appearance. Many of them are circular; a few are ovoid in shape, sometimes irregularly lanceolate. They lie in a fibrous network or stroma, and are distinguished by the presence in their interior of large nuclei and nucleoli.

Now, as regards treatment: the stage of the disease will require our consideration. All that we can do in the advanced condition, with extensive secondary involvement, is to palliate and relieve suffering, make the patient comfortable by attending to the general health, and secure sleep and respite from pain by giving anodynes. A carefully regulated diet should be used, simple but nourishing in its character, so as not to burden the stomach. Attention should be paid to the secretions. The bowels should be kept moderately open by enemata or mild laxatives. Tonics are generally indicated. Quinine, cinchonia, tincture of chloride of iron, and milk punch or other stimulants, may be needed to assist in sustaining the system. The pain is sometimes intolerable, and morphia must then be exhibited in sufficient doses to relieve it.

As to topical applications, we have no specifics, and a solution of the acetate of lead, half an ounce to the pint of water, will answer every purpose. It is applied on cotton wool or light flannel, which may be wet several times a

day, covered with oiled silk or waxed paper; it will soothe and allay the pain.

As regards operation, when the disease is in its later stages, as a rule, it should be let alone. The case before us is very unpromising, but it is evident that the patient's life is rendered miserable by it, and if we decline to operate it will so prey upon her mind as to unfit her for any duty. There is, therefore, good reason for operating upon this woman, to afford her temporary relief from pain and foul discharges, by removing all the malignant growth that we can find in the breast and axilla. At the end of a fortnight the wound will heal up so that she can go about her work. The disease may not return for six months, and during this period she will be comparatively happy. She may not have her life actually prolonged by the operation, as she may live just as long without it. But this disease is a thorn in her flesh, and as long as it is present she will suffer. She shall be cared for in the ward until the next clinic day, when I will amputate the breast.

Disease of Tongue—Epithelial Cancer vs. Mucous Tubercle.

You will notice this white, roughened spot on this man's tongue, on the left side, near the margin. It looks as if it had been recently touched with nitrate of silver, and, indeed, Dr. Hearn now informs me that caustic actually has been applied this morning. We will not, then, lay any stress upon the color, but will inquire into the history of the case, to seek to determine the character of the disorder. Twenty-two years ago the patient had a chancre, not followed by bubo or sore throat. He thinks this spot came on his tongue about two years ago; it has not materially increased in that time, and is not painful.

This looks very much like a mucous patch, such as we often find on the lips, tongue, and other mucous surfaces in certain subjects, as one of the results of syphilis. But I have never seen a mucous tubercle continue unchanged through so long a period as two years, and, therefore, we have a doubt entering into the diagnosis. One of two affections it must be, either a mucous tubercle or epithelial cancer of the tongue. As it is difficult to decide this question, we will institute treatment with a view to develop the diagnosis. I shall put this man upon specific treatment for constitutional syphilis, and if, as I have supposed, the affection is simply a mucous tubercle—as it seems to be, although its history would lead us to believe differently—I will expect decided results from the following treatment: I shall order that this man shall take ten grains of iodide of potassium and one-eighth of a grain of bichloride of mercury three times each day, in some simple syrup and water. The syrup of ginger will answer very well for the purpose. The iodides of potassium, sodium, or ammonium, are almost a specific in some forms of syphilis, and are about equally efficient. I generally aid their alterant, and corroborant effects by adding a small proportion of mercury. The mixture should be given after meals. Locally I will direct acid nitrate of mercury, diluted with water—one part to twelve—to be applied by means of a camel's hair brush, once in the twenty-four hours. Should the affection prove to be of a syphilitic character we shall be able to make a decided impression upon it in the course of a week or ten days. If the treatment prove of no avail I shall conclude that it is epithelial cancer. There are no enlarged lymphatics under the jaw, but should one be found it would not aid the diagnosis, for they occur in cancer as well as in syphilis.

The patient's diet must be restricted; he must eat very little meat. If this man had told me that this affection had existed only for a week or two I should have had very little hesitancy in announcing my diagnosis.

Constitutional Syphilis.

William K., 46 years of age, has several ulcers upon the upper lip. He says that he never had a chancre, but he had gonorrhœa twelve years ago, followed by orchitis. These ulcers have troubled him for a month; they give him considerable pain, particularly at night. His appetite is good, and his general health is not impaired. Examining his mouth, I find that the tongue is clean, but there are unmistakable mucous patches upon the tonsils. Now I have no hesitancy in saying that this is a case of syphilis. We cannot elicit an accurate history, but the appearance of the multiple ulcers is characteristic. The patient a few moments ago acknowledged having had a discharge from the urethra, which may have been produced by a urethral, a masked chancre. Or, as not infrequently happens, he may have had a small Hunterian sore on the foreskin, which gave no annoyance and escaped his notice. However acquired, originally, we have the evidence before us of general syphilitic poisoning of the system. I have no hesitancy in saying that these sores on the lips accompanied by the mucous patches on the tonsils remove every doubt in the diagnosis. You will recall his statement about the pain being worse at night. This is a peculiarity of syphilitic affections, especially in the tertiary form, which generally comes on from six to twelve months after the primary sore. In such cases you will find, upon inquiry, that, as a rule, the pain is worse at night than in the daytime.

There is another point in the case which requires our attention before putting him upon specific treatment; it is the condition of the alimentary canal. His tongue is not coated, digestion is well performed, and the bowels are regular.

We shall, as in the preceding case, put him upon ten grains of iodide of potassium, and one-eighth of a grain of bichloride of mercury. At night he shall have two grains of solid opium, for the purpose of relieving pain, until he experiences a beneficial effect from the alterative, which will be in the course of four or five days. To the sores we shall apply nitrate of lead, ten

grains to an ounce of water, on a piece of soft lint. This will relieve pain and cause healthy granulations to spring up, and promote healing. The diet must be nutritious but not stimulating. He must keep his room and get as much sleep as he can. I restrict the diet where the syphilitic patient is plethoric; on the other hand, if he is broken down in health, is cachectic, and losing strength and flesh, I generally put him on the use of a nourishing diet before instituting the specific treatment.

(To be Continued.)

Periscope.

Therapeutic Results with Pilocarpin.

The results of recent investigations are here summed up. Dr. Demme, of Berlin (London *Medical Record*), arrives at the following conclusions:—

1. Pilocarpin is an effective diaphoretic and sialagogue in childhood.

2. It is borne very well, in appropriate doses, even by children of very tender years.

3. Unfavorable after symptoms are but rarely observed, and, probably, may be altogether prevented by the administration of small doses of brandy before the injection.

4. The conditions in which it is chiefly indicated are the parenchymatous inflammations of the kidney, with dropsy, following scarlatina.

5. Pilocarpin does not appear to exercise an influence on the heart's action.

The *Hospital Gazette* states that an important physiological effect of pilocarpin, according to Dr. Zielewicz, of Posen, is its power to reduce animal heat. He has observed a decrease of temperature amounting to as much as 2, $2\frac{1}{2}$, and even 3 degrees, averaging, however, 1 to $1\frac{1}{2}$ degrees. In very few instances there was a slight increase of the temperature. Again, it seems doubtful to me whether the diminution of the temperature can be attributed primarily to the action of pilocarpin, or whether it is not due to, and only temporarily caused by, the evaporation of the perspiration. Zielewicz arrives at the following conclusions:—

1. Pilocarpin is a reliable diaphoretic in the diseases of children.

2. The unpleasant symptoms which occasionally follow the administration of this remedy interfere with its more general use.

3. To eliminate or diminish these complications the following rules should be observed:—

a. The dose of pilocarpin should be as small as possible.

b. A small amount of morphia should be administered with the pilocarpin, best in the proportion of ten pints of hydrochlorate of pilocarpin to one pint of hydrochlorate of morphia.

c. To prevent collapse a few drops of camphorated oil should be added to the solution.

Dr. Felsenreich, assistant to Prof. Gustav. Braun at the Vienna General Hospital, observes that Dr. Massman's statements (*Medical Times and Gazette*, July 13th, p. 56) on the employment of pilocarpin in the induction of premature labor must lead to further inquiry into the action of this substance on the uterus. At Professor Braun's request he tried its efficacy in nine cases of ataxy of the uterus, with reference to its future employment in cases of hemorrhage produced by this cause. In but three of the cases did the hypodermic injection take effect, and that only at the end of ten minutes; so that it cannot be regarded as a suitable means for combating active hemorrhage, in which promptitude of action is so important a factor. As in these cases, too, there is no time to examine the action of the heart, another contra-indication arises, for, as Petrina has shown, whenever this action is in any wise abnormal, the greatest care is required in the administration of pilocarpin, for arhythmia or an arrest of its action may then be easily induced. Indeed, as any considerable hemorrhage does greatly disturb the action of this organ, this itself is a contra-indication. These considerations do not apply to the induction of premature labor, and additional trials of the power of pilocarpin for this purpose may be made without danger.

Dr. P. K. Kretschmar adds, in the *Hospital Gazette*, that the *Hydrochlorate of Pilocarpin*, derived from the alkaloid found by E. Hardy in the leaves and in the root of pilocarpus pinnatus, is, in many respects, the most valuable of the preparations of jaborandi. It comes in small, white crystals, very soluble in water, and is for different reasons especially adapted for *hypodermic* medication. Its action resembles that of the drug itself, but it is *more uniform* and reliable than either the infusion or the fluid extract. It also influences the bronchial secretions by making them more fluid, and it has been used with advantage in croup, bronchitis, etc. A solution is made by dissolving $\frac{1}{2}$ a grain of hydrochlorate of pilocarpin in 30 minims of pure water. I use in cases of children from six to ten years of age, 10 minims of this solution, $1\frac{1}{2}$ gr. hypodermically, and repeat the injection once or twice the next or following day. To adults I have given 20 minims ($\frac{1}{3}$ gr.) repeated every day for three days.

The simplicity and almost painless manner of its administration, the fact that its hypodermical use does not cause any irritation, or abscess at the point of injection, the easy manner by which we are able to administer it in a state of uræmia, unconsciousness during convulsions, etc., make it a most valuable remedy in the treatment of children. I used it in five cases of parenchymatous nephritis following scarlet fever, four of which occurred in children under twelve years of age, and I can only state that its action was very satisfactory, although it produced considerable vomiting in one and moderate emesis in another case.

Harmlessness of Urea in the Blood.

The London *Medical Record* mentions experiments by MM. Feltz and Ritter, to show that pure urea never brought on convulsive symptoms. Urea injected into the blood was eliminated very rapidly by the urine, and when it existed in considerable quantities in the organism it did not, as generally supposed, undergo a rapid transformation into carbonate of ammonia. Dogs into which urea was injected, after the renal vessels were tied, to prevent the rapid elimination of the poison, showed no more marked convulsive symptoms than others in which the same ligature was made without the injection. The convulsive symptoms observed with urea were produced by an impure substance containing ammoniacal salts. The authors summed up in the following conclusions:—1. Pure urea, whether natural or artificial, injected into the venous system in large quantities, never brings on convulsive symptoms; it is rapidly eliminated by the secretions. 2. There are no ferments in the normal blood which convert the urea into ammoniacal salts. The rapidity of elimination cannot be regarded as the cause of this non-conversion, for by the suppression of the renal secretion the elimination of the urea may be retarded without accelerating the supervention of the eclampsia. The urea which in large doses brings on convulsions is always impure urea which contains ammoniacal salts, which are easily shown to be present by Nessler's reagent.

Why Physicians Should Use the Metric System.

Dr. Edward Wigglesworth gives the following reasons, in a recent circular:—

Because this system most nearly approximates to a perfect one, embodying, as it does, the most careful and delicate work of the International Metric Commission, composed of scientific men from all countries. Because it is *international;* and medicine is as cosmopolitan as human nature itself.

Because of its great *convenience* in writing and compounding prescriptions, in dividing doses and in computing quantities required during given times. Because of its *safety*, due to its *uniformity* and *simplicity*. It may be learned in five minutes. In complexity there is always danger, and the resemblance of the signs of the scruple, drachm and ounce has more than once proved fatal to human life. The metric system dispenses with the signs of the quantities, employs Arabic figures instead of Roman numerals, and assures the physician of more competent service, because from more educated pharmacists, such being always the first to adopt it. It is decimal, and a perpendicular line instead of the decimal points obviates any possibility of error from this source. It is allied to the change already made by Americans, from pounds, shillings and pence to dollars and cents.

Because of its *delicacy* and *accuracy* for the chemist and the pharmacist; and here the beauty of the system is especially apparent, for it provides denominations of weights applicable to the smallest quantity which the physician can prescribe, the old grain being by far too large and coarse a unit for modern medicine.

Moreover, the English and American graduates are both in use in this country, and yet are not alike. There is a difference of eighteen grains in the weights of their fluid ounces. Then, too, if *f* is omitted before the ounce symbol, either the graduate or the troy ounce may be used.

Finally, because it deals preferably with weights alone, *while admitting the use*, if desired, *of both weights and measures, as at present.*

Reviews and Book Notices.

NOTES ON CURRENT MEDICAL LITERATURE.

——One of the strongest and most pointed papers we have ever read on the iniquity of the existing laws about malpractice, is by Dr. Eugene F. Sanger. It was read before the Maine Medical Association, and we earnestly commend its perusal to thinking men who are not willing to be the prey of worthless patients and common barrators. To be had of the author, Bangor, Maine.

——Dr. Walter Coles, of St. Louis, in a reprint from the St. Louis *Medical and Surgical Journal*, reviews, with trenchant criticism, Dr. Hammond's recent paper on "Hepatic Abscess." Dr. Coles has undoubtedly picked some flaws in Dr. Hammond's references and quotations. But when he assails the general correctness of Dr. Hammond's principal statement, to wit, that hepatic abscess is much more frequent than is generally supposed, and that it often exists with masked symptoms, he certainly carries his attack too far. There has

been a considerable mass of evidence offered to this direct effect, by numerous independent observers, within the last year. Another point, and a very important one, on which Drs. Hammond and Coles differ wholly, is whether aspirating the liver is dangerous or not, providing it is done skillfully, with caution, and at the proper point. Under these circumstances, Dr. Hammond says it is wholly without danger, and after perusing carefully what Dr. Coles says, we do not think he successfully contradicts the New York professor.

——Messrs. Bailliére & Cox, of London, publish Mr. Lennox Browne's "Forms for the taking of Throat Cases and Aural Cases," with drawings, outlines, etc.; a very convenient arrangement. Price, in books of 25 forms, 3 shillings, 6 pence.

——The Twelfth Annual Report of the Home for Incurables, Fordham, New York, gives the present condition of an estimable charity. Of 89 cases the large number of 17 are stated to be epileptic mania. The physician's report is disappointingly meagre.

——In a reprint from the *Gynecological Transactions*, Dr. H. P. C. Wilson recommends sub-sulphate of iron as a valuable antiseptic in the surgery of the pelvis. He states that he has found Monsell's solution to be soothing rather than irritating to the surface of wounds.

——A curious fatal case of poisoning by wormseed oil f.℥iss is related by Dr. T. R. Brown, of Baltimore, in a reprint from the Maryland *Medical Journal*. The patient became aphasic.

——A study of pathological histology, with numerous original engravings, by Dr. A. R. Robinson, of New York, is the subject of a reprint from the New York *Journal of Medicine*.

BOOK NOTICES.

Practical Surgery; including Surgical Dressings, Bandaging, Ligations and Amputations. By J. Ewing Mears, M.D., Demonstrator of Surgery in Jefferson Medical College, etc. Philadelphia, Lindsay & Blakiston, 1878. 1 vol., cloth. Small 8vo, pp. 279. 227 illustrations. Price $2.00.

The author of this work has had an extended experience as an instructor in operative surgery and in the details of minor surgery; and the volume he has written is one which he found students to stand in need of, because no single work in the market teaches just what is required by those pursuing these branches. He has grouped under the four heads mentioned in his title a very carefully arranged statement of all the chief facts relating to each of these branches. Turning, for instance, to antiseptic dressings, we find Lister's method succinctly described in something less than five pages. Three pages, with appropriate illustrations, are given to Sayre's suspension apparatus. The directions for ligation and amputation are given in the fewest possible words, and are explained with reference to numerous wood-cuts. The operations described are not numerous, but we are inclined to believe that the author's selections will meet with the general approval of surgeons.

Notes on the Treatment of Skin Diseases. By Robert Liveing, A.M., M.D., F.R.C.P., London, etc. Fourth edition, revised and enlarged. New York, Wm. Wood & Co., 1878. 12mo, pp. 127.

Dr. Liveing has a prominent reputation as a dermatologist, and though his book represents an older school than that now prevalent, and though he has made but few changes to bring it into accordance with the opinions of younger men, it has had and still maintains a considerable popularity. It is small, and in these days of prolixity, that is attractive. We observe he says nothing of chrysophanic acid, salicylic acid, gurgun oil, and the other new remedies in skin diseases. Therefore we are forced to say that his book lacks considerable of being "up to the times."

The Medical and Surgical Directory of the State of Iowa, for 1878 and 1879. By Charles H. Lothrop, M.D., Clinton, Iowa. 1 vol., cloth. 8vo, pp. 154.

It would be an advantageous movement for the profession of every State to issue yearly, or every other year, an Official Directory of all physicians in good standing in their limits. This one, that we owe to the labors of Dr. Lothrop, might serve in most respects as a sample of what would be useful. It contains the medical laws of the State, a list of its medical schools, charities, societies, etc. Obviously it is the result of a great deal of labor, and we trust it will be continued in the future.

THE

Medical and Surgical Reporter.

A WEEKLY JOURNAL,

Issued every Saturday.

D. G. BRINTON, M.D., EDITOR.

The terms of subscription to the serial publications of this office are as follows, payable in advance:—

Med. and Surg. Reporter (weekly), a year,	**$5.00**
Half-Yearly Compendium of Med. Science,	**2.50**
Reporter and Compendium,	**7.00**
Physician's Daily Pocket Record,	**1.50**
Reporter and Pocket Record,	**6.25**
Reporter, Comp. and Pocket Record,	**8.25**

For advertising terms address the office.

Marriages, Deaths, and Personals are inserted free of charge.

All letters should be addressed, and all checks and postal orders drawn to order of

D. G. BRINTON, M.D.,
115 South Seventh Street,
PHILADELPHIA, PA.

1879.

PREMIUMS FOR NEW SUBSCRIBERS.

Special Offer to Our Old Subscribers.

From and after October 1st, any new subscriber will receive the REPORTER

15 MONTHS FOR $5.00,

to wit, from Oct. 1st, 1878, to Dec. 31st, 1879.

To enlist the interests of our Old Subscribers in the extension of our circulation, we offer, if they will send us, along with their own renewals, the amount for ONE new subscriber for one year (who will be entitled to the 15 months mentioned) to send them either (1) the HALF-YEARLY COMPENDIUM, for 1879; or (2), the PHYSICIAN'S POCKET RECORD, for 1879; or any of our other publications, to the amount of $2.50. These publications will include the following works now in press:—

GOODELL. Lessons in Gynecology.
LANDOLT. Manual of Examination of the Eyes.
SAYRE. Organic Materia Medica.

Besides, already published, Napheys' *Surgical Therapeutics*, Napheys' *Medical Therapeutics*, Dobell *On Cough and Consumption*, Bernard & Huette's *Operative Surgery*, Butler's *Medical Directory of the United States, etc., etc.*

THE CHINESE QUESTION.

In the number of the REPORTER for September 14th we criticised the position taken by some of the profession of the Pacific slope on the Chinese question. In so doing, we inadvertently left our readers to suppose that all the medical journals of that section shared the opinions we censured. This impression we desire to correct, and do so most cheerfully.

The *Pacific Medical and Surgical Journal*, edited by Dr. HENRY GIBBONS, and Dr. HENRY GIBBONS, Jr., not only holds views wholly at variance with the hoodlums and Kearneys, but has expressed them, and stood true to the lights of science and the doctrines which this country claims as its own. We should have distinctly excepted it from the charges we made, and do so now.

It is a pleasure to add that what we then said has directed the attention of several readers to the subject, and to the expression of several personal opinions in favor of justice to the Chinese emigrants.

It appears that the total Chinese population is at present 32,000. Most of these are servants, tailors, shoemakers and laundrymen. The total number of women is less than 2000. Postmaster General KEY, who is both an able and an unprejudiced observer, has lately returned from a visit to California, during which he took especial pains to study the Chinese. His words are—

"They are docile, obedient, obliging, punctual, hard-working and faithful. They are exceedingly thrifty and economical. They are temperate in their habits, do not drink liquor of any kind, eat very little meat, and live almost entirely on rice. It is wonderful to see how little a Chinaman can live on. Their economy struck me as something marvelous. Large numbers of them sleep in a single, ill-ventilated room. They constantly violate the fundamental laws of health, and yet they are seemingly very healthy. I was astonished to learn that they had no hospital. I was shown through the Chinese quarter of San Francisco by the Mayor, and saw everything in that locality, but there are a number of places here in Washington fully as bad, if not worse, than anything I saw in China town. I also observed that the railroad companies employed a large number of

Chinamen, and found them excellent workmen."

In reference to the matter of ventilation, a characteristic trait of "American civilization" is reported. The San Francisco authorities passed a law that every lodging room should supply at least five hundred cubic feet of breathing space to each lodger. It was directed solely against the Chinese, and was executed only against them. A large number were arrested and packed in cells so closely that each inmate had *less than* 250 *cubic feet of space!* What a commentary on those whom the *Western Lancet* wanted to enlist in a crusade against these poor foreigners!

That their sympathies are so little susceptible to appeals for charity we cannot believe, when we see authentic statements that not only have they subscribed liberally to relieve the famine now prevalent in their own land, but have sent a handsome sum to the yellow fever sufferers of the Mississippi Valley.

We close with an extract from a letter from Dr. R. B. Bontecou, of Troy, New York, who speaks from late personal observation.

"Permit me to thank you, as one of the profession, for your just and much needed remarks in defence of the "Chinese," in the journal of September 14th. I have been traveling, during the summer, through the territories of Dakota, Montana, Idaho, Wyoming, and Utah, and have had some opportunities to observe that class of emigrants, for they are almost universally employed in those countries as domestics, and very many in mining. It is true that the other inhabitants hold them in contempt, amounting to hatred, and a Chinaman seems to have no rights that others are bound to respect. To me this state of things is incomprehensible when I observe how peaceful and industrious they are, and how much honest labor they give to their employers. It is conceded by the people there, that a Chinaman will give a better day's labor than any other man, and still they hate them, although they are indispensable to the community. I have taken care to observe them closely, and I was unable to learn that they were afflicted with any diseases not common to other classes of community, and, as a rule, are healthy, and the percentage of sickness small among them. I need not assure you that they are excellent servants and cooks, as well as field laborers and miners, often getting good returns from soil which had been worked over and abandoned as worthless by other men. For my part, I wish there were millions of them scattered through the States, to set examples of industry and orderly conduct to the masses."

Notes and Comments.

Atkinson's "Physicians of the United States."

The editors of the Ohio *Medical Recorder* have sent us a reprint, in pamphlet form, of a review and editorial devoted to Dr. Atkinson's "Physicians and Surgeons of the United States" (noticed in the Reporter, May 4). It is very unusual for the review of a book to be thus reprinted and distributed by a journal, and suggests some motive quite as unusual. On examining the paper, both review and editorial, especially the latter, turn out to be most bitter and acrid attacks on Dr. Atkinson personally, and the severest reflections on the class of works of which his is an example. Now, any unbiased man will see very much to praise in works devoted to contemporary biography; for years, hardly a volume in our library has been more useful to us than the "Dictionaire des Contemporains;" and we never knew one who owned the book to disparage it. Dr. Atkinson's work has had the approval, endorsement and direct aid of hundreds of the best men in the profession; and from a more than ordinary knowledge of the labor, responsibilities and difficulties he had to contend with in selecting and collecting for its pages, we can render personal testimony to his good judgment, tact and discretion. Of course, in a work of 800 pages and 2200 biographies it is easy to pick out many points which ought to have been amended; and the cheapest of all criticism is that by ridicule; but a reviewer who does nothing but this, and indulges in a tirade of personalities, cannot gain much credit among dispassionate and intelligent men.

On Cod-Liver Oil.

Dr. Theodore Huseman, quoted in the *American Journal of Pharmacy*, denies the presence of any particular active principle curing scrofula and lung diseases, and believes that its efficacy is entirely due to the mixture of the glycerides of fatty acids, it differing, however, from other oils in being absorbed and in oxidizing more quickly in the human body. He states, on the authority of Professor Almén, who has devoted many years to the analysis and study

of the different kinds of cod-liver oil of commerce, that a nearly white oil may be made by heating fresh cod livers, previously cleaned and washed, in well-tinned kettles, by steam, decanting the exuding oil, straining it and exposing it to a low temperature; on conveying it afterward to a warm room, all stearine will crystallize and settle. The oil should then be decanted, bottled and sealed, and may be kept for six years without becoming rancid.

The Skulls of Women.

M. Lebon, in a communication made to the Congrès d'Anthropologie in Paris, pointed out that, while the relative volume of the skull, compared with the rest of the skeleton, has increased with the progress of civilization, the difference in size between the skulls of men and women is also much less in the savage than among the civilized races. This difference was admitted by the ethnologists present, and was explained by the President, M. Broca, on the ground that among the primitive races women led much the same lives as men, and took an equal part in the struggle for existence. According to these anthropological data the "protection" of women and their exclusion from professional struggles has ended in lessening the cranial capacity, therefore presumably the brain-power.

Poisonous Mushrooms.

A newspaper paragraphist, speaking of the resemblance of edible to poisonous fungi, said that about the only way to recognize them is that if you are living next day they were mushrooms, if not, they were toadstools.

The *Pharmaceutical Journal* points out that, although there are many fungi which form excellent food, yet most of them have, so to speak, poisonous twin brothers so like them that only the practiced eye can distinguish them. Thus the delicious *Lactarius deliciosus*, the taste of which has been likened to lamb chops, has a poisonous counterpart in the *Lactarius torminosus*, which is only distinguishable by the downy or hairy margin of the cap and the white, milky juice. The pretty yellow chanterelle (*Cantharellus cilarius*), which possesses an odor of apricots, is parodied by the *Cantharellus aurantiacus*, differing only in its smaller size and in having the gills of darker color than the cap, and the *Boletus edulis* is mimicked by several other species of *Boletus*, in most of which, however, the flesh of the cap turns blue when broken. Meanwhile, it is well to remember that the antidote for mushroom poisoning is daturine, and that, according to Professor Schiff, it is a very complete one.

Chloral as a Revulsive.

This is the subject of a paper in the *Bulletin de Therapeutique*, No. 94, by Dr. H. Peyraud. Made into a mass with gum tragacanth, spread on paper and applied to the skin, it will produce a blister without pain. Applied as a powder, on cotton, it causes a painful burning sensation. By the former method, a portion is absorbed and the patient falls asleep. Its action is not so uniform as cantharides, but as a mild vesicant, or an agreeable revulsive, the author quoted would commend such "chloral paper" to physicians, the more so as it will keep for months without losing its activity, if well prepared.

An Excipient for Pills.

A new excipient for pills is recommended in the last number of the *American Journal of Pharmacy*. It was suggested by Mr. W. J. Martin, of Cincinnati. Its only disadvantage, seemingly, is color, it producing with white powders a colored mass, which, with quinia and similar alkaloids, may preclude its use, since it is the fashion to have these prepared as light colored as possible. The excipient recommended by Mr. Martin is made by taking one part of powdered gum tragacanth and seven parts of powdered elm bark, and using either water or syrup, preferably the latter, to make the excipient of the requisite plasticity.

Thymic Acid and Sulpho-Thymate of Soda.

A therapeutical study of these substances has been published by Dr. V. Cozzolino, in the *Giornale delle Scienze Med.*, of Naples. Thymic acid has been advantageously employed locally in diphtheria, and is superior to carbolic acid for this purpose, as it is much more agreeable to the patient, and does not produce nausea. For ozæna Dr. Cozzolino considers it the best article he has tried; he uses an emulsion with gum arabic, one part of the acid to one thousand of emulsion, and injects the nostrils. Combined with unguentum petrolei, or dissolved in alcohol and glycerine, he applies it in favus, tinea, herpes, pityriasis, etc. In gastric catarrh from ferment, putrid diarrhœas,

intestinal mycosis, and the like, he gives it internally with excellent results. He also praises the sulpho-thymate of quinia as an efficient antiperiodic.

The Management of Hysteria.

In a recent paper, Dr. Risel, of Messeberg (*Allg. Med. Centralzeitung*, Oct. 9th) criticises the view that hysterical symptoms generally arise from genital disturbances. More frequently, he says, they are reflex neuroses. This is important to remember in treating such cases, the more so as the reflex phenomena tend to obscure the primary irritation. In very severe cases protracted chloroform inhalation will sometimes cure. Thus, a lady with a violent cough was chloroformed for fourteen days at every access of the cough, and another for eight days. In both the symptoms were conquered.

Administration of Salicylic Acid.

Dr. R. B. Bontecou, of Troy, N. Y., writes us, recommending the following form for administration of salicylic acid. He has for two years used it, and is pleased with it:—

℞. Acidi salicylici, ʒiij
Potassæ acetatis,
Glycerinæ,
Spts. etheris nitrosi, āā ʒj. M.

One teaspoonful represents $11\frac{25}{100}$ grains of the salicylic acid and half a drachm of the potassa, which may be given to an adult with acute rheumatism every two, three or four hours, diluted in water.

Prize Essay on Masturbation.

The Virginia *Medical Monthly* announces a prize of $25 for the best essay on this subject. The paper must set forth the evils, from a medical standpoint, in the most forcible style, and must be adapted to the comprehension of youths of twelve years of age and upward. The paper must be in before February 1st, 1879. Address "A B," Randolph Macon College, Ashland, Va. The paper selected will be printed in a pamphlet form and distributed *gratis* in all the boarding schools of the State, and as far as practicable, among all other youths.

This is well, but extreme caution should be used not to overdo a good thing. Sir James Paget maintains there are no peculiar dangers attending masturbation, other than its frequency; and in a pretty extended practice among young men we must say that we have had to treat far more who suffered from unfounded fears of the evils they imagined this habit had engendered, than who really showed bad effects from it.

Correspondence.

The Regular Education of Homœopathists.

Ed. Med. and Surg. Reporter:—

The editorial article headed "Recent Discussions about Homœopathy," in the Reporter of October 19th, contains a criticism of the proposed amendment to the Constitution of the American Medical Association, which seems to me just and pertinent. The adoption of this resolution would, in my view, render the Association justly liable to the charge of bigotry and exclusiveness.

If the object sought in this amendment be to place on record an authoritative expression of disapproval of the relation sustained by the medical faculty of Michigan University to the homœopathic college, then is the means ill-adapted to the end, because it embraces too much and fails to recognize an important distinction.

The mere imparting of instruction in rational medicine to students who are avowed believers in any exclusive system has never, as I know, been objected to in the discussions on homœopathy in the University, and I believe that all those who deplore the establishment of the present homœopathic college there would be no less pleased than yourself if all students who propose to become homœopathists, or pathists of any kind, would first pursue a regular course in some respectable medical college. Indeed, could this be accomplished the days of all one-idea systems in medicine would be numbered, for, under the illumination of a broad professional education, the "pathic" proclivities of such students would melt "like dew before the morning sun." "Avowed homœopathists," grasping principles deeper and more stable than the froth of a trivial symptomatology, and possessing themselves of weapons more tangible and puissant than infinitesimal nothings, spiritually potentialized, would inevitably elect a sound pathology and adopt a rational practice, even though many of them might, for the sake of popularity, write upon their signs the cabalistic "*Similia similibus curantur.*"

What so many friends of the University did oppose, was the attachment of a homœopathic school in such manner that members of the regular medical faculty were made *de facto* members of the homœopathic faculty, being compelled, not only to instruct and examine homœopathic students, but also to furnish six of the eight certificates essential to their graduation *as homœopathists*, while, by arrangement of lecture hours, it was made impossible for these

students to receive instruction in materia medica and therapeutics, theory and practice, or surgery, from any but homœopathic teachers. Many of the alumni were not willing to see their alma mater thus prostituted to the base use of propping the tottering fabric of the Hahnemannic delusion.

Could an amendment be offered which, stigmatizing simply such relations of medical schools to quackery, would stand as the recorded verdict of the Association to warn other State institutions, I should vote for it, deeming its adoption to be an act eminently befitting the most august medical organization in the land, as indicating at once a proper consciousness of its own dignity, a strict sense of professional integrity, and a wise appreciation of its duty to the public, and to true physicians everywhere. C. H. Lewis, M.D.

Jackson, Mich., Nov. 4th, 1878.

Experiences in the Yellow Fever.

Ed. Med. and Surg. Reporter:—

I take the liberty to submit to the readers of the Reporter the following extract from a private letter from Dr. Gustavus B. Thornton, physician of the City Hospital, Memphis. Dr. Thornton says—

"During the whole of our past epidemic, from the first until I was stricken down by the disease, I was constantly on the go, with official and professional duties of the most exacting and continuous character. I have passed through the most terrible ordeal of my life. I flattered myself that a severe attack of yellow fever in '67 would give me exemption this time, and perhaps, was not as careful of myself as I should have been. However, I did nothing to induce the attack, beyond being constantly exposed to the disease, in the discharge of what I conceived to be a plain, official and personal duty. I feel satisfied that I would have passed through all right, had it not been that I was very much worried and prostrated, by the influence of the poison and pure physical and nervous exhaustion combined. There was no escape for me; I felt from the first that I had to live through or die in it. I could not think of leaving my post for one hour, nor, indeed, of neglecting any part of my duty while here. The disease was, undoubtedly, modified or changed in its character by my previous attack. It commenced in the same way, with the usual cold stage, not excessive, and lasting about three or four hours. After that the fever, which was not high, the thermometer not registering over 101½°, did not last more than about fifteen hours, when my temperature fell to the normal, and pulse between fifty and sixty, and on several occasions fell to 48. The poison expended its force on my nervous system, and caused, for about eighty hours, the most intense pains in the back, chest, extremities and joints I ever experienced; of course, to take opiates was out of the question, and I realized the fact that it was purely a question of endurance, whether I could stand that pain while it lasted and then be in condition to react from it. For two days my attendants thought I was gone. Of course, I had every attention of physicians of my own choice, and two well disciplined and trained nurses. I dislike to think of this fearful illness, and do most sincerely thank an all-merciful Providence for my delivery from death, for the sake of my children, if nothing else. I am still excessively weak, and though this is the eighteenth day since I was taken, I am scarcely able to sit at my desk to write this. Of course, before bringing my children home from Russellville, Ky., where they were sent when the fever began, I shall take every precaution and have my house thoroughly disinfected.

"The mortality among the hospital corps was fearful. We lost one doctor, the druggist, the steward, and at least a dozen nurses, besides Dr. Lynn and myself, with a number of others attached to the hospital, having the disease and hardly escaping. Our wards, of course, were kept filled with the disease, and it seemed that the City Hospital was one grand focus for the yellow fever poison, and yet the sanitary condition of the place was as good, apparently, as it could be. No means of disinfection or cleanliness were neglected or relaxed, but the fact is, our whole atmosphere, for miles around, seemed thoroughly impregnated with this poison."

The newspapers of a later date than this letter report, "Dr. Thornton, who came near dying of the fever, was out on the street yesterday, hardly enough of him left to make a shadow. Like all convalescents, however, he was happy."

A single remark may be allowed, that the writer has had additional information from medical friends in New Orleans, viz.: that many convalescents have lost their lives after apparent recovery from yellow fever — true walking cases, described by Dr. Benjamin Rush, "with natural pulse and tongue." A single example will suffice. Mr. Godwin, a prominent merchant, deemed himself well after a slight attack, went out on the street, lunched at the St. Charles Hotel, danced for joy after smoking a cigar, fainted, had a relapse, black vomit, and is now hopelessly ill with symptoms of typho-malarial and yellow fever. This case is one among hundreds which have and will continue to occur during epidemics of yellow fever.

Salem, Va. Frederick Horner, M.D.

Question of Maternal Influence.

Ed. Med. and Surg. Reporter:—

I take from the *Michigan Medical News* the following extract, which I do not think conveys the meaning I intended it should, and, as a consequence, does me injustice. "The Medical and Surgical Reporter says: 'Financial doctors say the cause of the hard times is 'lack of confidence.' This was not the matter with a husband down South, whom Dr. R. L. Payne tells about in his address as President of the North Carolina Medical Association. He was speak-

ing of 'mother's marks' and gave this example: 'A black child was born to a white married woman in my county, and she accounted to her husband for its very dusky hue by assuring him that she had been terribly frightened by a negro man, who had presented himself before her in a half nude state. The husband was satisfied, and is still happy.'"

The quotation is probably correct, but I certainly intended to have written the last sentence thus: *The husband was satisfied, and is still happy!!* And as the example was given immediately after quoting the case of Maria Thérèsa, I intended to convey the idea that although I was a firm believer in "mother's marks," there might possibly be another way of accounting for the *color* in both instances, as well as in the case in Virginia, in which the child was *black because the mother ate black walnuts!* Respectfully, R. L. PAYNE, M.D.

Lexington, N. C.

Suggestions for Diphtheria, Acne, and Gonorrhœa.

ED. MED. AND SURG. REPORTER:—

Late in the fall of 1876, we had a short but sharp epidemic of diphtheria in this place. The last severe case occurred in my own person. I awakened out of my sleep in the night with an indescribable sense of suffering. Apparently every muscle in my body ached, comparable only to the severe pain of acute rheumatism, a throbbing headache, but only a slight sense of soreness in the fauces. I did not disturb my family or get up to do anything until morning, by which time the only change was an increase of soreness in my throat. By daylight and a mirror I saw the characteristic exudation on the tonsils; I swabbed this at once with the undiluted muriated tincture of iron, and then feeling a desire for an acid drink I dissolved at least ʒij of citric acid in a common tumblerful of water, sweetened liberally, iced and drank it off at a draught, took a lump of ice in my parched mouth, and laid down. In about fifteen minutes the distressing alternations of chills and sharp flashes of heat, and constant, and exceedingly acute pains, located apparently in every tissue of my body, entirely ceased; I fell into a sound sleep, to be awakened in just three hours by a full and complete return of all my suffering. I repeated the dose of citric acid, swabbed out my throat, and experienced the same complete relief in just fifteen minutes, as before, and sleep, perfect and refreshing, followed, and awakened by pain. I continued this treatment, so accidentally begun, for two days, the intervals of relief growing longer, until the paroxysms of suffering ceased to recur. During those two days, I took over three ounces of the citric acid, and at the end of the time found the urine alkaline, but very copious. By the morning of the second day I had to dilute the muriated tincture of iron, as it produced too much smarting, as the exudation was now coming off in flakes, adhering to the swab. I have not had an opportunity to order these heroic doses of citric acid in this malady since, for want of an appropriate case. If one's own sensations are to be trusted, and I fully believe mine were, the relief from pain was as full and complete as that following a dose of morphia, even where that drug acts the most kindly, but without its bewildering and benumbing stupor.

I have lately read plans of treatment for acne, in the REPORTER; I herewith offer mine. Direct the patient to use common soda carb. (sal soda) freely in the water used for bathing the affected parts, and at the same time use any common soap freely. This will dissolve and remove the hardened and impacted sebaceous matter from the ducts of the follicles, dry the parts, and then freely apply the following lotion—

℞.	Acetici acidi,	ʒiv	
	Glycerinæ,	℥ij	
	Aqua rosæ,	℥iss.	M.

SIG.—Apply locally, always after washing with the alkali and soap.

Also allow me to recommend this for constant use on the hands and face, to keep the skin soft and smooth.

With this prescription for acne I have attained considerable local celebrity in cleaning off the pimples from the faces of afflicted young persons. The druggist who habitually puts up my prescription sells gallons of this mixture to his customers, to keep hands and faces soft and smooth.

Now, another subject; what I believe to be a new plan of treatment for gonorrhœa:—

℞.	Tannici acidi,	ʒj	
	Aquæ puræ.,	℥vj.	M.

SIG.—Inject as hereinafter specified.

Introduce a number 6 or 7 catheter beyond the point of soreness in the urethra, having had the patient urinate first, for the purpose of washing out the accumulated matter; direct him to make firm pressure on the tract of the urethra beyond the point of the instrument. Now take a common rubber bulb syringe, and, by means of a bit of elastic rubber tubing, connect the catheter and syringe, and wash out the urethra with cold water, in a thorough manner. Press the syringe bulb with force, so that the return current of water will flow out at the meatus, around the catheter, with considerable force. Finally, inject the tannin solution in the same way. Repeat twice a day, gradually weakening the solution of tannin.

With this plan faithfully carried out, I find the disease rarely, if ever, passes beyond the original site of the fossa navicularis, and it may sometimes be actually cured in three days. Stricture in the membranous portion of the urethra is thus avoided, because the disease is not allowed to invade it. If the urine is acid and irritating I order alkalies, as bicarbonate potassium, etc. Respectfully yours,

Greely, Col. G. LAW, M.D.

News and Miscellany.

Epidemic Report for the Week Ending November 9th, 1878.

New Orleans.—There were 11 new cases of yellow fever, and 143 old cases, reported for the week ended yesterday evening. For the past twenty-four hours no new cases and 2 deaths. Quarantine raised on the 5th instant. Total cases 13,406, subject to revision. Total deaths 4010.

Morgan City, La.—There were 8 cases of yellow fever and 3 deaths during the past week. Total cases to yesterday evening 571, deaths 105.

Mobile, Ala.—During the week ended yesterday evening there were 35 cases of yellow fever and 9 deaths. Total cases 259, deaths 68.

Pass Christian, Miss.—7 new cases of yellow fever and one death for the past week. Total cases 196. Total deaths 21.

Ocean Springs, Miss.—For the week ended yesterday noon there were 4 cases of yellow fever and no deaths. Total cases 150, deaths 30.

Hernando, Miss.—10 cases of yellow fever and 5 deaths for the week ended November 2d. No cases and 1 death during the past week. Total cases 175, deaths 69.

Dry Grove and Lebanon Church Neighborhood, Miss.—Since October 19th there have been 13 new cases of yellow fever and 8 deaths. No new cases and but one death for the week ended November 6th. Total cases 125, deaths 52. Crystal Springs, Miss., near Dry Grove, has, so far, escaped the fever.

Memphis, Tenn.—During the past week there were 33 deaths from yellow fever. Total deaths to the evening of the 7th, 2997.

Chattanooga, Tenn.—9 new cases of yellow fever and 4 deaths during the past week. Total cases to yesterday evening 444, deaths 133.

Cairo, Ills.—During the two weeks ended yesterday there were 8 new cases of yellow fever and 3 deaths. The last case occurred on the 4th, and the last death on the 6th instant. Total cases 83, not including some doubtful cases. Total deaths 44. Heavy frost the 8th instant.

Vicksburg, Miss.—There were 11 deaths from yellow fever during the past week. No deaths during the past twenty-four hours. 6 deaths during the week in the country near Vicksburg.

Delta, La.—4 deaths from yellow fever during the past week.

Decatur, Ala.—During the week ended last evening there were 8 cases of yellow fever and one death. Total cases 196, deaths 43.

Gallipolis, Ohio.—No new cases of yellow fever since October 26th. The last death occurred October 27th. Total cases 65, deaths 37, not including 6 deaths which occurred on the steamboat John Porter.

Japan and China.—Dr. Simmons, Sanitary Inspector for the Japanese Government for the port of Yokohama, reports under date of October 10th, that he regards the occasional reported cases of cholera in Japan during the past summer as cholera morbus, and not malignant or Asiatic cholera. On the 2d of October, however, malignant cholera broke out in Nagasaki, and in eight days there had been 58 cases and 10 deaths. Cholera has existed in Shanghai, China, for several months, and as Nagasaki is the first port of Japan entered by vessels from Shanghai, Dr. Simmons regards the outbreak as a new importation, but owing to the lateness of the season, and the sanitary measures instituted by the Government, he does not anticipate a spread of the disease.

International Congress of Superintendents of Asylums for the Blind.

Next spring, in Berlin, a congress of the superintendents of all the European asylums for the blind will be held, at the suggestion of Dr. Römer, to prepare a system by which a unity of methods of instruction may be obtained in all such institutions. It were desirable that the United States were also represented.

—The American Public Health Association hold their next annual meeting at Richmond, Virginia, commencing on November 19th. Unusual interest will attend this gathering, as much time will be devoted to facts connected with the yellow fever epidemic which has scourged so many Southern cities. The sanitary measures for preventing the recurrence of such a calamity will be carefully considered. This topic is of national importance, and there is hope that the deliberations of this body of scientific men may result in a clear understanding of the preventable causes of yellow fever.

OBITUARY.

DR. TILGHMAN H. MARTIN,

Of Allentown, Pa., died, Nov. 5th, of cerebral congestion. He was born December, 6th, 1809, and graduated at the University of Pennsylvania in 1831. His father, Dr. Jacob Martin, was also a physician, and he leaves two sons in the same profession. For many years he enjoyed an extensive and lucrative practice. He was a man of clear, keen, intellect, and of very handsome attainments in all departments of life. In his intercourse among men his friendships were unfaltering, while his aversions were exceedingly sturdy, but on the whole his heart was full of generosity and kindness. He was a man universally loved, and his death is deeply regretted by all.

MARRIAGES.

Davis—Hardwick.—On Thursday, Oct. 31st, 1878, at the residence of the bride's father, Wm. Hardwick, Hartford, Ky., Dr. Amos Davis, Pleasant Ridge, Ky., and Miss Lizzie Hardwick.

McClung—Curry.—On Thursday, Oct. 31st, 1878, by Rev. J. G. Lowrie, at the residence of the bride's parents, S. H. McClung, M.D., of Mount Sterling, Ill., and Eleanor B., daughter, of Mr. J. R. Curry, Mount Sterling, Ill.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

DUCRO'S ALIMENTARY ELIXIR

A Combination uniting the properties of ALCOHOL and RAW MEAT. It has been Mr. Ducro's aim in preparing this elixir to present under the form of a pleasant cordial the nutritive and restoring properties of raw meat and the stimulating properties of alcohol. In this he has been eminently successful, judging from the great number of physicians who prescribe and use this food medicine. This preparation, which has been used with great success in the hospitals of Paris since 1868, is adapted to the treatment of all diseases requiring the administration in a small volume of a tonic able to stimulate and support the vital forces, as in *Pulmonary Phthisis, Depression* and *Nervous Debility, Adynamia, Malarial Cachexia,* etc. It is especially adapted for delicate ladies and children, debilitated old people and convalescents.

Paris: Place de Vosges, 20. **New York: E. FOUGERA & CO., Depositaries.**

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor,

P. Rigollot

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUGERA & CO., Agents,

NEW YORK.

TO PHYSICIANS.

THE scarcity and high prices of Cinchona barks and Sulphate of Quinia, and the prospect of only a slight reduction in these prices, makes the present a favorable opportunity of calling the attention of the profession to the *combination of the bark alkaloids.*

Much attention has been given to this subject in Europe and India.

The growing appreciation by the medical profession of the United States of

CINCHO-QUININE

is due to the fact that it retains the important alkaloids IN COMBINATION, — a combination which in practice is *preferable to perfect isolation or separation* of the alkaloids.

In addition to its superior efficacy as a tonic and anti-periodic, it has the following advantages, which may increase its value to physicians : —

1. It *exerts the full therapeutic influence of* Sulphate of Quinine, *in the same doses*, without disturbing the stomach, creating nausea, or producing cerebral distress, as the Sulphate of Quinine sometimes does; and it produces much less constitutional disturbance.

2. It has the great advantage of being *nearly tasteless.* The bitter is very slight, and not unpleasant to the most sensitive, delicate woman or child.

3. It is *less costly* : the price will fluctuate with the rise and fall of barks, but will always be considerably less than the Sulphate of Quinine.

Although it meets indications not met by that Salt.

The following well-known Analytical Chemists say : —

"UNIVERSITY OF PENNSYLVANIA, Jan. 22, 1875.
"I have tested CINCHO-QUININE, and have found it to contain *quinine, quinidine, cinchonine* and *cinchonidine*, the alkaloids of the barks of which CINCHO-QUININE is made.
F. A. GENTH,
Professor of Chemistry and Mineralogy."

"LABORATORY OF THE UNIVERSITY OF CHICAGO, Feb. 1, 1875.
"I hereby certify that I have made a chemical examination of the contents of a bottle of CINCHO-QUININE, and by direction I made a qualitative examination for *quinine, quinidine*, and *cinchonine*, and hereby certify that I found these alkaloids in CINCHO-QUININE.
C. GILBERT WHEELER,
Professor of Chemistry."

"I have made a careful analysis of the contents of a bottle of your CINCHO-QUININE, and find it to contain *quinine, quinidine, cinchonine*, and *cinchonidine.*
S. P. SHARPLES, *State Assayer of Mass.*"

TESTIMONIALS.

"WELLFLEET, MASS., Nov. 17, 1876.
"I have used CINCHO-QUININE, and can say without any hesitation it has proved superior to the sulphate of quinine. J. C. JOHNSON, M.D."

"MARTINSBURG, Mo., Aug. 15, 1876.
"I use the CINCHO-QUININE altogether among children, preferring it to the sulphate.
DR. E. R. DOUGLASS."

"LIVERPOOL, PENN., June 1, 1876.
"I have used CINCHO-QUININE, obtaining better results than from the sulphate in those cases in which Quinine is indicated.
DR. I. C. BARLOTT."

"RENFROW'S STATION, TENN., July 4, 1876.
"I am well pleased with the CINCHO-QUININE, and find it a better preparation than the sulphate.
W. H. HALBERT."

"ST. LOUIS, MO., April, 1875
"I regard it as one of the most valuable additions ever made to our materia medica.
GEORGE C. PITZER, M.D."

"RICHMOND, VA., March 28, 1877.
"I believe that the *combination* of the several cinchona alkaloids is more generally useful in practice than the sulphate of quinine uncombined.
"Yours truly, LANDON B. EDWARDS, M.D.
Member Va. State Board of Health, and Sec'y and Treas. Medical Society of Va."

"CENTREVILLE, MISS.
"I have used several ounces of the CINCHO-QUININE, and have not found it to fail in a single instance. I have used no sulphate of quinine in my practice since I commenced the use of the CINCHO-QUININE, as I prefer it. F. C. BATEMAN, M.D."

"NORTH-EASTERN FREE MEDICAL DISPENSARY, 908 East Cumberland St., Philadelphia, Penn., Feb. 29, 1876.
"In typhoid and typhus fevers I always prescribe the CINCHO-QUININE in conjunction with other appropriate medicines, the result being as favorable as with former cases where the sulphate had been used.
"F. A. GAMAGE, M.D."

SYRUP-GLYCEROLE

OF

FERROUS CHLORIDE.

The Combination which all Forms of Iron must assume before Assimilation.

Superior to all other Iron Salts in that, while it is readily taken into the circulation, and does referruginate the blood, it does not ordinarily cause constipation nor headache. It is very pleasant to the taste, and is unalterable.

Ferrous Chloride is a neutral salt, consequently it has no action upon the teeth, and may be administered fearlessly. This fact and the delightful taste of my preparation render it an advantageous form for administration to children. Each fluid drachm contains one grain of Ferrous Chloride, which, owing to the certainty of its assimilation, is a full, active, adult dose.

HAVE SURGEONS BEEN MISTAKEN AS TO THE NATURE OF FRACTURES OF THE BASE OF THE RADIUS? MEDICO-LEGAL BEARINGS OF THE ANSWER.

BY J. S. WIGHT, M.D.,

Professor of Surgery in the Long Island College Hospital.

(*Concluded from page* 423.)

It is proper to put in order the following evidence, bearing on the pathology of fracture of the base of the radius. Says Professor F. H. Hamilton, "I have seen, however, in the Museum of the College of Physicians of Philadelphia a specimen of this (Colles) fracture, in which the line of fracture is transverse, from side to side, but very oblique from before backward, and from below upward. There is also a line of incomplete fracture into the joint; it is united by bone, with the usual displacement backward." The seat of this fracture, which could have been determined by actual measurements, is not recorded by the reporter.

In passing, let me draw attention to the similarity between this specimen and the first case reported by Dr. Cameron, and also the second case reported by Professor Moore. It is suggested that the obliquity was produced by a similar cause. And when there is no impaction in addition to obliquity, reduction and retention of the fragments must be very difficult, if not, at times, quite impossible.

Professor Gross described a preparation of Colles fracture in the pathological collection of the New York Hospital, in which there are four fragments. He adds that he has seen several specimens of fracture of the base of the radius, in which there were as many as five or six fragments. Let me simply ask, in this place, How much comminution, and how much impaction would remove a fracture of the base of the radius from the class of Colles fracture? This question is raised for the consideration of those who desire to make fine distinctions and definitions.

Professor Bigelow saw a patient having an obscure injury of the base of the radius. The patient died on account of other injuries. On making a post-mortem examination, Professor Bigelow found a stellate fracture on the articular surface, extending into the base of the radius about an inch. The parts of the bone limited by the fissures were not displaced.

"M. Voillemier has given a representation of a case in which the upper fragment, rounded at its edges, was driven nearly three inches into the spongy tissue of the lower, and had broken the articulating portion into four pieces."

An account of some experiments on the forearm of the cadaver deserves to be introduced in this connection. An examination of the facts of experiments on the cadaver must, however, be of secondary importance to the examination of the facts of accidents to the living body, because the dynamic conditions are different in the two cases. Some facts of accident have been presented; let us now present some facts of experiment, as follows: namely—

M. Nélaton "amputated the forearm of a dead body at the elbow, and resected the olec-

ranon; then, applying the palm of the hand on a solid surface, the forearm being kept vertical, he struck a heavy blow upon the upper ends of the two bones. The wrist cracked, and became deformed, and dissection revealed a simple transverse fracture at the extremity of the radius, the lower fragment being thrown backward." So that M. Nélaton made a Colles fracture in the dead forearm, by compressing the base of the radius between "two counter forces;" and this on the authority of Malgaigne.

Dr. Daniel Ayres, in the years 1856–7, performed a series of experiments on the forearm of the cadaver, in a manner similar to that of M. Nélaton. He put the palm of the hand on a resisting surface, having the forearm placed nearly in a vertical position, and struck a heavy blow on the upper ends of the radius and ulna, producing a characteristic Colles fracture in every instance.

The facts of some experiments on the forearm of the cadaver were published by M. Bouchet, at Paris, in July, 1834. M. Bouchet, in trying to dislocate the wrist in the dead subject, only succeeded in fracturing the base of the radius, sometimes with other lesions, and especially with fracture of the styloid process of the ulna. He demonstrated that exaggerated flexion or extension of the hand on the forearm would break off the lower part of the base of the radius, and tear the fragment from the rest of the bone. And "M. Voillemier had two opportunities of observing analogous fractures in the living subject; in one case a man had fallen upon the lower half of the hand, not upon its 'heel;' in the other the patient had not fallen at all, but a comrade had forced his wrist into immoderate flexion [extension?]; here the conditions were exactly the same as in M. Bouchet's experiments."

During the present year, 1878, Dr. L. S. Pilcher made some experiments on the cadaver, before the Kings' County Medical Society, and repeated his experiments before the New York Academy of Medicine. The experiments consisted in binding the forearm of the cadaver to a firm body, and then forcibly extending the hand till the base of the radius was broken. Or, in binding the hand to a firm body, and then forcibly bending the forearm on the back of the hand, till the base of the radius was broken. The principle in each case is the same, and is identical with the principle of action put in experimental operation by Bouchet in 1834.

The next step in the experiment was to strike a smart blow on the proximal ends of the radius and ulna, as was done by Nélaton, or by Lecomte. There was here a combination, as it were, of two sets of experiments. On dissection two conditions were presented, namely: (1) The anterior radio-carpal ligament was not broken; about one-half inch of the base of the radius was broken off; the two fragments were more or less separated on the anterior aspect of the bone; and the two fragments were still in conjunction on the posterior aspect of the bone, being held together by the untorn periosteum. (2) The second condition was somewhat different, being described as one of greater severity than the first. It consisted in a partial displacement, backward and upward, of the entire lower fragment, and in a slight impaction of the two fragments. And these facts were added to the facts of the first condition. And it is proper to record in this place the unpublished fact that the carpal bones were sometimes broken during these experiments.

The main inferences drawn from these experiments are, it is believed, correctly expressed in the following words: In this kind of experiment "is the exact condition which is present in the production of Colles fracture." Hence, a Colles fracture is produced by forcible and extreme extension of the hand on the forearm, followed sometimes by the action of two "counter forces," that will make a slight impaction; and the theory that the base of the radius is broken between the action of two "counter forces" cannot be sustained by an examination of the facts. Let me ask, what facts? The facts of these experiments, or the facts of accidents? or both sets of facts combined?

These experiments, and by implication the inferences drawn from them, were received by some of the gentlemen who saw them, in such a manner as seemed to be of the nature of an endorsement. Professor Willard Parker "listened with profound interest, and had been much instructed by Dr. Pilcher's Paper." Prof. F. H. Hamilton was "proud to know that it was an American surgeon who had made the observations, and felt highly honored that the New York Academy of Medicine was among the first medical societies to which these observations had been unfolded." And it was suggested by Dr. A. C. Post "that the fracture should be called Pilcher's fracture, instead of

Colles fracture." Do these gentlemen, who with such generous words endorse the truly admirable experiments of Dr. Pilcher, leave us to suppose that they also endorse the *inferences* which the doctor draws from his experiments? Do they mean to tell us that Dr. Pilcher has demonstrated, by experiments on the dead forearm, the only actual and possible way in which an *accidental* Colles fracture can be produced in the living forearm? When we carefully consider the facts of accidents to the base of the radius, as well as other experiments on the cadaver, made by reliable experimenters, we cannot come to this conclusion.

Says Dr. Pilcher: "In the first place, the force of the impact is, in great measure, broken before it reaches the radius." In reply, let us ask, *Why, then, does the radius break?* What becomes of the impact if it is, in great measure, broken before it can get to the radius? The impact of the fall must be communicated to all or part of the palmar surface of the hand lever in case of an accident. And in either event the impact, as has been previously shown, is communicated, directly or indirectly, through the carpus to the base of the radius. And if the force of the impact of the fall, at a moment of muscular inactivity, comes, more or less, on the anterior carpo-radial ligament, by the way of a *pull*, why does it not come on the articular surface of the base of the radius, seeing that the base of the radius is the fulcrum, on which the carpal part of the hand lever rests and is suddenly and forcibly driven; driven upward and backward by the reaction of the resisting surface on which the palm of the hand strikes.

Again, says Dr. Pilcher, "In the second place, the lower end of the radius, by its expansion, and by the number and direction of the bony lamellæ which constitute its mass, is especially fitted for receiving and breaking shock, when applied to its extremity, in the direction of the long axis of the bone. In this respect it is the strongest part of the bone." Now let me ask, What need is there for especially fitting the base of the radius in any axis for receiving and breaking shock, when the impact and the shock are, in great measure, broken before they can get to the base of the radius? And why does the base of the radius break at all, in its long axis, if, in this respect, it is the strongest part of the bone? But it does frequently so break, as clinical observation and post-mortem examinations of recent accidents demonstrate. And if a small measure of the impact of a fall on the palm of the hand reaches the base of the radius, there cannot be much shock for the base of the radius to receive and break. How, then, does the base of the radius get broken? In the experiment, is the end of the radius pulled off by the anterior carpo-radial ligament? But this pulling on the ligament presses the carpus against the base of the radius, with a force exactly equal the extending force on the hand plus the straining force on the ligament.

There would be a difference between experiments on the cadaver and accidents on the living body. In the case of an accident to the forearm the muscles exert more or less *stress* on the structure of the bones, and this eventuates in more or less *strain* of the structure of the bones. In one case, before described, the stress and the strain from muscular contraction broke off the base of the radius. Such an accident must be very rare. And yet we cannot ignore muscular contraction, because it is almost always insufficient, when operating alone, to break the radius. There can be no doubt whatever, that muscular contraction is often a considerable factor in the accidental breaking of the base of the radius. But let it not be said that it is claimed that muscular contraction is *the* factor which breaks the base of the radius. We must look at all sides of this important and interesting subject. We cannot reject any factor, however insignificant it may appear. And muscular contraction is really no insignificant factor, in exerting stress and causing strain; and this must make the work of other breaking forces easier to be done.

In the experiment on the cadaver, the muscles are dead, and the stress and the strain, if any, come on the anterior carpo radial ligament, and on the base of the radius, as separating strain of the anterior part, and as compressing strain of the posterior part of the bone. Whereas, in case of muscular contraction, there is compressing strain on the anterior part of the bone as well.

Let me now state the nature of two dynamic conditions—

(*a*) A patient falls on the palm of the carpus; the motion of the carpus is suddenly arrested, and the carpus moves upward and outward, or upward, backward and outward, against the base of the radius, which at the instant receives the impact of the descending compact tissue of

the shaft of the radius, and the base of the radius is broken in a variety of ways; it may be penetrated, it may be comminuted, and it may be displaced. *And the line of fracture, whether transverse or oblique, occurs ordinarily in that part of the bone where there is least compact and most cancellous tissue, so that this part of the bone is weakest, or else it suffers more stress and strain than any other part.*

(*b*) A patient falls on the palm of the fingers and the heads of the metacarpal bones; the motion of the fingers and the metacarpal bones is suddenly arrested, and the carpus is pressed against the base of the radius upward, backward and outward, causing various forms of fracture, it may be admitted. And in addition to this, the palm of the carpus will ordinarily meet the resisting surface, and the force of reaction will be communicated to the base of the radius as an associated factor of the breaking.

Let us now compare an example of Dr. Pilcher's experiments with the second case of post-mortem examination made by Dr. Cameron. In the experiment the fragments were separated anteriorly, and hinged posteriorly; and in the accident the fragments were hinged anteriorly, and firmly impacted posteriorly. In the accident the periosteum was not torn through anteriorly, but was disorganized posteriorly; and in the experiment the periosteum was untorn posteriorly, but was completely torn through anteriorly. Even in the first case of Prof. Moore, the periosteum was broken through on all sides of the bone.

Suppose we admit that the base of the radius may be broken, in the living subject, after the manner of the experiments of Bouchet and Pilcher, the general inference that this is always or nearly always so, is contradicted by the following facts, namely—

First, The facts of the experiment of M. Nélaton.

Second, The facts of the experiments of Dr. Ayres.

Third, The facts revealed by the post-mortem examinations of recent fractures of the base of the radius.

Fourth, The facts revealed by post-mortem specimens, removed from the body after treatment of the fractures.

Fifth, The facts presented by a careful consideration of the dynamic relations in the causation of fractures of the base of the radius.

Sixth, The facts of the structure, and the function of the base of the radius.

We are now justified in coming to the following general conclusions, namely—

I. A fracture of the base of the radius may be distant from the lower articular surface about one and one-half inches, as observed by Colles; or from one-fourth of an inch to an inch, as observed by Robert Smith; or from three to twelve lines, as observed by Dupuytren; or from one-fourth of an inch to one and one-half inches, as observed by Hamilton; or a piece of the posterior lip may be split off, as observed by Barton; or the base of the radius may be fissured in the long axis, as observed by Bigelow. The perfect accuracy of these statements may be somewhat questioned, on the supposition that they have been made without accurate and exact measurements.

II. A fracture of the base of the radius may be *transverse.*

III. A fracture of the base of the radius may be *oblique.*

IV. When the base of the radius is broken, the average length of the lower fragment is somewhat more than one-half inch.

V. A fracture of the base of the radius may be *vertical.*

VI. A fracture of the base of the radius may be *impacted.*

VII. A fracture of the base of the radius may be *comminuted.*

VIII. A fracture of the base of the radius is generally caused by the reaction of the resisting surface on which the palm of the hand strikes at the time of the fall. The carpus be driven or pressed against the base of the radius.

IX. A fracture of the base of the radius may be caused by extension or flexion of the hand on the forearm.

X. Muscular contraction must be recognized as an associate cause of importance in fracturing the base of the radius.

XI. An important element in the causation of fractures of the base of the radius is found in the structure of the bone, the seat and direction of the fracture being usually where there is the least compact tissue.

In conclusion, I have but few more words to write, to wit:—

Dr. Pilcher writes in regard to the base of the radius: "The fracture never entails permanent disability." "The sprain is the fruitful source of long-continued, sometimes permanent,

impairment of the function of the joint." Are we to suppose that such distinguished surgeons as Parker, Hamilton and Bost endorse these broad conclusions? Let me be permitted to remind these gentlemen that they are the *experts* of the surgical profession, to be called, at any time, into courts of law, to virtually decide if any other reputable surgeon is guilty of malpractice. Now it will not be competent to deny that a case could occur; for I have recently seen a case of fracture of the base of the radius, some six weeks after the receipt of the injury, in which there was permanent displacement of the distal fragment and great *deformity*, on account of upward and backward displacement of the hand and the distal fragment, the base of the radius being broken off obliquely upward and backward, as could be unmistakably determined by an examination. And this case had been under the treatment of two good and reputable surgeons; and so far as could be judged at that time, Sir A. Cooper could not have done better. And Dr. Mott has distinctly affirmed that the most eminent surgeons cannot always prevent *deformity* and imperfection of motion in the treatment of fractures of the base of the radius. In fine, clinical observation and post-mortem examinations show that there are, and must be, some cases of fracture of the base of the radius which will inevitably result in permanent deformity and disability. Such a case may at any time come into court, as a cause for damages, in a suit at law for malpractice. And if the experts testify *that the fracture of the base of the radius never entails permanent deformity or disability, they will unjustly ruin the surgeon who is defending himself in a just cause.*

PROCIDENTIA UTERI AND ITS TREATMENT.

BY HENRY P. WENZEL, M.D.,
Of Theresa, Wis.

Read before the Rock River Medical Society, November 11th, 1878.

There is no other disease in the domain of gynæcology that produces so much discomfort and suffering as procidentia uteri. Whether it be caused by brutal treatment during labor, or falling or jumping, or from atonicity of the uterine ligaments or the walls of the vagina, or the displacement result from pressure—there is but one way to correct the malposition: reduction of the organ to its normal position and retention by proper appliances.

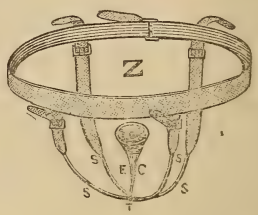
It is useless, here, to detail the anatomy or the relations of the parts involved. The redundancy of the vaginal walls and debility of the uterine ligaments are prime causes in this lesion. So soon as the womb is forced below its normal site for any length of time, congestion, and later, hypertrophy, result; the increased weight of the organ further displaces it, and with the prolapsed uterus follow the ovaries, bladder and rectum. During the first stage of prolapsus—really only a descent—there may be no inconvenience, nor erosions of the mucous membrane. But when the os tincæ presents at the vulval fissure, or the greater part or the whole uterus hangs pendent between the thighs, the mucous tissues are rapidly ulcerated or totally destroyed. In recent cases the uterus is congested and eroded or fissured, but later it is covered with erosions, ulcers and scabs; a fetid, thin, sanious pus exudes, which may endanger the patient's life by absorption or inhalation of septic matter. The bladder and rectum are displaced, the latter forward and downward, the former downward; the lower segment of the uterus is partly everted; the cervical canal forcibly dilated; the vaginal walls inverted, and the pelvic vault weakened; the intestines sink into the pelvic cavity and produce an unnecessary pressure on the displaced organs. The excruciating agony, the rectal and vesical tenesmus, and the host of concomitant symptoms, must necessarily result as a consequence of the malposition of all the parts involved. Is it a wonder, then, that the unfortunate patient prays for death to end her misery? Yet this lesion is generally easy to correct, and taken in time may not only be relieved, but cured, in young cases! There are legions of appliances to correct the trouble, but how many deserve notice or a name? How many of them relieve only temporarily, or, if you please, increase the evil. How often is a pessary unnecessarily applied, and by its pressure does infinite harm?

Why do these cases pass from one hand to another? Each one attempts to relieve; he who "quacks" the case longest gains the largest fee, and the disgusted patient seeks relief elsewhere. The difficulty lies here: the natural laws involved in this lesion are disregarded; the mal-posed anatomical structures ignored; no attention is paid to their relations, nor to

physiological functions; good common sense is of more value than theoretical speculation. Besides, there are many pretenders, claiming to be gynæcologists, who could not differentiate a prolapsed rectum from the prolapsed womb, or between the latter and prolapsed vagina; consequently, the treatment must be worse than useless! When an accurate diagnosis is made, the appliance to be worn for the correction of the deformity should be carefully selected and carefully adjusted, that it may fit accurately. It is as essential for a pessary to fit accurately, as for a boot to fit the foot nicely; pressure must, under all circumstances, be avoided. Dangerous and fatal inflammation may result from unnecessary pressure at any time.

Sometimes a mechanical appliance is altogether out of place. In general debility of the system, and atonicity or relaxation of the stays of the uterus, a simple tampon, locally, and the bitter tonics and iron internally, are followed by better results than the best pessary ever invented. Three years ago a lady, aged fifty-three, called to be treated. She could scarcely be out of bed. She suffered from general exhaustion, nervousness, etc. A year previously her health failed, and she had prolapse of the womb. A Hodge closed-lever pessary had been introduced by a physician, but her condition did not improve. She began to complain of tenderness and pain in the pelvis, which continued unremittingly, and was of course, attributed to the pessary. A thin, fetid liquid discharged constantly in small quantities from the vagina, and rigors followed by flushes of heat supervened. This was also laid to the presence of the pessary, and the attending medical adviser directed that the pessary must remain (to cover his careless blunder, and hide the damage done as long as possible). A vaginal examination revealed the pessary imbedded in the tissues. It was removed, and a gush of fetid, sanguinolent liquid followed. The vaginal walls were deeply ulcerated, and the posterior part of the cervix was nearly destroyed by the large sores in its substance. Locally, she was treated by a tampon, saturated with carbolized glycerine, and internally the bitter tonics and iron. In two months she performed all her household duties without any mechanical support whatever; nor has she worn any appliance whatever since; yet at the present time she is in good health, and there is no procidentia, or falling of the womb. The treatment was simple and rational, and the original trouble being removed, all danger of prolapse had vanished.

There are cases where ligaments holding the uterus *in situ* have been overstretched and exhausted; degenerative changes have taken place. Here complete recovery is impossible. The organ can be replaced, and must be kept in proper position by accurately fitting mechanical appliances, to remove the difficulty and relieve the patient's distress. The best instrument for



the purpose—see figure—I have found to be that manufactured by Dr. S. S. Staufer, of Philadelphia. It is composed of two parts; viz. an abdominal belt of strong elastic rubber, and a hard rubber stem cup, resting on two soft rubber tubes which pass through its base, and are attached to the belt in front and behind by buckles. The cup is placed on a curved stem, to fit the pelvis, thereby avoiding useless friction. The cups are of different size and shape. The instrument is easily applied, removed and cleaned. It cannot get out of order. There is no danger of caustic action, for gold and silver may corrode, rubber never. The instrument may remain *in situ* during urination and defecation, and does not cause annoyance in the sitting or reclining posture. All instruments must be accurately fitted, and Dr. Staufer gives exchange privileges until correct.

The two following cases were recently treated for procidentia uteri. One is a young mother, of 24, in excellent health, and the other an old lady, about 72 years of age, suffering from chronic bronchitis.

Case 1.—Mrs. W. jumped from a lumber wagon in October, 1877. She was in her third month of pregnancy. There was sudden pain and distress, and the attending physician found a prolapse of the second degree, reduced the dislocation, and applied a ring pessary which came away a few days after (application). She was delivered, at term, of a large, living, female infant. The midwife allowed her to get up on the third day. She felt immediate pain, tenderness and inconvenience, which constantly grew

worse. I saw the case for the first time two weeks later, and found complete procidentia. The uterus was as large as a fetal head, dusky red, and had some fissures on the exterior. The vagina was pulled down and inverted; there was internal vesical and rectal tenesmus, intense pain in the knees, etc. The organ was with difficult re-posed, and a tampon saturated with carbolized glycerine placed against the os. The vagina was packed with cotton. The dressings were changed every two days. She was kept supine for two weeks. There was improvement from the first, pain and tenesmus ceased, and appetite and sleep returned. She received no medicine internally.

Four weeks later the uterus was much diminished in size and free from ulcerations. I fitted one of Staufer's stem-cup supporters (cup 2½ inches). She performed her household duties at once with ease; the uterus was perfectly retained. She bound and carried sheaves during harvest, and does all kinds of farm work besides her household duties, and is happy. The instrument is worn since the 1st of May, and the relief is permanent.

Case II.—Mrs. F., aged about 72, was injured by an ignorant midwife, at the birth of her last child. She was treated with variable success by many physicians, and wore nearly every variety of pessary in the market without any benefit. Some called her trouble "prolapse" of the bladder; one "prolapse" of the vagina; one "prolapse" of the rectum. She was constitutionally treated, without any benefit whatever.

Status præsens, July 31st, 1878. Saw her the first time to-day. She is broken down in health; has *facies uterina*; eyes very weak; violent paroxysmal headache; anorexia and insomnia; locomotion is impossible; there is violent pain in both knees and in back; her pulse is neither slow nor fast, but feeble; she suffers from chills and flushes of heat, constant nausea and frequent vomiting. There is vesical and rectal tenesmus and an acrid diarrhœa. Her person is very offensive. There is also chronic bronchitis.

The uterus is completely prolapsed, and lies between the thighs. The mucous membrane is destroyed and the surface full of ulcers, which are covered with scabs and crusts; the ulcers extend to the muscular tissue, and exude a thin, fetid, sanio-pus. The external os is widely dilated and cervix partly everted; the cervical canal is a mass of ulcerated tissue; the fundus is also implicated; cavity nine inches deep. The vaginal walls are inverted and full of fetid ulcers. The bladder is drawn downward and the rectum downward and forward, forming a pouch, which is filled with fecal matter. In the upright position the intestines sink into the pelvic cavity.

The entire diseased mass was bathed with solution of thymol, which removed the fetor at once and permanently. The organ was with difficulty replaced, and a tampon saturated with solution of thymol—thymol, 1 grain; glycerin, 120 grains; water, 600 grains, applied. This forms a clear solution, and has a specific gravity of 1.026. It may be further reduced if found to "burn" too much when applied—placed against the cervix uteri. The vagina was moderately packed with cotton. For two weeks the dressings were renewed night and morning, subsequently every three or four days. Internally, pulverized glycyrrhizæ comp., of the Prussian Pharmacopœia, a heaped teaspoonful at night, in a tumbler of water, during her time of treatment.

August 1st, less nausea, and headache less violent; tenesmus only moderately severe. *There is no fetor*; appetite poor; local treatment same; internally (Wyeth's) elix. cinch. pepsin and bismuth. August 3d. Appetite improved; no pain whatever on walking; œdema of uterus subsiding; ulcers covered with granulations; uterine cavity six inches; treatment same. August 8th. Uterine cavity four and a half inches; healthy granulations. Internally four drops fl. ext. æsculus glabera thrice daily. August 23d. Uterine cavity three inches; uterine walls flaccid; no pain; no œdema; ulcers healed; general health much improved; treatment continued. August 28th. Applied a Staufer supporter, with two-inch oblique stem cup; all other treatment stopped. September 4th. Took a ride of twenty-four miles in a carriage yesterday, without inconvenience. General health very good. September 30th. Uterus held perfectly in position. There is neither discomfort nor annoyance. At the present time her general health is good; she attends to her few household duties, and the instrument has relieved the trouble permanently.

In conclusion, I wish to call attention to the use of thymol solution in uterine diseases. An extensive trial during the last six months, in diseases of the womb, convinces me that it is a

valuable adjunct in uterine therapeutics, and superior to carbolic acid.

1st. It cannot be made strong enough to act as a cauterant; thymol in substance feebly cauterizes.

2d. Thymol solution destroys the fetor instantly and effectually.

3d. Thymol solution leaves the grateful odor of *thymus vulgaris*.

4th. Thymol solution heals the ulcer more rapidly.

5th. There is no danger of toxic symptoms following the local application of thymol solution; it may be taken internally more freely than carbolic acid, without producing dangerous consequences.

SENILE GANGRENE.

BY SAMUEL BIRDSALL, M.D.,
Of Susquehanna, Pa.

Read before the Susquehanna County Medical Society, at its semi-annual meeting, held at Great Bend Village, Pa., October 8th, 1878.

Senile gangrene, as its name implies, is a disease peculiar to advanced life, but the middle aged, and even young, are not entirely exempt from it. It is, fortunately, a rare disease, attended, as it is, with so much pain and suffering, and resisting so obstinately all curative treatment. The pathological conditions giving rise to this disease have been thoroughly investigated, and may be said to be well understood.

There are, however, some points in regard to the treatment which are still unsettled; and on this account the experience of physicians should be recorded, for the benefit of the profession.

Prof. Gross says, "My belief, founded upon considerable experience, is, that we ought scrupulously to follow the practice long ago laid down by surgeons, not to interfere until there is a well marked line of demarkation; and, indeed, not even then, unless it is perfectly evident that there is sufficient strength of the system to bear the shock of the operation. I have, however," he continues, "seen several cases where amputation was succeeded by the most happy results before nature had made any attempt to cast off the slough, and that, too, under circumstances not at all promising, as it respected the powers of the constitution."

Prof. Armsby, of Albany, said, in a clinical lecture, a few years ago, "Be guarded in your surgical interference; pursue an expectant plan of treatment."

Erichsen says, "In gangrene from constitutional causes, it is a golden rule in surgery never to amputate until the line of separation has formed; for, as it is impossible in these cases to say where the mortification will stop, the amputation might be done either too high or not high enough; and, under any circumstances, the morbid action would, to a certainty, be set up in the stump. It is not even sufficient, in such cases as these, to wait until the line of demarkation has formed before removing the limb; these spontaneous or constitutional gangrenes having often a tendency to remain stationary for some days, and then creeping on, may readily overstep the line by which they had at first appeared to be arrested. Besides this, the local disturbance and inflammation set up by the amputation might be too great for the lessened vitality of the system or part, and might of itself occasion a recurrence of the gangrene. Hence, in these cases, it is always well to wait until the line of demarkation has ulcerated so deeply that there is no chance of the gangrene overleaping this barrier, at the same time that means are taken by the administration of tonics, nourishing food, etc., to improve the patient's strength and fitness for the operation. So soon as this has been done in a satisfactory manner, and all the soft parts, except the ligaments, have been ulcerated through, the mortified part should be separated, by cutting through the remaining osseous, ligamentous or tendinous structures, and then means should be taken to fashion the stump that has been so formed by nature." * * * * * * * *

"In senile gangrene it has recently been proposed to amputate the thigh high up. This practice has been successfully adopted by Mr. Garlike, Mr. James, of Exeter, and others, and certainly deserves a trial in all cases in which the health is otherwise good, and the constitution tolerably sound. It has not as yet been adopted in a sufficient number of cases to warrant a positive opinion on its merits, but it would appear that for it to succeed, the amputation should be done high up in the thigh, so that there may be a better chance of meeting with a healthy condition of the vessels, and good vitality in the limb; the operation being performed on the principle that this form of gangrene is dependent on local disease, ob-

structing the vessels of the part, and not always on constitutional causes."

Thus it will be seen that the expectant plan of treatment is the one advised by our best authorities. All who have had experience with this disease will readily admit that there are serious objections to this plan. The process of separation is slow, and, contrary to what might be anticipated, the disease is attended with a vast amount of pain, which deprives the patient of sleep, impairs digestion, and rapidly exhausts his strength. The fetor contaminates the atmosphere and adds to the patient's discomfort and danger. In addition, there is the liability of blood poisoning, from absorption of fluids from the gangrenous parts. There is but one plan of treatment by which these sources of danger and the pain may be removed. The one incidentally referred to by Erichsen, viz., amputation of the thigh. Having adopted this course in a case recently occurring in my practice, I report it as a contribution to the literature of this subject.

June 22d, 1878, I was called to see Mr. G. T., aged about seventy-five, a respected citizen of this town, a machinist by occupation, possessing good muscular development. Not corpulent; usual weight about one hundred and fifty-five pounds. Had always enjoyed good health, but his constitution now somewhat impaired. Found him suffering from pains in his right foot, not constant, but paroxysmal. There was nothing in the appearance of the foot or leg to indicate defective circulation, except when it was allowed to remain dependent for some time it became very much congested. For several weeks previous he had experienced some degree of pain, occasionally, in this foot. Pulse rather frequent; digestion impaired. Anodyne liniments and fomentations were applied, to relieve the pain, but proved insufficient, and opiates were resorted to.

For about two weeks moderate doses of Dover's powder occasionally were sufficient to render the patient comfortable. In three weeks the toes had assumed a gangrenous appearance. Mortification gradually extended over the foot and up the leg. Patient now experienced great pain. Large doses of opium were required. In four weeks two of the toes were removed without occasioning any pain. Deep incisions could be made in almost any part of the foot without pain. Tonics, especially quinine, were steadily administered, stimulants moderately given, and every means taken to maintain the patient's strength.

By the first of August superficial gangrenous patches had appeared within one inch of the knee joint. Here it halted in its progress. Various local applications, including the much vaunted charcoal and yeast poultice, were used. The application which proved most useful in soothing pain and destroying fetor was a lotion of liq. sodæ chlorinat. and tincture opii in warm water.

August 3d, consultation was held with Dr. C. C. Edwards, of Binghamton. Patient had now become considerably reduced in strength, and was gradually failing. Two plans of treatment presented themselves. 1st. To pursue the expectant plan and wait for the line of demarkation to be fully formed, and the soft parts to ulcerate through, then to remove the limb at the lowest point possible consistent with securing a good stump. It was thought, considering the patient's unfavorable condition, the adoption of this plan must soon result in a fatal termination of the case. Our only hope of prolonging the patient's life was in amputation of the thigh high up. Though the chances of success were extremely slight, it was decided that if the gangrene advanced no further for a few days to perform the operation.

Accordingly, on the seventh of August, I amputated at the middle of the thigh, by the anterior and posterior flap method, assisted by Drs. Smith and Boyle, of this place.

Upon removing the limb, it was noticed that the femoral artery did not bleed, and that it was completely occluded to a point about half an inch above where it was sawed. I removed the coagulum, and the blood flowed freely. Four ligatures were applied. The flaps were carefully approximated with deep and superficial silk sutures. A few adhesive straps and bandages completed the dressing.

One part of chloroform and two of ether was the anæsthetic employed. The femoral artery was compressed by an assistant. No tourniquet was used. The shock was apparently slight. Soon after the operation I commenced wetting the bandages with water and carbolic acid (thirty drops to a pint).

August 9th. Third day; the bandages were removed. It was evident there would be no sloughing, and that union by the first intention was taking place. The dressings (except the adhesive straps) were changed daily. The sixth

day union by the first intention was complete, and several of the sutures were removed.

Everything progressed favorably until about the fifteenth day, when it was discovered that an abscess had formed in the stump, which I opened through the cicatrix near the external angle of the wound. The discharge at first was considerable in amount, but gradually diminished and ceased in two weeks, four weeks from the date of operation. At that time the stump was soundly healed and entirely free from pain and tenderness.

I attribute the formation of this abscess to the bruising of the flesh against the extremity of the bone, as the patient had been moving about in bed quite freely not exercising due care to prevent it.

I have been thus careful in describing the after treatment, to show that union by the first intention, after amputations, may be obtained without resorting to Lister's method, or using any of the complicated antiseptic dressings. No pain was experienced after the operation except upon sudden movement. Although the patient is aged and rather feeble, his recovery is complete.

The results of this case must influence our minds strongly in favor of early amputation in all cases of senile gangrene, and at a point sufficiently high up to secure healthy condition of the blood vessels and good vitality of the parts.

The artery below the point of amputation was completely occluded by a firm clot, of reddish color, adhering to the somewhat roughened inner coat. The structure of the artery appeared considerably altered, being cartilaginous, with some calcareous deposit. The calibre of the artery was diminished and its natural resiliency lost.

Nitrite of Amyl as a Sedative.

The Boston *Medical and Surgical Journal* states that Dr. Lyman tried, with success, nitrite of amyl in a case of the opium habit, where, after two or three nights of complete wakefulness, consequent on breaking off the habit, a nervous irritation had ensued, most distressing to the patient and the friends. He had caused the patient to inhale the nitrite directly from the vial; two or three whiffs had been sufficient to bring on the therapeutical effects, which were followed by refreshing sleep. The flushing of the face had been the criterion for ceasing the use of the drug in this case.

Hospital Reports.

JEFFERSON MEDICAL COLLEGE HOSPITAL.

CLINIC OF PROF. GROSS, OCTOBER 2d, 1878.

(*Concluded from page* 429.)

Treatment of Chronic Synovitis of Knee-joint by the Actual Cautery.

A. E., aged seventeen years. You notice that this young woman's knee is very much enlarged. Her mother informs me that about four months ago she struck the knee against a door post, an accident which eventuated in synovitis of this joint. You remember that the knee has the largest articulating surface of any joint in the body, lined, as you know, by a delicate membrane, which, like other serous membranes, forms a shut sac, and ordinarily secretes only sufficient synovial fluid to lubricate the opposing surfaces of the articular cartilages, and make them glide smoothly over each other. In cases where there is a gouty or rheumatic diathesis, and in some forms of syphilis, there is a special tendency to inflammation of this membrane, which, in the course of the disease, may become involved throughout its entire extent and great structural mischief be done. Considerable distention of the joint may be produced by the free secretion from the inflamed surface, though the quantity in this patient is remarkably small. In chronic inflammation, as in the case before us, the fluid is more viscid than in the natural state, and becomes yellowish, amber color. It may even contain a few globules of pus. In addition to this there is doubtless more or less thickening of this membrane, from deposit of plasma in the meshes of the areolar tissue. This plastic deposit may tend to increase its density; or, on the other hand, the synovial membrane may be softened, from the inflammation, and even go on to gelatinoid degeneration, as described by Sir Benjamin Brodie.

It is very important that this joint should be restored to its natural condition before extensive nutritive and structural changes have taken place. In order to accomplish this object in the present instance, it will be necessary to employ means of counter-irritation more vigorous than any that have yet been adopted, since all others have uniformly failed. Blistering, which was faithfully, though ineffectually employed, is a good method of counter irritation, and doubtless did good in preventing thickening of the synovial membrane, and in keeping down effusions. When the disease resists such treatment, combined with the internal administration of the iodides, we can still resort to the best of all counter-irritants, the actual cautery. By its aid we are enabled to make an impression upon the deeper tissues, more lasting and more powerful than by any other means. The absorbents will be stimulated, while subsequent irritation of the joint will be prevented by putting it completely at rest by splints and extension for a

period of three or four weeks. When a joint, whether large or small, is the seat of inflammation, it is essential that it shall be kept absolutely at rest, a principle that applies with especial force to the knee, where the rubbing of such large opposing surfaces cannot fail to keep up and increase the morbid action.

The patient being unconscious, from the effect of chloroform, the cautery will now be applied. Having the iron heated to a white heat in a charcoal furnace, the cinders are rubbed off, and the surface of the knee on each side of the patella is well scored, a cloth being held under the cauterized spot to prevent the burning fat from running over the skin. This ascending smoke would, doubtless, prove a grateful incense to the old Arabian surgeons, especially to Albucasis, who wrote fifty six chapters on the use of the actual cautery.

The only application necessary after the hot iron is a cold-water dressing for a few hours, to be followed, to-morrow morning, by an emollient poultice. This must be kept up not only until the detachment of the eschar, but until the sores are healed, in order to favor the discharge of pus. There is usually no pain after the application of the cautery, but in case the patient should complain after recovering from the anæsthetic, we shall give her a full anodyne. At any rate, we shall place her upon the use of eight grains of the iodide of potassium and one-twelfth of a grain of bichloride of mercury, thrice daily, for its general effect upon the system, and its influence in removing the deposit in the interstices of the lining membrane. Her diet must be plain and unirritating, and absolute rest enjoined.

Hydrocele in a Child, and its Radical Cure.

This little boy, seven years of age, has, accord ing to his mother's statement, some trouble in the scrotum. You see at once that there is something wrong here. A cylindrical tumor, not pyriform, but quite elongated, occupies the left side of the scrotum, with the testicle not at the bottom, as in inguinal hernia, but at the junction of the lower with the middle third, posteriorly.

In a dark room we might determine the character of the tumor by testing its translucency by the light from a candle. We should find it to exist here, beyond a question. However, should there be any doubt upon the subject of its contents, we may employ the little magician we find in our pocket cases—an exploring needle—as it is usually called. After insertion, we notice that its withdrawal is followed by a few drops of a clear fluid, like spring or well water, which at once reveals the true nature of the case. It is nothing but a hydrocele, a collection of water in the vaginal tunic of the testicle, which, as you know, was originally a portion of the general peritoneal membrane that, in the latter stages of utero-gestation, descended with the testicle. Afterward the canal in the upper part of the funnel-shaped portion became occluded and impervious, making a distinct cavity for the testicle. Occasionally, owing to some defect in the absorbent vessels, the fluid naturally secreted by this serous membrane, accumulates and passively distends the sac. This condition sometimes follows a blow or injury to the part, but, as a rule, we can assign no cause for it whatever. The loss of balance between the secreting and absorbent vessels exists, but why, we are unable to say. As a consequence, however, there is a collection of watery secretion, which forms what we call a hydrocele. The fluid is albuminous, and has a saline taste. In some instances there may be fibrinous particles, or lymph, as a result of inflammation of the sac; and in long-standing cases the fluid may be dark-colored, almost black, from the presence of coloring matter of the blood. I have known a hydrocele to terminate in suppuration and evacuate spontaneously, but this termination is exceedingly uncommon. The testicle may be enlarged, and thus give rise to the dropsy, just as a tumor of the ovary, or an enlarged liver, will produce ascites.

In the present case the testicle is healthy. Many methods have been devised for the radical cure of hydrocele, which it would take too long to discuss. We will use in the present case the seton, which I prefer for children. Introducing a single thread first, and then evacuating the sac with a bistoury, you see that the tumor has disappeared, and the testicle now occupies the bottom of the scrotum. The thread need not be left in longer than forty-eight hours; by that time, if not before, sufficient inflammation will be excited to cause the adhesion of the opposing surfaces. I am not a believer in the idea that the cure is effected by altering the relations of the secernent vessels. On the contrary, I am satisfied that the sac is obliterated by an effusion of plasma. If the inflammatory action threatens to transcend the proper limits, it may be reduced by cooling applications, such as a solution of sugar of lead. The patient must be kept quiet in bed for several days.

Hydrocele in the Adult.

Mr. B., colored, 49 years of age, also comes before us with an enlargement of the scrotum, which has existed since 1875, and which we recognize as another hydrocele. In chronic hydrocele, as a rule, there is thickening of the spermatic cord, and enlargement of the testicle. This tumor is quite solid; at the same time it is somewhat elastic. It is rather pyriform in shape. I am not certain that this is a pure case of hydrocele; it may be a collection of water from disease of the testicle. You must be guarded in your statements to your patients, as to the nature of the affection, and the results to be expected from the operation, as it is easy in such cases to make an error in diagnosis. In performing the operation of tapping, the trocar must not be thrust in directly to any distance, otherwise it may injure the testicle.

Tapping our patient, we find the ordinary

limpid contents, and that the testicle is not enlarged. It is a case of simple hydrocele. Leaving the trocar in its place, we inject, through it, two drachms of a mixture containing equal parts of tincture of iodine and alcohol. This is thrown into the vaginal tunic of the testicle just relieved of its contents, and after rubbing it, so as to bring it thoroughly in contact with every part of the inner surface, it is allowed to remain. Now, in the other case, I introduced a seton, because in the child there were none of the structural changes in the vaginal tunic, such as we find in older persons, where it becomes necessary to adopt some more active means to excite inflammation. Dr. Levis, one of the surgeons of this hospital, uses fluid carbolic acid (ʒss to the ounce of water), which is injected in the same manner as the iodine; it is recommended as being painless and antiseptic, and I have used it in some cases with good results.

The patient must immediately be put to bed. To-morrow we may expect to have sufficient inflammation for our purpose; the scrotum will then, perhaps, be nearly as large as it was before the operation, but this will soon subside under evaporating lotions. He must be kept upon a restricted diet, and the bowels must be opened with castor oil, aided, if necessary, by puncture. If the operation prove successful the hydrocele will be radically cured; it can never return, for the cavity of the sac will be entirely obliterated by the inflammation, and consequent adhesion, of its walls.

Family Idiosyncrasy in Regard to the Use of Silver Nitrate.

Dr. Meriwether Lewis says, in the Nashville *Journal of Medicine and Surgery*:—

While we all know that certain persons have such idiosyncrasies in regard to opium, quinine, ipecacuanha, iodine, mercury, and various other medicinal agents in common use, few, if any, have heretofore observed any peculiarity in this respect in their employment of the silver nitrate. Having recently met an instance in point, it is published in the hope that others may be induced to do likewise, should they have had a similar experience in their use of this valuable and much employed agent.

Recently, while treating a young man for gonorrhœa, complicated with syphilis, an injection was prescribed as follows—

℞. Argenti nitratis, grs. viij
Aquæ destillata, ʒviij. M.
Fiat. injectio.
Sig.—Inject twice daily.

Notwithstanding the acute stage had passed, and all febrile symptoms had disappeared, the injection at each employment was followed by the most violent pain in the urethra, extending in a few minutes to the rectum, prostate, bladder, kidneys and spine. The pulse and temperature rose rapidly, and the muscles of the abdomen, together with the flexors of the lower limbs, showed a strong tendency toward clonic spasm.

The injection was used thrice; and each time the above mentioned symptoms were rapidly developed, persisting, in each instance, for half an hour or longer. Of course the idiosyncrasy was at once recognized, and the offending remedy discontinued.

Zinc sulphate, zinc and lead acetates were subsequently employed in the ordinary doses of the text-books, curing the gonorrhœa, and producing no other symptom besides the subjective sensation of scarcely perceptible stinging in the urethra.

The young man is about 21 years old, free from all organic disease of the vital organs, powerfully built, indeed, almost a Milo—able to "wrestle with an oak," and save his fingers in the conflict better than he did his *penis* in his late encounter with his inamorata.

A younger brother of the patient's contracted gonorrhœa at the same time, and was treated, after the case had become chronic, by a neighboring physician, who likewise prescribed the silver salt, and with results equally as bad, if not worse than mine.

The patient's father, a powerful, healthy, middle-aged man recently used a weak collyrium of silver nitrate for a case of conjunctivitis in his own person, with no better success—the salt acting in his case, as in the others, as a violent irritant.

Sexual Excesses and Masturbation as Exciting Causes of Insanity.

On this topic Dr. E. C. Seguin says, in the *Hospital Gazette*—

Sexual excesses operate in two ways. First, though there is a drain by the loss of semen, I do not believe that this factor is of much importance. But there is nervous exhaustion. The sexual act is accompanied by a semi-epileptic seizure. There is a degree of muscular spasm with a probable dilatation of the pupil

and a rise in temperature. When this act is inordinately repeated, a great strain is caused to the nervous system, leading to a variety of results, such as debility, paretic legs, impairment of memory, etc. Excesses or masturbation may lead to insanity, and it is a well recognized cause in a few cases. The number of cases produced in this way is considered to be quite large by some, and very small by others, This is not surprising if we consider the multiplicity of circumstances that may be involved. The various numbers only represent the particular views held by the different superintendents.

Secondly, there is the element of remorse that follows sexual excesses, especially self-abuse. A man commits sexual excesses and then greatly regrets it and feels mortified. The idea of remorse is constantly present in his mind, and he may never forgive himself. Some patients fifty and sixty years old have a few nervous symptoms, and because they masturbated when young, ascribe all their trouble to that cause, but in reality their disease is not the result of their transgressions.

By peripheral irritation I mean not only a nervous disturbance elsewhere than in the brain, but any irritation of any of the organs. Dr. Storer has written a small work on the influence of uterine diseases over mental troubles, and has shed considerable light on the subject. I have no doubt that to-day a large number of female patients in asylums need a specialist, and many could be thoroughly cured by the replacement of a uterine version or the curing of a uterine inflammation. Superintendents of asylums, as a rule, are incapable of attending properly to these maladies, and they have an aversion to calling in an outsider. Some have a great repugnance to such cases, for fear of being accused of assault. For very many reasons every asylum should have consulting physicians and surgeons. Dr. Storer cites case after case, showing a cause of insanity to be uterine difficulty, and European statistical reports point the same way.

Neither would I ignore similar facts in men. A specialist might sometimes relieve an insane patient entirely. Other peripheral injuries and internal diseases may likewise cause reflex insanity.

The Treatment of Baldness.

In the Atlanta *Medical and Surgical Journal*, Dr. George H. Rohe writes on this widely interesting subject.

Having been himself a sufferer from seborrhœa and consequent alopecia for six or seven years, the writer has, as may be supposed, tried a great many remedies with a view to its alleviation and cure. Arsenic internally, stimulating washes or oily applications, containing in the one case corrosive sublimate, in the other quinine, or tannin, in still another some of the stimulating oils, were used with no appreciable effect either on the formation of scales or the depilation. Finally, about two years ago, an item went the rounds of the medical journals to the effect that a French physician, whose name has escaped me, had found that the local use of a five per cent. solution of chloral hydrate was a sovereign remedy for the trouble under consideration. Rejoiced that at last I could appropriately shout "Eureka!" I began to use the chloral wash assiduously for about three months, following the directions given as accurately as possible. At the end of the three months the production of scales was more rapid and the fall of hair greater than ever. Disgusted with the failure of all the therapeutic measures which had been so highly lauded, I almost decided to let the affection takes its own course, and run the risk of a shiny bald pate at thirty. About that time the second volume of Hebra's classical treatise on diseases of the skin,* came to hand, and one of the first things I read was Kaposi's thorough article on alopecia. Impressed with the reasonableness of the views put forth by Kaposi, I determined to give his plan of treatment a trial, with the result of checking the fall of hair and diminishing the production of scales in a reasonable short space of time. I have since then recommended the plan in a considerable number of instances, and when it has been faithfully carried out, with uniform success.

The success of the method depends upon the use of an agent which, while mildly stimulant, removes the scales and thoroughly cleanses the scalp. This agent is the German or French soft soap (green soap, schmierseife, savon vert.) in alcoholic solution. This soap is now imported in large quantities and prescribed daily by the dermatologists of Boston, New York, Baltimore, Philadelphia and other cities. The soap, containing an excesss of alkali, saponifies the fatty matter of the sebaceous secretion, and it is thus easily removed. The alcohol greatly assists this action, and seems also to have an alterative action—if such an indefinite term is excusable—on the glands. The two may be combined as follows:—

℞. Saponis viridis (Germ.),
Alcoholis, āā. ℥ij.
Solve, filtra, et adde ol. lavandulæ gtt. xx–xxx.

The oil of lavender is added to cover the disagreeable fishy odor of the soap. The above makes a very handsome orange or wine-colored preparation, with a pleasant odor, to which the most fastidious will hardly object.

This is used as a shampoo every morning or evening, pouring one or two tablespoonfuls on the head. Upon the addition of water, and smart friction with the fingers, a copious lather is soon produced. After keeping up the shampooing process for four or five minutes, all the soap must be washed out of the hair by the free use of warm or cold water, and the hair thoroughly dried by means of gentle friction

* Hebra & Kaposi; Hautkrankheiten, 2 Band. Erlangen, 1876.

with a soft towel. The immediate effect experienced is a disagreeable feeling of tension of the scalp, as if it were stretched too tightly over the skull. To obviate this effect, and to keep the scalp from getting too dry, and thus, perhaps, set up a true pityriasis, it is necessary to follow up the shampooing with some fatty application, which may contain some mild stimulant, thus: Castor oil, 1 part, to alcohol 3 or 4 parts, with a little oil of rosemary or cinnamon, or the elegant pomades and oils of Bazin and other manufacturers may be used. But the best, as well as the neatest preparation that I have employed for this purpose, is the hydrocarbon known in commerce as cosmoline. This is a product obtained from petroleum. It is entirely bland and unirritating; never turns rancid, and is comparatively cheap. It may be obtained in the fluid form or as a soft solid.

This procedure, shampooing, drying the hair and applying the greasy preparation, must be repeated daily for three or four weeks. In the course of that time it will be discovered that the production of scales and the falling of the hair has been very markedly decreased. It will then suffice to repeat it two or three times a week for a month or two longer, after which a good shampoo once a week will usually succeed in maintaining a permanent cure.

Most patients will be alarmed after using this method at first, because the hair comes out in greater quantity than before. This is due to the fact that a large number of hairs are dead and only retained in their follicles by the plugging of the sheath with the accumulated sebaceous matter. The patient should, therefore, always be prepared for this result, and the cause of the increased falling of the hair explained to him.

It is not necessary, though more convenient, to cut the hair short during the treatment.

When the alopecia has lasted so long that the hair bulbs have become atrophied, nothing will restore the hair on those spots. Our endeavors must be directed to saving what remains. A prognosis favorable to the restoration of the hair must, therefore, be given with caution.

Reviews and Book Notices.

NOTES ON CURRENT MEDICAL LITERATURE.

——We do not know who O. S. Saunders, M.D., of Boston is; the name is not in the Massachusetts Medical Directory; but we respectfully acknowledge the receipt of an essay on Menstruation and Ovulation, by this author. It is stated to have been read before the Ladies Physiological Institute, of Boston, and published by request of said ladies. We suppose Saunders is a female, for certainly no male would have the —— well, we shall call it the hardihood, to read this essay before any ladies whatever; and as for the ladies of the institute —— here we are again at loss to choose our words, so we shall keep silence. Perhaps we judge hastily, for we confess to have read only one page of the book, p. 13, the one that contains what the author calls an "amusing" incident of "a lady of symmetrically voluptuous development," (ah!) who "was able to gratify her passion, and ovulate, without the aid of a member of the opposite sex" by a procedure all her own. (For sale by James Campbell, Boston.)

——October brought us two new medical journals. One is the *Southern Clinic*, edited by Dr. C. A. Bryce and J. R. Wheat, Richmond, Va. They announce their intentions in idiomatic American (we cannot say English) in these words: "We shall endeavor in every way to maintain that high standard of purity, and flat-footed squareness which every organ of the regular medical profession should hold." The second is the "*Medico-Literary Journal*, a monthly devoted to diffusion of medical knowledge among women," edited by Mrs. W. P. Sawtelle, San Francisco. The exciting cause of this periodical seems to be "Our Sanitarium," which is "the most healthy spot," etc.

——Dr. S. Weir Mitchell was selected to deliver the address dedicatory of the new buildings erected by the University of Pennsylvania for its dental school and medical laboratories. He showed his audience, in well-chosen words, the advantage reaped by medicine from the use of instruments of precision in diagnosis, and concluded with the announcement that the next great enterprise to which the University looks forward is the creation of a great American School of Veterinary Medicine.

——The treatment of placenta prævia is discussed by Dr. George Sutton, of Aurora, Indiana, in a reprint from the Transactions of the Indiana State Medical Society. He goes back to that recommended long ago, 1752, by Smellie: "Dilate with the hand and deliver at once."

——"*Progress*," the new weekly, edited and published by John W. Forney, in this city, is upon our table. It is in large quarto form, with handsome new type, and presents a wide range of literary, political, social, legal and artistic headings, under which every one must find something to entertain and instruct them. We wish it a long and prosperous career.

THE

Medical and Surgical Reporter.

A WEEKLY JOURNAL,

Issued every Saturday.

D. G. BRINTON, M.D., EDITOR.

The terms of subscription to the serial publications of this office are as follows, payable in advance:—

Med. and Surg. Reporter (weekly), a year,	$5.00
Half-Yearly Compendium of Med. Scienc.,	2.50
Reporter and Compendium,	7.00
Physician's Daily Pocket Record,	1.50
Reporter and Pocket Record,	6.25
Reporter, Comp. and Pocket Record,	8.25

For advertising terms address the office.

Marriages, Deaths, and Personals are inserted free of charge.

All letters should be addressed, and all checks and postal orders drawn to order of

D. G. BRINTON, M.D.,
115 South Seventh Street,
PHILADELPHIA, PA.

1879.

PREMIUMS FOR NEW SUBSCRIBERS.

Special Offer to Our Old Subscribers.

From and after October 1st, any new subscriber will receive the REPORTER

15 MONTHS FOR $5.00,

to wit, from Oct. 1st, 1878, to Dec. 31st, 1879.

To enlist the interests of our Old Subscribers in the extension of our circulation, we offer, if they will send us, along with their own renewals, the amount for ONE new subscriber for one year (who will be entitled to the 15 months mentioned) to send them either (1) the HALF-YEARLY COMPENDIUM, for 1879; or (2), the PHYSICIAN'S POCKET RECORD, for 1879; or any of our other publications, to the amount of $2.50. These publications will include the following works now in press:—

GOODELL. Lessons in Gynecology.
LANDOLT. Manual of Examination of the Eyes.
SAYRE. Organic Materia Medica.

Besides, already published, Napheys' *Surgical Therapeutics*, Napheys' *Medical Therapeutics*, Dobell *On Cough and Consumption*, Bernard & Huette's *Operative Surgery*, Butler's *Medical Directory of the United States, etc., etc.*

THE PROPOSED NATIONAL PUBLIC HEALTH BOARD.

Active measures are in progress toward the establishment of a National Public Health Board, for the purpose of improving public hygiene, for carrying out scientific and systematic investigation into the causes and preventive measures of epidemic, contagious and infectious diseases, and in collecting the vital statistics of the United States on some uniform and general plan. A memorial has been drawn up and will be presented to Congress with this object.

It is extraordinary how backward this country is in these matters. The indifference with which all subjects of State medicine are treated by Congress and by State Legislatures would seem to betoken a cynical indifference to human life, health and happiness, on the part of those elected to protect and further these aims. But, in fact, such an interpretation would be an unfair one. The neglect of such subjects arises from ignorance of the vast importance of sanitary science to the welfare of the commonwealth, and extends to the homes and health of the legislators themselves. Last winter we were present one day in the House of Representatives, when one member requested permission of the House to bring before it a matter relating to the heating and ventilation of the chamber, which, he added, was of immediate moment, as involving the health of members. In spite of this, objection was made to the introduction of the subject, and the order of the day was demanded.

This summer has taught a lesson which it seems will bear fruit. The loss by the yellow fever epidemic, one way with another, is set down in round numbers at *two hundred million dollars*. Say that this is a willful exaggeration, and divide it by eight, and there is left a loss in a few months of twenty-five million dollars. Now a most efficient national board of health, with all its officers of able men, with its machinery in good working order, with ample means to print and distribute its results, would cost

less than half a million dollars annually. In other words it would cost for fifty years far less than this epidemic has cost in five months! And of its good effect no intelligent man will doubt. We do not hesitate to say that in the future no epidemic of yellow fever equal to that of this summer would ever again visit our land, were such a board organized as it should be, with power to enforce its decisions.

But the Memorial before us asks for no such sum as we have mentioned. Indeed, its request is for a sum so small that any hesitancy in giving it would be inconceivable. It asks for *thirty thousand dollars*. And for what purposes? We quote the proposed organization of the board and the duties it proposes to perform. The provisions are:—

I. That the board shall be constituted by one medical officer from each of the following named departments, namely: The medical department of the army, the medical department of the navy, and the marine hospital service, and of two physicians from civil life, selected on account of their knowledge in matters pertaining to public health. That the medical officers of the government services for this board shall be detailed by the secretaries of war, of the navy, and of the treasury respectively, and that the three officers so designated shall select and recommend to the President, for appointment, the other two members of the board.

II. That the board so constituted shall be known as the United States Public Health Board, and that its duties shall be to obtain information upon all matters affecting the public health; to consult with the superintendent of the census with regard to the disease and mortality statistics to be collected and prepared under his direction; to advise the several departments of the government, the executives of the several States, and the commissioners of the District of Columbia, on all questions submitted by them, or whenever in the opinion of the board such advice may tend to the preservation and improvement of the public health. To establish a standard of the qualifications which should be possessed by a municipal health officer, to examine those who may present themselves for examination as to their fitness for such a position, and to furnish suitable formal certificates to those found to be properly qualified.

III. That the detailed officers shall receive their usual payments, allowances from their respective departments, and that the two physicians selected from civil life shall each receive compensation at the rate of five thousand dollars per annum from the funds appropriated for the use of this board. That the ordinary sessions of the board shall be in Washington, where it shall have its office, and that at least one member of the board shall be always on duty during the usual office hours.

IV. That the board shall prepare and present to Congress an annual report of its operations, with such recommendations as may seem to it advisable.

V. That when deemed specially desirable by the board it may send one or more of its members to any point within the United States, for the purpose of investigating a disease or other matter specially affecting the public health, and that the actual traveling expenses of the members so sent shall be paid from the funds appropriated for the board.

For the present such an organization is the most that we can hope for. But when this nation deserves to be called an *enlightened* one, when our legislators are awake to their real duties to their constituents, when the government is actually carried on for the greatest benefit of the people, we shall have a department of the National Government as important as that of War, or for Internal Affairs, with a Secretary of Sanitation in the cabinet, and as a result, epidemic pestilence will be as impossible then as an extensive famine is now.

Notes and Comments.

New Microphone and Stethoscope.

At a late meeting of the Franklin Institute, in this city, Dr. Isaac Norris presented and described a new form of microphone, devised by himself, in which he employs a cylinder of wood or other light material, about 3″ in diameter, and 4″ long, placed horizontally, over either end of which is stretched a membrane, forming two diaphragms. To the centre of one of the diaphragms is attached a silk thread, which passes over a small pulley, and has suspended at its end a metal cone with a carbon point. This cone is made hollow, in order that its weight may be adjusted by adding small shot. Directly under the cone is placed a carbon rod, adjustable perpendicularly, so as to secure a very delicate contact. The electric circuit is completed through it, the cone, and a Bell telephone. This instrument is very sensitive to sound, and with a stethoscope, connected with the cylinder by means of a flexible tube, was designed to aid in the study of the sounds of the heart and lungs.

Temperature in Fever.

A correspondent in Washington takes us up on what we said about fever on page 366, and thinks that he figuratively throws us over by sending us a copy of the fourth Toner lecture, in which it is maintained that elevation of temperature is "the essential part of fever." But we don't succumb even to such authority. That elevated temperature is generally present, we admit; but there are also cases of fever where the mercury sinks below the norm; and the very highest temperature we have seen recorded was not in fever at all, but in hysteria. Again, it is notorious that neither the symptoms nor the gravity of fevers bears a constant ratio to the temperature.

On Diphtheria.

Dr. E. M. Snow says, in his last report as Registrar of the city of Providence—

In connection with this subject I think it my duty to ask the attention of the people of Providence, and especially of parents, to the following statements:—

1. No case of diphtheria occurs without an adequate cause. This is self-evident.

2. The cause of nearly all cases of the disease exists in the houses or premises, or within a few feet of the houses where the cases occur.

3. The cause of nearly all the cases that occur in the city is breathing impure air from privy vaults or sink drains, or cesspools; or drinking impure water.

Much observation and long-continued and careful investigation have perfectly satisfied me of the truth of these propositions, and they are applicable to all cases, whether in the tenements of the poor or in the mansions of the rich.

Results of Opium Smoking.

Some remarks on this subject are recorded by Dr. Ayres, Colonial Surgeon at Hong Kong. According to the opinion and experience of this officer, it is a misapprehension to attribute to the smoking of opium, as a rule, the fearful and ghastly results with which it is usually credited. When offenders are committed to jail their allowance of opium is frequently stopped altogether, but no evil results ensue. It would appear that opium eating has been confused with opium smoking, and that many who practice the latter are the subjects of scrofulous diseases in their worst forms and most advanced stages.

Doubtful Novelties.

Dr. W. P. Gibbons, of California, does a good work in the October number of the Pacific *Medical and Surgical Journal*, by exposing the pretended new remedies from California called *Yerba Santa*, *Berberis Aquifolium*, *Cascara Sagrado* and *Yerba Reuma*. They have been pushed on the profession by a Dr. I. H. Bundy, and by the efforts of Parke, Davis & Co., of Detroit. We regret to add that several medical editors have either been entrapped or have deliberately been bargained into giving their sanction and aid to this form of mercantile exploitation of the profession and their patients. We have a right to demand of them that they now publicly retract their statements about these pretended remedies.

Remedies in Epilepsy.

The last two are veratrum viride and cannabis indica. Dr. E. F. Mordough, of New York, has recommended the former; and Dr. Wharton Sinkler, of this city, the latter. The latter says (Philadelphia *Medical Times*, Sept. 28th), "I have not been able to find any reference to the use of Indian hemp in epilepsy." If he had turned to *Napheys' Medical Therapeutics*, 5th Ed., p. 48, he would have found that it has been tried long since, without satisfactory results.

Effects of Publicity on Suicide.

An Italian medical society which meets at Pisa, recently sent a request to the various Italian papers to cease reporting suicides, stating that after careful study of the subject they had reached the conclusion that such publicity tends, at least in Italy, materially to increase the number of those who destroy themselves. The motive is sometimes imitation, sometimes a morbid thirst for notoriety.

Carbolic Acid in Smallpox—A Claim for Priority.

In the *Lancet*, for October last, Dr. Eade, of Norwich, and Dr. Robert Bell, of Glasgow, both put forward, with some sub-acidity, their respective claims to the priority of suggesting the use of carbolic acid in small-pox. Dr. Bell had rather the advantage, his first case being in December, 1871.

Now, we would call the attention of these gentlemen, and others interested in the question, to the Medical and Surgical Reporter, for January 6th, 1871, page 20, where they will

find a letter from Dr. D. P. Boyer, of this city, advocating the use of this drug in this disease. So both of the claimants can step down.

"Porphyrized" Iron.

This threatens to be a rival of "dialysed" iron. According to M. Cabrol, of Paris, it is superior to all preparations yet discovered. He says it is well known that iron oxidizes very rapidly when exposed to the air, and owing to this many of the simple forms of the pure iron cannot be readily used as medicines. The "porphyrized" metallic iron, by the process of Coquet is, however, to all intents and purposes, unalterable. This process is based on the preservative influence of cane sugar, and is very simply prepared by mixing the pure metal with cane sugar, and then drying. This form may be prescribed either in pill or powder, and in cases of fatigued stomach he administers with the iron a few teaspoonfuls of milk or alkaline pastilles. He writes enthusiastically of the beneficial and unexpected good effects of this iron in many cases.

Urticaria Caused by Cinchonidia.

Dr. T. W. Rankin writes to the Cincinnati *Lancet and Clinic*—

Out of six cases recently met with in my practice, in three have I verified the soundness of our inferences by entire disuse of the cinchonidia for a few days, and then repeating it. Invariably did the erythema and intumescence disappear after withdrawal of the remedy, and reappear when again administered. I have one patient, a woman, to whom any form of Peruvian bark is wholly inadmissible, from the fact that it occasions a marked erythematous eruption, accompanied by the most unbearable itching.

Embalming the Dead.

The modern method of embalming the dead subject is, according to Dr. B. W. Richardson, very rapid and simple when it is compared with the ancient. A large artery of the dead body is exposed and opened, and into the vessel a hollow needle is inserted. The needle is firmly tied in its place. Through the needle a solution of chloride of zinc is injected slowly until it has found its way into every part. The principal art that is required in this process is to be very careful not to use too much force in driving the fluid into the tissues, and in not using too much fluid. The fluid which answers best is made as follows:—Into two pints of water, at fifty degrees Fahrenheit, add chloride of zinc slowly until the water just refuses to take up any more of the salt; then add one pint of water more, and two pints of methylated spirit. The five pints so produced are a sufficient quantity for embalming an adult body. The solution can be injected quite cold, and it will find its way readily over the vessels. If expense be not considered, pure alcohol may be used instead of the methylated spirit. The effect of the solution is shown by its making the surface of the skin white, firm, and, for a short time, slightly mottled. The apparatus necessary is extremely simple; it consists of a small ordinary anatomical case, and of an injecting bottle and syringe.

Effect of Coffee.

Professor Binz has been investigating the action of the constituents of coffee, which he finds possess a certain antagonism to the action of quinine. He injected beneath the skin of a strong dog .7 gramme of caffein, and the temperature in an hour rose one degree Centigrade. With smaller doses (.2 grm.) the rise is slighter (.3° C.), and after large doses (about 5 grm.) the elevation may be as much as 1.4° C., without there being any other disturbance obvious, except a somewhat stiff condition of the animal's muscles. Large doses also caused a considerable elevation of temperature, and death, with convulsive symptoms. This effect of caffein was hindered by curara and by artificial respiration.

Manitoba as a Health Resort.

The editor of the *Canada Lancet* says of this remote province—

Several cases of debilitated health from incipient lung and heart affections, have been completely restored to health by a sojourn of two or more years in Manitoba and the Northwest, and while we are unable, from lack of sufficient data, to particularize or discuss the *pros* and *cons* in detail, yet, nevertheless, sufficient information has come to our knowledge to confirm us in the opinion that the climate of Manitoba and the Northwest offers signal advantages to the invalid, and especially to sufferers from incipient constitutional affections of any kind.

Correspondence.

Ulceration of the Female Urethra.

Ed. Med. and Surg. Reporter:—

Every physician who has been in practice any considerable length of time must have often seen a class of cases with a history something like the following. There will be frequent desire to urinate, and after each act, although the bladder will be emptied, the patient will experience little or no relief; there will be vesical irritation and tenesmus, with a pain which is described by her as a "bearing down" pain, and she will be in such terrible agony when urinating as to cause her to sometimes be unable to control her cries. When the physician is consulted by this class of patients, they will often insist that there must be some displacement of the uterus; and almost any physician, without an examination, would conclude, from the symptoms, that the patient was correct in her surmises; but upon an examination he will often be puzzled and amazed to find the uterus in proper place, and, in fact, everything within the vagina in a normal condition. Many times have I been put to my wits' end to account for the symptoms described by my patients, after I had searched in vain with the index finger and vaginal speculum, and sometimes, in my own mind at least, unjustly accused my fair patients of exaggeration, or, in other words, of being hysterical. Never, until within the last six months, have I looked in the right place for the difficulty, viz., the urethra.

Case 1.—Mrs. G. called at my office saying that she had been recommended to call upon me, by her physician, and have me adjust one of my "soft rubber and silver wire pessaries," as she was suffering from a displaced uterus, of long standing. I made an examination, but could find no displacement. While searching for the difficulty in the vagina, I obtained the following facts from the patient. She had only passed about a tablespoonful of urine in the last twenty-four hours, not from retention, but each time she made the attempt was forced to desist, from pain. I also noticed that the bladder was somewhat distended; while making the examination I accidentally passed my finger along the anterior wall of the vagina, over the urethra, the movement caused the patient great pain, and I then found, upon careful examination, that the urethra was swollen until it presented to the finger a ridge as large again as a lead pencil, and the least pressure caused her fearful pain. I then introduced the catheter, which caused the patient to almost have spasms, from the pain the operation produced, and drew off a large quantity of very offensive urine; after which I withdrew the catheter and introduced a piece of large-sized glass tubing, one end of which was rounded, which I used for a speculum, and found, just within the meatus, an ulcer about a quarter of an inch long, and extending half-way around the urethra; with my rude speculum I could not see the neck portion of the urethra, but I have no doubt there was another situated at that point, as there was a tender spot touched each time the catheter was passed.

Since this case I have treated six others, some of whom I had unsatisfactorily treated before, and in each case I found an ulcer situated in nearly the same location, but differing in size, from a mere crack to the size of the ulcer described. In each of the above cases I touched the ulcers with nitrate of silver, and afterward syringed out the urethra with a solution—tannic acid, grs v, glycerine, ℥ss, aquæ, ℥ss, carbolic acid, gtts. xv—to be used twice a day. I also passed a catheter each time; the injection was used to prevent any contraction by the healing of the ulcer. Four of these cases are now entirely well, and the other two are still under treatment, but are progressing favorably. One of these cases had been to Chicago and had been treated by a physician in high standing, for uterine retroversion, which may, of course, have existed when she was there.

There are many causes for urethral ulceration, among which, I have no doubt, may be numbered uterine displacements, as in one of the cases which I treated there existed a prolapsus, the pressure from which, upon the bladder, may have caused the ulceration. I introduced, in that case, the pessary spoken of above, with the best results; it kept the uterus in place until the ulceration of the urethra was healed. I then removed it, and she has had no return of either the prolapsus or the ulceration. Another of the cases was, I have no doubt, either syphilitic or gonorrhœal, as she has had the first for years, and has the second now. Other fruitful sources of this difficulty are, undoubtedly, decomposed urine, from being long retained, want of cleanliness, etc., which is surely, in women, "next to godliness."

Greenville, Mich. O. E. Herrick, M.D.

Veratrum Viride in Puerperal Peritonitis.

Ed. Med. and Surg. Reporter:—

The following case has some points of special interest: Mrs. B., an apparently healthy married lady, multipara, age twenty-seven; eight and a half months pregnant. She suffered somewhat from varicose veins in the left leg. The treatment was the application of bandages every other day. She improved in her general health, showing no other disturbance whatever. Easy labor came on at the expiration of the forty-two weeks of gestation, and she gave birth to a living child weighing about twelve pounds. My presence during the second stage of what I have spoken was of no use whatever, as far as manual or instrumental assistance was concerned. The administration of two doses of ergot brought a good contractile power of the uterus, and combined with this, on the application of Crede's method, an enormous placenta was expelled, being at least two and a half times larger and heavier than the normal size. Soon

after, I gave my patient an anodyne and left her while she was sleeping. I visited her four or five times after her confinement, and, until the seventh day, everything was doing remarkably well; but on the morning of the eighth day, when she left the bed, she was taken by a violent rigor, which lasted about two hours, and was followed by free perspiration. I was called to see her at seven o'clock, P.M., and found her complaining of constipation, headache, pain in the epigastric region, and impaired vision; pulse rapid and feeble, rising 145 per minute; anxious expression of countenance; skin cold, damp; tongue white, dry, fissured, especially at the middle; on percussion a tympanitic sound could be heard, but there was but little tenderness on pressure. Temperature very high. She stated to me that the lochial discharges were fetid and very abundant, mixed with a small quantity of blood. I ordered her a bottle of citrate of magnesia, and told her to take half of its contents at once, and repeat the dose after half an hour if the first did not operate.

I came back at eight o'clock P.M., and found that the medicine had not acted; I gave her three comp. cath. pills, U. S. P., and also eight drops of veratrum viride every fifteen minutes. The therapeutic value of the veratrum was thoroughly exhibited by the fourth dose, when the pulse fell to 110. One-sixth of a grain of morphia was given hypodermically. The administration of the drug was continued every four hours. Permanganate of potash in the proportion of ten grains to the pint of water was used as an injection three times a day.

September 9th, seven o'clock A.M. Pulse 92; expression of the patient better; bowels have not moved; I prescribed oleum ricini and spts. of turpentine, āā. f.℥ss; the medicine acted promptly. Veratrum viride was discontinued. Sulphate of quinina and calomel, āā. grs.x, were administered every day.

September 10th, nine o'clock, A.M. Pulse 85; general appearance better.

September 11th, nine o'clock A.M. Pulse 82; the patient seemed to be well.

September 12th, ten o'clock A.M. Pulse 70, and she complained of great debility; I then ordered the quinia and calomel to be discontinued.

September 13th, three o'clock P.M. The patient left the bed perfectly well.

SEGUNDO ZERTUCHE, M.D.

Philadelphia, 1878.

A Case of Purpura Hemorrhagica.

ED. MED. AND SURG. REPORTER:—

I was summoned, August 7th, 1878, to see G. W. Moss, aged sixty years. I found him in a very alarming condition, owing to the loss of blood from the cavities of the mouth and pharynx. Upon examination, I found extravasation beneath the mucous membrane of the parts. He frequently vomited large quantities of dark, venous blood. The surface of the body and lower extremities were covered with dark purple spots, about the size of a silver quarter dollar, owing, no doubt, to minute extravasation beneath the surface of the skin. He complained of pain in the head, with vertigo, etc. I suspected extravasation into the serous cavities. The temperature seemed to be about normal. The capillary circulation was impeded. I considered the objects of treatment was to restore the normal condition of the blood and the capillary vessels, and to arrest the hemorrhage. With reference to these objects, I placed him on a light, nutritious diet, with small quantities of wine at frequent intervals. I gave him dilute sulphuric acid, also gallic acid, to control the hemorrhage.

August 2d. My friend, Dr. J. N. Goodson, met me in consultation. We found the patient growing worse; we decided, in connection with the above treatment, to put him under the sedative influence of veratrum viride.

August 3d. I found the patient still bleeding profusely, and suffering from great prostration. His condition was truly deplorable. I decided to put him on ergot, in connection with tonics and stimulants.

August 4th. I found him gradually improving. I continued the ergot until the hemorrhage ceased. He made a good recovery.

Lamar, Mo. MARCUS CARTER, M.D.

NEWS AND MISCELLANY.

Reports of the Yellow Fever for Week Ended November 15th.

NEW ORLEANS, LA.—For the week ended November 15th there were 11 deaths from yellow fever. Impossible to procure accurate number of new cases. No new cases or deaths for the past 24 hours.

CLINTON, LA.—The first case of yellow fever occurred September 7th. Among the white population there have been 40 cases and 15 deaths; among the colored people 56 cases and no deaths.

MORGAN CITY, LA.—12 new cases of yellow fever and 1 death during the last week.

DELPHI, LA.—The first case of yellow fever occurred in August. Total cases to date, 100; deaths, 50. Both physicians died early.

MOBILE, ALA.—There were 21 new cases of yellow fever during the past week and 8 deaths.

VICKSBURG, MISS.—There were 4 new cases of yellow fever and 3 deaths during the past week. For the same period there were 8 cases and two deaths in the surrounding country.

PASS CHRISTIAN, MISS.—Three new cases of yellow fever during the last week; no deaths. The last case occurred on the 10th, and the last death the 3d instant.

CHATTANOOGA, TENN.—Two new cases of yellow fever and 2 deaths during the past week. Last case and last death occurred on the 10th instant, both colored.

OSYKA, MISS.—The first case of yellow fever occurred July 30th. Total number of cases to date 227; total deaths 30.

Moscow, Miss.—Population 185. First case of yellow fever August 31st; last case November 3d. Total cases 71; deaths 35.

McComb, Miss.—First case of yellow fever Sept. 28th. Total deaths to date 21.

Lake, Miss.—To Nov. 1st, there had been 300 cases of yellow fever and 86 deaths.

Canton, Miss.—Total cases of yellow fever to Nov. 1st, 919, deaths 176.

Port Gibson, Miss.—To Nov. 5th, there were 655 cases of yellow fever and 116 deaths.

Havana, Cuba.—16 deaths from yellow fever and none from small-pox, for the week ended Nov. 9th.

National Yellow-Fever Relief Commission.

The following circular, with an accompanying form, has been distributed by this body.

Washington, D. C., November 1st, 1878.

To Yellow-Fever Relief Associations, Committees, Etc.:

At a Meeting of the Executive Committee of the National Yellow-Fever Relief Commission, held on October 30th, 1878, the following resolutions were adopted, and directed to be forwarded to the various Relief Associations throughout the United States:—

"In prosecuting the duties which have required the attention of this Commission, we have witnessed with profound emotion the widespread evidences of a noble, tender, practical, humane sympathy. At the cry of the stricken and dying, not only have words of kindness been spoken, but deeds have been done and sacrifices have been made, which have embalmed the beneficence in the memory of the age. From all sections of the country, the treasures of the people have been willingly and promptly offered, and many, as voluntary victims on the altar of humanity, have fallen before the face of death while giving their personal ministrations for the relief of the suffering. The influence of such noble charity and moral heroism should not be allowed to pass away, leaving no deeper impression than can be made by the daily newspaper record. We deem it to be of untold advantage, not only in demonstrating our common humanity, but in binding more firmly in loving brotherhood the people of our great community of States, that the history of this grand sympathetic movement of the hearts of the people be made a part of the history of the nation, and that the permanent record be scattered widecast over the land. With the view, therefore, of making a full report to Congress at the beginning of its coming session, and of asking that the same be printed in book form for public distribution, it is—

"*Resolved*, That all relief committees and other organizations which have contributed in aid of the yellow-fever sufferers of the South during the present epidemic, be requested to communicate to this Commission the gross amount they have collected, and in what manner they have disposed of their funds, together with such other information as will give a history of their benevolent work.

"*Resolved*, That a committee of three, of which Surgeon-General Woodworth, of the Marine Hospital service, shall be chairman, be designated by the chair to prepare and edit this report, and that they be empowered to employ such clerical assistance as may be deemed necessary."

Wheeling and Ohio Medical Society.

On October 4th the Wheeling and Ohio County Medical Society met and elected the following officers for the ensuing year. President, Dr. John Frissell; Vice President, Dr. S. Sepson; Secretary, Dr. B. Ward; Treasurer, Dr. J. C. Hupp; Board of Censors, Drs. Botes, Sr., Hazlett and Hildreth.

Medical Students in Germany.

This winter shows an increased number of medical students at the German Universities. Vienna leads off, with 658; Würzburg comes next, with 475; then follow Munich, with 456; Dorpat, with 387; Berlin, with 346; Leipzig, with 335; Zurich, with 189; and the remainder of the twenty-six universities in which instruction is given in Germany with classes ranging from 40 to 150.

Personal.

—Dr. C. C. Parry, of Davenport, Ia., has deposited in the Academy of Sciences, at that city, his large botanical collection of thirty thousand specimens, the labors of thirty-six years.

—Dr. W. N. Hammond has brought suit for libel against Dr. John P. Gray, editor of the American *Journal of Insanity*, for printing an article by Dr. E. Grissom, alleged to reflect on Dr. H's character. This action of Dr. Hammond's cannot meet the approval of the profession. Dr. Grissom's article was read at the meeting of Superintendents in Washington. In accordance with uniform custom there were accepted for publication in the *Journal of Insanity* the official proceedings of this "American Association of Medical Superintendents of the Insane," and this address and the debate upon it were parts of that report. Such a document could hardly be refused, and any injury which Dr. Hammond has sustained must date back to the Association. The position of Dr. Gray is different from that of editors in general. The *Journal of Insanity* is the property of the State, and his connection with it is solely as the servant of the State.

—The death of Mr. John Hilton, of London, which took place in September last, will be learned with regret by many readers of his works in this country. He was in his seventy-fourth year.

Items.

Correction.—In Dr. Hooper's letter, page 412, for *lupoid* read lepoid.

—According to Prof. Trélat, the deaths in the Paris hospitals, from phthisis in its various forms, count up the appalling number of 25 per cent. of the total deaths from disease.

—At the Hygiene Congress of Paris it was stated, during the discussion on the influence of tobacco on health, that Dr. Strohen, eighty-six years of age, the father of eleven children, and in the enjoyment of perfect health, has, for sixty-five years, smoked fifteen cigars daily.—*Gaz. Hebd.*, October 4.

—Notwithstanding the numerous high posts which the late Baron Rokitanski held, the emoluments he derived from them were very moderate, and he died almost a poor man for one in his distinguished position. In consideration of his services to science and the State, the Government, besides a continuance of his pension to his widow, has conferred upon her a "special donation."

Anti-Vaccination in Canada.

Opposition to vaccination in Montreal has of late happily subsided, and there is little likelihood of another outbreak such as the ignorance of this great preventive measure caused, not many months since, in Canada. Not only have the Roman Catholic clergy lent their wide and potent influence, by publicly commending the efforts of the Board of Health to stay the ravages of small-pox by means of vaccination, etc., but the same people who, a year ago, would not allow a physician or health officer to cross their thresholds, are now seen to submit with comparatively ready acquiescence to their children being vaccinated. The reports presented at the meetings of the Board of Health satisfactorily show that there are but very few whom the health officers are unable to persuade to consent to the safest and most approved treatment which they employ. The wonder is that the irresistible influence of the clergy was not brought to bear on this matter long ago.

QUERIES AND REPLIES.

Dr. "*A. H. B.*" will find a useful prescription in the following:—

R. Kerosene oil,	fluid ounce j	
Lime water,	fluid drachms vj	
Comp. spts. lavender,	fluid drachms ij.	M.

SIG.—Give a teaspoonful three times daily until the odor of the kerosene is noticed in the urine. Then omit three or four days.

It has proved quite satisfactory in my hands in treating chronic muscular rheumatism, especially. The only use of the water and lavender being to disguise the oil.

La Fayette, Ala. M. J. ELEY.

OBITUARY.

DR. LOUIS E. GILLIARD,

Of Philadelphia, died of scarlet fever (contracted from a patient,) Nov. 3d, aged 24 years. He was a graduate of the Philadelphia High School, and of the Medical Department of the University of Pennsylvania, 1876, and from the Philosophical Department the same year. He held the position of Librarian to the Medical Department. The following resolutions were passed by the Alumni.

"At a special meeting of the Alumni Association of the Auxiliary Department of Medicine of the University of Pennsylvania, held Saturday, November 9th, the following resolutions were adopted:—

"WHEREAS, it has pleased God, in His divine providence to remove from us our esteemed fellow-member and friend, Louis E. Gilliard, A. M., M. D., Ph.D., in the midst of his usefulness, and on the threshold of his rapidly opening professional career, under circumstances redounding to his honor as a friend of humanity and a devotee of science; and,

"*Whereas*, We have, during his years of association with us, viewed with pleasure his earnest efforts and faithful zeal for the advancement of medical knowledge, combining, as he did, able scientific attainments with rare social qualities and genial, generous disposition, Therefore be it

"*Resolved*, That we tender to the family of our deceased friend our sincere sympathies in this their sad hour of bereavement, and that we cause a copy of these resolutions to be transmitted to them, and also that this be published in the *Public Ledger*, *The Philadelphia Medical Times*, and the MEDICAL AND SURGICAL REPORTER.

DE FORREST WILLARD, M. D.,
ROLAND G. CURTIN, M. D.,
GEORGE Y. MCCRACKEN, M. D.,
} Committee.

MARRIAGES.

CATLIN—PRIESTLEY.—On Thursday, October 31st, 1878, at Northumberland, Pa., by the Rev. Stephen H. Camp, of Brooklyn, N. Y., the Rev. Hasket D. Catlin, of New York City, and Miss Hannah T. Priestley, eldest daughter of Dr. Joseph Priestley, of Northumberland, Pa.

CRISWELL—HUGETT.—In Milan, Ill., October 31st, by Rev. M. Noerr, Matthew Criswell, M.D., of Hamlet, and Annie C. Hugett, of Milan.

HALL—POTTS.—Thursday evening, October 10th, at 7½ o'clock, by the Rev. C. H. Daniels, at the house of the bride's father, Dr. O. G. Potts, No. 364 West Seventh street, Joseph L. Hall, Jr., of New York city, and Carrie Lee Potts.

MILLER—COOPER.—In this city, October 31st, by the Rev. George H. Houghton, Rector of the Church of the Transfiguration, Dr. Thomas S. P. Miller and Miss Amanda Cooper.

DEATHS.

BURCHARD.—In Cochranton, Pa., November 1st, of typhoid fever, H. M. Burchard, M.D., in the thirty-ninth year of his age.

HASSLER.—In Philadelphia, on the 9th instant, Annie Kate, wife of Ferdinand A. Hassler, M.D., and daughter of Eli S. Burnett.

HOFFMAN.—Suddenly, on the 5th instant, at his residence in St. Louis, Mo., Dr. H. L. Hoffman, in the eighty-second year of his age.

LANSING.—At his residence, No. 104 East Twenty-second street, Wednesday morning, November 6th, 1878, G. C. Lansing, M.D.

LOTT.—Rev. Henry Ray Lott, M.D., at New Brunswick, N. J., on Wednesday, November 13th, 1878.

MORRIS.—At Binghamton, on the 10th instant, at 8 o'clock, Moreau Morris, Jr., aged twenty years and nine months, only son of Dr. Moreau Morris, Superintendent of the New York State Inebriate Asylum, and formerly of New York city.

MUNNS.—On the 13th instant, Eliza, A., wife of Dr. Cuthbert L. Munns, of Philadelphia.

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de 1ère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

SAVORY & MOORE, 143 New Bond Street, London.

PARIS, 1867. 1868. 1872. 1873, VIENNA

Prize Medal.

Silver Medal.

Gold Medal.

Medal of Merit

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 46 Rue Bonaparte, Paris

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUCERA & CO., Agents,

NEW YORK.

TO PHYSICIANS.

THE scarcity and high prices of Cinchona barks and Sulphate of Quinia, and the prospect of only a slight reduction in these prices, makes the present a favorable opportunity of calling the attention of the profession to the *combination of all the bark alkaloids.*

Much attention has been given to this subject in Europe and India.

The growing appreciation by the medical profession of the United States of

CINCHO-QUININE

is due to the fact that it retains the important alkaloids IN COMBINATION, — a combination which in practice is *preferable to perfect isolation or separation* of these alkaloids.

In addition to its superior efficacy as a tonic and anti-periodic, it has the following advantages, which greatly increase its value to physicians : —

1st, *It exerts the full therapeutic influence of* Sulphate of Quinine, *in the same doses*, without oppressing the stomach, creating nausea, or producing cerebral distress, as the Sulphate of Quinine frequently does ; and it produces much less constitutional disturbance.

2d, It has the great advantage of being *nearly tasteless.* The bitter is very slight, and not unpleasant to the most sensitive, delicate woman or child.

3d, It is *less costly :* the price will fluctuate with the rise and fall of barks, but will always be much less than the Sulphate of Quinine.

4th, It meets indications not met by that Salt.

The following well-known Analytical Chemists say : —

"UNIVERSITY OF PENNSYLVANIA, Jan. 22, 1875.
"I have tested CINCHO-QUININE, and have found it to contain *quinine, quinidine, cinchonine, cinchonidine.* F. A. GENTH,
Professor of Chemistry and Mineralogy."

"LABORATORY OF THE UNIVERSITY OF CHICAGO, Feb. 1, 1875.
"I hereby certify that I have made a chemical examination of the contents of a bottle of CINCHO-QUININE ; and by direction I made a qualitative examination for *quinine, quinidine,* and *cinchonine,* and hereby certify that I found these alkaloids in CINCHO-QUININE.
C. GILBERT WHEELER,
Professor of Chemistry."

"I have made a careful analysis of the contents of a bottle of your CINCHO-QUININE, and find it to contain *quinine, quinidine, cinchonine,* and *cinchonidine.*
S. P. SHARPLES, *State Assayer of Mass.*"

TESTIMONIALS.

"WELLFLEET, MASS., Nov. 17, 1876.
"I have used CINCHO-QUININE, and can say without any hesitation it has proved superior to the sulphate of quinine. J. G. JOHNSON, M.D."

"MARTINSBURG, MO., Aug. 15, 1876.
"I use the CINCHO-QUININE altogether among children, preferring it to the sulphate.
DR. E. R. DOUGLASS."

"LIVERPOOL, PENN., June 1, 1876.
"I have used CINCHO-QUININE, obtaining better results than from the sulphate in those cases in which quinine is indicated.
DR. I. C. BARLOTT."

"RENFROW'S STATION, TENN., July 4, 1876.
"I am well pleased with the CINCHO-QUININE, and think it is a better preparation than the sulphate. W. H. HALBERT."

"ST. LOUIS, MO., April, 1875.
"I regard it as one of the most valuable additions ever made to our materia medica.
GEORGE C. PITZER, M.D."

"RICHMOND, VA., March 28, 1877.
"I believe that the *combination* of the several cinchona alkaloids is more generally useful in practice than the sulphate of quinine uncombined.
"Yours truly, LANDON B. EDWARDS, M.D.
Member Va. State Board of Health, and Sec'y and Treas. Medical Society of Va."

"CENTREVILLE, MICH.
"I have used several ounces of the CINCHO-QUININE, and have not found it to fail in a single instance. I have used no sulphate of quinine in my practice since I commenced the use of the CINCHO-QUININE, as I prefer it. F. C. BATEMAN, M.D."

"NORTH-EASTERN FREE MEDICAL DISPENSARY, 908 East Cumberland St., Philadelphia, Penn., Feb. 29, 1876.
"In typhoid and typhus fevers I always prescribe the CINCHO-QUININE in conjunction with other appropriate medicines, the result being as favorable as with former cases where the sulphate had been used.
"F. A. GAMAGE, M.D."

ARTIFICIAL EYES.

The finest, best, and most natural Artificial Eyes in the world, inserted, and sold at Wholesale and Retail, by Dr. THEO. ROTH, 336 N. Sixth St., Philadelphia, General Agent for the United States of L. Mueller's Celebrated German Artificial Eyes, which received the Gold Medal at Berlin, Vienna, Philadelphia (1876), etc. 1128-1140

SYRUP-GLYCEROLE

OF

FERROUS CHLORIDE.

The Combination which all Forms of Iron must assume before Assimilation.

Superior to all other Iron Salts in that, while it is readily taken into the circulation, and does referruginate the blood, it does not ordinarily cause constipation nor headache. It is very pleasant to the taste, and is unalterable.

Ferrous Chloride is a neutral salt, consequently it has no action upon the teeth, and may be administered fearlessly. This fact and the delightful taste of my preparation render it an advantageous form for administration to children. Each fluid drachm contains one grain of Ferrous Chloride, which, owing to the certainty of its assimilation, is a full, active, adult dose.

McKELWAY, APOTHECARY,

Successor to O. S. HUBBELL,

1410 CHESTNUT ST., PHILADELPHIA.

WYETH'S

DIALYSED IRON.

(FERRUM DIALYSATUM.)

A Pure Neutral Solution of Peroxide of Iron in the Colloid Form. The Result of Endosmosis and Diffusion with Distilled Water.

PREPARED SOLELY BY

JOHN WYETH & BRO.,

PHILADELPHIA.

This article possesses great advantages over every other ferruginous preparation heretofore introduced, as it is a solution of iron in as nearly as possible the form in which it exists in the blood. It is a preparation of invariable strength and purity, obtained by a process of dialysation, the iron being separated from its combinations by endosmosis, according to the law of diffusion of liquids. It has no styptic taste, does not blacken the teeth, disturb the stomach, or constipate the bowels.

It affords, therefore, the *very best* mode of administering

IRON

in cases where the use of this remedy is indicated.

The advantages claimed for this form of Iron are due to the absence of free acid, which is dependent upon the perfect dialysation of the solution. The samples of German, French and American Liquor Ferri Oxidi Dialys. which we have examined give acid reaction to test paper. If the dialysation is continued sufficiently long, it should be tasteless and neutral.

Our dialysed Iron is not a saline compound, and is easily distinguished from Salts of Iron, by not giving rise to a blood-red color on the addition of an Alkaline Sulpho-Cyanide, or a blue precipitate with Ferro-Cyanide of Potassium. It does not become cloudy when boiled. When agitated with one part of Alcohol and two parts of Ether (fortior), the Ether layer is not made yellow.

Physicians and Apothecaries will appreciate how important is the fact that, as an antidote for Poisoning by Arsenic, Dialysed Iron is quite as efficient as the Hydrated Sesquioxide (hitherto the best remedy known in such cases), and has the great advantage of being always ready for immediate use. It will now doubtless be found in every drug store, to supply such an emergency.

Full directions accompany each bottle.

Physicians will find our DIALYSED IRON in all the leading drug stores in the United States and Canada.

It is put up in bottles retailing for **ONE DOLLAR**, containing sufficient for four months' treatment Large size is intended for hospitals and dispensing. Retail at $1.50. Price Lists, etc., senton application.

DIPSOMANIA.

BY WORTHINGTON MYERS, A.M., M.D.,
Of New York.

There is no form of nervous exhaustion more severe in its character than that which is induced by the abuse of stimulants. A sudden and violent fit of drinking, of course, shakes the nervous system very much, and, if frequently repeated, reduces the nervous power materially; but, bad as these effects are, they are slight compared with the profoundly exhausted state of both the cerebro-spinal and sympathetic systems which the continuous use of stimulants in excessive quantities produces.

The effects of chronic alcoholic poisoning are felt not only in the nervous centres, but in most of the important organs of the body, and over the whole mucous tract of the alimentary canal, from the commencement, at the lip, to its termination, in the lower bowel.

The derangements of the digestive organs, of the liver, kidneys, bladder, etc., which usually accompany persistent dram-drinking, vary much in degree, being, in a great measure, dependent on the particular form of stimulant most frequently indulged in; but the exhaustion of the nervous system is not so variably manifested, being pretty much the same whether the excess is committed with one stimulant or another.

Secret dram-drinking, especially in delicate, nervous women, gives rise to many anomalous nervous symptoms, very difficult to diagnose correctly, as the secrecy of the vice itself engenders silence or willful misleading on the part of the patient, in justice to whom it may be said, that, as a rule, she is herself ignorant of the close relation existing between her peculiarly nervous and distressing state and the habit she indulges in.

In common fairness to many amiable and refined women of highly nervous temperaments, victims of neuralgia, hysteria, and the like, it must be remarked, that the habit of prescribing brandy, sal volatile, sulphuric and chloric ether, red spirits of lavender, and other diffusible stimulants, to be used at their friends' or their own discretion, when in suffering, has a most potent effect in inducing the evil habit of overstimulation, and many a woman who would feel outraged at being called a dram-drinker, is, through this practice, slowly and imperceptibly becoming one, without her own cognizance.

The custom which prevails among business men in this and other large cities, of the head of the family lunching in the neighborhood of his business, while his wife and children have the same meal apart from him, offers many inducements to the wife to contract the habit of overstimulation.

Not having the duty imposed on her of providing a regular meal, she is often tempted to have some slight refection, in which wine or beer soon comes to be a principal feature. Dyspeptic symptoms are thus produced, the appetite fails, small quantities of brandy or some other spirits are taken to relieve the unpleasant stomach symptoms; the remedy increases the disease, and is flown to more frequently, with still increasing mischief, and slowly and surely, but unwittingly, she drifts

into a confirmed dram drinker. If she is childless and more or less isolated, the temptations are greater, and the descent more rapid.

A small percentage only of wives so situated fall into this error; still the number is sufficiently great to be notable, and too much circumspection cannot be exercised by young married people in guarding themselves against those errors of diet which, in women, are most commonly the original cause of intemperate habits.

The mercantile life itself produces drunkards in no small degree among highly valuable and highly placed members of its body. Taking what may be termed the upper middle class of the commercial world, certain businesses are more prone to produce dram-drinkers than others. Of these the most usual are the ones in which the principal transactions are conducted out of doors, instead of in the counting-house or warehouse. Most important and highly valuable classes of men are engaged, during the whole of their business day, in buying or selling their commodities among their associates, in all manner of places, wherever and however they can find them, and in visiting and taking charge of their country customers at the hotels they frequent on their arrival in town.

I have had professional experience of many a hopeless drunkard, utterly ruined, who has complained bitterly of the necessities of his calling, which entailed on him the duty of waiting on and "showing attention" to the country customers of his firm. These customers, coming to town once or twice a year, for a few days, look upon their visits as holidays, in which excesses may be indulged in with safety, while to the New Yorker the events are of every-day occurrence, and the excesses of to-day with one person, or group of persons, must be repeated to-morrow with fresh ones. This, and the habit of completing large transactions "with a drink," have furnished very many most painful cases of incurable alcoholism.

The persistent use of stimulants in excess after a time presents the following characteristics:—Loss of sleep, which is not relieved by opiates; disinclination for bodily exertion, with considerable restlessness of mind; a tendency to take offence at trifles; irritability of temper; loss of appetite; foulness of breath; watery and bloodshot eyes; congested mucous lining of mouth and fauces, with tumid and relaxed uvula; haggard countenance; uncertain and often shambling gait; tremblings in the limbs, especially in the hands; tendency to spectral illusions; extreme sensitiveness to cold, with extremely hot skin; irritable stomach, with severe fits of vomiting, especially in the morning, etc. In addition to these, pains are felt in the limbs, especially around the joints. All these symptoms may culminate in delirium tremens, or, particularly in women, that condition may not appear.

If consulted by a person thus affected for any ailment, he generally denies that he exceeds, and if asked to state the amount of stimulants taken daily, will purposely mislead, even in the presence of persons whom he knows can contradict him. If questioned much, he is shifty in his answers, will not look you steadily in the face, and is full of plausible theories to account for his symptoms, which theories he often alters for others.

The state of the nervous system in chronic alcoholic poisoning is one of great molecular derangement. This is due not only to the immense amount of hydrocarbon carried by the blood to the remotest tissues where a nerve filament exists, but to a direct condition of innutrition. From both causes combined, the true nerve currents are erratic, deficient, or wanting, as the disease progresses. Structural changes also begin to take place, and unless the mischief be averted by prompt and judicious treatment, the constitution is utterly ruined, and the case passes out of the bounds of curative medicine, to be dependent, at the best, on palliatives only. Alcohol rapidly destroys the nervous currents when applied directly to a healthy nerve. How much more must it affect the currents in nerves rendered previously unhealthy by a long continued course of alcoholic saturation!

In treating cases of chronic alcoholism, a line must be drawn between the condition as it exists in the comparatively young, and as it may be in the elderly individual. In the former, stimulants must be interdicted *at once;* in the latter, owing to the structural changes which must be taking place, and especially to the condition of the circulation, as evidenced by a rigid state of the arteries. Stimulants must still be allowed, although in greatly diminished quantities.

In all cases, nourishment of the most supporting description, but not beyond the powers of the patient's digestion, must be freely given. A

tepid bath every alternate night, at bedtime, will often give the patient a good night; where it fails to do so, and there is much cerebral excitement, full doses of bromide of potassium will have the desired effect, not only in inducing comfortable sleep, but in allaying the excitable condition of the head. Where sleeplessness exists without cerebral excitement, opium and morphia should be avoided, and hydrate of chloral given instead.

The galvanic bath has been recommended as a useful adjunct to treatment in these cases, but I have not had sufficient experience of its effects to give an opinion on the subject.

No internal remedy exercises so powerful and beneficial an influence over the broken and exhausted condition of the victim of alcoholism as quinine; unless there are special indications present which preclude its employment for a time, it should be given persistently until all the bad symptoms have subsided and the morbid craving has been entirely overcome. In many instances the effects of its judicious employment are immediate and most remarkable.

Where practicable the galvanic current should be applied to the whole course of the spinal nerve roots for five minutes, on alternate days, and on the intermediate days a mild current for three minutes, from the cervical sympathetic to the pit of the stomach (as directly over the solar plexus as possible). If this course be pursued steadily for some time, conjointly with the other treatment laid down, complete restoration may be relied on. It will then depend on moral influences whether or not a relapse may occur at a future time. Mild cases of chronic alcoholism have been treated successfully by galvanism alone; but it requires a treatment based on the combined principles just enumerated to produce a decided and permanent influence on the severer cases of a disease which acts so banefully on so many important organs.

Out of a number of persons who have come under my care for the effects of inebriety, I select the two following, as they are good representative cases.

W. H. P., aged thirty-nine years, engaged in a large dry goods house in this city, had gradually fallen into intemperate habits, and at last suffered from loss of appetite, sleeplessness, nervousness, great mental depression, and the other usual symptoms of chronic inebriation. A peculiar gnawing pain at the pit of the stomach caused him great distress. The sensation, he said, was indescribable and intolerable, and could only be relieved by brandy, but returned as badly as ever when the effect of the stimulant wore off. He had never had delirium tremens, but was haunted by gloomy thoughts, and during his sleepless nights suffered so much from mental anguish that his existence was a burden to him. He had no suicidal tendencies, but often wished himself dead.

On the thirteenth of March, 1876, I placed him under galvanic treatment. As he had no appetite, and his stomach was too irritable to bear quinine, I applied a small blister to the pit of the stomach and ordered him strong soups and broths. After a few days he was able to take moderate doses of quinine and some solid food. *All stimulants were strictly prohibited.* This was a most severe trial to the patient; but, aided by cheerful and kindly society, he struggled against the morbid craving, and after less than a fortnight's distress overcame the violent desire. His mental depression, nervousness, and want of purpose, gave place to a hopeful, cheerful and more decided turn of mind; his health became gradually better, his rest at night was not disturbed, as formerly, and with these changes nearly all his old sensations passed away, and his mind and memory were strengthened. After six weeks' electric treatment he was well enough to do without it, still, however, continuing the quinine and avoiding all stimulants.

A year later I had an opportunity of seeing him; he had not relapsed into his old habits, and, although somewhat excitable and nervous in his temperament, was otherwise in good health.

These cases are very favorable ones, as beyond the stomach symptoms, which quickly yielded to treatment, there was no evidence of organic mischief. In most cases of long-continued inebriation serious organic mischief is produced; this materially lessens the chances of complete recovery, but with careful and judicious management, and the moral influence of home and friends, much can be done to overcome the "dipsomania," the morbid craving for stimulants, which, after all, is the great difficulty which lies in the path of the intemperate individual who honestly wishes to reform. That some morbid action is going on in the brain of such cannot be doubted, and treatment, especially the galvanic, should be specially

devoted to that organ. In the cases above cited this was not necessary; the patients were comparatively young, and had a hearty desire to struggle against the temptation.

WHY ACETATE OF LEAD SHOULD NOT BE USED AS A COLLYRIUM.

BY W. S. ROSS, M.D.,
Of Evansville, Ind.

The great danger of the use of lead in the eye is that a deposit often takes place on the cornea, especially if the cornea is in the least abraded, from whatever cause. Ulceration of the cornea is a very common occurrence, especially where there is high inflammation in the conjunctiva and sclerotic. If the acetate of lead is used, in solution, in an ulcerated condition, it does not matter of what strength, there will be a deposit of albuminate of lead the entire extent of the cornea denuded.

Dr. S. Ringer says, "In ulceration and sloughing of the cornea, lead washes must be avoided, lest a white compound become deposited in the structures of the ulcer, leaving a permanent opacity."

T. W. Jones says, "From acetate of lead application, an opaque white deposit takes place on the conjunctiva. This bad effect, different from the effect arising from the abuse of nitrate of silver, may result from a single application. The deposit is extremely apt to fix itself on ulcers of the cornea. It attacks every abrasion on the slightest denuded surface. Hence, when such exist, acetate of lead collyria are especially contraindicated.

Sometimes the whole surface of an ulcer of the cornea is found covered with a matter resembling (to use the comparison of Mr. Wardrop) wet chalk. This appearance is attributed, by Dr. Jacob, to a precipitate from the acetate of lead solution, so frequently employed as an eye wash. Beer had frequently remarked that the use of lead lotions rendered the cornea opaque. Any part of the conjunctiva, whether abraded or not, may be the seat of the deposit, but attention is most usually drawn to it when on the cornea. The white deposit is apt to become fixed in the cicatrice, which is then dense and indelible.

Dr. Jacob says that the opacity appears to be produced at once, by a single application. He has seen it the day after a drop of solution of acetate of lead had been put into the eye by mistake. A white deposit does not take place in all cases in which the acetate is used, but Dr. Jacob says that he does not think he can state positively the precise condition of the ulcer which causes it.

Dr. Mackenzie recommends a cautious attempt to be made to remove the white deposit from the surface of the ulcer; and he tells us that in one case he succeeded in separating a scale of lead which had been deposited on the cornea. I have seen the scale become detached spontaneously as the ulcer healed.

Dr. Lawrence says: "I have found cases of corneal ulceration peculiarly obstinate and intractable when the surface of the ulcer has presented, generally or partially, an opaque white color, as if it had been covered by wetted chalk, the attendant ophthalmia not being considerable. Sometimes such ulcers have continued for weeks or months, in spite of every treatment. I do not know what the peculiarity depends on, but Dr. Jacob ascribes it to the application of the acetate of lead, which he says is decomposed, and a white precipitate is deposited in the ulcer, to which it adheres tenaciously, and indelibly imbedded in the structure of the cornea."

Dr. Mackenzie says: "When we meet with an ulcer which has been touched with acetate of lead in solution, a remedy often recommended by ignorant people for inflamed eyes, we ought, with the small silver spatula, to endeavor to remove the white deposit adhering to the surface of the ulcer, lest it become indelibly incorporated with the cicatrice, forming a peculiar chalk-like speck, which may never afterward be capable of being removed, either by absorption or operation. This attempt, however, must be made with great caution, lest we cause a large opacity of a different character."

There is no means of removing the deposit of lead except to spud it off, and there is great danger in that operation, especially if the patient is advanced in years, for the reason that the opacity produced by the operation does not become absorbed, as it would be in a young subject. The restorative process in the cornea of the aged is very sluggish.

I will report a case that came under my observation:—

Mr. A., seventy-six years of age, was attacked with inflammation of the eyes during the fall of 1876, and was directed by a physician

"to get some sugar of lead, and make a solution, and bathe the eyes frequently with it." There was at that time an ulcer on the cornea of each eye, the size of the pupil, and immediately over it. The solution of lead having been applied the deposit of lead took place, and the old gentlemen discovered that the light was completely shut out, and he was in "utter darkness." He came to the city and placed himself under the treatment of Dr. Compton and myself. At that time there was considerable inflammation in the conjunctiva and sclerotic.

The cornea over each pupil, the entire extent of the ulcer, had that peculiar "wet chalk" appearance. By appropriate treatment we, in a short time, subdued the inflammation, and rendered the patient comparatively comfortable, but he was almost blind, from the deposit of albuminate of lead.

We endeavored to remove the deposit of lead by spudding it off, but it was so firmly fixed that we were apprehensive that if too much force be used inflammation would set in and destroy vision. Taking his age into consideration, we thought it best to "let well enough alone." By the use of a solution of atropia, two grains to the ounce of water, and applied to the eyes twice per day, we dilated the pupils sufficiently for the patient to see to get about without assistance. He was also supplied by J. Rillinberg, optician, of this city, with a pair of smoked glasses, No. 42, convex, which were of great benefit to him.

In consideration, therefore, of the opinion of eminent authorities on diseases of the eye, above quoted, and my own experience as to the deleterious effects of the acetate of lead as an eye wash, I would advise that the use of acetate of lead be forever laid aside as a remedy in diseases of the eye.

A Perfumed Solution of Iodoform.

The objection to the use of iodoform, on account of its unpleasant odor, has led an English druggist to prepare a perfumed solution. This is prepared by shaking tincture of iodine with a fragment of fused potash until the color is removed, and covering the odor of the iodoform produced by the addition of eau de cologne or lavender water. The author speaks of lint that has been dipped in this liquid, and afterward dried, as being a very good application to indolent sores.

Hospital Reports.

HOSPITAL OF THE UNIVERSITY OF PENNSYLVANIA.

SERVICE OF PROF. LOUIS A. DUHRING, M.D.

REPORTED BY DR. ARTHUR VAN HARLINGEN.

Tinea Favosa.

The patient, a little girl, ten years of age, had been under treatment for some months for squamous eczema of the scalp, from which she had almost entirely recovered, but had not visited the clinic for several weeks. When she made her appearance on September 5th, she presented a marked eruption of characteristic favus cups. She was placed under observation, but without treatment, until September 13th, when she was brought before the class. By this time the affection had made decided progress, the whole head being involved, the disease running down almost to the borders of the scalp, and only a few small islands of healthy skin remaining. It consisted of a mass of dingy, sulphur or canary-yellow-colored, dry, pulverulent matter, covering the entire scalp and easily brushed off, or somewhat more adherent in masses of a yellow, chalky consistence, which, when detached, left a shallow, moist, reddish depression or pit in the skin. Here and there, about the border, distinct lemon or canary-colored cups could be seen, each one pierced by one or more hairs which formed its centre. The patient complained of some itching and irritation of the scalp; she was rather pale and meagre.

Dr. Duhring said the affection was a very rare one at this clinic, but one which was well known, and which was so troublesome that a portion of the hour might be well spent in studying it. The yellowish masses observed through the scalp were entirely composed of a microscopic vegetable growth; they were not the result of inflammatory exudation. The original shape of the masses was roundish, hollowed out like a bowl or cup; they were pinhead to pea sized. The disease in the present case had only been a short time existent, and was as yet superficial; when the affection had lasted some time, the roots of the hairs became seriously involved and loosened from their follicles; here the hairs appeared to be still intact. Usually the disease made slow progress, but here it seemed to have involved almost the whole surface of the scalp in the course of a few weeks. Favus, Dr. Duhring continued, was usually highly contagious; ordinarily several members of a given family were attacked one after another. He had seen, in London, some years ago, as many as thirteen individuals thus seized in one household. In the present instance, however, it would appear that no one else in the family was as yet affected. Favus was due to a parasitic fungus, the *achorion schönleinii*, and when this once obtained a firm seat in the skin, it might persist for years, producing

atrophy of the scalp and baldness. The odor of the eruption was pungent and characteristic; it might be compared to that of mice, to which he would liken it; also to stale urine or mouldy straw. The so-called crusts were friable, like soft mortar. If lifted up they showed the little, superficial, moist depressions or pits, to which attention has been called, and which the growth had made for itself. With regard to the diagnosis, favus might be mistaken for pustular eczema, but for nothing else.

The treatment of favus presented peculiar difficulties, for when the fungus had penetrated the hair follicles it was exceedingly hard to get at; it was also very persistent, frequent and stubborn relapses being not uncommon. In the present case the hair should first be cut off close to the surface, then this should be soaked in oil until the masses of fungus had become softened and easily loosened from the scalp. The latter should then be thoroughly cleansed with a plentiful amount of soap suds and hot water, and dried. It was now ready for the application of the parasiticide. This should, in this instance, be the following—

℞. Sodii hyposulphitis, ℥j
Aquæ, ℥viij. M.

The lotion was to be poured into a saucer and then applied by means of a cloth. Certain precautions should be taken to prevent the spread of the disease. The patient should use her own brush, comb, etc., and should constantly wear a closely fitting cap, in order to prevent the light, powdery masses of fungus becoming distributed through the atmosphere. For the present, depilation would not be ordered.

Maculo-papular Eruption Due to Bromide of Potassium.

The patient, a young unmarried women, had been under treatment in the hospital on account of epilepsy, for which she had been taking the bromide of potassium in moderate doses almost continuously during the past three years. About ten days or two weeks previously to her admission, she was, for some reason, ordered a *smaller* dose than she had been accustomed to take. At that time she had no marked eruption upon her skin, although her face was always irritable, and small acneform pustules could usually be seen there as well as on the chest. Five days before her admission she went to bed, feeling as well as usual; but when she awoke the following morning, she perceived an erythematous condition of the skin, with an eruption in the form of macules, flat papules and pustules, occupying the face, hands and neck. During the succeeding three days this increased in intensity, until at the end of that time it had extended over the entire surface of the body and limbs. Over the trunk and extremities the eruption assumed the form of papules and papulo-pustules. No bromide was taken after this time. When the patient presented herself at the clinic she showed the following appearances. The whole surface, including the scalp, face, neck, trunk and extremities, was covered with a profuse erythematous, papular, and pustular eruption, which was most pronounced over the face, neck, chest and back. Her face had a congested, violaceous hue; it felt hot and flushed easily. From the line of the scalp to the neck the lesions were mostly confluent macules and papules, the size of large split peas. They were rounded or irregularly rounded, indistinctly defined, and of a dull yellowish, somewhat violaceous red color, identical with that of the maculo-papular syphiloderm attacking this region. The whole face was profusely invaded, many of the lesions running into one another, and giving the surface an uneven, rough feel. They were for the most part papular, but were only slightly raised above the level of the surrounding skin; were quite flat, and upon close inspection were noted to possess enlarged sebaceous gland ducts, which could be seen to contain very minute plugs of sebaceous matter. The openings of the sebaceous glands were slightly patulous over the whole face. Some of the more advanced papules were covered with a thin, adherent, sebaceous crust, of a pale-yellowish color, especially noticeable about the centre of the cheeks and chin. Here and there over the face, notably about the cheeks and nose, there were a number of pin-point and pin-head sized, slightly elevated pustules; they were for the most part very minute. Throughout the scalp were scattered split-pea sized, flat, sebaceous crusts, which were especially numerous about its anterior border. Over the neck the eruption was very diffuse, in the form of indistinctly defined, irregularly shaped, split-pea and finger nail sized, broken macules, of a vivid pink color. The eruption was very plentiful over the chest, back and abdomen. In addition there were small, mostly split-pea sized, rounded and irregularly shaped maculo-papules and papules; there were, moreover, numerous pin-point and pin-head sized, accuminated, more or less inflamed pustules. The color of the efflorescence over the trunk was paler than that about the face, and possessed a yellowish tawny hue. The extremities showed numerous scattered macules and papules, identical with those on the face and neck. A burning sensation was experienced over the face, chest and back. There was no itching. The patient's appetite had failed during the few weeks just previous; her bowels were regular.

Dr. Duhring remarked that the case was one of unusual interest. First, because of the history. Secondly, on account of the variety of the lesions, the bromide of potassium eruption being generally distinctly pustular in character. Thirdly, for the reason that the diagnosis was by no means easy, the disease resembling very closely, in appearance and distribution, the maculo-papular syphiloderm, for which it might readily be mistaken. He added that the expectant treatment would be pursued in this case. The patient would be directed to put nothing on the skin and to take no medicine.

[The woman returned, and was shown to the class two weeks later. At this time the eruption had entirely disappeared, leaving only a flushed condition of the skin, which also was rapidly fading away.]

Four Cases of Epithelioma.

The first case, which belonged to the flat or superficial variety, was of comparatively recent date. It occurred in a woman under 40 years of age, and involved the bridge of the nose, presenting a reddish, nodulated tumor, the size of the finger nail, and slightly raised above the surface of the skin, from which it rose abruptly with a smooth, elevated, pearly border. It was covered with a thin crust or scale. The history of the affection showed it to be of several months' duration, having first been noticed as a small pea-sized nodule in the skin, without sensation of any kind, but which grew gradually until it had reached its present size. Recently the patient had experienced a slight pricking or itching feeling in the tumor, and as it had grown constantly, although slowly, from its first appearance, she had become apprehensive and had sought advice.

Dr. Duhring drew the attention of the class to the age of the patient. Epithelioma, as a rule, was found on older persons. The affection belonged to the flat or superficial variety of epithelioma, and the treatment appropriate to the case was cauterization by means of caustic potassa. The knife was not called for in this instance. The solid stick of potassa fusa was then applied, going slowly over every portion of the diseased structure, and allowing the influence of the caustic to penetrate a little below and beyond the diseased tissue in every direction. It was not necessary, Dr. D. said, to use any pressure or force, but the caustic should be brought most carefully in contact with every particle of the growth, lest recurrence should take place, and a second operation be required. When the action of the caustic had gone far enough, it was limited and checked by the application of dilute acetic acid. The pain of the operation was quite sharp and severe, but ceased almost immediately upon the application of the acetic acid. The patient was directed to dress the part simply with lint soaked in olive oil; the dressing to be removed twice daily and the wound cleansed.

The second case was very similar in character and history to the first, the original disease having extended to about the same size, but being situated on the cheek, just at the side of the nose. It had been operated upon some days previously, and was brought before the class to show the appearance of the wound after operation. There was a slough about the size of a small coin separating, and the sore underneath was granulating at the edge. No hardness or nodulation could be felt about the edges of the ulcer. The patient stated that the day after the operation the part was somewhat swollen, red and "angry looking." Application of cold water compresses had subdued the inflammation, however, and Dr. Duhring pointed out the occurrence of healthy granulations and the evident commencing separation of the slough.

The third case, although also of the superficial, flat variety of epithelioma was in a more advanced stage. The patient, a woman of 70, had been operated upon at different times, but had neglected treatment, and the affection had recurred again and again. The point attacked was the nose, the entire cartilaginous portion of which had been destroyed. The borders both of the septum and the remains of the alae nasi were infiltrated, enlarged, and in one or two places suppurating slightly. The disease appeared to be extending up into the nares.

From the appearance of this case Dr. Duhring said it would be difficult to diagnosticate between epithelioma, syphiloderma and lupus. The history, however, would aid in deciding the question. A similar operation was performed in this as in the former instance, the caustic potasssa being freely applied to all the diseased parts.

The fourth case presented an appearance quite different from that of the three former; it was a case of recurrent epithelioma. The patient had been operated upon about a year ago, but the disease had returned in a peculiar form. The affection was seated upon the centre of the forehead, in the form of a smooth, well defined, slightly nodulated tumor, about two inches in diameter, rising abruptly from the surrounding skin to the height of half an inch, with a flattened surface, firm about the periphery, but somewhat fluctuating in the centre, and of a dusky purplish hue. It had attained its present size and appearance some time ago, but had only during the few weeks previous given rise to pain of a lancinating character, and quite severe. An exploratory incision into the centre of the tumor, made before the class, gave exit, at first, to a clear, somewhat viscid fluid, which was followed by a small quantity of pus. It was rare, Dr. Duhring said, to find such tumors breaking down and suppurating in this way. Caustics would not be available in a tumor like the present; the tumor should be removed by the knife.

[The patient was transferred to the surgical ward, under care of Prof. Ashhurst who operated a few days later.]

MEDICAL DEPARTMENT OF BELLEVUE HOSPITAL, NEW YORK.

MEDICAL CLINIC OF PROF. AUSTIN FLINT.

REPORTED BY WORTHINGTON MYERS, A.M., M.D.

Pleurisy, with Effusion.

Case 1.—Lemuel Owens, age thirty-three years, was admitted into the hospital two weeks ago, suffering from pain in right axillary and inter-scapular regions, with cough and chilly sensations. His father and mother both died of consumption, he being the only child.

Patient says he has never been a strong man, but always comparatively healthy, until about six weeks ago, when the above symptoms developed themselves, supervening upon a cold. He now raises a small amount of transparent mucus. He has evening exacerbations of temperature, followed by profuse perspiration. Exertion causes a slight dyspnœa, and coughing increases the pain in the axillary and inter-scapular regions. When first admitted he had slight diarrhœa, which was checked. His appetite is impaired, and he has great aversion to fatty articles of diet. He has never had any hemorrhage. Pulse strong, 84 per minute, and temperature averaging 99½. He has not been confined to bed since admission.

Physical Examination.—The patient is anæmic, somewhat emaciated, respiratory movements normal. Percussion reveals flatness on right side below the fifth rib, the flatness being limited by a horizontal line. Above this line we have dullness, as compared with the other side; over apex of lung, normal resonance; absence of vocal fremitus over the region of flatness, with a suppression of vocal resonance. Respiratory murmur is also absent over this region, while above it it is broncho-vesicular. Apex beat of the heart a little to the left of its normal situation. Liver and spleen normal.

Diagnosis.—From the patient's history, his symptoms, and signs obtained from physical examinations, we are justified in saying that he has subacute pleurisy, which has become chronic. The mild constitutional disturbance, the slightness of pain, and the long career of the disease, exclude the acute form. We cannot satisfy ourselves that the patient has phthisis, although the patient's parents both died of this disease. The physical evidence of tuberculous deposit has not been demonstrated. But while we do not think, from the symptoms, etc., that we are justified in saying he has phthisis, still in our prognosis his history should not be forgotten. Therefore, upon physical examination, we find signs so characteristic that we can without hesitancy pronounce it a case of pleurisy with effusion.

Prognosis.—From the fact of the patient presenting a history with predisposition to tuberculosis, and his general emaciated condition, a favorable prognosis can scarcely be given, although we can pronounce it more so than if the actual existence of tuberculous deposit had been fully established.

In this case we have a moderate pleuritic effusion; on the right side of the chest we have flatness extending from below upward. This flatness is bounded by a horizontal line, which represents liquid. If the situation of the liquid be vertical it will be indicated by this line, which we find it is, both anteriorly and posteriorly. Above the line we have resonance, below, flatness. If the lung be adherent to the walls of the chest the liquid will gravitate to the posterior part of the chest, the sound absolutely flat when patient leans over, then resonance. We have, therefore, absolute proof of the existence of liquid. The effect of liquid is to abolish or diminish respiratory murmur, also to abolish resonance. In such cases we have solidified lung, also broncophony. The effect of liquid is to increase this. This change takes place abruptly, just at the boundary line, where flatness and resonance exists. So with vocal fremitus, when you auscultate the voice. The effect of liquid is to diminish the fremitus, of solidified lung to increase it.

I take this occasion to point out what is meant by egophony; it is a modification of bronchopony. The voice has a bleating character, like the cry of the goat. The patient may have it; we look for it at the posterior part of the chest. The amount of liquid would lead us to suppose he has it; upon examination we find he has not; we get it as follows: Let the lung be adherent to the walls of the chest; above this line we have it, and below it condenses to produce bronchophony. In regard to phthisis: where pleurisy supervenes upon phthisis, then some symptoms predominate. First, the patient has a cough and expectorates, with a hereditary tendency. We look at the concomitant symptoms, at physical signs. If we find on the unaffected side a moist râle, and on the affected side, at the summit of the lung, then we look for it. This history of some cases gives no evidence of the existence of phthisis.

Treatment.—The indications seem to be to promote absorption of the liquid and to bind up the patient. The milder hydragogue cathartics, preferably the saline, with a combination of diuretics, will accomplish the former, and phosphorus, quinia and iron fulfill the indications of the latter. Small doses of cod-liver oil will be found serviceable. The application of sinapisms or belladonna plasters to the chest are indicated, for the relief of the pain. Quinia should be given, both as an antipyretic and as a tonic. Sulphuric acid should be given, with a view to relieve the night sweats. Alcoholic stimulants, in moderate quantities, should be given, with a sponge bath daily, of 65°. The patient should be well nourished, take out-door exercise, but undertake nothing which requires exertion.

Medical Societies.

PROCEEDINGS OF THE MEDICAL AND SURGICAL SOCIETY OF BALTIMORE, OCTOBER 10th, 1878.

Reported expressly for the Medical and Surgical Reporter, by G. L. Wilkins, M.D.

Yellow Fever.

Dr. J. S. Lynch. I will premise by stating that I do not assume special knowledge on the subject of yellow fever. It is true that I have had some experience with the disease, both in this city, during the visitation in 1876, and in some of the southern States, but in all instances my acquaintance has been with the disease in its sporadic form.

This subject is interesting now, not only from the wide-spread prevalence and fatality of yellow fever in the southern cities and towns, but also from the necessity of rendering more accurate the views that we may have of the disease.

As an evidence of the uncertainty of the views entertained on yellow fever, I will state that a reporter of one of the Baltimore papers recently interviewed a number of physicians, and published their opinions, and it was a surprising fact that most of them held opinions utterly at variance with the accepted views on this subject.

Yellow fever probably originated on the west coast of Africa; from thence it made its way to the West India Islands, and thence to this country. This view of its origin has been opposed, on the ground of the apparent non-susceptibility of the African race. We may account for their exemption by the fact that the recurrence of epidemics had in time reached most of the population; in this way an original attack secured immunity against subsequent ones. In after years this protective ceased, and it is a notable fact that in the present epidemic it has been quite fatal among negroes.

Yellow fever is unquestionably a miasmatic, infectious disease, but not contagious. The probabilities are that it is due to a living organism, and, indeed, the habits of the disease will admit of no other explanation. The poison, or germs of yellow fever enter the system, and produce the disease, but they are not capable of multiplying in the human organism, nor can they migrate from one person to another, as, for example, the germs of small-pox, hence, in this sense, yellow fever is not a contagious disease. Clinical experience furnishes abundant proof that yellow fever is not communicable directly from one person to another. Numerous experiments show that neither the inoculation of the black vomit nor swallowing of the vomited matter will produce the disease.

The identity of the yellow fever miasm with the malarial miasm, has been asserted by many authorities, but there are many grounds for rejecting this view. These objections, briefly stated, are: malarial fever chiefly affects country districts, and swampy regions, while yellow fever generally prevails in cities, and has shown itself in localities almost barren of vegetation, and unknown to intermittent fever, as Gibraltar, Island of Barbadoes, Stony Hill, Jamaica, Brimstone Hill in the Island of St. Kitts, and many other places. Yellow fever is capable of transportation; malarial is not portable. Yellow fever chiefly attacks the unacclimated, and one attack secures immunity to a certain extent, from a subsequent attack. This rule does not hold good with malarial fever. Yellow fever is not remittent in its character, and is not under the specific influence of quinia. Yellow fever does not originate *de novo* or *autochthonously*, although there are some facts that would seem to militate against this assertion. In April, 1792, the ship Hankey, in company with another vessel, left London, for the establishment of a colony on the island of Bulam, on the west coast of Africa, where she arrived just before the commencement of the rainy season. The Hankey remained at the island nine months; soon after her arrival yellow fever broke out among her passengers and crew, numbering more than 200 persons, and about three-fourths died. A new crew was made up from other ships, and the Hankey sailed for Grenada, West India Islands, reaching that port on the 19th of February, 1793. The shipping of that port was first infected, and the disease was finally communicated to the town. In 1799 the United States frigate General Green sailed from Newport for Havana; she had a stormy passage, became filled with bilge water, which, with the advent of warm weather, became very foul. Yellow fever appeared among the crew before she arrived in port, which was at the time free from disease. When she left Newport there was no sickness, neither was there a subsequent appearance of yellow fever there.

The disease made its appearance on board the United States Ship Hornet, in 1828, while lying at Sacrificios, a small island about three miles from Vera Cruz. The ship had been lying there at anchor twenty-six days when the fever broke out. There was no disease then prevailing in the city of Vera Cruz, nor was there yellow fever prevailing at any port where the vessel had touched during her cruise.

The weight of evidence bears out the conclusion that to produce an epidemic of yellow fever in any locality, the germs of the disease must either already exist, or be imported to the particular locality, and for their full development and propagation certain external conditions are necessary, as heat, moisture and filth. It has always been observed that in proportion to the mal-hygienic condition of a locality, in the same ratio does the disease prevail.

This was notably the case in Norfolk in 1852, and in Shreveport in 1873. During the present epidemic at Grenada, a filthy sewer, containing dead animals, decaying vegetable matter, etc. which had been exposed to the sun all the summer, furnished a suitable nidus for the development of the disease. While I believe the germs of the disease do not exist in the patient himself, the dejections, etc., yet they are capable of being retained in the clothing, and in this way may be conveyed to other localities. For this reason personal quarantine is not a matter of necessity, but it is always essential to quarantine the patient's surroundings. If cities and towns would require all persons arriving from an infected place to divest themselves of their clothing, baggage, etc., to thoroughly bathe, and procure entirely new clothing, the disease could be excluded.

The symptoms of yellow fever are very generally known, hence I shall very briefly refer to them. The first stage or stages of fever usually lasts about twenty-six hours. It is commonly ushered in by chilliness, fever, headache, nausea, and sometimes vomiting. In cases which are going to be grave, the vomited matters show

streaks of blood thus early in the disease. The temperature rapidly rises, but seldom goes above 25° Fahr. The pulse is generally full, strong and rapid, beating from ninety to one hundred and twenty per minute. The skin is hot and dry, the face flushed, the eyes bloodshot, brilliant and watery, and the tongue covered with a creamy white fur, but with clean tip and edges. The bowels are at first costive, but as the disease advances they become loose. After this stage has lasted a few hours or days, then comes the stage of calm. The pulse may become normal, and the temperature may regain its healthy level, or slightly above it, but the patient remains depressed and indisposed to take food, thus showing that he is not well. About the fifth day of the attack the characteristic jaundice shows itself, first in the eyes, then over the surface of the body; according to Dr. Dowell, "the skin does not turn yellow in more than one case in six, and many die before there is the least appearance of yellowness even in the eyes; not more than one in three turn yellow that dies of black vomit." The stage of calm may last from two to five days, and by good fortune or treatment end in recovery; otherwise, the third stage, or hemorrhagic stage begins; all the tissues now show a hemorrhagic disposition. The vessels of the gastric mucous membrane no longer retain their contents, the blood oozes into the stomach, and mingling with the acid is turned black, nausea ensues, the blood is vomited up, and we have thus produced the "black vomit." The urine, which throughout the attack has been scanty, now becomes either suppressed, or, if excreted at all, is black and bloody, and highly albuminous; the jaundice increases, the skin becomes dusky brown or livid, and there are frequently hemorrhages from all the mucous membranes, or beneath the skin. In fatal cases the heart's action fails, and the patient dies, either in convulsions or coma. Under the most favorable circumstances the mortality is about twenty per cent.

The most constant pathological lesions are fatty degeneration of the heart and liver.

Hemorrhagic effusions are found more or less in all the organs of the body, as well as on the mucous surfaces. The blood is dark and often fluid. The period of incubation of yellow fever varies from three hours to twenty-six days.

The most importance is to be attached to the treatment of this disease during the first and second stages. Of all the indications for treatment, probably the most important is to keep the temperature down. Of the various antipyretics cold water ranks first in importance. It may be applied either in the form of the cold bath, sponging, wet pack, or by Major's apparatus. Many years ago I had an accidental illustration of the advantage of the cold water treatment in the person of my father. On returning from an expedition to the West India Islands, the crew of the ship were stricken down with yellow fever, and it became necessary, for the safety of the vessel, for the passengers to volunteer. At the time he was suffering with an attack of the fever, and while the fever was on him he steered the ship all night in a rain storm, and became thoroughly drenched and chilled. In this condition he retired, and fell into a sleep of some hours' duration. From this time he rapidly improved, and was soon quite well.

Quinia is a powerful apyretic, but like alcohol, it is badly retained by the stomach.

At the onset of an attack of yellow fever a mild aperient should be administered. It is a safe rule to allow the patient to follow his own inclinations as to cold or warm drinks. Orange leaf tea is a favorite drink among the physicians in the southern States. During the stage of calm the patient should be kept quiet, and the diet should be light, moderate, and judicious. The limited use of wine may be permitted, but alcohol in large quantities is pernicious. The nausea and vomiting may be met with creasote and lime water, and spiritus mindereri.

Dr. T. B. Evans. I have always believed that yellow fever and malarial or bilious fever was one and the same disease. The poisons producing these diseases are similar. Yellow fever occurs in this country *de novo*, and is the result of heat, moisture, filth, and animal and vegetable decomposition. Quarantine is not, as a rule, necessary. The disease can be carried from place to place, but cannot be communicated directly from one person to another. During the epidemic at Norfolk, in 1855, the Bay Line of steamers continued to ply between this port and Norfolk, and many persons came to this city with the disease and were treated here, but in no instance was the disease communicated to others living in the city. The disease did not then prevail in Baltimore, because the soil did not exist for its production. In Louisiana the conditions favoring the development of yellow fever always exist. Proof of the identity of the two poisons is furnished in the pathological appearances. Autopsies show the same state of things in both hemorrhagic malarial fever and yellow fever. The difficulty of reaching the truth is on account of a want of a proper knowledge as to what contagion means.

Dr. J. F. McShane. The disease that made its appearance in this city in the summer and fall of 1876 was clearly traceable to importation. The first case was that of the pilot who brought the infected vessel from the capes. A lot of junk from the vessel was sold to a dealer on Caroline street, below Lancaster street; the disease now broke out in the neighborhood, and the majority of the cases were confined within a radius of two hundred feet. The locality in which the disease prevailed is probably one of the most filthy sections of the city; the inhabitants, mostly Bohemians, were extremely filthy in all their habits of living.

Dr. Evans. The first case of yellow fever that I met with in this city in 1876, was on Durham street near Lancaster street, about six squares from the locality mentioned by Dr. McShane. The patient was employed as a stone cutter,

and he had no connection with the shipping. A number of other cases appeared in this locality. My next cases were next door to the junk shop, on Caroline street.

Dr. Erich read, from the Baltimore *Sun*, an account of the skipping by the disease of certain localities in New Orleans.

Dr. John Morris. These statements are sensational in their character; they are made by reporters who are non-medical men, and are not reliable. I do not believe that the disease skips any locality. In Norfolk, in 1855, it progressed everywhere. Its progress is steady and onward, like the march of an army. I do not believe the profession are undecided as to the nature of yellow fever; there are some who still hold that it is a congestive, or an aggravated form of malarial fever, but I think it has many characteristics sufficiently distinctive to prove its non-identity with malarial fever. In yellow fever there is always albumen in the urine, and we may have it in malarial fever, but there is not present the evidences of desquamation which distinguishes yellow fever.

Dr. Erich. In some epidemics of yellow fever this skipping disposition is manifested, while in others it is not. It is a question of some interest as to how the poison of yellow fever enters the system; if it enters through the lungs, in the inhaled air, then the disease would not be confined to any particular locality, but would extend everywhere. If it is traceable to the drinking water, then we can explain the localization of the disease.

In the epidemic in this city, in 1876, the disease was confined within two distinct circles. The inhabitants of both of these localities were supplied with drinking water from pumps. Yellow fever developed itself on board of a ship, the name of which I cannot recall at this time, and was confined to the inmates of the cabin, who drank water that was taken on board at one of the West India islands, while the crew, who drank European water, were entirely exempt. The question may be asked, if the poison enters the body through the drinking water, why is it that frost puts an end to the disease? The germs of the disease are deposited from the air, and taken up by rain water, which percolates through the earth and makes its way into the wells. The advent of frost kills the germs in the air, hence living organisms can no longer be deposited on the surface. The germs of the disease many times continue to live in dwellings that are artificially heated, even after the advent of frost.

The history of some epidemics of yellow fever furnishes proof that the drinking water is the means through which the poison enters the body.

Toward the last of the past century epidemics of this disease occurred in Boston, New York and Philadelphia, but since the cities receive a clean and pure supply of water through the hydrant system, the disease never appears. Before the germs are wafted to the distant water-sheds frost makes its appearance and destroys them.

Epidemics of the disease occur now, generally, in places where the population receive their drinking water from pumps. On shipboard the water casks are many times left open and exposed to the air. New Orleans has only recently been supplied with hydrant water, which, thus far, is not very extensively made use of for drinking purposes. Dr. Dowell says: "New Orleans has been greatly improved by its water works, and its mortality has been greatly reduced, since 1853, though the inhabitants have increased."

Dr. Lynch. Any disease germ may enter the system through the medium of the drinking water, but not exclusively so. To again refer to the etiology of yellow fever, I must say that, besides the facts previously mentioned, I have met with many cases of hemorrhagic malarial fever, and have always recognized a clinical history differing from that of yellow fever.

Dr. Evans has inquired the difference between contagion and infection. I will briefly answer the question. If we narrow the limits of the definition to each term, *contagion* may be restricted to the communication of a disease by direct contact, or by contact with a palpable morbid product; for example, syphilis. On the other hand, *infection* may be used to denote communication by means of an inappreciable emanation or miasm, or communication with the intervention of more or less space, and not by direct contact; for example, typhoid fever. Some *infectious* miasms or germs are propagated in the patient's body, and are communicated to others through a limited space. Such diseases are, for convenience sake, frequently termed contagious; for example, scarlatina. In other infectious diseases the *miasma* finds a suitable soil for its propagation outside of the body. The disease under consideration furnishes an example.

Suggestion for the Prevention of Scriveners' Palsy.

The North Carolina *Medical Journal* says of this condition of fatigue of the fingers and hand which precedes writers' palsy—

The pen should be taken between the forefinger and the one next to it, after the fashion of phonographers, and only held loosely in position by the natural contact of these two fingers, while the forefinger, middle finger and thumb rest in loose contact with the pen holder. The motion then is gliding from left to right, the up and down strokes being performed mainly by the motion of the wrist. With a lead pencil there is no easier way to write, and a little practice enables one to acquire a legible hand; and there need be no obstacle to writing with a pen, as suitable instruments in gold and steel, with their nibs bent to the left, are easily procured from stationers.

This new position of the pen enables the writer to rest his forefinger and thumb, and after the lapse of months he may return to the more familiar way, for special occasions.

Periscope.

The Combination of the Cinchona Alkaloids with Opium.

Several recent writers have urged the value of this combination. It is one perfectly familiar to Southern and Western physicians. Dr. P. G. Skillern claims, in the *Medical Times*, that—

1. By a combination of the cinchonia alkaloids with opium, a much better effect is obtained; a paroxysm being aborted with much more certainty, and a much earlier and more complete cure insured.

2. Only half the amount of quinia or cinchonia is required.

3. It relieves any painful sensations which might be associated with periodic affections.

4. Exemption from certain disagreeable effects upon the brain, headache, tinnitus aurium, etc.

5. It enables the stomach to retain quinia much more readily.

6. Large and continuous doses of quinia or cinchonia may be given without producing cinchonism, if combined with morphia.

Venesection as an Anti-Hemorrhagic.

Professor Chauffard is of opinion that at the present time venesection is too much neglected, and especially in cases where it is desirable to open up another channel for blood which tends to become effused at the surface of an organ. He pointed out a case of hæmoptysis at the Neckar, occurring in a robust young man who was almost plethoric, a stone cutter by trade, and therefore of an occupation dangerous to the pulmonary organs. A very abundant hæmoptysis had appeared suddenly three days before his admission, and still continued. Professor Chauffard, having ascertained that no serious lesion existed, ordered venesection to the extent of five hundred grammes, and the cure was immediate and complete. This is the reverse of what is met with when a normal hemorrhage which is suppressed gives rise to another in its place. It is not only an accidental hemorrhage which may be thus arrested, but also the hemorrhagic molimen, when it becomes dangerous. Thus one of the most important applications of venesection in practice is for the prevention of catamenial congestions persisting after impregnation and leading to the detachment of the germ, a cause of sterility which is frequently misunderstood. A case in point is that of a lady who, during a period of ten years, repaired to every resort reputed as useful for the prevention of sterility. She was a stout and plethoric person, with very abundant menstruation, which appeared at regular periods. In neither her nor in her husband was there any cause preventative of impregnation. This had probably taken place, but had been rendered invalid by reason of the abundant periodical discharge which had continued. The day before the expected period a small quantity of blood was taken, and then again the next day; and at the end of nine months the lady had her first child; which was followed by others. This cause of sterility, especially in persons of generous blood, is by no means rare.

On Supernumerary Breasts.

The following are the conclusions which Dr. Godfrain arrives at, in a carefully worked-out thesis upon this subject:—1. Supernumerary breasts are rare. 2. They are of the same structure as the normal breast. 3. They are met with most frequently two in number, less often one, and rarely three. 4. Their most common seat is the axilla, and this site is explained by the frequent existence of axillary prolongations of the gland. 5. Some of the supernumerary breasts have, as points of departure, a pediculization, and a migration of the glandular lobules—analogous to the migratory tumors of the breast. 6. These supernumerary breasts may exist with or without nipples, and in the former case the milk secreted resembles that of the normal breast. 7. The above characters of the supernumerary breasts enable us to distinguish them from tumors; but in some cases, in which consecutive alterations take place, their diagnosis may become very difficult or even impossible.

Therapeutic Uses of Sulphate of Copper.

From a sketch of the pharmaceutical history of this drug in the *Practitioner*, we learn that in 1789 Wright employed it as a diuretic in dropsy, and subsequently it was recommended by Hufeland in severe neurosis; by Winter and others as a specific in epilepsy, and by others in catalepsy and chorea. Brera used it in gastralgia with success, Stienbach in pertussis, Storer in hysteria, and Brendt in diabetes. The general result of the observations made by these authors was to show that copper possessed a well-marked anti-neuralgic and anti-neuritic action, and that it was capable of modifying various conditions of innervation. Subsequently Guersent and Pecholier obtained excellent results from its use in scrofulous and rachitic diseases, while Rademacher, Gubler and Schroeder v. der Kolk found in it a reliable and powerful hæmatinic and general tonic. The celebrated powders of Smith, used in intermittents and in obstinate remittent fevers, contained ten parts of sulphate of copper, one part

of kino, and two parts of gum-arabic. The statements of veterinary surgeons are unanimous in favor of the value of sulphate of copper in glanders, farcy, anæmia, hydræmia, and in inveterate cutaneous diseases. The opinion expressed by Barrallier, that small doses of sulphate of copper act silently, and permit the metal to be placed, as a pharmaceutical agent, by the side of silver, platinum, gold, manganese, and even iron, has received support from the discussion lately carried on in the Society of Biology, of Paris; for while Christison, Orfila and others, appeared to have established without a doubt the toxic action of sulphate of copper, Bourneville gave no less than 1000 grains to an epileptic, in the course of 151 days, and when death at length occurred, from other causes, found that the mucous membrane of the intestine presented no structural alteration. Drs. Levi and Barduzzi undertook some original investigations on this subject, and found that the salt might be given in considerable doses without injury to the horse, ass, dog, and to man; that it was not only tolerated by the stomach and intestines, but that it increased the activity of the nutritive processes, and that it might truly be called a "recorporant." These effects they attribute to its causing excitation of the gastric secretion, and at the same time exerting an astringent action on the secretory tracts and on the vessels, everywhere augmenting the contractility of the unstriated muscular fibre, thus effecting a more complete performance of the digestive process, in consequence of which, again, more material is absorbed and thrown into the circulation.

The Determination of the Cardiac Triangle.

Dr. Constantine Paul proposes the following method, in lieu of those at present in use, in order to determine the cardiac triangle. It is necessary to begin by precisely fixing the point corresponding to the apex of the heart; this point being found, its relations must be determined with the points of the thorax more fixed than it; the nipple will not serve as a landmark, by reason of the variability of its position in different individuals; it is necessary to designate the intercostal space at which the apex beats, and to measure the distance between the spot at which the pulsation is perceived and the medium line of the body. This done, the outer border of the liver is determined by percussion; and this line, which is a little below the real line, being extended to the region of the point of the apex, affords the indication of the right border of the heart. To obtain the right and inferior angle, the lung is percussed in the transverse sense, and the zone of dullness is reached which corresponds to the limit of the auricle. This method of insuring the extent of the cardiac triangle allows us, according to M. Paul, to easily define the changes in the size and position of the heart. He presents a series of observations on ventricular hypertrophy, with schematic figures in support of his view.

Reviews and Book Notices.

NOTES ON CURRENT MEDICAL LITERATURE.

——A clinical lecture on hydrocele, by Dr. J. H. Pooley, of Columbus, forms a pamphlet of twenty pages. It does not contain any new suggestions on the subject. Dr. Pooley uses iodine injections, and his success with them seems fully up to the average.

——From the opening discourse pronounced by Dr. T. E. D. d'Orsonnens, Professor of Chemistry and Obstetrics, at the thirty-sixth opening of the faculty of medicine of the University of Victoria College, Montreal, it appears there is a probability of the medical faculty hereafter becoming attached to the Laval University, a Roman Catholic institution. As the medical school is entirely Catholic in its sympathies, Dr. d'Orsonnens urges that such a union would be highly desirable.

——A neat little quarterly of 22 pages, edited by Dr. G. Beck, of Bern, Switzerland, has been started, which has for its field "medical polytechnics," that is, the description of all instruments of precision, apparatus, and mechanical, electrical and chemical aids to diagnosis and therapeutics, in medicine, surgery and obstetrics. The title is "*Illustrirte Vierteljahrschrift der ärztlichen Polytechnik.*" Price 5 francs a year, exclusive of postage. If it steers clear of becoming an advertising sheet (of which this first number leaves us in some doubt), it can be made a valuable journal.

——"Refracture for the Relief of Deformity Following Badly-treated Fracture of the Extremities, Illustrated by Cases Treated in the Pennsylvania Hospital," is the title of a pamphlet of 27 pages, by Dr. John B. Roberts, of this city. The matter was first published in the Edinburgh *Medical Journal*, and will be found an important contribution to this branch of surgery.

——The Charter and By-laws of the Mutual Aid Association of the Philadelphia County Medical Society may now be obtained in pamphlet form. As they are the outcome of careful consideration by its most competent members, assisted by eminent counsel, we recommend other medical societies proposing similar organizations to procure a copy. The secretary is Dr. Blackwood, 246 N. Twentieth st., Phila.

BOOK NOTICES.

Traité de Thérapeutique appliquée basé sur les Indications. Par J. B. Fonssagrives. Tome I, pp. 810; Tome II, pp. 752. Paris, 1878.

In these large octavo volumes of nearly 1600 pages is collected a mass of well-digested learning, which does the highest credit to the author. Dr. Fonssagrives is professor of therapeutics and materia medica at Montpellier, and has long been known for his very popular and able works on hygiene. He also published, in 1875, a treatise on general therapeutics, from the physiological point of view. In the present work he takes up the art from its practical side. The originality to which he lays claim is that of a classification of therapeutic resources based on *the indications*. It is not possible, in the limits of such a notice as this, to do more than sketch in a superficial manner the elaborate system he constructs; but we shall give its outlines.

All scientific medication must aim either to bring about some physiological action; or else it must be aimed to remove some existing hindrance to the return to health. Hence, most medication is *biocratic* (directed to controlling the vital functions) or *etiocratic* (directed to controlling the causes of disease). In the former class come the stimulants and depressants of the nervous system, the modificators of the force and quality of the blood, the circulation, the secretions, of nutrition, calorification, generation and other functions. In the latter class are obviously ranged those agents which remove or alter the diatheses and dyscrasiæ, which neutralize miasms, septic and other poisons and virus, which destroy parasites, and are antidotal to active toxical agents. There is still a third class of remedies, those which, by creating artificially a pathological condition, remove another and more serious one already existent. These are the *nosopoietic* remedies, and embrace bleeding, counter-irritants, vesicants, cauterants, etc.

These, then, are the three great classes under which our author groups remedial agents; or, more correctly speaking, they are the three grand therapeutical endeavors, in aid of which he marshals, inspects and arranges the resources of the materia medica.

It will be seen that his plan is at once eminently philosophical and eminently practical. We know none more so. To be sure, his book is not one for the student to learn his materia medica from; it is rather the treatise for the thoughtful practitioner to call to the assistance of his already ripe culture and mature judgment. It is a fit implement for the master workmen, not a tool for the apprentice.

We need not add how wide a scholarship it displays, nor pay compliments to the style, for in those points Professor Fonssagrives has a reputation which needs no extension. But we may call attention to the full indexes which close the work, as they are a rare phenomenon in a French book, most of the authors of that nation having the inexcusable negligence of letting their works appear without any index at all, or none worth the name.

Cyclopædia of the Practice of Medicine. Edited by Dr. H. von Ziemssen. Vol. viii: Diseases of the Chylopoietic System. William Wood & Co., New York city. pp. 935.

This thick volume, of nearly a thousand pages, has a list of eight contributors, and presents the same thorough treatment of the topics it includes as its predecessors. Indeed, it is somewhat exhausting, from its fullness. For example, Dr. Friedreich gives us eighty pages on diseases of the pancreas, a subject to which Bristowe devotes but a page, and even such a voluminous writer as Aitken omits altogether. But the fact remains that in spite of Friedreich's fullness not a disease of the pancreas can be diagnosed.

Under diseases of the spleen Mosler gives a very learned disquisition on leucæmia, a subject to which German writers have devoted amazing attention, as they claim it as a discovery of their countryman, Virchow.

Diseases of the bladder and urethra are treated by Lebert, and of the male genital organs by Curschmann. In his discussion of spermatorrhœa the latter maintains the position, in strong contrast to Lallemand and his disciples, that in most cases the mental symptoms, though not obvious at first, constitute the primary condition, and the sexual phenomena depend upon them.

The remaining sections are on diseases of the œsophagus, by Bauer and von Ziemssen; diseases of the peritoneum, by Bauer; and diseases of the supra-renal capsules, by Merkel. The typography, paper and binding of the book are like the previous volumes, that is to say, all that can be asked.

THE

Medical and Surgical Reporter.

A WEEKLY JOURNAL,

Issued every Saturday.

D. G. BRINTON, M.D., EDITOR.

The terms of subscription to the serial publications of this office are as follows, payable in advance:—

Med. and Surg. Reporter (weekly), a year,	**$5.00**
Half-Yearly Compendium of Med. Science,	**2.50**
Reporter and Compendium, - - -	**7.00**
Physician's Daily Pocket Record, - -	**1.50**
Reporter and Pocket Record, - - -	**6.25**
Reporter, Comp. and Pocket Record, - -	**8.25**

For advertising terms address the office.

Marriages, Deaths, and Personals are inserted free of charge.

All letters should be addressed, and all checks and postal orders drawn to order of

D. G. BRINTON, M.D.,
115 South Seventh Street,
PHILADELPHIA, PA.

1879.

PREMIUMS FOR NEW SUBSCRIBERS.

Special Offer to Our Old Subscribers.

From and after October 1st, any new subscriber will receive the REPORTER

15 MONTHS FOR $5.00,

to wit, from Oct. 1st, 1878, to Dec. 31st, 1879.

To enlist the interests of our Old Subscribers in the extension of our circulation, we offer, if they will send us, along with their own renewals, the amount for ONE new subscriber for one year (who will be entitled to the 15 months mentioned) to send them either (1) the HALF-YEARLY COMPENDIUM, for 1879; or (2), the PHYSICIAN'S POCKET RECORD, for 1879; or any of our other publications, to the amount of $2.50. These publications will include the following works now in press:—

GOODELL. Lessons in Gynecology.
LANDOLT. Manual of Examination of the Eyes.
SAYRE. Organic Materia Medica.

Besides, already published, Napheys' *Surgical Therapeutics*, Napheys' *Medical Therapeutics*, Dobell *On Cough and Consumption*, Bernard & Huette's *Operative Surgery*, Butler's *Medical Directory of the United States, etc., etc.*

THE FREQUENCY OF UNRECOGNIZED HEPATIC ABSCESS.

A number of articles in various medical journals recently, have called attention to the frequency of obscure and unrecognized hepatic abscesses. Thus Drs. DAVIS, TANSCKY and HAMMOND, of New York, and Drs. DRUDE and BYRD, of Quincy, Illinois, have all written very instructive papers on the subject within the last six months. Often there is no sign of these abscesses; they are small, deeply seated, devoid of perceptible fluctuation, and wholly painless. The symptoms are general, often almost wholly cerebral. Profound depression of spirits always is present; indeed, Dr. HAMMOND teaches that where this is encountered without obvious cause, it is well to plunge the aspirator needle into the liver, as a venture. It is, he says, a certain means of diagnosis, and not dangerous.

Probably the most frequent origin of these abscesses is in malarial poisoning. Few physicians are sufficiently impressed with the pathological changes which the liver undergoes in miasmatic disease. Lardaceous changes and local congestions are probably the most common. Chronic hepatic congestion is as common as "ague cake" in the lowlands of the South and Southwest. Dr. JOHN SULLIVAN, in an article in the *Medical Times and Gazette*, recently (July 27th, 1878), has called the attention of the profession to the frequency of these degenerations. The substance of the liver is enlarged and softened; its tissue presents a variety of shades of color, the effects of altered secretion.

"The poison of malaria affects the texture and functions of the liver. The subject of marsh cachexia is jaundiced, because the normal metamorphosis of the bile is interfered with. He is pale and anæmic; his heart beats with a sense of suffocation and giddiness; his gait is slow and painful; he is sad and careworn; he labors under ascites or serous infiltrations; he is subject to alternations of heat and chills, because the process of oxygenation in the liver and the functions of sanguinification and of depuration of the blood are interrupted.

"A patient who suffers from a structural or functional disease of the liver, through the con-

tinued but slow and insidious operations of marsh malaria, may drag on a painful existence for months and years. He relapses, he declines, and finally succumbs to the influence of a melancholy cachexia."

It has, indeed, been maintained by other observers, Dr. W. Coles, of St. Louis, for example, that the assertion that hepatic abscess is frequent, is not well founded; and that the free use of the aspirator is by no means without serious risk to the patient. Cases of death are quoted, following its employment.

To this it is replied that even such a simple operation as aspiration must be guarded by all the surgical precautions which every operation demands, and must be undertaken with an accurate knowledge of the anatomy of the parts. The fatal cases arose from ignorant or careless use of the instrument.

At present, the discussion is at an interesting point, and we look forward to further inquiries which will enlighten us on this important lesion.

Notes and Comments.

Recent Notes on Salicylic Acid.

At a late meeting of the Boston Society for Medical Improvement, Dr. Wheeler spoke of an eruption which he had observed follow the use of salicylic acid in rheumatism. It consisted of vesicles and pustules seen on both extremities. There was much sweating, and the patient died a few days later, of some complication. The eruption diminished after the discontinuance of the acid.

On the other hand, at a recent session of the Richmond, Va., Academy of Medicine, Dr. J. N. Upshur reported several cases of typhoid fever and scarlet fever, in which he had used the above remedy with gratifying results. In cases in which temperature ranged from 102° to 104½°, by the exhibition of ten grains of salicylic acid in a saturated solution of phos. sodii every two hours, the temperature was reduced to 101°, above which it did not again rise. The above mixture was continued in the same doses every two hours for four days, then every four hours for six more days. The patient rapidly recovered. The case is from the *Southern Clinic*, for October.

Dr. B. W. Hazard writes, in the St. Louis *Clinical Record*—

Among the external uses of this acid I take occasion to again refer to its employment in wounds, burns and scalds. I usually prescribe it with cosmoline, in the proportion of ten grains to the ounce. Suppuration is reduced to a minimum, and the processes of repair go on without interruption.

I have found a solution of the acid in Bay rum, ten to twenty grains to the ounce, a most effectual application in dandruff (pityriasis capitis), a half dozen or less times applied, and the scales disappear. It is just as effective, and a far more agreeable application than a solution of chloral hydrate.

In rheumatism the drug holds its place. Mr. E. Prideaux says, in the *Practitioner*—

The results of the treatment of acute rheumatism by salicylic acid are now almost fully determined, and from the great amount of recorded and accumulated experience of its action, its beneficial effect may be considered as proved. From an experience of about forty cases I find that it cuts short the disease, so that it now lasts as many days as it did weeks formerly; it quickly reduces the temperature and keeps it down while the poison is eliminated from the system, if it does not have a specific action upon the disease itself, and by thus lessening the duration and intensity of the disease it lessens the probabilities of complications, more to be feared than the disease itself; and this it does in a way which cannot be hoped for by the use of any other remedy. It is true that a few failures have occurred in its use in the treatment of this disease, but in the larger number of these failure has evidently been due to timidity in dosing and in administering it frequently enough, for the drug is so rapidly eliminated from the system that unless its effects are kept up by hourly or very frequent doses for some time, it is not of much avail.

Treatment of Enlarged Glands in Scarlet Fever.

A correspondent of the *Lancet*, writes—

I have lately adopted a very simple method of preventing the great suffering which little patients sometimes have to undergo from enlarged glands in scarlet fever. The attendant is directed, on the slightest indication of enlargement, to rub gently into the neck, every two hours by day and every four at night, the linimentum ammonia, with a little tincture of

opium added; each application to last ten or fifteen minutes; and, to ensure the necessary perseverance, warning is given of the probable serious consequences should the enlargement continue. I have recently had a large number of cases of scarlet fever, some of them severe; but I have had no enlarged glands. The friction obviously prevents the collection of morbid material in the gland and subsequent adenitis.

Velocity of Nervous Transmission.

The *Comptes Rendus* contains some interesting accounts of the experiments of M. Chauveau on this subject. He presented two series. In the first, he compared the velocity of transmission in the nerves of the laryngeal muscles (red voluntary muscles), and in those of the cervical position of the œsophagus (red involuntary muscles). In the second, the comparison was extended to the nerves of the terminal portion of the œsophagus (pale involuntary muscles). He finds that in the motor nerves of the red involuntary muscles the velocity of transmission of centrifugal excitement is about eight times less than the nerves of muscles which have an identical structure, but which belong to the portion of the muscular system that is controlled by the will.

The Position of a Medical Expert.

A reviewer of Dr. Ogston's "Lectures on Medical Jurisprudence" observes that Dr. Ogston points out what cannot be too forcibly dwelt upon, for it is a principle underlying the whole question of medical jurisprudence, viz., that the medical man as an expert is practically a scientific witness, and being such, and such only, he must carefully refrain from exercising the prerogative of a judge. The law requires medical evidence to aid, not to direct, its decisions. This teaching is so sensible that we are tempted to quote the dictum of an old hospital lecturer on forensic medicine: "The duty of a medical expert is to state facts, and if called upon he should be prepared to explain them."

Varieties of Medical Specialism.

In an introductory lecture at St. Thomas' Hospital, London, Mr. E. Nettleship observed in regard to this subject as illustrated by ophthalmic surgery, three stages might be recognized in medical specialism: the first or empirical stage, based on the need for special dexterity in certain operations; the second, or encyclopædic, in which the practice of eye surgery was joined with general surgery, and the special branches of practice were in the hands of the best surgeons of the day, who were but seldom specialists (16th, 17th, and 18th centuries). The continued action of the causes which produced this stage have led, in the last half century, to a great increase of specialism and specialists, the progress of knowledge and multiplication of resources having made it impossible for any but men of the highest ability to cultivate thoroughly the whole field of modern medicine (third stage). However much we may regret this modern subdivision of labor, as fostering narrow habits and exclusive views, and as tending to an over-estimation of the importance of trivial complaints, we must accept it as an essential condition for most of us if we wish to attempt thorough work.

The Syrian Cure for Hydrophobia.

The following description of the Syrian cure for rabies is given in the *British Medical Journal*. It is probably as successful as others, and more agreeable than most. The person bitten by a mad dog is subjected, for forty days, to a strict vegetable diet; he is then made to pass every night, from the fortieth to the fiftieth day, without sleep; and to keep him awake, he is surrounded by musicians and dancers with instructions to amuse him. In the morning, shrouded in a large cloak, or with a thick bandage over his eyes, he is led to the seashore, or close to a sheet of water. There, at the moment when the sun rises, his eyes are rapidly uncovered, and at the same time a large quantity of water is thrown in his face. Several Arabs said that they had seen this treatment succeed, and they had great confidence in it.

The Frequency of Uterine Displacements.

We remember to have heard the late Dr. Charles D. Meigs state his belief that at least 30,000 women in Philadelphia were at one time suffering from womb disease. In the October number of the *American Journal of Obstetrics*, Dr. D. C. Wade writes—

It is the result of my observation that a large proportion of women suffer from uterine displacement, and that young ladies are not less prone to these diseases than are matrons. It is further observed that many consecutive diseases are banished upon the removal of this their cause; and I wish to impress upon all

the absolute necessity of giving the uterus particular attention in all cases where it may be supposed to be implicated.

Mosquito Bites.

An exchange tells us that the best preventive of mosquito bites is to smear the face and hands with half a drachm of the oil of cloves or cinnamon, rubbed up with an ounce of spermaceti ointment; and that to allay the smarting they produce the handiest remedy is to rub the bitten part well with strong soap, and hold it under a stream of water.

Batiator Root.

This is a new emetic root from Senegal, now propagated in France from seeds. It has properties very similar to ipecacuanha, and is given in similar doses.

Correspondence.

The Sense of Voluntary Power.

Ed. Med. and Surg. Reporter:—

My attention has been directed to a brief editorial comment, appended to a letter of mine, with the above caption, in the Reporter for Nov. 9th.

The views of Dr. Brinton relative to general psychology are well known to the readers of this journal; they are also stated with sufficient clearness in his thoughtful treatise on the "Religious Sentiment, its Source and Aims."

According to this modern psychology (with which in the main I fully agree), sentiency is a property, not merely of the brain proper, but of the whole nervous system; wherever there are ganglia and nerves, there is sensibility. Every ganglionic excitement, whether cerebral, or spinal, or sympathetic, gives rise to sensibility; this view, as Bain well remarks, "seems a more likely supposition than that sensibility should attach to certain ganglia (those in the cerebrum), and be absent from others made up of exactly the same combination, of the same nervous elements."*

In ascribing sentiency as a universal property to nervous ganglia, we have not even yet touched bottom. If we pursue the analysis still further, we shall find the same fundamental mental characteristic in the undifferentiated protoplasm: "The human mind is a memberment of infusorial sensation," said Oken, in 1804; "this phrase," says Dr. Brinton, "has been the guiding principle of modern psychology." † Wherever you see living protolapsm responsive to a stimulus, protoplasm in animal or vegetable, there you see sentiency, there you see mind; so says Dr. Brinton, and so says Spencer and Lewes, and Ferrier, and Nägeli, and Taine, and hosts of modern psychologists. But why stop here? Why not push the line of argument into the inorganic world, and with Haeckel see love and hate in the attractions and repulsions of atoms? Why may not the magnet be presumed to have something akin to love for the iron which flies to its embrace? *

Without, however, unnecessarily pressing the theory into the inorganic world, it may be safely affirmed that the study of comparative Physiology and Psychology does confirm the evolutionary theory of mind, so well epitomized by Von Nägeli.† "From the clearest consciousness of the thinker, downward, through the more imperfect consciousness of the child, to the unconsciousness of the embryo, and to the insensibility of the human ovum, or through the more imperfect consciousness of undeveloped human races and of higher animals to the unconsciousness of lower animals, and of sensitive plants, and to the insensibility of all other plants, there exists a continuous gradation without definable limit."

It is not my purpose to go into an extended analysis of this theory, so plausible, if the hypothesis of evolution be sound; in fact, granting the hypothesis, it is hard to see how any other theory can stand.

In the development of higher organisms, and the elaboration of a complex nervous system, super-added to the simple nervous arcs of the lower organisms, certain protective ganglia of a higher order are evolved; any considerable stimulus awakens not merely one ganglion, but several; there is now what is called a "diffusion of nerve currents;" "local feelings fuse into a collective feeling," or "a combined tone, the resultant of all the separate tones;"‡ there was first sentiency, there is now consentiency; finally, when we arrive at the complex cerebral apparatus of the higher mammalia, we find sentiency associated with thought, reflection, comparison (the memory of past experience) and consentiency becomes consciousness, sensori-motor action becomes conscious effort; in short, we have volition. Let me quote a few paragraphs from G. H. Lewes.

"The gradations of sensitive reaction are sentiency, consentience, and consciousness."

"The reflex mechanism necessarily involves sensibility; reflex actions may be unaccom-

* Bain, *Emotions and Will*, Eng. Ed. 1865. p. 600. Appendix A.

† "*Religious Sentiment*," p. 61. The author here appends a judicious qualification: "That in the course of this memberment or growth, wholly new faculties are required, is conceded. As the union of two inorganic substances may yield a third, different in every respect from either, . . . so positively new powers may attend the development of mind. From sensations it progresses to emotions, from emotions to reason."

* Virchow, in reply to Haeckel, in his address to the German Association of Science, delivered last fall, admits that it may be so, but such analogies are very misleading. Virchow meets this speculation in a fine vein of ridicule.

† *Nature*, October 25th, 1877. It is necessary to point out that Nägeli here uses terms in their popular acceptation.

‡ Bain. Loc. Cit., p. 600.

panied with consciousness, and yet be sentient; the feelings are operative, though not discriminative."

"Sentiency has its various modes and degrees, such as perception, ideation, emotion, volition, which may be conscious, subconscious, or unconscious. Between conscious, subconscious, and unconscious states, the difference is only of degree of complications in the neural processes, which by relative preponderance in the consensus determine a relative discrimination."

"There is no real and essential distinction between voluntary and involuntary actions; they all spring from sensibility; they are all determined by feelings."

"All actions are reflex, all are the operations of a mechanism, all are sentient, because the mechanism has sensibility as its vital property."*

I opine that the above propositions, which will appear startling to many readers of the Reporter, have very much justification in comparative psychology, and they may possibly hold their ground till the long guns of the Boston "Monday Lectureship" are directed at them, when they must fall, for they savor of rank heresy, call the doctrine "organicism," or call it what you will.

After all this explanation of views which are the outcome of the exactest scientific method, and which I am inclined to endorse, and with this concession, that there is no absolute line of demarcation between voluntary and reflex, between sentiency, consentiency and consciousness, I yet maintain that for all practical purposes there is such distinction. I affirm that in my letter of November 9th I used the word voluntary in the popular acceptation of the term, and was justified by the best authorities in so doing. Thus, Flourens, in describing the reflex movements of decapitated animals, asks, "Do these phenomena indicate a residuum of will? No, they are purely mechanical; they are sensori-motor acts, in which intelligence and will take no part."†

Vulpian describes similar exhibitions in the same language. I need not refer to Carpenter, Flint, Draper, and other eminent physiologists, who use the words voluntary, conscious, etc., to express products of the higher cerebration; even philosophers like Lewes, do not, in common parlance, make consciousness the synonym of sentiency, or speak of reflex action as voluntary. Whether, as Draper teaches, there be, in the human organism, "automatic arcs," and "influential arcs," essentially distinct and different, as wide apart as heaven and earth, for the boundless ocean of the immaterial lies between them, or whether, as I believe, this distinction be only fanciful, there is, nevertheless, a difference in degree between the automatic and the volitional, which justifies the common phraseology, and justifies me in affirming as a heresy the doctrine of Dr. Dowler (and with this I close), "that voluntary motion is neither directly communicated from, nor regulated by, the brain;" that the muscles in connection with the spinal cord perform voluntary motions for hours after having been severed from the brain; that these motions are not only entirely independent of the brain, but may take place, though imperfectly, after the destruction of the cord."

In so far as the word voluntary is concerned, I reiterate my entire disbelief in the above proposition.

E. P. Hurd, M.D.

Newburyport, Mass.

* *Physical Basis of Mind.* American edition, p. 403.

† Quoted by Vulpian.

The Decimal System.

Ed. Med. and Surg. Reporter:—

I certainly think the profession and the public generally are under obligations to the Reporter and Dr. Oldberg for the very clear statement of the metric system (see Reporter, July 27th, 1878). I shall not attempt to make any improvement on the communication, but merely wish to impress more deeply the idea of comparing the metric system to our decimal monetary system. Liken the gram to one dollar, the centigrams to cents, and the decagram to an eagle, and the whole matter is simple and plain. And this rule is applicable to the measures of length. Call the meter one dollar, and the other divisions and multiplications become easy and natural.

Here let me enter a protest against the multiplication of tables. Dr. Oldberg well says gram, centigram and milligram are all the terms necessary for the physician, chemist or druggist. A table of measures by weight, and a table of measures by length, is all that the profession or the public in general need to know. Why have a table of superficial measures, a table of solid measures, and a table of measures of capacity, when the table of measures of length will answer every purpose? Abolish or ignore liter, are and stere, and their derivatives, and a huge stumbling block in the way of the adoption of the metric system is removed. Certainly it is easier to comprehend one hundred square meters than it is one are. A cubic meter comes more clearly in the mind than does one stere. And as to liter, almost everything merchantable can be bought and sold by weight; so let us abolish the measures of capacity of squares and cubes at once, as superfluous and complicated.

Physicians are the only active reformers we have. Here is a reform subject to no possible objection, and the more one studies it the more he wonders that it has not been long ago adopted. It is applicable to every department of human knowledge and industry.

A writer in the *Popular Science Monthly* says the attempt to measure time by the metric system was a total failure. Why not measure time as well as the distance between two towns? Nothing but stupidity or obstinacy stands in the way. Divide the clock dial into ten parts; call the day one meter long instead of twenty-four hours. Each of the ten parts can be

called decimeters. Divide again into centimeters and millimeters. Put on two, three or four hands, as may be necessary, and the one hundred-thousandth part of the meter (one day) can be clearly indicated. Roman clock dials are divided into twenty-four hours; why not into ten decimeters and their metric subdivisions equally as well?

Again, what "rhyme or reason" is there in the arbitrary statement that every circle, from the celestial meridian to a pin's head must be divided into three hundred and sixty degrees? As meter means measure, why not say all circles are one meter, and then divide them into deci, centi, or millimeters as may be required? Other examples might be given proving the complete adaptability of the system to every department of science as well as industry.

It would be well if we knew where the weights and measures spoken of could be obtained; but any physician or any person of ordinary skill as a mechanic, after reading Dr. Oldberg's article, can make a set of weights which will not "turn in the estimation of a hair," as Portia said to Shylock, from the true metric, or as I prefer to call it, decimal system. Another question: Will some one inform your readers where decimal or metric clocks, as above described, can be obtained?

Canyonville, Oregon. C. H. MERRICK, M.D.

Tolerance of Hydrate of Chloral.

ED. MED. AND SURG. REPORTER:—

Dr. Frank Woodbury's article on "Chronic Chloral Poisoning," in the REPORTER for Nov. 9th, 1878, recalls to mind a case of great tolerance of hydrate of chloral without any bad results.

Several months ago I was called to attend Dr. Mc., aged about 30, who had been on a debauch for two weeks. Found him very much prostrated and on the verge of delirium tremens, but still rational enough to converse and tell me his condition, etc. I prescribed the following—

℞.	Hydrat. chlor.,	ʒiv	
	Potass. bro.,	ʒvj	
	Tr. valerian.	f.ʒij	
	Aq. cinnamon. q.s. ad	ʒiv.	M.

SIG.—Teaspoonful every two hours until quiet.

I remained with him until the medicine arrived, and gave him a tablespoonful, and directed him to take a teaspoonful in two hours, if he was not relieved. This was about 1 P.M. I saw him again at 4 P.M., and was much surprised to find him still awake and restless. Asked him if he had slept any; he said "No, and I don't feel anything like sleeping, but feel a little quieter." Asked him if he had taken the teaspoonful as I had directed. His answer not only surprised, but frightened me. "Yes, I have taken it all." I picked up the bottle, and sure enough, it was empty. He said that he had taken the last dose a half an hour before I came; consequently he had taken 240 grains of hydrate of chloral in three hours and a half, and still he was not sleepy. The only effects visible were an excessively rapid, irregular and intermittent pulse, hallucinations, confusion of thought, slight dyspnœa, flushed face, and intensely injected eyes.

I remained with him until 9 P. M., when he went to sleep, and slept, off and on, for thirty hours. He remained in his room for two days, and then started for his home, feeling no worse, nor no bad effects from his large dose of chloral.

The chloral used was an excellent preparation, and the prescription was prepared by a reliable druggist, consequently I am positive that my patient took 240 *grains* of chloral in *three hours and a half*, and without any bad results, He informed me that he had never before taken hydrate chloral. Very respectfully yours,

J. N. DIXON, M.D.

Springfield, Ill., Nov. 17th, 1878.

Yellow Fever—Is it Personally Contagious or Not?

ED. MED. AND SURG. REPORTER:—

Surgeon General John M. Woodworth uses the following language: "The weight of scientific evidence seems to warrant the conclusion that yellow fever is produced as an invisible poison, capable of *self multiplication* (italics mine) outside of the human organism, which it enters through the air passages." Again, he says, "It is capable of being transported in the clothing or (other) personal effects of passengers and sailors, but its spread from one city to another is chiefly accomplished by vessels, their damp filthy holds and bilge water being its favorite lurking places." And again, "Yellow fever is *not communicated from the sick to the well* (italics mine), the sick and well being only dangerous as possible carriers of the poison germs or miasm."

Frederic T. Roberts, M.D., B.SC., M.R.C.P., in his book on the "Theory and Practice of Medicine," uses the following language (1874):—

"It is by no means agreed upon, whether it (yellow fever) is due to malaria, or whether it is a specific disease propagated by contagion. Most authorities maintain the latter view, holding that the *true* fever is of the *continued type*, but that it may be simulated by some malarial fevers of a remittent character." There appears to be strong evidence to prove that the disease may be conveyed by infection, etc. Again, he says: "Fomites may be the means of propagating it." Here, then, are antagonistic views. The language of many other writers might be quoted on either side, but this shall suffice. When Surgeon Woodworth, as the representative of the non-contagious (personal) party says, the "invisible poison (of yellow fever) is capable of self-multiplication *outside of the human organism*," (italics mine) are we to infer that it is *only* thus multiplied, and not at all by the "human organism?" If that is the view, how are we to account for the rapidly fatal termi-

nation of so many thousands of cases? Can it be *possible* that the mere inhalation of a few "poison germs," into the "human organism," *without further multiplication* in it, can, like the poison of a serpent, so rapidly destroy its vitality?

On the other hand, if the "poison germs" rapidly multiply in the "organism" (as *leaven* in a lump of dough), their *destructive* effects would not be so astounding. But in that case another difficulty looms up, more extraordinary and unaccountable than the former, viz., that the poison germs of yellow fever may "multiply" in the "human organism," to its *entire* destruction (vitally), and those germs be propagated to *all* contiguous *inanimate* bodies, as clothing, bedding, furniture, and other "personal effects," but *not possibly* to another "human organism," *except* they have *first adhered* to the fomites mentioned. Then, indeed, do they become dangerous in the extreme! How astonishing the developments of science! The "human organism," dying or dead, but a *mass of poison yellow fever germs*, may not possibly communicate them to a living "organism," but to fomites, *ad infinitum*, and those fomites, in their turn, to "human organisms," without limit!

This reminds me of the historical fact, that for the first thousand years of the existence of the small-pox (as known to history), it was declared by the medical world to be "non-contagious." But "history repeats itself."

J. H. Nowlin, M.D.

Little Rock, Ark., Sept. 12th, 1878.

Imbedding of a Piece of Tooth in the Tongue, in a Case of Gunshot Wound.

Ed. Med. and Surg. Reporter:—

In the *British Medical Journal* for September 21st, 1878, there is mentioned the following case, reported by Bronstein: A Russian soldier was wounded in the mouth at Plevna, July 18th, 1877. Nine months subsequently he felt pain in the tongue, which was found to contain a foreign body. On extraction this body proved to be an incisor tooth, carried away by the ball.

On reading this, I was reminded of a somewhat similar case which came under my notice during the late civil war. Major S., of the Sixth Pennsylvania Cavalry, was riding across the field on the 7th of May, 1864, during the battle of the Wilderness, when a ball entered his mouth, through the right cheek, breaking away the bicuspid and anterior molar teeth of the upper jaw on that side, cutting a gash across the tongue, and shattering the left upper molar teeth, with their alveoli. Although stunned by the blow, Major S. was conscious of spitting out a mouthful of blood and pieces of teeth, among which the ball must have been, for it was never seen afterward, and the left cheek was not perforated. In four days he reached his home in this city, when I attended him. He thinks it was on the thirtieth day that he called my attention to a swelling and soreness on the upper surface of the tongue, where, he said, there had twice before been, at intervals of two or three days, a slight discharge of pus. Upon careful pressure I felt fluctuation, and opened a little abscess. Passing a fine probe through the orifice, I felt a foreign substance, which was at once extracted, and proved to be a piece of one of the teeth. It need hardly be added that the cavity healed up soundly at once.

Philadelphia, Pa. John H. Packard, M.D.

News and Miscellany.

A Permanent Scientific and Medical Commission.

On Saturday, November 9th, a committee appointed by the "Maryland Academy of Sciences," and approved by the "Academy of Medicine" and "Baltimore Medical Association," consisting of Drs. J. R. Uhler, C. C. Bombaugh and C. L. Oudesluys, waited on President Hayes, with the following memorial:—

To the President—The undersigned, a committee appointed by the "Maryland Academy of Sciences," most respectfully request you to transmit to Congress a message, asking an appropriation and authority to appoint a permanent scientific and medical commission, to study and report upon the nature, causes, treatment and prevention of yellow fever and allied epidemic diseases; said commission to consist of twenty or more members chosen from the ablest chemists, physicists, microscopists, biologists, naturalists and physicians in the country, with power to select from their own number any others, workers, in order that the disease may be systematically examined from different points of view, both by acclimated members on the spot, and others in the various laboratories of our country.

J. R. Uhler, M.D.
Charles L. Oudesluys.
Rev. John M. Holmes.
George W. Davidson.
P. G. Sauerwein.
C. C. Bombaugh, M.D.

During the conversation that ensued the following important points were made:—1. That the active intervention of men of trained judgment and special qualification is essential for success. 2. That the investigation should be commenced at once, before another epidemic occurs, in order that the usual healthy condition of the air, water, food, vegetable and animal life in the infected districts may be ascertained. 3. That the investigations should be made by a large number of specialists, in order that many new methods may be tried. 4. That a portion of this work can only be conducted in the various large laboratories of the country, hence a number of names of men possessing a national reputation, and connected with Harvard, Yale, the Universities of Michi-

gan, New York, Pennsylvania, Maryland, Louisiana, Bellevue Medical College, Cincinnati Medical School and the Surgeon General's Office, were suggested for appointment. 5. The importance of systematic efforts was discussed, and the committee left with the assurance that the memorial would be acted upon, and with the request of the President that it should be widely made known, in order that medical and scientific men may induce Congress to pass the bill.

The American Public Health Association.

This Association held its session in Richmond last week, under the presidency of Dr. Elisha Harris, of New York. There was a representation of nearly one hundred and fifty members of the profession, and a number of other gentlemen of eminence in sanitary science, and many valuable papers were presented. We have received a full report of the proceedings, which we are, however, obliged to postpone until our next issue, owing to the pressure of other matters upon our columns.

Plant Forms in Art.

Dr. J. T. Rothrock, of this city, has commenced a course of thirty-five lectures on "Plant Form and its Anatomy, as Applied to Industrial Art." The lectures are given on Friday evenings, in the rooms of the Pennsylvania Museum and School of Industrial Art, on North Broad street. Dr. Rothrock has developed a most interesting and novel branch of the application of exact science to the demands of art. By the process of maceration and double staining, and then projecting the magnified image on screens, he reveals to art students a new world, both of form and color. It is comparable to the kaleidoscope, but instead of set figures of geometrical outline, we have all the diversity and wealth of the intimate laboratory of nature herself.

Items.

—A committee of the Minnesota Legislature, appointed in February last to investigate charges of cruelty and mismanagement against the State Lunatic Asylum, have reported to the Governor. They find the charge of cruelty sustained in two cases. In one case, an unfortunate patient was choked to death by having solid food forced down his throat; in another, a woman was scalded to death by being "carelessly left in a bath tub." In addition to this, there is a "deficiency" of over $4000 in the accounts of Rev. A. H. Kerr, the Treasurer of the Hospital Board.

—Wet pepper, it seems, throws off great quantities of carbonic acid gas. On board an English steamer in a Chinese port lately, a quantity of pepper was taken on board, a part of which had been wet with rain. Next morning a Chinaman went into the hold and fell senseless. Four English sailors went down to render assistance; they, too, became senseless; and finally all five, after a ventilation of the hold, were found dead.

Personal.

—In the death of Mr. Thomas H. Powers, senior member of the large and widely known manufacturing firm of Powers & Weightman, drugs and chemicals, this community loses one of its most estimable citizens, and numerous charitable and benevolent organizations one of their most liberal and intelligent supporters.

—Some very bitter and unfair reviews of Dr. Allan McLane Hamilton's late work on nervous diseases have appeared in various medical journals, and Mr. Lea, the publisher, has done well to reprint a fair and complimentary notice of the book by Dr. J. Crichton Browne, one of the ablest of English neurologists, which substantially coincides with the notice which appeared in the Reporter.

MARRIAGES.

Morrison—Gould.—On Tuesday, October 29th, at Christ Church, Brooklyn, by Rev. A. M. Morrison, Dr. Sterling Morrison, of Peekskill, N. Y., and Marie Louise, daughter of the late J. E. Gould, of Philadelphia.

Neave—Bailey.—On the 14th instant, at Christ Church, by the Rev. I. N. Stanger, James L. Neave, M.D., of Fort Berthold, D. T., and Lizzie M. Bailey, of this city.

Pierce—Schnell.—In Brattleboro, Vt., October 10th, by Rev. M. H. Harris, Elihu Proctor Pierce, M.D., of Northfield, Mass., and Mrs. Emma E. Schnell, of Winchester, N. H.

Pihlman—Brailly.—On Thursday, October 24th, 1878, at the residence of the bride's parents, by the Rev. B. Grimm, Robert L. Pihlman and Regina Lucy, daughter of Dr. C. Brailly, all of this city.

Reynolds—Charlick.—On Wednesday, October 30th, 1878, at the Fifth Avenue Presbyterian Church, by the Rev. Dr. John Hall, Jessie, daughter of the late Oliver Charlick, and William M. Reynolds, M.D., both of New York.

Rossell—Wister.—At Philadelphia, on Thursday, October 31st, by the Rev. Dr. Furness, Clifford B. Rossell and Lily S., daughter of Caspar Wister, M.D.

Thompson—Tutt.—At Elizabeth, N. J., on Wednesday, October 23d, 1878, by Rev. W. C. Roberts, D.D., assisted by Rev. E. N. Crane, Lewis Thompson and Alice S., daughter of Dr. Wm. H. Tutt.

DEATHS.

Murphy.—On the 6th instant, Dr. John G. Murphy, at his late residence, Rising-Sun lane and Sixth street, Philadelphia.

Shunk.—In Philadelphia, on the 31st ultimo, Francis R. Shunk, M.D., only son of the late Isaac Shunk, in the fifty-fifth year of his age.

Sites.—On the 28th instant, after a lingering illness, Dr. Joseph Sites, of Philadelphia.

Steele.—In New York, on Tuesday, November 12th, Edward F., son of Dr. Edward G. Steele.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

DUCRO'S ALIMENTARY ELIXIR

A Combination uniting the properties of ALCOHOL and RAW MEAT. It has been Mr. Ducro's aim in preparing this elixir to present under the form of a pleasant cordial the nutritive and restoring properties of raw meat and the stimulating properties of alcohol. In this he has been eminently successful, judging from the great number of physicians who prescribe and use this food medicine. This preparation, which has been used with great success in the hospitals of Paris since 1868, is adapted to the treatment of all diseases requiring the administration in a small volume of a tonic able to stimulate and support the vital forces, as in *Pulmonary Phthisis, Depression* and *Nervous Debility, Adynamia, Malarial Cachexia,* etc. It is especially adapted for delicate ladies and children, debilitated old people and convalescents.

Paris: Place de Vosges, 20. **New York: E. FOUGERA & CO., Depositaries.**

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUGERA & CO., Agents,

NEW YORK.

TO PHYSICIANS.

THE scarcity and high prices of Cinchona barks and Sulphate of Quinia, and the prospect of only a slight reduction in these prices, makes the present a favorable opportunity of calling the attention of the profession to the *combination of all the bark alkaloids.*

Much attention has been given to this subject in Europe and India.

The growing appreciation by the medical profession of the United States of

CINCHO-QUININE

is due to the fact that it retains the important alkaloids IN COMBINATION, — a combination which in practice is *preferable to perfect isolation or separation* of these alkaloids.

In addition to its superior efficacy as a tonic and anti-periodic, it has the following advantages, which greatly increase its value to physicians : —

1st, *It exerts the full therapeutic influence of* Sulphate of Quinine, *in the same doses*, without oppressing the stomach, creating nausea, or producing cerebral distress, as the Sulphate of Quinine frequently does ; and it produces much less constitutional disturbance.

2d, It has the great advantage of being *nearly tasteless.* The bitter is very slight, and not unpleasant to the most sensitive, delicate woman or child.

3d, It is *less costly* : the price will fluctuate with the rise and fall of barks, but will always be much less than the Sulphate of Quinine.

4th, It meets indications not met by that Salt.

The following well-known Analytical Chemists say : —

"UNIVERSITY OF PENNSYLVANIA, Jan. 22, 1875.
"I have tested CINCHO-QUININE, and have found it to contain *quinine, quinidine, cinchonine, cinchonidine.* F. A. GENTH,
Professor of Chemistry and Mineralogy."

"LABORATORY OF THE UNIVERSITY OF CHICAGO, Feb. 1, 1875.
"I hereby certify that I have made a chemical examination of the contents of a bottle of CINCHO-QUININE; and by direction I made a qualitative examination for *quinine, quinidine,* and *cinchonine,* and hereby certify that I found these alkaloids in CINCHO-QUININE.
C. GILBERT WHEELER,
Professor of Chemistry."

"I have made a careful analysis of the contents of a bottle of your CINCHO-QUININE, and find it to contain *quinine, quinidine, cinchonine,* and *cinchonidine.*
S. P. SHARPLES, *State Assayer of Mass.*"

TESTIMONIALS.

"WELLFLEET, MASS., Nov. 17, 1876.
"I have used CINCHO-QUININE, and can say without any hesitation it has proved superior to the sulphate of quinine. J. G. JOHNSON, M.D."

"MARTINSBURG, Mo., Aug. 15, 1876.
"I use the CINCHO-QUININE altogether among children, preferring it to the sulphate.
DR. E. R. DOUGLASS."

"LIVERPOOL, PENN., June 1, 1876.
"I have used CINCHO-QUININE, obtaining better results than from the sulphate in those cases in which quinine is indicated.
DR. I. C. BARLOTT."

"RENFROW'S STATION, TENN., July 4, 1876.
"I am well pleased with the CINCHO-QUININE, and think it is a better preparation than the sulphate. W. H. HALBERT."

"ST. LOUIS, Mo., April, 1875.
"I regard it as one of the most valuable additions ever made to our materia medica.
GEORGE C. PITZER, M.D."

"RICHMOND, VA., March 28, 1877.
"I believe that the *combination* of the several cinchona alkaloids is more generally useful in practice than the sulphate of quinine uncombined.
"Yours truly, LANDON B. EDWARDS, M.D.
Member Va. State Board of Health, and Sec'y and Treas. Medical Society of Va."

"CENTREVILLE, MICH.
"I have used several ounces of the CINCHO-QUININE, and have not found it to fail in a single instance. I have used no sulphate of quinine in my practice since I commenced the use of the CINCHO-QUININE, as I prefer it. F. C. BATEMAN, M.D."

"NORTH-EASTERN FREE MEDICAL DISPENSARY, 908 East Cumberland St., Philadelphia, Penn., Feb. 29, 1876.
"In typhoid and typhus fevers I always prescribe the CINCHO-QUININE in conjunction with other appropriate medicines, the result being as favorable as with former cases where the sulphate had been used.
"F. A. GAMAGE, M.D."

SYRUP-GLYCEROLE

OF

FERROUS CHLORIDE.

The Combination which all Forms of Iron must assume before Assimilation.

Superior to all other Iron Salts in that, while it is readily taken into the circulation, and does referruginate the blood, it does not ordinarily cause constipation nor headache. It is very pleasant to the taste, and is unalterable.

Ferrous Chloride is a neutral salt, consequently it has no action upon the teeth, and may be administered fearlessly. This fact and the delightful taste of my preparation render it an advantageous form for administration to children. Each fluid drachm contains one grain of Ferrous Chloride, which, owing to the certainty of its assimilation, is a full, active, adult dose.

THE ELEVATED RAILROADS OF NEW YORK CITY AS A DETRIMENT TO HEALTH.

Read before the New York County Medical Society, September 27th, 1878,

BY WORTHINGTON MYERS, A.M., M.D.,
Of New York City.

Mr. President:—I have carefully read the petition in relation to the noise caused by the Metropolitan Elevated Railroad. I am free to say that the statements contained in said petition are in accordance with the result of an experience of eighteen years' practice, eleven of which have been devoted (in a measure) to the study of the nervous system and the diseases pertaining to it, their causes, etc.

I admit that noise of any description is at first disagreeable, even to those in good health, but how much more so, and even injurious, does it prove to those ailing, or if I may be allowed the expression, of an "hyperæsthetic temperament."

I also admit that it is an established fact that the nervous system becomes (in some cases) habituated, as it were, to sounds that at first seemed almost intolerable; but I am also free to assert that the noise or sounds produced by the running of trains on these roads is of that continuous jarring character which will eventually cause among those residing within its vicinity that degree of impoverishment of brain and nerve tissue which, while it is less perceptible in its immediate effects than sudden shock, is far more serious in its ultimate results.

I also consider it liable to produce certain changes in the natural state of the microscopic molecules of which the nerve substance is composed, whereby their healthy balance is lost and the proper generation of nerve and muscle currents interfered with. This state of disarrangement is known as molecular perturbation. Now, in my opinion, this is exactly what will be produced in those subjected to the noise of these roads, and will produce in them that artificial induction of these perturbations which will give rise to all the symptoms of nervous exhaustion, and engender a reduced condition of constitution, in which proneness to severe nervous affections is one of the most prominent as well as most serious defects; and if continued for any time, will set up all the symptoms of dementia, hysteria, dyspepsia, melancholia, chorea, etc. Now this class of affections are entirely due to these artificially induced perturbations, caused by this rapid succession of shocks, this jarring to and fro, and are entirely and totally distinct from the true dynamic reactions which, in the healthy molecular condition of the nerves, are produced in them by the ordinary exigences of existence.

I have been consulted by persons residing along the line and in the vicinity of these roads, engaged in various occupations during the day, and with scarcely a single exception they have complained of insomnia, headache, disrelish of food, etc., which symptoms have only manifested themselves since the running of the cars on these roads.

Now, as every effort of the mind and every action of the body involves the necessity for a discharge of nervous force—much as a Leyden

jar discharges its charge of electricity—and as every continuous exercise of the faculties requires a continuous succession of such discharges, it follows that as the generation of nerve force is produced by the act of nutrition (that is to say, that the establishment of a nutritive molecule and removal of an effete one, sets free a modicum of electricity, which, joining others, supplies the current), such process must keep pace with the discharges; hence bodily or mental exertion—be the calling what it may, professional, merchant, clerk, or seamstress—requires rest during the hours allotted for relaxation, which it is impossible to obtain in the neighborhood or along the line of these roads.

As loss of sleep is the most constant and distressing symptom in many nervous affections, its relief is one of the first effects appreciated by the patient. The importance of this fact can scarcely be overrated. Sleep is food for the nerves; its presence facilitates a ready adjustment of the molecular balance, a disturbance of which is the primary cause of nervous exhaustion, and all the conditions which follow in its train.

To such as have consulted me, I have given a warning that the early symptoms of insufficient nerve force and molecular perturbation in some of the nervous centres, are manifesting themselves, and that they will drift into a condition which will eventually undermine their mental and bodily powers, unless they turn the warning to good account, viz., *by changing their locality.* I have found the urine of these patients, in some cases, phosphatic, in others slightly charged with lithates, indicating clearly impoverishment of brain and nerve tissue, involving, in two instances, deficiency of elementary matter and disturbance of molecular balance.

What does this condition indicate? To my mind it is clear, viz., waste and malnutrition of brain and nerve substance, involving reduction in the power of or partial suspension of the healthy nerve currents, the presence of which is absolutely necessary for the proper performance of organic functions, and the anomalous feelings of these patients are true sensations, the jarring vibrations given off by a defective nerve current, like the broken wire of a stringed instrument.

It has been asserted that the nervous system soon becomes habituated to sounds that at first seemed almost intolerable, or, in other words, that persons residing along and in the vicinity of these roads would gradually become accustomed to the noise, so that no detriment to health or otherwise would accrue. Now some accept this as a *truism,* and are led to believe that it is only the effect of sudden shock, which produces severe, or in fact any form of mental or nervous disorder. To all such I say, let them reflect that as the continuous dripping of a few atoms of water on the hardest stone will eventually wear it away, so will the *slow* but *sure* influence of this noise prematurely wear away the nervous tissues, produce degeneration of the minute nervous structures, and induce all forms of neurotic disease, including cerebral softening itself. And this is the class with whom the neurasthenic constitution will originate, to be left as a legacy to their children, and their children's children.

ANASARCA COMPLICATING PREGNANCY—FELON.

BY J. G. BULLOCH, M.D.,
Of Morrison Mills, Florida.

I present to your notice an interesting case of anasarca complicated with pregnancy. I was called to see Mrs. ——, and found her suffering with abdominal dropsy; there was considerable œdema of the lower extremities. She was also pregnant. What was to be done in a case like this: a poor woman, deprived of the necessities of life; surely it was a bad outlook for her; but I began prompt treatment, and accordingly prescribed a diuretic of sulphate of magnesia and bitartrate of potassa, eight ounces each, a teaspoonful three to four times per diem, and increased the dose to a tablespoonful every hour. From time to time throughout, to promote rest, I gave her opium and extract hyoscyamus, the latter in itself a laxative and diuretic. I also gave her tincture of iron, and pills of Vallett's mass, nux vomica and gentian, to strengthen the system and reduce the excessively anæmic condition of the blood vessels and tissues. Her liver and spleen were much enlarged; no trouble about the heart. The discharges were watery. She continued in this state for some time, under the above treatment, for I did not care to bring on labor, nor did I expect any improvement until she gave birth to the fœtus. When I was away one night she gave birth to a fully developed child, born dead. There was no hemorrhage

to speak of, and the os possessed but little elasticity.

The treatment was continued the same as before labor, though I subsequently left off the sulph. magnesia, and gave powdered squills and bitart. potassa. As no great relief accrued from the diuretics it was thought best to perform abdominal paracentesis. After putting on the bandage, I introduced the trocar and canula and evacuated about a quart or more of water. I must have introduced the instrument fully one and a half inches before I could penetrate the cavity of the abdomen, so thick were the abdominal walls. I had forgotten my adhesive plaster, and had to make use of a piece of porous plaster, which soon came off, leaving the water free egress. I concluded not to put on any plaster at all, but let the bandage suffice; and thus did this case continue, with the fluid dripping, for two weeks, with nothing to cover the orifice except a piece of lint. There was no peritonitis, but rather an improvement, as the water began to disappear from the lower extremities and abdomen. I continued the diuretics. The fluid left the lower parts and accumulated in the right shoulder and arm, which became hot and painful, erysipelatous in character. I ordered poultices, which acted like a charm, and to-day the woman walks about, not well, tis true, but with the swelling gone, "the shadow of her former self." The swelling of her feet troubles her at night; she has some headache and an anæmic murmur at the heart; but I trust, ere long, she will fully regain her health, for she is vastly improved and would scarcely be taken for the same person. I have had another such case, which was not so fortunate; she gave birth to a four or five months' child; and sent for me too late to be of any service. In both cases I lay the prime cause to the continuous exposure to malaria, which weakens the system and unfits the liver and spleen to perform the duty which nature imposes upon them. I made no examination for albumen in either case, but did so in another one, and found no trace of kidney affection.

I would also add a short history of a case of bone felon. I was sent for to see a young fellow with a bad case of ulcerated finger, and found him so nervous as to require chloroform before he would let his finger be lanced. I saw but little encouragement to give him, as to whether his whole finger could be saved. I lanced the finger deeply and well, along its whole course, and ordered a warm poultice. Attention was paid to the state of the bowels, Dover's powder administered, to promote rest, cinchonidia, for fever, iodide potassa and iron, for blood.

While at the Roper Hospital, one day, in Charleston, S. C., I observed the case of a man whose hand I saw but little hope of saving, as the pus was burrowing all through the tissues, but Prof. Porcher had ordered his hand kept in tepid water all the time, by means of a vessel filled with water, above which was a frame, from which hung a cord which held the hand in such a position as to keep it slightly under the water. Recovery of hand. I had my patient's hand suspended in somewhat the same manner, with poultice on the finger, which had the double advantage of keeping the poultice warm all the time, and for nearly two days and the same number of nights was the water kept warm; the poultice was not on all the time, but the hand was kept immersed for the time mentioned above. Of course, no bacteria, to speak of, could get to the wound from the air, and in a measure the water might be said to act as an antiseptic. I found the water to cause the skin on the whole hand to die and shrivel, but no other trouble. The water acted well upon the wound; I then ordered solution chloride of soda, and the young fellow's finger was saved. I neglected, at first, to put a splint on the finger, and consequently, some contraction of tendons ensued, but by constant stretching of the tendons his finger is regaining its original position, and is of good use to him.

URINARY FISTULA RESULTING FROM AN OPERATION OF LITHOTOMY FOURTEEN YEARS PREVIOUS—SPONTANEOUS EXIT OF A STONE FROM THE FISTULA, WEIGHING TWO OUNCES.

BY F. H MILLIGAN, M.D.,
Of Wabashaw, Minn.

James R., aged twenty-two years, was referred to me by the County Commissioners, for admission to the County Hospital, in January last. I examined the case, and found what I thought was a stone, just posterior to the scrotum, from which issued urine, more than twice as much as came from the natural passage. The patient informed me that fourteen years previous, in New York City, when at the age of

eight years, he was cut for a stone. The cicatrix of a bilateral operation was apparent. About two years previous to coming under my charge he fell from a ladder and ruptured his perineum. A large abscess formed and opened, from which he recovered sufficiently to do work on railroads. Last December he had to abandon his work, and was confined to the house and bed all winter. The day after I saw him first, in January last, I was hastily summoned to a farm house where he was temporarily reposing previous to his admission into the County Hospital. When I arrived at the bedside of the patient I found he had passed a urinary calculus weighing two ounces. The poor fellow was highly delighted when I informed him that his testicles were all right, he thinking the calculus was one of his own stones, as he expressed it. The calculus I herewith enclose.

My theory of the case is this: when the operation was performed on this person, fourteen years ago, some portion of the calculus was overlooked. Being small, it impacted itself in the urethra. The fall dislodged it, and its descent to the posterior portion of the scrotum was the effort of nature to get rid of the foreign substance. The cavity from which the stone came indicated that it had been in that locality for some time, as it was lined with a dense, hard, cartilaginous substance.

The operation to close the fistula was performed at the Wabashaw County Hospital. I was assisted by Drs. Stone, Low and Tacker; there was also present Mr. Washburn, a medical student from Indiana.

Ether was administered, and the patient brought to the edge of the table and secured in the usual manner. A lithotomy staff was introduced and the fistula probed by all the physicians present. A fistulous opening was found to be nearly continuous with the urethra from the point of exit posterior to the scrotum, about half an inch at the prostated portion, and growing nearer as the fistulous canal entered the bladder. A director was inserted into the fistulous canal and the groove in the staff was formed, when a slight puncture was made into the urethra, and a bistoury, blunt at base and point, was introduced. All the tissue between the staff and director was divided, in to the bladder, and the hard, calculous substance removed.

The wound was sewed up, a catheter placed in the bladder, and retained twenty hours. The case progressed finely. About the fifteenth day the fistula was perfectly healed.

No catheter was introduced after the operation. And the patient was discharged, cured, in eight weeks.

To Dr. Stone and the other medical gentlemen who kindly assisted me I am under many obligations, especially for their advice in the after treatment of the case.

Hospital Reports.

JEFFERSON MEDICAL COLLEGE HOSPITAL.

CLINIC OF PROFESSOR GROSS, OCTOBER 5TH, 1878.

Elephantiasis of Inferior Extremity.

Gentlemen—This young girl, Annie T., nineteen years of age, presents for our consideration a marked condition of disease of the left lower extremity, extending up on the thigh. She is a domestic; has always resided in this country, and does not know of any of her acquaintances or relatives having suffered from a similar affection.

Four years ago she noticed that the left foot was swollen and thickened, but there was no pain attending the enlargement, nor was the skin discolored. Gradually this swelling increased, and extended up the leg, the disease being better in the winter than in the summer.

You see before you this enormous mass. The left leg is twice as large and heavy as the sound one; the skin hangs in folds over the dorsum of the foot. There is considerable heat of the skin here, which is perceived at once by placing my hand over the part, showing great activity of the circulation and nutritive processes, and proving that there is an increased amount of nervous force, as well as capillary congestion. Above the left ankle the leg measures eighteen inches, the right nine and three-eighths inches; around the middle of the left calf twenty-six and three-quarters, but only sixteen and a half around the right.

This is a case of great interest, not only from the pathological condition which it presents, but more especially from a practical point of view. Some of you recognize the affection at once as a case of so-called elephantiasis arabum. Rare in this country, it is more frequent in Asia, in Persia, in Africa and the East, particularly in China and Japan. It is also common in the West Indies, from whence it receives the name of Barbadoes Leg.

In some of the countries I have named the disease is by no means uncommon, but in the United States it is rarely encountered. It affects both sexes, but is more frequent in the male, generally making its appearance between

the age of puberty and forty-five to fifty. Although it may affect any portion of the body, it generally exhibits a preference for the lower extremities, either one or both of which may be involved in its course, beginning not uncommonly in the feet and then extending upward Occasionally, it occurs in the labia, clitoris, and in the genital organs of the male. Sometimes the scrotum is increased to an immense mass without affecting the testes. I have a specimen in the Museum of the College weighing forty pounds, which was removed from the genital organs of a negro, by Dr. Bozeman, of New York, who kindly presented it to me. Clot-Bey operated upon a similar case, for a tumor weighing one hundred and ten pounds. There is a specimen in a museum at Montpellier, France, weighing one hundred and sixty pounds.

This affection occurs more particularly in warm countries, and generally comes on without assignable cause. In many cases it is attributed by the patient to suppression of the cutaneous perspiration, from exposure to cold or wet. A circumstance in proof of this is the fact of its frequent existence where there are marshy regions or jungles, where the ground is constantly wet, malaria being also added to this cause. Thus, where the disease most frequently arises, we observe constant exposure of the subject to wet and cold, and the exhalations of malaria. However this may be, the disease gradually extends, until the mass attains an enormous bulk, as you observe in the present case.

Upon close examination, we find marked changes in the component parts of the skin. The scarf skin is thickened, but not so much as the deeper layer, which is remarkably altered in character. You notice that the skin is apparently horny, that its surface is rugose, fissured, and thickened, and that it has lost in a marked degree its sensibility. The rete mucosum we find to be thinned by the pressure, but its changes are by no means as marked as in the epidermis. In the true skin there is a great increase in the papillæ, and later in the disease enormous thickening occurs. The subcutaneous connective tissue is indurated, and its cells become distended with a peculiar substance, so that it has lost its softness. The muscles become attenuated, weakened, and by microscopic examination it is discovered that many of the fibres have undergone fatty degeneration. So far as we know, the periosteum and the bony structures preserve their natural condition. The arteries and veins are more or less hypertrophied in their walls, and increased in calibre; hence, they carry more blood to the parts, and favor the increase in structural development.

But greater changes occur in the lymphatic vessels or absorbents, normally constituting, as you know, a part of the component elements of the skin and connective tissue. Indeed, it is supposed, by some, that the disease consists essentially in a disorder of the lymphatic vessels, or the lymphatics and the veins, the affection beginning by the formation of deposits on the outside of the vessels, producing induration and diminution of size. There is a plastic deposit of lymphoid cells, which ultimately causes obstruction, so that the lymph cannot pass along the vessels and return from the extremity. Many of the veins also seem to be clogged up by this deposit, the effect being noticed more particularly in the small veins. The nerves are generally flattened by pressure, and are sometimes enlarged. As to the changes in the nervous fibrillæ, there is no uniformity, and dissection thus far has failed to throw any light upon the subject.

The increase in the size and weight of the limb is largely due to an effusion of plasma, especially in the cutis and connective tissue, in consequence of inflammation, subsequently becoming, by its partial organization, an integral and permanent part of these structures.

Now, what shall be done for the relief of this affection? This is a serious question for the patient. Looking upon it as an inflammation, commencing in, or affecting, primarily, the absorbents or small vessels, and ultimately invading every tissue except the bones and ligaments, we might think that this indicated the usefulness of antiphlogistic remedies, or such as we are in the habit of employing in ordinary cases of inflammation. Such applications, in truth, as the solution of muriate of ammonium or acetate of lead might be very serviceable in the earlier stages of the affection. The application of a bandage over the diseased part is found to be of great advantage, making firm and equable pressure, thus encouraging the absorption of the effused fluids. Dilute tincture of iodine may be painted over the affected area in cases of this kind, and I should expect great benefit from the use of very dilute biniodide of mercury ointment, rubbed upon the affected parts several times in the twenty-four hours.

But whatever remedy is employed, it should be aided by a judicious use of the bandage. You are well aware that when persistent pressure is made with it, a properly applied bandage becomes a powerful sorbefacient. In the treatment of inflammation of the mammary gland, or in orchitis, pressure by adhesive strips is of striking service, and in ordinary cases of inflammation of the lower extremity, attended with an effusion of plasma, it is constantly used with great advantage.

For the earlier stages, I should recommend this systematic compression above all other treatment. Then I should rely upon sorbefacient remedies, small doses of calomel or other preparations of mercury, with the local applications already suggested, and in a certain proportion of cases should expect to obtain good results. The treatment that we use in the tertiary form of syphilis, the mixture of iodide of potassium with bichloride of mercury, which is a valuable alterative, I might also resort to with the expectation of greatly benefiting my patient.

In 1851, Dr. Carnochan, of New York, ligated

the femoral artery for the first time, for the relief of this affection, with the idea of cutting off the supply of blood from the affected parts, and reducing the nutritive changes in the skin. This operation has been repeated in this and other countries, but so far as my observation extends, there has not been a single case in which the operation has been permanently successful. And, indeed, how could it be successful? the anastomosing vessels in the limb must soon reëstablish the circulation. We find, as you well know, in ligation of the femoral artery, for aneurism or other causes, that in a very hours the heat of the distal portion of the limb is higher than it was before the operation, showing increased activity in the circulation. This operation cannot, therefore, be supposed to be productive of more than temporary good when performed for the relief of elephantiasis. Rather more than a year ago Dr. Thomas G. Morton, one of the surgeons of the Pennsylvania Hospital, cut boldly down upon the sciatic nerve, which he found enlarged and thickened, and excised a portion of its trunk, with the view of so affecting the nutrition of the parts below as to lead to a reduction in the size of the limb. The wound readily healed. After the expiration of about two months, the patient having been seized with inflammation of the lungs, he became greatly emaciated, and the adipose tissues over the entire body underwent reduction. There was a great diminution in the size of the affected limb. The man subsequently died, if I mistake not, of pulmonary trouble. There was some loss of sensation and motion after the excision of the nerve, but much less than would be expected; certainly nothing to affect or detract from the success, should this be brought about. From the gravity of the affection the operation seems to be perfectly justifiable, if it can be shown, by future experience, to check the disease.

In a case like this, ordinary means are out of the question; nothing can be accomplished with them; therefore, a desperate remedy might be justified. Amputation would appear to be warranted, and has been performed in cases where the disease was confined to one lower extremity.

We notice that the other leg is slowly affected in some patients, but in the vast majority of cases the disease is confined to one side. When the disease becomes stationary, or has attained a high degree of development, it is much less likely to yield to local treatment.

When referring to the treatment of elephantiasis, I should have mentioned the fact that Dr. Addinell Hewson, of this city, in a case at the Pennsylvania Hospital, obtained very good results from the application of dry earth, applied by a Scultetus bandage. I subsequently saw the case, at his invitation, and observed that the earth treatment caused the softening of the epidermis, so that it peeled off in large flakes; it undoubtedly produced temporary benefit, combined, as it was, with pressure by a tight bandage and absolute rest in bed.

Phagedenic Chancre.

This patient, a colored man, aged twenty-four, contracted this sore upon his penis, from connection with a white woman. You notice that a considerable portion of the head of the penis is destroyed; the remainder is indurated, and the seat of a large excavated ulcer, covered by patches of spoiled lymph, and discharging thick pus; there is no bubo. As far as I can see there are no secondary symptoms; the skin is not invaded. This is a hard chancre, and it is very surprising to me, considering the duration of the case, that there are no buboes or evident constitutional symptoms. There is no mystery about this case; it is simply a venereal sore, the result of impure connection. The diagnosis between epithelioma and chancre is sometimes attended by difficulty, but there can be no question about it here.

What shall be the treatment? You notice that the ulcer is excavated and disinclined to heal. I would recommend that the penis be bathed three or four times a day, in a tin cup containing warm water, in which a little table salt has been dissolved. In the intervals it may be enveloped in an elm poultice, wet with a weak solution of acetate of lead. The sore should be touched twice daily with a solution of nitrate of silver, fifteen grains to the ounce. In the next place we shall put him upon—

℞.	Hydrarg. chlorid. mitis,	gr.j
	Pulv. opii,	gr. $\frac{1}{3}$
	Extract. hyoscyami,	gr.j
	Antimonii et potassii tartrat.,	gr. $\frac{1}{12}$ M.

In a pill, to be taken every five hours, as an alterant and a depressant, to be continued until there is slight ptyalism.

Attention should also be paid to his diet, which should be restricted to plain, simple food. For the present he should remain in bed; the penis elevated, on the same principle that we keep a finger elevated when it is the seat of a felon. The local treatment of warm water impregnated with common salt will serve as a detergent and stimulant, while the emollient poultice will favor the granulating process.

This is a bad sore, but, what is worse, he will be sure to have his constitution invaded. The period has passed by for the appearance of the ordinary secondary symptoms, but he will be sure to have tertiary symptoms, sooner or later.

Constitutional Syphilis in its Tertiary Form. Multiple Ulcers of the Extremities.

Mrs. Ann B., twenty-eight years of age, married nine years. I wish to call your attention to this woman's foot. You notice that along the whole inner surface, around the ankle, especially toward the heel and on the sole, there are a number of ulcers, covered with white or gray lymph; some are circular and some ovoidal, but they all have elevated edges, as if cut out with a punch. The discharge is thin, sanious and ichorous, not of the nature of

healthy pus. She says she has pain at night—please notice this point—and it is worse in wet weather. There is some disease of the right foot also, and an eruption upon the arm, which became affected after the foot. There are ulcers on the outer aspect of the arm, smaller than those on the lower extremities, but of the same general character. She has no alopecia.

The disease has been in the foot for eighteen months; at first it was papular, but subsequently became ulcerated.

You anticipate me in saying that this affection is specific in character; a case of tertiary syphilis, manifesting itself in the form of indolent ulcers on the skin.

Ulceration of the skin is very common in the tertiary form of syphilis; so also is destruction of mucous membrane, particularly the lining membrane of the nose, throat, and larynx. The skin and mucous membranes, the cartilages, the synovial membranes of the larger joints, even the bones, are not secure from its invasion. In the secondary form we have mucous tubercles in the tonsils, pharynx, soft palate, or lips, associated with a papular or erythematous eruption and iritis. These rupial ulcers belong to the tertiary stage. I have not inquired into the early history of this case; I have not asked how she contracted this disease, whether from her husband or some other person, for it is not necessary for me to know how it was acquired. The disease speaks for itself. There is no doubt, whatever, that these ulcers are of a specific character, and I shall treat them accordingly.

There is one point in the diagnosis to which especial attention should always be paid; it is *the aggravation of the pain at night, in syphilitic affections.* This is the rule. When a person is laboring under the constitutional form of syphilis, no matter in what portion of the body the disease manifests itself, he always suffers more at night, and in moist or damp states of the atmosphere. Why this is so we cannot explain, but such is the fact.

This woman came here a week ago, and has certainly improved under the following prescription:—

℞. Potass iodid., gr.x
Hydrarg. bichlorid., gr.$\frac{1}{10}$
Syr. zingiberis, f.℥ss
Aquæ, ad f.℥ss. M.

Sig.—Taken three times in the twenty-four hours. As a local application she may use—

℞. Liq. hydrarg. nitratis, f.℥j
Aquæ destil., f.℥iss. M.

Pure nitrate of mercury is entirely too strong for ordinary purposes.

Under this treatment the nocturnal pains have decreased, and her appetite and general condition have sensibly improved. This shall be continued, but the ulcers shall now be touched with a weak solution of nitrate of silver, and afterward covered with cotton wadding saturated with a solution of nitrate of lead, ten grains to the ounce of water. The diet shall be restricted, and the bowels kept open.

The iodide of potassium forms a valuable alterative in this combination, which is one that I constantly use. There are three iodides which we may consider as specific in the treatment of syphilis, at least, as far as the temporary effects are concerned; they are the iodides of sodium, ammonium, and potassium. Their properties and alterant effects are about equal; the dose is the same, about ten grains three times a day, given in solution, made pleasant by the addition of syrup of orange peel, or something of this kind. In addition, I am in the habit of ordering a small portion of bichloride of mercury, to aid the alterant effect. You may say, as chemists, that these salts are incompatible, but experience tells me that the *tertium quid* is quite as good as the original articles. The stomach is a chemical laboratory, and doubtless chemical changes occur in most of our remedies, which, however, does not interfere with their effectiveness, but may, on the contrary, increase it in a manner that we do not understand.

Cystic Tumor of the Face.

This woman, forty years of age, has a small growth upon her chin, under the left angle of the mouth, which, she states, has existed for seven years. It is without pain, and there is no discoloration of the skin.

It is sometimes difficult to decide as to the exact nature of a tumor previous to removal, and in very many cases you cannot be absolutely certain of your diagnosis.

This seems very much like a sebaceous cyst. It is not an abscess, and it is too superficial to be an enlarged lymphatic gland. I think it is a sebaceous tumor, but on introducing the knife I find that I was in error. It is a cyst, but simple and not sebaceous. I shall have to dissect out this growth very carefully. If the smallest portion of the secreting surface be left behind it would be sure to determine its reproduction. The wound is closed with a single suture.

This cyst felt very hard. It had none of the characteristics of a lipoma, or fatty tumor, but all the appearances of a sebaceous cyst, and was well calculated to deceive. The stitch will be retained for three or four days, at the end of which time it may be removed. We must caution our patient to avoid cold, and to be very careful, or she may get erysipelas, which may follow the most trifling operation. A man may die from the bite of a flea or a mosquito. There is always more or less danger after every operation, however slight, and patients should be warned to be very careful about exposure, both directly afterward and for a few days following.

Sinus Following Syphilitic Abscess.

This young man, twenty-six years of age, was before you a few weeks ago, on account of several ulcers on the lower part of the abdomen, and on both the inner and upper sides of the thigh, with

sinuses extending as far up as the pubic bone. Whether this bone is really affected or not I am unable to say, but it does not feel particularly rough to the probe.

Last February, he tells us, this abscess was lanced, and it now appears evident that it was produced by the softening of a gummy deposit. The sinus extends up behind the urethra. I will now lay it open, as far as I dare, and dilate the rest with a sponge tent, to keep the parts from contracting, and make the sinus granulate from the bottom. He is on the ordinary specific treatment.

Fissure of Anus.

This man has a fissure of the anus. This affection is of interest, from the amount of pain which accompanies an apparently insignificant lesion. By this name we do not mean a fissure or crack at the side of the anus, which is what is implied by the term anal fissure, but an ulcer, generally situated just inside of the anus, in the grasp of the sphincter muscle. It is interesting, not only from its insignificant size, position, shape and depth, but also from the great discomfort it occasions. It generally appears on the posterior wall, toward the sacrum, but is sometimes in front or at the side. The pain occasioned by it is so great, and continues so long after defecation, that the sufferer goes to the water-closet with reluctance, as he expects to suffer torture, and puts off the act as long as possible. Constipation naturally results. The pain continues from six to fifteen hours afterward, or even during the whole twenty-four hours, and renders the patient utterly wretched, and worthless for any occupation, during this period. It completely unnerves and unmans him by the anguish it causes.

The disease is not specific; it is not cancerous, nor scrofulous in its character, but a simple superficial ulcer, appearing without any appreciable cause. It may come on at any period of life; it occurs in either sex, but more often in the male than in the female.

There are several modes of examination. It is immaterial whether the finger or the speculum is used, for the history of the case is generally sufficient to show its nature.

In regard to the treatment, Boyer, who wrote a treatise on surgery, in eleven volumes, and who flourished in the early part of the present century, was the first to call this sore by the name of fissure of the anus. The operation he recommended was the division of the sphincter muscles, thus placing the parts in repose and allowing the fissure to heal. The constant contraction of these muscles keeps the wound open and renders astringent applications of no value. I was formerly in the habit of scarifying the ulcer with the bistoury, making a slight effect upon the muscles; but during the last fifteen years I have depended solely upon stretching the sphincters. This procedure temporarily paralyzes the muscles and allows the ulcer to heal under ordinary applications. Dipping both thumbs in oil they are carried into the anus and the parts thoroughly stretched. As the operation is very painful an anæsthetic is required.

[The patient returned a week later and stated that his bowels had been moved daily since the operation, and that the motions had been absolutely without pain]

Scirrhus of Breast.

Mrs. W. was before you at the last clinic, for cancer of the breast in the stage of ulceration, and she has returned to-day for operation. I shall be obliged to remove a considerable portion of the integument, and perhaps part of the pectoral muscle. You should never unnecessarily sacrifice tissue, but must, nevertheless, remove, as completely as possible, all the diseased portion. A large incision, as you know, must heal by the granulating process, while one that admits of approximation of the edges may close by first intention.

Having administered chloroform, the breast shall be included between two elliptical incisions. We do not stop to tie the arteries, as they are divided, but simply compress them with the fingers until the gland is removed. The incision is extended toward the axilla, so as to reach any enlarged lymphatics affected in the same manner as the mammary gland itself. We do not dissect the glands from the adipose tissue in the deeper parts of the axilla with the point of the knife, but rely principally upon the finger nail for taking them out. The reason for this is obvious, on account of the danger of injuring the axillary vessels and nerves. The surface of the great pectoral muscle is exposed, but appears healthy. The gland is in a marked condition of cancerous infiltration. The edges of the wound will be brought together as soon as all oozing has stopped, and a compress of sweet oil shall be applied. A full anodyne shall be given at once, and the patient kept in bed for the present, with tonics and a supporting diet.

Medical Societies.

THE AMERICAN PUBLIC HEALTH ASSOCIATION.

FIRST DAY.

The convention held its opening session at Mozart Hall, Richmond, Nov. 19th. Dr. Elisha Harris, of New York, president of the Association, called the convention to order, and introduced the Rev. Dr. Peterken, who opened the proceedings with prayer. Dr. Harris then presented Governor Holliday, of Virginia, as the presiding officer of the convention for the evening. Governor Holliday proceeded to address the Association, extending to the members, on the part of the people of Richmond and the State a hearty and cordial welcome to the hospitalities of the city. In conclusion, he said—

Coming from every section of our common country, bringing your learning and culture,

your experience and earnestness, you will imbibe that gentleness and affection that are the very genius of unity, and when you go to your homes, wherever they may be, you will carry with you that feeling of fellowship that is stronger than political or sectional bonds. Here, in this beautiful city, which was lately the heart of convulsion; here, where honest, fearless men and women strove even unto death; here, where suffering of warfare was endured that will never be known till the great future, when all hearts will be revealed; here, where prayers were offered that need not be blotted even by the tears of the recording angel; here you have come together, from North, South, East and West, as one brotherhood, to show by your words and deeds how peace hath its victories no less renowned than war, and how we can, by the divine instincts of our nature, make our Republic one, and what she ought to be—the mother of a mighty race.

Professor J. L. Cabell, M.D., of the University of Virginia, followed Governor Holliday, introducing the president of the association, Dr. Elisha Harris, of New York.

Dr. Harris recommended that this session should bring into closer apposition in its councils still larger resources, both in membership and in methods, and in actual undertakings. He recommended, among other things, the maintenance in each State and territory of a system of periodical reports, weekly, monthly and yearly, of all epidemics and other prevalent diseases, to be approved by the State Board of Health, and where there are no such boards by resident members of the association designated for the purpose, all studies and reports to be on a method of yielding comparable results; the studies of meteorological and atmospheric conditions, with reference to epidemiology and health; the maintenance of a committee for the study of, and consultation with regard to, biological and anthropological investigations, including the contributions from the census, and other national and State systems of registration; the introduction of a clause in the constitution of this association to provide for editorial and supervisory duty in the publication and diffusion of sanitary information; a formal recognition of both national and international obligations in the work of this association by means of correspondence with State, national and international sanitary authorities, especially to conduce to the researches that are already in progress in Europe in regard to pestilential diseases and their contagia.

Regarding the yellow fever, he said: We offer no theory, we utter no dogma, but we do believe that scientific investigation can gain the mastery of this destroyer. All the States liable to be visited by yellow fever are gathering with us in council. These pestilences indicate the various deep-seated wrongs and neglects, vices and errors of the people. Whenever the human race is in such a situation as to lose its strength, courage, liberty, wisdom, lofty emotions, the plague, cholera or fever comes, not committing havoc, perpetually, but turning men to destruction, and then suddenly ceasing. As the lost father speaks to his family, and a slight epidemic to a city, so the pestilence speaks to nations, in order that a greater calamity than the untimely death of the population may be averted.

Surgeon General Woodworth then addressed the board, detailing the progress of the yellow fever in the Southern cities. The Commission, he said, will bring facts only—facts gathered by patient, careful inquiry made from city to city and from house to house. The work is not yet completed, and it will not be abandoned until all of the facts possible to be obtained are gathered, either by the present Commission or another enlarged commission, as this Association may advise or Congress direct.

Dr. Steiner, of Frederick City, followed, and Dr. Bemiss, President of the Commission, related incidents of the scourge. He said that, should any charitable people be willing to adopt orphan children they have only to address the president of the Commission to learn where there are troops of them left dependent.

SECOND DAY.

Previous to proceeding to the regular order of business the president laid before the association a letter from Governor Porter, of Tennessee, regretting being unable to attend, on account of official business, assuring the Association of his active sympathy with the noble work in which they are engaged, and extending and invitation to hold the next meeting at Nashville.

After some routine business Dr. Bemiss, president of the Yellow Fever Commission, read the regular report of the commission.

The report says that Dr. Cochran joined the chairman of the Commission in New Orleans on the 4th day of October, and Dr. Howard arrived the 6th of the same month. Nearly two weeks elapsed before the Commission was ready to take the field. The first cases which occurred in New Orleans are then discussed by the report. On the 23d of May the Emily Souder arrived at New Orleans with her purser sick at the time of her arrival. This man, whose name was Clark, was carried to Claiborne street. At this house he died, on the 25th of May. Another of the crew, by the name of Elliott, took sick May 24th, at the corner of Girard street and Front, from which place he was taken to the Hotel Dieu, May 27th, and died on the 30th. Enough was developed to render it probable that a connection, as yet untraceable, exists between the cases of Clark and Elliott and the first cases among the citizens. We obtained a sufficient amount of testimony to justify a belief that one or more cases of yellow fever had occurred in the city, probably in the month of June, under circumstances which rendered it altogether possible that they had been brought to the city by conveyances as yet unknown.

The appointment of Colonel Hardee as Sanitary Engineer, enabled the Commission to begin field work, and they left New Orleans on the

22d and 23d of October. The report then describes the routes taken by the physicians. Every point of testimony which could throw any light upon the origin of the sickness of the first cases was carefully sought for and faithfully put on record. We located the houses in which cases had occurred, until as large a number of cases had been placed upon maps as was possible to obtain in the short time allotted for the work. The sanitarian can look upon these maps and see for himself the precise location of the earliest cases of an epidemic. He can determine what influence occupation of the same locality exerts upon the spread of the disease. He can see for himself how invariably yellow fever tends to arrange itself in groups of cases, and thus observe its marked contrast with the tendency of malarial fever to occur in separate, disconnected and totally independent cases. He can also study for himself the influences of filth, bad drainage or unsanitary situations, and of elevations and depressions of surface. In respect to the sanitary condition of the towns visited, we have to report the same character of neglect and violation of laws of health common to all, or nearly all, the inland towns of the United States. These are neglect of drainage, inattention to deposits of fetid matter and refuse animal and vegetable matter, and inattention to the purity of drinking water. The violations of sanitary rules in each of these particulars are given without reserve, in respect to all the visited towns, except New Orleans.

Dr. Cochran, of the Commission, then read a paper giving a detailed account of the fever at Grenada, at which place the investigation showed the intensely infectious character of the disease. Dr. Lloyd Howard, of the Commission, read the report of his investigations at Baton Rouge. He also read several reports of investigations in towns on or near the Mississippi. Dr. Bemiss also read reports of results of his investigations at Canton, Miss.; Port Gibson, Miss.; and Brownsville, Tenn. At the night session the president submitted the following resolution, among others, as coming from the executive committee, which body is authorized to prepare business:—

Resolved, That a committee be appointed by the President, to whom all resolutions and motions relating to proposed action by the general government of the United States shall be referred, without debate. The committee to report to the executive committee, and to consist of seven members.

Dr. Bemiss gave a detailed history of the fever at Lake, Mississippi; Yazoo city, Mississippi; Milan, Tennessee; and Vicksburg. He was followed by Dr. Cochran, also of the Commission, who gave a similar history relative to Holly Springs, Decatur and Grand Junction.

THIRD DAY.

After the usual preliminaries, Col. Hardee read his report, explaining the topography and sanitary condition of New Orleans. He stood before a map of New Orleans and pointed out the different locations to which he referred from time to time. The Colonel, in his report, said that as New Orleans is supposed to be the great central point from which radiated the recent epidemic scourge, it has been deemed that a brief description of its position and topographical surroundings would be interesting and important. There is no large city in the United States where there is so much demand for sanitary work, and where at the same time the natural disadvantages are greater than in New Orleans. The lands in the alluvial region of the Mississippi are divided into three distinct kinds, or may be classified under three distinct heads, namely: the highest or cane lands, interior or open swamp lands, and the lowest or cyprus swamp basins. The lands of the first class are found upon the banks of the rivers and the interior bayous, and are covered with a thick growth of red cane, and consequently are designated as cane lands. The lands of the second class, or the open swamp lands, commence where the cane lands cease, and extend to the edge of the lower swamp basins; and then, in order, come the cyprus basins, upon which water permanently stands.

The speaker also referred to a profile showing a cross section of the land between the banks of the Mississippi and Lake Pontchartrain, running through the heart of the city. It was shown that the high water mark in the Mississippi river was 16 feet above the main tidal level of Lake Pontchartrain. It was further shown that the intervening ridge, known as the Metairie ridge, is about 12 feet below the same high water mark; that there is a basin of low land answering the description of the second class of lands above enumerated, between the Metairie ridge and the banks of the river, which is about 14 feet below the high water of the river; also that beyond the Metairie ridge, and between it and Lake Pontchartrain, there is a belt of cyprus swamp, on nearly the same level as the water of the lake, and which was designated by Colonel Hardee as a pestilential cave around the vital parts of the city. In addition to the threatened overflow from the Mississippi river, from which the city has to be protected, the waters of Lake Pontchartrain are often raised several feet above their normal level during the prevalence of southeasterly gales, which frequently bring the waters into some of the inhabited districts of the city; therefore the city has a double protection to look out for. The present system of drainage was represented as being circumscribed, on account of embracing only about one-half of the superficial area within the city limits, or that district lying between the Metairie ridge and the banks of the river.

A great many other points in regard to the sanitary engineering of the city of New Orleans were touched upon by the speaker and illustrated by his system of maps, all to the end of showing the necessity of sanitary reform in this great southern city. The speaker also re-

ferred to the fact that although the sanitary condition of New Orleans is not such as could be desired, yet this recent epidemic of yellow fever was more virulent and prevalent to a greater extent in parts of the city that were entirely paved and well drained, than in those parts where even it was proved that garbage was thrown upon the streets, and in the immediate vicinity of lowest canals and drainage reservoirs.

Col. Hardee was followed by Dr. Choppin, President of the New Orleans Board of Health. He gave a history of the introduction of the yellow fever into New Orleans in different epidemic years, and showed that it was always imported. He contended for absolute non-intercourse with infected countries from April to November, as he was satisfied modified quarantine was not sufficient to prevent the disease. Dr. Choppin's paper was full of interesting facts and incidents, and was attentively listened to.

Dr. William G. Austin, of the New Orleans Board of Health, followed Dr. Choppin. He gave facts from the yellow fever epidemics prior to this year, going back as far as 1839. In that year it was clearly proved, by eminent men, that the disease was not of local origin, but was imported. The cause of it, like all zymotic diseases, is unknown, and instead of taxing our brains to find out what it is, we will find it more profitable to ascertain its habitat, its habits, its infectious and contagious character, its portability, and, last of all, how to prevent a repetition of epidemics. By the laws of exclusion only can we hope to prevent its introduction into our country, as well as its migratory habits after it is introduced. The doctor said we would have to acknowledge the insect hypothesis, as advocated by Lionel, Beal and others. It is killed, like insects and hot-house plants, by a temperature of 32 degrees Fahrenheit. It cannot live when the banana is cut down by the cold of winter. Hence it hibernates in the mild winters of the South, as it did in 1873, 1874 and 1875, in New Orleans, having been brought there the previous year by the ship Valparaiso. In a practice of thirty-five years in New Orleans, La., and Mississippi, he was satisfied that in not a single instance had the yellow fever originated there. It is indigenous to the tropics, and non-intercourse during the spring and summer was the only way to prevent its introduction into our country. If non-intercourse had been ordered fifty years ago the population of New Orleans would now be trebled.

Prof. Richardson, of Philadelphia, read an interesting and valuable paper on the results of his microscopic investigation of the blood of yellow fever patients, and Dr. White, of the Marine Hospital Service, read a paper on the same subject.

A very interesting paper upon the subject of "How to Study an Epidemic," was read by G. M. Hunt, M.D., of New Jersey, and one upon Sanitary Responsibility was read by J. G. Thomas, D.D., of Savannah.

After the papers had been read, the following resolutions were adopted:—

Resolved, That the several committees appointed to report on the communications made by the Yellow Fever Commission be considered, and they are hereby instructed to consider all those communications, as merely preliminary verbal statements, and not as formal reports or papers presented to the Association.

Resolved, That the chairmen of these several committees are hereby constituted a separate committee, and directed to prepare, with the least possible delay, a few brief, clear propositions with regard to the cause and best methods of prevention of yellow fever, to serve as a basis for discussion in the body of the Association.

Dr. Deering J. Roberts, of Tennessee, offered the following resolution:—

Resolved, That this Association earnestly recommend the establishment of a Chair of Public Hygiene in every medical institution in the United States.

Dr. R. W. Mitchell, of Tennessee, submitted the following, which was adopted:—

WHEREAS, There has been founded in Washington, under the direction of the Surgeon General of the United States Army, one of the most valuable medical and sanitary libraries in the world; and, whereas, there has been prepared, under the same direction, the manuscript index catalogue of this library, which if published, would more than double the practical utility of the collection, and would be of the greatest value to all medical men and sanitarians, even if the library itself were not in existence; therefore,

Resolved, That a committee of five be appointed to urge on Congress the immediate publication of this catalogue, setting forth that such publication, in the opinion of this Association, is one of the most important steps which can be taken by the general Government to promote the interest of sanitary science, and aid investigation into the causes and prevention of diseases.

FOURTH DAY.

At the morning session the Executive Committee reported that the invitation of Governor Porter, of Tennessee, for the Association to hold its next session at Nashville, had been accepted. The Association then proceeded to the election of officers for the ensuing term, with the following result:—

President, Professor J. L. Cabell, M.D., of the University of Virginia; First Vice President, Surgeon J. S. Billings, U.S.A.; Second Vice President, Samuel Choppin, M.D., of New Orleans; Treasurer, Dr. Henry B. Baker, of Michigan; Executive Committee, Dr. C. B. White, of New Orleans; Dr. T. J. Turner, U.S.N.; Dr. Ezra M. Hunt, of New Jersey; Dr. J. D. Plunkett, of Nashville; Dr. C. F. Folsom, of Mississippi, and Dr. C. N. Hewitt, of Minnesota. Secretary E. R. Janes, of New York, holds over another term.

At the evening session the executive committee reported several names for election as members of the Association, and among them Governor Carroll, of Maryland, and Mrs. Elizabeth Thompson, of New York. A committee was appointed to urge upon the special committee of Congress now engaged upon the organization of the next census the great importance of collecting certain specified facts relating to the health of the people. Several propositions were adopted, among them the following:—

That the yellow fever of 1878 was a specific disease, not indigenous to or originating spontaneously in the United States, and its appearance in this country during that year was due to specific causes; that quarantine, established with such rigor and precision as to produce absolute non-intercourse, will prevent the importation of specific causes of yellow fever; that it is the duty of the General Government to appoint a commission of experts to make a thorough investigation of the causes of yellow fever.

In the discussion of these propositions, Medical Inspector Albert L. Gihon, now stationed at Annapolis, said: I desire to put on record the experience, and opinion based on that experience, of the medical officers of the Navy, whom I am here to represent, by the authority of the Navy Department. I believe these to be the unanimous opinions of my colleagues in the Medical Corps. If there are any who dissent from them, I have never met them.

First. The yellow fever ship is always a foul ship.

Second. Foul ships, while often generating by their filth other endemic diseases, have never yellow fever *de novo*.

Third. When a foul ship visits a port where yellow fever prevails, communication with that place will cause the development of yellow fever aboard that ship.

Fourth. A clean ship may visit a port in which yellow fever is prevalent, and by rigorously abstaining from communication of any kind with that port, will escape yellow fever contamination.

Fifth. When yellow fever appears on board a vessel, the only safety for the crew is to get them out of the ship.

Sixth. The sick can also be removed from the vessel with entire impunity to those among whom they are removed.

Seventh. Nurses and attendants upon the sick with yellow fever aboard ship are not more liable than other occupants of the vessel to contract yellow fever.

Eighth. When the yellow fever appears aboard a vessel, it is possible to imprison it by battening down the hatches, carefully calking every possible outlet for emanation from the hold and lower decks, and by requiring the crew to live and sleep in the open air on the spar deck, and abstaining from using food, water, clothing, etc , which has been below.

Ninth. If this vessel is removed to a place where bad sanitary conditions prevail, and any of its contents are discharged, it will inevitably disseminate yellow fever.

Tenth. It is believed that in places to leeward currents of air from such an infected vessel will cause the appearance of yellow fever in such places.

Eleventh. Freight, food, baggage, clothing, etc., cannot be safely removed from infected vessels until they have been exposed to the prolonged continuance of extreme cold weather.

Twelfth. No vessel on which yellow fever has prevailed can be safely inhabited until after such exposure.

Thirteenth. It is believed, but not entirely demonstrated, that permeation by dry, hot air or steam will destroy the germ of yellow fever.

In conclusion, "I would state that yellow fever is due to a specific living germ—the vitality of which may be impaired or destroyed by extreme frosts, and which rapidly propagates itself when deposited in a nidus of visible or invisible filth."

The Chair appointed the following Committee on Appeal to the Medical Profession of the United States, for funds for the relief of widows and orphans of physicians who died while serving in the epidemic: Dr. Chas. N. Hewitt, Red Wing, Minn.; Dr. R. W. Mitchell, Memphis, Tenn.; Dr. Wirt Johnson, Jackson, Miss.; Dr. C. B. White, New Orleans; Dr. Stephen Smith, New York city; Dr. L. H. Steiner, Frederick City, Md.; Dr. T. L. Neal, Dayton, Ohio. The post-office address of each member of the committee is given, to enable all who wish to communicate information, etc.

Dr. Snow offered the following, which was adopted.

Resolved, That the heartfelt thanks of this Association and of the whole people of the country are due to Mrs. Elizabeth Thompson, of New York, and to other philanthropic individuals and associations who, by their liberal contributions, have enabled the Yellow Fever Commission to prosecute its investigations, and also to those who have been concerned in organizing the work of the Commission, and in presenting the result of its work to this Association.

Aphasia in Children.

Dr. A. Schwarz relates, in the *Deutsche Archiv. für Klinische Medicin*, Band xx, the case of a normally developed little girl, three years old, who, during convalescence from an attack of measles, was suddenly seized with loss of speech and paralysis of the extensor muscles of the right arm. The right leg was unaffected. After a few weeks the paralysis improved, and the child learned to speak as if she had never spoken before. Considering the peculiarity of the manner in which speech was regained, Schwarz asks whether the right half of the brain did not gradually assume the functions of the left half, which had been impaired.

Periscope.

Villate's Mixture in the Treatment of Sinuses.

A report from the Charity Hospital, New York, in the New York *Medical Journal*, states that several deep sinuses have recently been under treatment in the surgical service, in which no necrosed bone could be found, but which proved intractable to heal. Villate's mixture was tried, first of half strength, then of full strength. In some of the cases it proved of value, in others it failed partially or completely. The case in which it proved of most service was one of deep sinus in the neighborhood of the hip joint. The original composition of the mixture was—

℞.	Liq. plumbi subacet.,	℥j
	Zinci sulph. cryst.,	
	Cupri sulph. cryst.,	āā ʒss
	Aceti vini albi,	fl.ʒvjss.

The mixture was injected once a day, and proved a more satisfactory application than any other. Some patients complained of severe pain, others felt but slight inconvenience from it.

Tests of Carbolic Acid, Cresylic Acid and Creasote.

We quote the following from a paper in the *Chemist and Druggist*, by A. H. Allen, F.C S.

Pure carbolic acid takes up 26 to 27 per cent. of water to form a hydrous carbolic acid; cresylic acid will only absorb 13 to 14 per cent. It has not previously been supposed that carbolic acid would take up so much.

Action of Cold.—Absolute carbolic acid is solid at ordinary temperatures, and the hydrous substance solidifies in a freezing mixture of hydrochloric acid and crystallized sulphate of sodium. Neither absolute nor hydrous cresylic acid, nor creasote, shows any signs of freezing on exposure to the same degree of cold.

Solubility.—Carbolic acid (absolute) will dissolve in 10.7 parts of cold water, and more freely in hot water. Absolute cresylic acid dissolves in the proportion of 1 to 31. These figures are taken after allowing for the water which combines with either acid to form hydrous compounds. Carbolic acid is soluble at 60° Fahr. in an equal proportion of a solution of caustic soda 6 per cent., and it is likewise soluble in an equal volume of liquid ammonia; cresylic and creasote are insoluble in the same quantity of the former (the creasote being the least soluble), and in ammonia cresylic acid requires 16 volumes, and creasote 60 to 80 volumes.

Benzol mixes with all three in any proportion, and separates the water from the hydrous acids; benzoline (petroleum spirit) mixes with cresylic acid and creasote in all proportions, but carbolic acid will not take up more than half its volume. Price's glycerine (sp. gr. 1.258) was found to mix in all proportions with carbolic and cresylic acids, but creasote will not dissolve in it. The acids are thus distinguished. A mixture of one volume of carbolic acid with one volume of glycerine is not precipitated by the addition of three volumes of water, but a similar mixture of cresylic acid and glycerine is precipitated on the addition of two volumes of water. The addition of one drop of a 10 per cent. aqueous solution of ferric chloride to 15 cc. of an aqueous solution of cresylic or carbolic acid, causes a permanent violet-blue coloration. When creasote is similarly tested, a blue color results, which almost instantly changes to green and brownish-yellow.

The Etiology of Diabetes.

Dr. F. W. Pavy says, in a recent lecture in the *Lancet*—

I certainly incline to the opinion that some kind of textural change in the brain stands at the foundation of diabetes, and there are two ways in which the effect may be produced. The vaso-motor system exerts an influence upon the arteries, which gives them their *tonus* or keeps them in a certain state of contraction. The effect of destruction of the centres or tracts is to lead to arterial dilatation, by causing direct paralysis of the muscular coat, while that of irritation is the converse. These results are in harmony with what occurs under similar circumstances in connection with the cerebro-spinal system, and are, therefore, intelligible enough to us. Arterial dilatation, however, may be induced in another way, viz., by an action of the cerebro-spinal system controlling or inhibiting the activity of the vaso-motor system. Reference to what may be perceived in connection with the salivary glands will supply us with an illustration of the occurrence of this mode of dilatation.

While the glands are in a state of quiescence, the arteries are maintained in a comparatively contracted condition by the influence of the vaso-motor nerves they receive from the sympathetic. Now, common observation shows us that a flow of saliva, which means an antecedent dilatation of the arteries, may be excited by a stimulus applied to the surface of the tongue, and so influencing the extremities of the lingual gustatory nerve, and even by an impression starting from the brain and originating in a passing thought about food. The explanation which physiological science gives of this phenomenon is that a stimulus is transmitted from the cerebro-spinal system which

produces an inhibitory action upon vaso-motor centres or nerves that relaxes the muscular coat of the arteries, and thus permits dilatation to occur. This may be considered to constitute an active form of vaso-dilatation, in contra-distinction to that arising from paralysis induced by operations upon the sympathetic, which lead to a simple removal of vaso-motor influence.

There being these two modes of action by which vaso-dilatation may be brought about, it may happen that diabetes may arise either from a lesion affecting and involving a loss of power in vaso-motor centres, or a lesion in some part or other of the cerebro-spinal system leading to an inhibitory influence being exerted upon them.

Inhalation of Carbolic Acid Spray in Phthisis.

At the Mount Sinai Hospital, New York city, the inhalation of carbolic acid spray in phthisis has been introduced, in order to test its efficacy. The spray was obtained from a solution holding two per cent. of the acid. The first case had fetid expectoration, with an average temperature of 102½°. The first effect of the inhalation was to increase to a marked extent the sputa, but at the same time to check the fetor. The most important effect of the inhalations was to decrease the temperature from 102½° to 101°, 100½° and 99°. In some of the cases carbolic acid acted as an irritant, giving rise to considerable spasmodic effects, and in these cases salicylic acid was substituted. The latter agent did not produce such a decided effect on the temperature, but its action on the fetor was equally marked.

Reviews and Book Notices.

BOOK NOTICES.

Habitual Drunkenness and Insane Drunkards. By John Charles Bucknill, M.D., London, F. R. S., etc. London, MacMillan & Co. Cloth, 12mo, pp. 97., xxiv. Price $1.

This volume is a reprint of a number of letters, articles and essays by the author, on subjects relating to the treatment of drunkards. The first is an address which he delivered in 1875, on inebriate asylums in America. It led to some caustic comment from specialists on this side of the water. Dr. Bucknill thought very poorly of the American Inebriate Asylums. The only one which he seems to believe was doing any really good work was the Franklin Reformatory Home in Philadelphia. Moreover, he inclines to believe that habitual drunkenness is generally a vice and not a disease; when it deserves the latter name, it must be classed and treated as a form of insanity. Regarded as a vice, it must be considered by the statesman as such, and not as a crime—a significant distinction which Dr. Bucknill further emphasizes by the antithesis which at once indicates his position. "It is not drunkenness we wish to punish, but temperance we wish to promote." He, therefore, very positively opposes the advocates of a law for locking up drunkards.

We are tempted to give extracts from his thoughtful and cogently put arguments, but the limitations of space forbid us; we can but recommend the study of these very able essays to all who are interested in these important discussions.

Contributions to Operative Surgery and Surgical Pathology. By J. M. Carnochan, M.D., formerly Professor of Surgery in the New York Medical College, etc. With illustrations drawn from nature. New York, Harper & Brothers, 1878. Parts I–V, 4to, pp. 179. Price $2.75.

Dr. Carnochan commenced the publication of this work a number of years ago, but the plates, drawings, etc., were destroyed by fire. In 1876 he recommenced the labor, and since then the five parts now before us have appeared. They are published in the most artistic style, and embrace a series of cases of the highest interest. We shall give a brief description of the contents.

Parts I and II contain an introductory address on the study of science, which also serves as explanatory of the author's scheme in presenting the cases in his work. The address is thoughtful, and is a worthy contribution to medical logic. We refer with especial pleasure to his explanation of the principle on which incomplete inductions are, in natural science, held to be sufficient to establish general laws. The surgical cases described and commented on are two of elephantiasis arabum and three of ligation of the femoral artery.

Number III describes two cases of amputation of the entire lower jaw, with remarks on the operation, and an essay on shock and collapse, the primary treatment of injuries and the time of election for capital operations after extensive lesions. This very elaborate essay is continued through parts IV and V, and is not yet concluded. It enters into the collateral subjects of the nature of the nervous fluid, of direct, indirect,

complicated and latent shock, its phenomena as modified by temperaments, diatheses, etc. The statements which are made with reference to these conditions are borne out by the details of cases from the author's own practice.

The lithographic illustrations of the work are very carefully drawn. The author expects to finish it in ten parts; but from appearances we think it will be difficult for him to embrace his scheme in this compass. It is a most creditable addition to American surgical literature, and the boldness of the author's operations cannot fail to excite for his descriptions a wide interest among surgeons.

Human Osteology, Comprising a Description of the Bones, with Delineations of the Attachments of the Muscles, the General and Microscopic Structure of Bone and its Development. By Luther Holden, F.R.C.S., etc. Fifth edition, revised by the author, with the assistance of Alban Doran, F.R.C.S. With numerous Illustrations. Philadelphia, Lindsay & Blakiston, 1878. 1 vol., cloth. 8vo, pp. 286.

This is *facile princeps* as a book on human osteology in our language. It would be difficult to imagine how the arts of explanation and representation could be more successfully applied to the subject. With these beautiful plates before him, there is no possibility of the student being at a loss to recognize every origin and insertion, every process and foramen, every notch and tuberosity. Sixty-one full-page plates, and eighty-nine figures in the text, all of them drawn with the utmost fidelity, come as near as can be taking the place of handling the bones themselves. The text is handsomely printed, and has marginal references, of great convenience in consulting the descriptions.

Diseases of the Bladder and Urethra in Women. By Alexander J. C. Skene, M.D., etc. New York, Wm. Wood & Co., 1878. pp. 374.

The author observes, in his preface, that no systematic work on the many diseases and functional anomalies of the female urethra has hitherto existed in the English tongue. This lacuna he has filled in a worthy manner, from a wide range of reading in gynecological literature, and from an extended experience in diseases of the female sex. His work is divided into eight lectures. Of these, six are occupied with diseases of the bladder, two with diseases of the urethra. Among the former are irritability, paresis and incontinence, all functional in their nature; and hemorrhage, cystitis, carcinoma, hypertrophy and atrophy, all organic. An instructive chapter on urinary analysis and exploration of the bladder as a means of diagnosis, is inserted.

The chapters on diseases of the urethra commence with its neuroses and its inflammations, the forms of acute, chronic and gonorrhœal urethritis. A careful description follows, of the neoplasms of the urethra, a most important topic, and one better treated here than in any other work we can now recall. Dilatation, dislocation and stricture are other pathological conditions of the organ which are described at sufficient length. An appendix, on extroversion of the urinary bladder, is added, and a well prepared index closes the volume.

In its manufacture it is presented with considerable luxury of paper, and is printed in old style type, making a handsome book.

Observations on Some of the Operations of Chemical Analysis; including reactions of metallic oxides, organic and inorganic acids, and poisons in organic mixtures. By J. B. R. Purnell, M.D. Baltimore, W. J. C. Dulany & Co., 1878. 8vo, pp. 138. Price $1.50.

The author presents in this work a brief description of the apparatus, reagents and processes of qualitative analysis, especially as employed in medical chemistry and in pharmacy. He does not aim to present any original researches, but rather the most available tests which his experience has recommended. The selection he has made is judicious, and as a handy book of reference on the subjects indicated by the title it deserves commendation. The proof reading is, in places, faulty, but the errors are mostly of a kind which will not be apt to lead astray.

NOTES ON CURRENT MEDICAL LITERATURE.

——Two papers read before the N. Y. Obstetrical Society by Dr. N. J. Garrigues explain, the one, an apparatus for transfusion, the other, the condition of asphyxia in new-born children, considered from a medical and a legal standpoint. The point that the last mentioned aims to inculcate is that the child may be alive when it does not breathe, and that if only the heart beats, its life may be saved, even if spontaneous respiration does not appear for hours.

THE

Medical and Surgical Reporter.

A WEEKLY JOURNAL,

Issued every Saturday.

D. G. BRINTON, M.D., EDITOR.

The terms of subscription to the serial publications of this office are as follows, payable in advance:—

Med. and Surg. Reporter (weekly), a year,	**$5.00**
Half-Yearly Compendium of Med. Science,	**2.50**
Reporter and Compendium, - - -	**7.00**
Physician's Daily Pocket Record, - -	**1.50**
Reporter and Pocket Record, - - -	**6.25**
Reporter, Comp. and Pocket Record, - -	**8.25**

For advertising terms address the office.

Marriages, Deaths, and Personals are inserted free of charge.

All letters should be addressed, and all checks and postal orders drawn to order of

D. G. BRINTON, M.D.,
115 South Seventh Street,
PHILADELPHIA, PA.

1879.

PREMIUMS FOR NEW SUBSCRIBERS.

Special Offer to Our Old Subscribers.

From and after October 1st, any new subscriber will receive the REPORTER

15 MONTHS FOR $5.00,

to wit, from Oct. 1st, 1878, to Dec. 31st, 1879.

To enlist the interests of our Old Subscribers in the extension of our circulation, we offer, if they will send us, along with their own renewals, the amount for ONE new subscriber for one year (who will be entitled to the 15 months mentioned) to send them either (1) the HALF-YEARLY COMPENDIUM, for 1879; or (2), the PHYSICIAN'S POCKET RECORD, for 1879; or any of our other publications, to the amount of $2.50. These publications will include the following works now in press:—

GOODELL. Lessons in Gynecology.
LANDOLT. Manual of Examination of the Eyes.
SAYRE. Organic Materia Medica.

Besides, already published, Napheys' *Surgical Therapeutics*, Napheys' *Medical Therapeutics*, Dobell *On Cough and Consumption*, Bernard & Huette's *Operative Surgery*, Butler's *Medical Directory of the United States, etc., etc.*

THE INJURIOUS EFFECTS OF THE TOBACCO HABIT.

Every few years there is an outcry against the increasing use of tobacco, and a general onset along the lines is made against the smokers, chewers, snuff takers and snuff dippers. It is about time for one, and we cheerfully lend it our concurrence.

Let us look at some recent facts. In the United States alone, in the year 1875, there were raised, according to the revenue returns, *four hundred and two million* pounds (402,000,000 lbs.). Last March we were informed, by a Baltimore merchant, that in that city there was only a moderate supply of the weed ready for export, to wit, one hundred and fifty-five thousand hogsheads! A single firm in New York paid to the government, in one month, a revenue tax of $123,000. Its average monthly tax for internal revenue is over $100,000. The shipments of snuff by this house to one town in North Carolina amounts to 100 barrels a month, or 1200 barrels annually. And this is but a tithe of the snuff yearly sold by this one firm.

The quantity consumed in Great Britain is 20,000,000 pounds; in France it is 44,000,000 pounds; in Austria, 81,000,000. It is a principle source of revenue to every continental State. In 1865 Austria smoked 1,900,000,000 of cigars, nearly. Russia raises 25,000,000 pounds of tobacco for home consumption. But our own country leads all others easily in the consumption of the weed.

What is the result? It is evident in the increase of nervous and pulmonary disease, in the demand for alcohol to counteract this excessive narcotism, in the broken constitutions and exhausted offspring of these immoderate tobacco consumers. Hear a recent witness. In one of the last numbers of the *North Carolina Medical Journal* (that State in which one town uses a hundred barrels of snuff a month—how it is used, and by which sex, gallantry forbids us to explain), Dr. J. H. Hicks, of Faison, in that State tells what he has seen of its effects. He

finds it in every house, on every mantel. He says, "I think the majority of my office patients are those whose systems are shattered from an excessive use of tobacco. The effects of immoderate use of this drug are not sufficiently taught by the profession. Smoking rooms must not be made nurseries, and stomachs must not be made apothecary shops, for functional derangement caused by habits that proper professional advice would cause to be abandoned, at least, to an injurious extent. Dr. Pepper, in his excellent clinics, scarcely ever failed to impress his opinions of tobacco."

It is high time for a counterblast when unprejudiced physicians must report thus.

What is the immediate cause of the injury when the plant is smoked, is not as yet certainly known. It used to be charged to the nicotine. But Dr. O. KRAUSE has shown, by careful experiments, that the poisonous effects of tobacco smoke are not produced by nicotine, this alkaloid being decomposed during the burning of the tobacco, but are due to the carbonic oxide of the burning leaves. He found in one hundred volumes of smoke five to thirteen volumes of carbonic oxide, and nine to sixteen volumes carbonic acid (*Medicinische Neuigkeiten*, March, 1875). In chewing and "dipping," the saturated solution formed is sure to impregnate the system with all the soluble principles of the leaves.

NOTES AND COMMENTS.

The Repression of Drunkenness.

An English physician, of Manchester, Dr. A. M. Adams, wisely says, in a late address: "I believe nothing will stem the flood of intemperance until we can ameliorate the physical surroundings of the masses of our crowded cities; for, just as surely as a pestilence like cholera is engendered and spread by filthy habits, so is the moral plague of drunkenness and crime begotten by the wretchedness and squalor of the dwellings in which many of the lower classes spend their lives. It may be said, however, that it is not alone among the lower orders that these debasing habits prevail, and that among our commercial, professional, and well-to-do classes intemperance exists to a large and increasing extent. Here, then, is a field for our exertions as practitioners of medicine. We can tell these drunken men and women of the Nemesis of disease that inevitably awaits them if they continue the excessive use of stimulants; and we can use all our great influence and all the resources of our art to rescue them from the evil.

Oxide of Zinc in Diarrhœa.

The value of oxide of zinc in diarrhœa has long been known, but is apt to be overlooked. Some recent reports on the subject have been made by Dr. Tyson, of this city, and Dr. Bonamy, of Nantes. The formula which the latter uses is—

℞.	Zinci oxidi,	54 grains
	Sodæ bicarb.,	7½ grains.

In four packets, one to be taken every six hours.

In all the cases which he observed oxide of zinc produced rapid cure of diarrhœa. In fourteen cases observed by Puygautier the cure was even more rapid, since in only one case were three doses of the medicine required. The results are considered to have been more satisfactory, inasmuch as in several cases the malady had endured from one to many months, and other methods of treatment had not produced any improvement. Thus he concludes that, although by no means to be held as exclusive treatment, the employment of oxide of zinc deserves to be more generally known as useful in diarrhœa.

Can One Have Typhoid Fever After Forty?

A correspondent of the *Lancet* puts these hard questions:—

Can it be seriously conceived that a man can possibly have "typhoid fever" (as people will erroneously call it) after he has passed the age of susceptibility to its influence? in other words, when he has lived so long as to have nothing of Peyer's patches left in him! The thing is physically impossible, and if, after the age of forty, cases really crop up, the time has arrived for framing another new and sounder pathology of enteric fever than the generally received one of to-day. Now, then, accepting current pathology of the subject as infallible, the question arises,

why should forty be singled out as the limited period of liability, and the succeeding years past the prime of life as the period of immunity? The reason is simple enough. It is this: Forty years is the time of life when Peyer's patches (the special seat of lesion) begin to degenerate, and enteric fever cannot touch the advanced in years, because Peyer's glands are absent in the old. *Ergo*, I am at liberty to question the diagnosis "typhoid fever" in such an individual.

On Nitrite of Amyl.

The purity of this drug was discussed before the British Pharmaceutical Society, in September, by Mr. D. B. Dott. This paper embodied the results of an examination of several samples of nitrite of amyl procured from different makers, with the view of ascertaining the degree of purity of the article in the market. The samples examined had a specific gravity varying from .864 to .876, the proper specific gravity being .877. By a single rectification they gave a yield of 6.7, 11.5, 33.3, 47.5, and 65.0 per cent. respectively, boiling at 90° to 100° C., while a sample prepared by the author in the ordinary way gave 85·0 per cent. One of the samples had an odor quite distinct from that of genuine nitrite of amyl, and produced little effect on the heart's action by the inhalation of its vapor. It will thus be seen that there is a great variation in the quality of the amyl nitrite of different makers, and that some of it is of very inferior quality. The author considers that some standard of purity less rigid than that of the Pharmacopœia ought to be adopted, as it is impossible to prepare a nitrite of amyl boiling constantly at 205° F. Indeed, there seems to be some doubt as to whether that is really the correct boiling point. The process for preparing nitrite of amyl by passing nitrous acid gas through amylic alcohol is held to be the best, being decidedly preferable to that by the direct action of nitric acid on the alcohol.

An Improved Preparation of Ergot.

Mr. A. W. Postans, F.C.S., gives the following process:—

To 20 ounces of freshly-powdered ergot packed in a percolator, the extremity of which had been closed, is added a mixture containing 10 ounces each of rectified spirit and glycerine, and 5 ounces of water, the whole allowed to macerate for a week, at the expiration of which time the percolation is proceeded with, and the subsequent displacement continued with distilled water until the drippings almost cease to have any taste or color. Eighteen ounces having been collected of the first liquid, the remainder is evaporated gently, in a water bath, to 2 ounces, and then mixed with the previous quantity, so that 20 ounces of this fluid extract exactly represent 20 ounces of freshly-powdered ergot. Several obstetricians of eminence have found this preparation highly satisfactory.

Mr. Postans remarked that the main difference between the above process and the American consists in the addition, by the U. S. Pharmacopœia, of half-an-ounce of acetic acid to each 16 ounces of liquor, thus rendering, in his opinion, an otherwise good preparation nauseous and unpalatable, as well as presenting a difficulty as to the desirability and wisdom of introducing acid into the stomach of patients.

The Use of Bael.

This East Indian astringent is growing in popularity in Great Britain. Dr. R. P. Ritchie writes of it, to the *Medical Times and Gazette*.

My experience of it has been very considerable. Having observed the good results following its administration in the adult, it occurred to me, when I joined the staff of the Edinburgh Sick Children's Hospital, in 1863, that it would be a good remedy in the catarrhal diarrhœas of children. In the chronic form of this affection I found it valuable, and in those cases which assumed the dysenteric character especially so. I give it sometimes alone, and in others in combination with sulphuric acid. In cases in which much irritability of the mucous membrane or prolapsus of the bowel is present, the addition of bismuth at the same time is advisable.

Chloride of Calcium Pills.

At a recent meeting of the Pharmaceutical Society, of this city, pills of chloride of calcium were mentioned as being very troublesome to prepare and very liable to deliquesce, in consequence of the extreme solubility of the salt. Even if well made the only remedy, if it must be dispensed in pillular form, is to coat the pill with an ethereal solution of mastic or tolu. The fused chloride should never be used, as in dissolving it, it fixes two molecules of water, and in doing so gives out the latent heat of this water.

Correspondence.

Mixed Methods of Instruction.

Ed. Med. and Surg. Reporter :—

I see in your issue of the 16th instant a communication from Dr. C. H. Lewis, of Jackson, in this State, which contains several errors.

The simple facts are as follows: When the Homœopathic College was first established by an act of the Legislature there were but two professors in it—one of theory and practice and one of materia medica and therapeutics. The students of that college were allowed to attend the lectures on Anatomy, Chemistry, Surgery and Obstetrics, in the regular medical college, and the professors of these four departments were required by the Board of Regents to examine these students on these four respective subjects, and certify their standing in them to the President of the University. This was all the responsibility any of the Faculty assumed, and these certificates were given under laws enacted by the authorities over them, having all the force of public statutes, and which they could not avoid obeying but by resignation and abandoning their work. After the first year a Professor of Obstetrical Therapeutics was appointed in the Homœopathic College, and the year following a homœopathic Professor of Surgery. The Professor of Surgery in the regular school was then relieved from teaching, examining and certifying to the qualifications of any of the homœopathic students.

At a meeting of the Board of Regents, in June last, the previous requirement for the professors of anatomy, of chemistry, and of obstetrics, to examine and certify to the qualifications of the homœopathic students was repealed, and it was widely published in the newspapers and medical journals of the State, and by circulars sent abroad extensively, that no member of the regular faculty was any longer required to recognize, examine or certify to any presence, condition or qualification of any student of the Homœopathic College, or to take cognizance in any way of students in exclusive or sectarian medicine.

The three members of the faculty whose lectures the homœopathic students still attend are in the same position in relation to such students as the lecturers on clinical medicine or surgery in any hospital governed by a board distinct from themselves, who sell tickets to irregular students, allowing them to attend the teaching in such hospital. This, and nothing more.

Sufficient time has not elapsed to demonstrate the full effect upon homœopathy of the establishment of its school in the University of Michigan, but judging from every present possible indication, it will be disastrous to its pretensions. The number of students in that college has diminished, while the number in the regular college has increased, and several who the present term matriculated in the Homœopathic College have transferred themselves to the College of Medicine and Surgery, while a change of opinion outside of the latter college, unfavorable to homœopathy, is too apparent to be mistaken

Ann Arbor, Mich. A. B. Palmer, m.d.

[We cheerfully admit the above, but we shall be obliged to have the correspondence on this subject cease at this point.—Ed. Reporter.]

The Germ Theory.

Ed. Med. and Surg. Reporter :—

The question of the germ theory is now attracting the attention of some of our most scientific men. Be the theory true or false, let the question be thoroughly examined before passing judgment or coming to a definite conclusion.

If Linnæus, the father of botany, a century ago, gave this theme a thought, let us see, in our more enlightened day, whether he was correct or incorrect. It is now claimed by some advocates of the germ theory that many of our prominent prevailing diseases are caused by immense numbers of spores, such as typhoid fever, scarlatina, small-pox, measles, diphtheria, erysipelas, etc. These spores, or some variety of them, producing in the system a mechanical irritation, setting up the disease. In regard to the number and variety of these spores, they are said to be of large variety and innumerable in quantity, and capable of multiplying with great rapidity, at a given time, under favorable circumstances. Others advocate that this scientific knowledge gives them the true theory in prescribing the correct remedy or antidote. For instance, they say pseudo-membranous croup is caused by a variety of oidium albicans, called mycelium, and the remedial agent is an acid, to cure the disease. Diphtheria is caused by micrococci, and an alkaline is the remedy. Then they say that a species of spores called algæ causes scarlatina and sarracenia variola.

Besides there are an innumerable host of malarial germs. Hence it is claimed that there is an evolution in the etiology of disease, under the power and use of the microscope. Be this as it may, my opinion is that we, as practitioners, should give this important subject a fair consideration, arriving at truth by practical observation. Recently I prescribed for a female patient, aged 30 years, who has dyspepsia of several years' standing. The patient did not complain a great deal, but I noticed that her tongue was broad, pallid, with a peculiar thin white fur. Now, according to the germ theory this patient had yeast plant on the mucous membrane of the stomach. I prescribed sulphate of soda in ten grain doses, four times per day. This simple prescription in ten days benefited the patient very materially, and I noticed her tongue changed to a normal condition.

It is a well known principle that if the tongue has a broad, pallid appearance in any form of disease the system is in an acid condi-

tion, and alkalines are the remedy. And if the tongue has a red, sleek, pointed appearance, the system is said to be in an alkaline condition, and acids are the remedies. But the question is, how far will this hypothesis hold good? Take a case of erysipelas, where we uniformly find a red tongue; then the system is in an alkaline condition, and we usually prescribe the muriated tincture of iron, which is an acid. This very often cures. Again, we have diphtheria, where we generally see the pallid, white-furred tongue, and soda or potash is prescribed with success.

In conclusion, let me say that I pen these scattering thoughts for the purpose of inviting the attention of practitioners to this subject, in order that we may observe at the bedside this germ theory, and report our observation to the profession. I have often thought that if we would prescribe more to pathological conditions rather than the name of the disease, we might have better success.

Red Key, Ind., Dec. 1st, 1878.

Croup and Diphtheria.

ED. MED. AND SURG. REPORTER:—

How there could ever be any question about the difference between membranous croup and diphtheria is a puzzle to me; or how it should be dignified enough to be a question before the International Congress, which it was, and a good deal of feeling displayed on both sides, is a mystery that I cannot solve, except on the ground that genuine croup is of so infrequent occurrence that many physicians never have seen a case. In this city of 8000 inhabitants there occur two or three cases each winter, so that there are physicians here that in ten or twelve years have never seen a case. It has happened to me in the past ten days to see three cases of membranous croup, so that my attention has been directly called to it. Diphtheria is not prevailing at present, though in the seasons past we have had many cases. The diseases have no more points of similarity than typhoid fever and whooping cough. In diphtheria the membrane sometimes forms in the trachea, and the patient dies of suffocation; in croup this is *always* the manner of death; here the similarity ends.

CASE.—Called to see a child, aged seven years, on Wednesday, having a cold, hoarse, and some râles in the lungs; no fever; occasional tightness of breathing. In the night I was called up to see the child; found it had had a severe paroxysm of dyspnœa, with the peculiar metallic cough. It was soon relieved by a nauseant. There was no fever, no enlargement of the glands, no soreness, or even inflamed appearance of the throat. In an hour the child was apparently well, except a little prostration from the emetic. I was certain of the disease, however, and prognosticated death. During the day it had frequent attacks of cough, with the same ominous, brassy sound; at night the paroxysm came on after the first sleep, and was severe; then they became more frequent, and on Friday morning the breathing was very difficult, and a cyanosed condition of the skin was apparent most of the time. There were intervals of partial ease. Violent vomiting gave some relief, and shreds of membrane were thrown off. The breathing became entirely obstructed at seven o'clock, and death resulted. The other two cases were similar. The membrane was in sight in only one case. I tried all treatments that had ever been mentioned. I have seen fifty cases, and never one that recovered. It resembles diphtheria as much as a duck does a fish.

Clinton, Iowa. P. J. FARNSWORTH, M.D.

Carbolic Acid in Small-Pox.

ED. MED. AND SURG. REPORTER:—

In your issue of the 23d of November is an article on priority in the use of carbolic acid in small-pox. As many of the profession appear anxious to know all that can be learned as to its introduction in the treatment of the above named disease, allow me, through your valuable column, to express my knowledge of its use before 1871.

When in 1867–'68 I was attending my course of study in Queen's University, Kingston, Canada, Prof. Horatio Yates used the acid with good success, and highly recommended it in the treatment of small-pox.

S. C. Hillier, one of my classmates, in his thesis, on small-pox, dwelt largely on the importance of the new treatment and its value in preserving the face and skin intact. The thesis was recommended to be published, but whether it was or not, I do not know, as I came to my present location at the close of college. By referring to the London *Lancet* of 1868, vol I, p. 151, you will find a communication from Prof. H. Yates, on the use of carbolic acid in the treatment of small-pox. GEO. HENDRY, M.D.

Zilwaukis, Mich., Nov. 27th.

Stricture of the Rectum.

ED. MED. AND SURG. REPORTER:—

In reading the report of a clinic held by Dr. F. F. Maury, at the Philadelphia Hospital, volume xxxix, page 338, I see the following statement made, which I quote: "Strictures of the rectum are usually due to syphilis or cancer. The latter is more common in elderly people, while young women, in particular, who have stricture of the rectum, generally owe it to syphilis."

How does the doctor account for those cases of stricture of the rectum where no syphilitic history can be obtained, and where no manifestations of that disease (save this one) are present?

I know of a case of stricture of the rectum which is neither syphilitic nor cancerous, but the result of cicatrized dysenteric ulceration, which has now lasted during a period of four

years. The patient has never had syphilis nor venereal disease of any kind, and the duration of time the stricture has existed in this instance precludes carcinoma.

Stricture of the rectum in women may also be produced by cicatricized chancroidal ulceration, which may be caused by unnatural copulation (as mentioned in the same report, page 338), or the pus of a chancroid situated upon some part of the genitals may find its way into the rectum. During my term of service as house surgeon in the several wards of Charity Hospital, New York, I have met with cases originating in that manner.

A number of these cases of rectal stricture, the result of chancroidal cicatrization, were published a few years ago by Dr. Erskine Mason, of New York, in the *American Journal of the Medical Sciences.*

G. O. Morrison-Fiset, M.D.,
Late Examining Physician at Bellevue Hospital, New York. Three Rivers, Quebec, Canada.

News and Miscellany.

Bulletin of the Public Health, Issued by the Surgeon General United States Marine Hospital Service, for the Week ended November 23d.

Yellow Fever in the Mississippi Valley.—Advices to the close of November 22d show the following number of new cases of yellow fever and deaths for the week ended on that day. There were 20 deaths in New Orleans, 2 deaths in Vicksburg and 2 in the adjacent country, 3 at Delta, Miss., 8 cases and 4 deaths at Mobile. The last case reported in Morgan City, La., occurred November 19th, the last death November 15th. During the two weeks ended November 22d, there were 4 new cases of yellow fever and 2 deaths at Decatur, Ala., 33 deaths at Memphis, and 2 deaths at Cairo, Ill. The last case at Cairo occurred October 28th, and the last death November 15th.

It is advised that during the coming winter all the rooms of every dwelling in the cities and towns which have suffered from yellow fever should be opened to the outer air for a sufficient length of time to subject them to a freezing temperature. Carpets, bedding, clothing, trunks, etc., should be exposed to the open air, and to a temperature below the freezing point. Unless this is done, sporadic cases may be anticipated when the warm weather returns, from yellow fever poison, which is liable to survive the winter in dwellings which are kept continuously at an elevated temperature.

Governmental Relief in Epidemics.

The Secretary of War, in his last report, has the following interesting passage:—

In addition to the issue of rations, as shown by the report of the Commissary General, tents were issued as a loan, as follows:—

August 15th. 1000 common tents to Memphis.

August 20th. 200 common tents to Vicksburg.

August 21st. 200 common tents to Grenada.

August 24th. 300 common tents to Memphis.

September 7th. 25 common tents to Natchez.

September 21st. 1 hospital tent to Donaldsonville.

September 21st. 70 common tents to Chattanooga.

Also a small supply of medicines was issued to Grenada. I respectfully recommend that a joint resolution be passed by Congress, approving and legalizing these issues.

I would recommend to Congress the careful consideration of the question whether such emergencies in the future may not be provided for by law, by conferring authority to act upon the President. If it be practicable, the law should be so framed as never to leave an executive officer under the necessity of acting outside of the statutes.

In this connection I have further to report that, by means raised from private contributors, the steamer John M. Chambers was chartered, loaded with supplies and medicines for the relief of the sufferers, and sent from St. Louis down the Mississippi river, upon her voyage of charity. A request having been made for an officer of the army to command the expedition, First Lieutenant Hiram H. Benner, of the Eighteenth Infantry, and Second Lieutenant Charles S. Hall, of the Thirteenth Infantry, volunteered for that hazardous duty, and in its performance the former lost his life, having died of yellow fever, at Vicksburg, on the 17th day of October last.

Lieutenant Benner was a man of high character and a young officer of uncommon merit. He leaves a widow and two infant children; and it is respectfully submitted that Congress should, without delay, take such action as will recognize and give proper expression to the nation's gratitude for the self-sacrificing heroism which characterized his conduct and led to the sacrifice of his life. I earnestly recommend the passage of an act granting a pension to his widow.

The National Quarantine.

A New York letter in a leading daily, says—

The proposition to establish a national quarantine, which the President is reported in this morning's despatches as prepared to recommend, and which Southern members of Congress are understood to be urging with all their might, will be resolutely opposed by the delegation from this city, and, it is believed, by all the Atlantic ports. The reasoning is that New Orleans and other ports that have been desolated by pestilence ought to exert themselves to bring their municipal arrangements into conformity with sanitary laws before asking Congress to establish a national quarantine. Furthermore, it is urged that this is simply placing the cart before the horse, as it would be better to see what virtue there is in clean streets and a

thorough system of drainage before coming to the conclusion that disease is imported from other countries. The theory upon which the bill rests—the yellow fever is an exotic, and not indigenous to the Southern Mississippi country, is by no means universally assented to. Our State and municipal quarantine arrangements here have worked so admirably during the past few years that we have been able to keep yellow fever out of the city, though it has been almost all the while, during the hot weather, at our doors, and this, too, without in any way interfering with our commerce, or creating panic or uneasiness even among the people. For these, among other reasons, all our Commercial Exchanges will petition against the bill, and it is known that at least two of our city Congressmen are prepared to speak against it. At the same time, there is every disposition to extend aid to New Orleans and other ports, to enable them to undertake such municipal improvements as will conserve the health of their inhabitants and prevent pestilence from overrunning the rest of the country, but it is contended that this can be accomplished much better by private enterprise and by private capital than by Congressional appropriations.

The Brooklyn Fasting Girl.

A remarkable story is going the rounds about a girl in Brooklyn, who has been dying for thirteen years and still lives; who eats nothing and drinks less; who can read a sealed letter, and lying on her bed see what's going on at the Khyber Pass, and such stuff. Evidently the time is a long way off when the fools will all be dead.

Personal.

—Dr. A. W. Heise, who for the past three years has filled the office of physician to the Illinois State Penitentiary, with credit to the institution and himself, was lately discharged "by reason of expiration of term of service." Dr. Heise managed the medical affairs of the prison by instituting such admirable sanitary regulations that the endemic and epidemic diseases were unknown there; the average number of cases in hospital, as shown by his annual report, being only six, thirteen per cent. of these being classed as "wounds." The average number of convicts during this time has been 1700. The commissioners have appointed a "homœopath" to occupy the place of the prison physician.

—Dr. Daniel Pierson, a physician of Hancock county, Ill., was called from his bed on Saturday night, by an unknown man, to attend a case about three miles distant. He saddled his horse and started, and an hour after his lifeless body was found by the roadside, with an iron bar, the instrument of murder, lying near. Dr. Pierson was a trustee of the town of Augusta, and active in suppressing lawlessness, and it is believed he was murdered out of revenge.

—Dr. J. B. Ullersperger died on October 15th, at Munich, in the eighty-first year of his age. He was born in March, 1798, at Neuburg, on the Danube, studied at Würzburg, where he took his degree, and then began to practice at Munich. In 1826 he was appointed physician to the Duke of Leuchtenberg, but lost the post through an indiscreet revelation concerning the health of a friend of the Duke. He returned to his private practice in Munich, and quickly rose in his profession. His first contribution was on "Angina Pectoris," in 1848. Next year he published a work on "The Employment of the Saline Springs at Kissingen. In 1868 he brought out a work on fatal diseases of the brain and nerves, and next year one on diseases of the heart. In 1867 he published a pamphlet on the possibility of curing phthisis, and on "A Remedy for Hysteria, Epilepsy," etc. The same year he published a work on "The Treatment of Infants and Infantile Diseases." A work of his on "Ancient Transfusion and Infusion Compared with Modern Transfusion and Hypodermic or Subcutaneous Injections," has been translated into English. He gave considerable attention to the study of the history of medicine in Spain, and published a work upon it at Würzburg, in 1871. He received, during his long life, many marks of distinction from the Bavarian and other sovereigns, and from many universities and learned bodies. One of his essays was awarded a prize by the Medical Society of this State.

—Prof. Erasmus Wilson, F. R. S., has handed to Mr. John Dixon, C. E., a cheque for $50,000, in redemption of his munificent pledge to pay him that sum on the erection of Cleopatra's Needle on the banks of the Thames, in London.

Items.

—The Surgeon General reports the total number of deaths in the army during the year, from all causes, at 256, or about twelve in one thousand. Of these 121 died of disease, and 135 of wounds, accidents, and injuries.

—According to recently published statistics, there are more deaf mutes, idiots and lunatics in Switzerland, in proportion to the population, and fewer people afflicted with blindness, than in any other European country.

MARRIAGES.

BUSEY—CATLETT.—At Christ Church, on November 12th, 1878, by the Rev. Dr. Runcey, A. P. Busey and Miss Corinne B. Catlett, daughter of Geo. Catlett, M.D., of St. Joseph, Mo.

WALKER—GREER.—November 6th, by Rev. A. H. Parker, Thomas P. Walker, M.D., of Dunbar, Fayette county, Pa., and Mary M. Greer, near Milroy, Mifflin county, Pa.

DEATH.

LEYBURN.—October 29th, at Abingdon, Va., where, as a delegate of the Church of Lexington, Va., he was in attendance upon the sessions of the Synod of Virginia, Alfred Leyburn, M.D., in the seventy-sixth year of his age.

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

SAVORY & MOORE, 143 New Bond Street, London.

PARIS, 1[illegible].

Prize Medal.

1868.

Silver Medal.

1872.

1873, VIENNA.

Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired such well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris.

without which none are genuine.

TO PHYSICIANS.

THE scarcity and high prices of Cinchona barks and Sulphate of Quinia, and the prospect of only a slight reduction in these prices, makes the present a favorable opportunity of calling the attention of the profession to the *combination of all the bark alkaloids.*

Much attention has been given to this subject in Europe and India.

The growing appreciation by the medical profession of the United States of

CINCHO-QUININE

is due to the fact that it retains the important alkaloids IN COMBINATION, — a combination which in practice is *preferable to perfect isolation or separation* of these alkaloids.

In addition to its superior efficacy as a tonic and anti-periodic, it has the following advantages, which greatly increase its value to physicians : —

1st, *It exerts the full therapeutic influence of* Sulphate of Quinine, *in the same doses*, without oppressing the stomach, creating nausea, or producing cerebral distress, as the Sulphate of Quinine frequently does ; and it produces much less constitutional disturbance.

2d, It has the great advantage of being *nearly tasteless.* The bitter is very slight, and not unpleasant to the most sensitive, delicate woman or child.

3d, It is *less costly :* the price will fluctuate with the rise and fall of barks, but will always be much less than the Sulphate of Quinine.

4th, It meets indications not met by that Salt.

The following well-known Analytical Chemists say :—

"UNIVERSITY OF PENNSYLVANIA, Jan. 22, 1875.
"I have tested CINCHO-QUININE, and have found it to contain *quinine*, *quinidine*, *cinchonine*, *cinchonidine*.
F. A. GENTH,
Professor of Chemistry and Mineralogy."

"LABORATORY OF THE UNIVERSITY OF CHICAGO, Feb. 1, 1875.
"I hereby certify that I have made a chemical examination of the contents of a bottle of CINCHO-QUININE ; and by direction I made a qualitative examination for *quinine*, *quinidine*, and *cinchonine*; and hereby certify that I found these alkaloids in CINCHO-QUININE.
C. GILBERT WHEELER,
Professor of Chemistry."

"I have made a careful analysis of the contents of a bottle of your CINCHO-QUININE, and find it to contain *quinine*, *quinidine*, *cinchonine*, and *cinchonidine*.
S. P. SHARPLES, *State Assayer of Mass.*"

TESTIMONIALS.

"WELLFLEET, MASS., Nov 17, 1876.
"I have used CINCHO-QUININE, and can say without any hesitation it has proved superior to the sulphate of quinine. J. G. JOHNSON, M.D."

"MARTINSBURG, MO., Aug. 15, 1876.
"I use the CINCHO-QUININE altogether among children, preferring it to the sulphate.
DR. E. R. DOUGLASS."

"LIVERPOOL, PENN, June 1, 1876.
"I have used CINCHO-QUININE, obtaining better results than from the sulphate in those cases in which quinine is indicated.
DR. I. C. BARLOTT."

"RENFROW'S STATION, TENN., July 4, 1876.
"I am well pleased with the CINCHO-QUININE, and think it is a better preparation than the sulphate. W. H. HALBERT."

"ST. LOUIS, MO., April, 1875.
"I regard it as one of the most valuable additions ever made to our materia medica.
GEORGE C. PITZER, M.D."

"RICHMOND, VA., March 28, 1877.
"I believe that the *combination* of the several cinchona alkaloids is more generally useful in practice than the sulphate of quinine uncombined.
"Yours truly, LANDON B. EDWARDS, M.D.
Member Va. State Board of Health, and Sec'y and Treas. Medical Society of Va."

CENTREVILLE, MICH.
"I have used several ounces of the CINCHO-QUININE, and have not found it to fail in a single instance. I have used no sulphate of quinine in my practice since I commenced the use of the CINCHO-QUININE, as I prefer it. F. C. BATEMAN, M.D."

"NORTH-EASTERN FREE MEDICAL DISPENSARY, 908 East Cumberland St., Philadelphia, Penn., Feb. 29, 1876.
"In typhoid and typhus fevers I always prescribe the CINCHO-QUININE in conjunction with other appropriate medicines, the result being as favorable as with former cases where the sulphate had been used.
"F. A. GAMAGE, M.D."

SYRUP-GLYCEROLE
OF
FERROUS CHLORIDE.

The Combination which all Forms of Iron must assume before Assimilation.

Superior to all other Iron Salts in that, while it is readily taken into the circulation, and does reffruginate the blood, it does not ordinarily cause constipation nor headache. It is very pleasant to the taste, and is unalterable.

Ferrous Chloride is a neutral salt, consequently it has no action upon the teeth, and may be administered fearlessly. This fact and the delightful taste of my preparation render it an advantageous form for administration to children. Each fluid drachm contains one grain of Ferrous Chloride, which, owing to the certainty of its assimilation, is a full, active, adult dose.

WYETH'S COMPRESSED TABLETS
OF
CHLORATE OF POTASH.

For Hoarseness, Bronchial Irritation, Sore Throat, Diphtheria, Croup, etc., etc.

Chlorate of Potash is a remedy of acknowledged value in cases of Diphtheritic Sore Throat, and in Inflammation of the Mouth and Throat, induced by a depressed state of the system. In these instances, as in the milder forms of Croup, it has, besides its depurative and detergent effects, a solvent action on the deposits, characteristic of those troublesome and dangerous affections. It relieves Hoarseness; and in many cases of Fetid Breath from disordered secretions, it proves an efficient corrective. Its virtues in simple Angina, or ordinary Sore Throat, are recognized by many of the most eminent physicians.

As the taste of this article is not disagreeable, we have prepared it in the form of Compressed Tablets, thus giving the patient the full benefit of its action, undiluted with Sugar, Gum, or other vehicles, which would not only prevent its effects, but which sometimes themselves offend the stomach.

The Lozenges usually contain about twenty-five 25) grains of gum and sugar, with two grains of the Chlorate of Potash while each of these Tablets contains simply five grains of the Chlorate, all of which, dissolved in the saliva, acts on the affected mucous membranes.

If allowed to dissolve in the mouth, the topical effect is much more efficient than a saturated solution, as, while the solution is but temporary, the tablet really acts as a continuous gargle.

FOR SORE THROAT, HOARSENESS.

DIRECTIONS:—Adults should take one every hour or two until relieved, allowing it to dissolve slowly in the Mouth. Children half of one as often.

For Offensive Breath, no remedy will give more certain relief; use one, two or three times a day.

For Diphtheria, Croup, and the more serious ailments, the physician should direct.

PEPTONIC PILLS.

Pepsin Pancreatin with Lacto-Phosphate of Lime and Lactic Acid.

(COPYRIGHT SECURED.)

This pill will give immediate relief in many forms of Dyspepsia and Indigestion, and will prove of permanent benefit in all cases of enfeebled digestion, produced from want of proper secretion of the Gastric Juice. By supplementing the action of the stomach, and rendering the food capable of assimilation, they enable the organ to recover its healthy tone, and thus permanent relief is afforded. One great advantage of the mode of preparation of these pills is the absence of sugar, which is present in all the ordinary Pepsin and Pancreatic compounds. In this form, the dose is much smaller, more pleasant to take, and is less apt to offend the already weak and irritable stomach. The results of their use have been so absolutely satisfactory, that we are confident further trial will secure for them the cordial approval of the Medical Profession and the favor of the general public.

Each pill contains onegrain of pure PANCREATIN, which is equivalent to 10 grains of the ordinary or Saccharated usually prescribed and dispensed. Physicians will appreciate the great advantage of this mode of administration, the increased benefit to the dyspeptic being due to a full and effective dose of each, freed from unnecessary bulk, and really hurtful addition of sugar. A single pill will give immediate relief.

DIRECTIONS:—Take one pill immediately after eating or when suffering from Indigestion, Lump in the Throat or Flatulence. For children, reduce the pill to powder and give one-fourth or half, according to age.

LARYNGO-TRACHEOTOMY.

SUCCESSFUL OPERATION FOR CHRONIC FOLLICULAR LARYNGO-PHARYNGITIS WITH SPASM OF THE GLOTTIS.

BY WILLIAM A. BYRD, M.D.,

Of Quincy, Ill.

July 27th, 1878, I was called to see Mrs. Frank Gleitman, a German lady, aged twenty-eight, the wife of a green grocer. She had contracted a cold with sore throat, aphonia, cough, pain in the chest and difficulty of breathing, about September 1st, 1877. For these difficulties she consulted one of the best physicians in our city, who, being very busy at the time, gave her a very cursory examination, and intimated that she had phthisis, but asked her to call again.

This opinion so discouraged her that she called another physician, who made local applications and gave some internal remedies, promising her a speedy recovery; but instead of recovering she became gradually worse until about a month before I was called, by which time her breathing had become so difficult as to resemble that of a child with the croup, getting worse all the time.

When she would sleep, which would be but a short time before waking, it would cause such dryness and spasm of the glottis that the neighbors and her family would gather at her bedside to witness her death.

The pharynx was red, granular and devoid of mucous membrane in patches, the granulations resembling those in trachoma, only being larger. The face wore an anxious expression, and had a dusky hue. The breathing was difficult and labored, being easiest when she was sitting up and leaning slightly forward. Pulse rapid and weak; voice low, indistinct, hoarse, and the words slowly and laboriously articulated. There was dullness over both lungs, with mucous rales well marked. It was not possible to examine with a laryngoscope.

I at once told her and her friends that tracheotomy offered her the only chance for her life. Not getting their immediate consent for the operation I ordered anodynes, tonics, stimulants and a local application of glycerole of tannin and chlorate of potassa, to be applied with a camel's hair brush every two hours.

The anodyne relieved her some, but after sleeping, which was prolonged to two or three hours at a time, the spasm of the glottis would be worse than ever.

On the 28th she decided to have the operation performed the next day, providing the spasms recurred during the night.

Called in the morning and found that she had passed the worst night of all, the attendants twice during the night thinking her dead. She was now determined to have the operation done at once.

With the able assistance and advice of Drs. Wm. Zimmermann and Jacob A. Wagner, we made the operation at 1.30 P.M., the patient being under the influence of ether.

An incision was made through skin and fascia, commencing at the lower edge of the thyroid cartilage and extending downward to the middle of the isthmus of the thyroid body. The muscles and vessels were pressed aside with the

handle of the scalpel, exposing the trachea. The vessels were very much enlarged, tortuous and thin-coated, many giving away, causing fearful hemorrhage. At this point in the operation the patient ceased to breathe, and became deeply cyanosed. The issue of life or death hung on seconds; quickly cutting through the cricoid cartilage, and the two upper rings of the trachea, I applied my mouth to the wound and blew her lungs full of air, and sucked out the blood that had run into the trachea. In the meanwhile Drs. Zimmermann and Wagner promptly inverted her by placing the flexure of her knees over their arms, and standing up on the bed, allowing her head to hang over the edge of the bed. By keeping up respiration in this manner for a few minutes, we had the pleasure of seeing the respirations become more natural, the bleeding ceased, and the color returned to the cheeks.

I now passed a silver wire through each side of the trachea, about the middle of the opening, and attaching elastics tapes to each end of the wires, tied them behind the neck in such a manner as to cause the opening in the trachea to gape widely.

The breathing immediately became easy, and the effects of the ether quickly passed away.

Same local application was continued, and anodynes ordered, to procure rest.

It may have been that the upper edges of the isthmus was cut during the operation, but Bryant says, "In many instances I have gone through the isthmus of the thyroid, and have never had any reason to regret it; indeed, I am almost tempted to believe that the dangers of its division are really theoretical, and may practically be disregarded."

She rested well the following night, waking occasionally to cough up considerable quantities of tenacious, frothy mucus. In the morning the appetite was good and the dullness of the lungs was evidently less. Continuing to improve for a week, and the mucus coughed up being much less in quantity and thinner, the wires were removed and a double silver cannula substituted. The wires caused some soreness of the skin where they entered the wound. The cannula was kept in for two weeks, when the improvement was sufficient to permit of its removal. The wound was completely closed in two days afterward. She could breathe very easily through the larynx, the ulceration of the pharynx had disappeared, as had the dullness of the lungs, with the exception of a small spot in the apex of the left one. The larynx looked somewhat like Fig. 54, "in colors," opposite page 326 of Browne's "Throat and its Diseases." The voice was, and is, slightly metallic, but is improving.

She is now feeling very well, and is attending her house and keeping store when her husband is absent, and has gained seventeen pounds in weight.

At first I took the case to be one of laryngeal phthisis complicated with spasm of the glottis. The spasm occurring upon waking up from sleep indicating that ordinarily the hyperæsthesia of the larynx was not sufficient to cause marked spasm, but was so when the mucus to be expelled was partially dried from longer retention during sleep, and of course more lumpy and irritating.

The dullness of the chest and mucous rales I now believe to have been symptoms of pulmonary œdema, the result of the obstructive inflammation of the larynx; inspiration being interfered with, the serum exuded into the areolar tissue to fill up the vacuum formed by the action of the inspiratory muscles. I was the more readily led into error by the confidence I had in the opinion of her first physician, but she did not offer him an opportunity for a second and careful examination, as he desired she should.

Even if it had been laryngeal phthisis, I should have recommended the operation, in view of relieving the suffering she was experiencing from the spasm of the glottis. I fully concur in the opinion expressed by Dr. Geo. M. Lefferts in a review of Browne's "Throat and its Diseases," in the *American Journal of Medical Sciences*, October, 1878, p. 463. "The operation cannot, of course, be curative; but it can and is often most markedly and mercifully palliative. We believe that there are many cases constantly occurring where it is imperatively demanded at the conscientious surgeon's hands; cases in which the indications for the operation are based upon common surgical principles, and where the relief which it will afford is not only great, but life itself is prolonged for a period extending far beyond the limit 'of a few days or weeks.' We have a personal knowledge of such instances, and venture to recall to our author's recollection the similar experience of Secowiski, Elsberg, Smith, Janeway, Ripley and others."

Dr. Frank Hamilton, "Principles and Practice of Surgery," p. 675, says, when the trachea tube is used, "a competent assistant must remain with the patient when the surgeon leaves, instructed to remove the inner tube occasionally, clean it with hot water and a sponge and return it." By use of the wires passed through the edges of the tracheal wound and tied behind the neck, the wound gapes widely, and the thick tenacious mucus, almost always coughed up in long stringy masses, can be readily removed by any watcher, or even by the patient, as was done in this case. Thus the very great danger of the patient choking to death by occlusion of the tube is obviated.

This was the fifth tracheotomy I had performed, and the second case where the operation had to be finished rapidly, with the blood flowing freely, on account of cessation of breathing, and artificial respiration with the mouth to the wound, and the inversion of the patient resorted to.

The other was a case of œdema glottidis. The man apparently died when he laid down on the table to be operated upon. After fully an hour of labor with him inverted, to keep the blood from running down the trachea, and constant resorting to artificial respiration, he walked to the next room and to bed. His regular medical attendant remained to watch him through the night.

The Doctor had to clear the tube of tough mucus several times when he coughed, to allow him to breathe, but when he had his last coughing spell he ceased to breathe, and died. The Doctor returned the tube the next day, stating that he had cleaned it, but to me it looked dirty, so I threw it into a basin of water sitting in the room, and went out. I returned in an hour or so and went to clean the tube, when I found it blocked full of fibrinous mucus, that had dried in the tube, but had enlarged with the moisture, so as to hang out of the tube fully two inches. This explained the death of the patient.

I then determined to try and devise some better means for holding the wound open, and had decided upon the use of the wire ligature, when I was more than gratified to learn that Dr. Henry A. Martin, of Boston, had been using the device successfully for more than thirty five years. See New York *Medical Record*, June 22d, 1878, p. 494.

In conclusion, I know of no opinion upon this class of cases more concise and replete with common sense, than that Bryant expresses, *op. cit.*, page 143. "In chronic laryngitis, whether tubercular, syphilitic or otherwise, tracheotomy may be required to prevent impending death, or as a means of cure. For the first indication it should not be postponed too long, for too long often means too late, some spasmodic attack carrying off the patient. When these attacks, consequently, appear, and recur, tracheotomy should be performed. Trachetomy, as a means of cure, is not sufficiently practiced. It has been hitherto generally performed in the class of cases to which I have just alluded, to rescue patients from the danger of impending suffocation, and to prolong life when threatened from laryngeal disease; and yet it must have struck most men, when watching cases which have been operated upon under these circumstances, how rapidly all laryngeal symptoms disappear, and ulcerative action undergoes a separative process, both in the pharynx and larynx, after a new passage has been obtained for the respiratory act, and complete quiescence of the parts has been secured by means of trachetomy? I have a strong opinion, therefore, that it would be wise to perform the operation of tracheotomy in ulcerative laryngeal affections at an earlier period than has hitherto been practiced, with the view of arresting the progress of the disease, and probably of saving the larynx as a respiratory and vocal organ, anticipating the time when the operation may be demanded for the purpose of preventing impending suffocation.

SUN AND AIR BATHS.

BY C. H. MERRICK, M D.,
Of Canyonville, Oregon.

I remember reading an editorial in the MEDICAL AND SURGICAL REPORTER, in which the idea was advanced that the prominent feature of medical knowledge and practice, in the near future, would be directed to the prevention rather than the cure of disease. The thought is a good one, and truthfully reflects the sentiment which actuates every genuine member of our noble profession. We have been told a thousand times by the great lights in the profession, and the sentiment finds a welcome in the heart of every honest physician, that it is as much our mission to prevent disease as it is our duty to cure its unfortunate victims.

Many years ago my attention was drawn to the wonderful capabilities and functions of the human skin; its power of enduring heat and cold; its condition and office as regards the cause and cure of many of our common diseases. Sea captains have related how the natives of the tropical islands would lie around in almost a nude condition, on the decks of vessels, with the sun's rays pouring down so hot as to melt the tar from the planks, yet appear not the least oppressed by the heat. Dana, in his "Three Years Before the Mast," speaks of sailors dashing cold water over their naked bodies in air below the freezing point, while doubling Cape Horn. Thousands of similar facts might be mentioned. Medical literature abounds with references to the skin, and the effect which light, air, and temperature, applied directly to the surface of the body, has upon health and disease. Sun baths are not a feature of recent medicine. Dr. Coventry says: "The sun's rays are indispensable to prevent the in ception and progress of tuberculosis." (*Trans. N. Y. Med. Society*, 1855.)

I might fill many pages of your journal with quotations of a similar character, but my object is not to argue a point about which there is but little difference of opinion. Facts are of more importance, and in hopes of leading medical men to use, oftener than they do, the power of light and air in the treatment of various diseases, I shall give my limited experience with this branch of therapeutics.

Case 1.—Telegraph operator; aged twenty-five; thin in person; suffers with cold hands and feet, especially after going to bed. Cough frequent but not distressing. Constantly "taking cold;" otherwise general health good. Read to him portions of Dr. C. R. Agnew's lecture on Otitis. "How may you and I learn to endure drafts and lessen our tendency to catch cold? By diminishing the morbid sen sibility of the surface of the body. This can be brought about by graduated exposure and friction of the skin in a daily air or sun bath, followed by such local sponge baths as you may be able to speedily react from. It is well, at first, in the air bath, to expose the body for a very short time only, such as would be spent in walking briskly across an ordinary bed chamber. After a little practice the length of the exposure may be increased. The salutary effect of this exposure may be still further increased by two or three deep, chest-filling inspirations, with closed mouth, and by a few such movements of the arms as would tend to invigorate the chest muscles and quicken the action of the heart. The entire surface of the body should be rubbed briskly with hair mittens, until there shall have been produced a sense of glow and warmth of the skin. Under all circumstances, it would be better to use a sunny room. Of course, imprudence in exposing the untempered nervous system of the skin for too long a time to a low temperature would defeat the grand purpose of the training, and bring the method into contempt. Invalids should enter upon it deliberately and continuously." (*Clinical Lectures*, Seguin, page 138.)

The patient was pleased with my prescription, and although in mid-winter, commenced "taking it." After a lapse of four months he wrote to me: "Cough all gone; hands and feet warm; gained six pounds in flesh; and, as telegraph operators say, everything is O. K. When I hear persons say they have a cold I laugh at them, and tell them they ought to be ashamed of themselves for having a cold when they can prevent it."

I should have mentioned that the first ingredient in my prescriptions of air and sun baths is the requirement that patients shall not sleep in the clothes worn during the day, and in no case must the exposure of the body to air or water be continued so as to produce chilliness and discomfort. I omit here all details as to good ventilation in sleeping rooms, diet, regularity of the bowels, etc.

Case 2.—Merchant; aged thirty-five; annoyed with rheumatism, constipation and sleeplessness. No cough except when having "a cold" which is pretty often. Sometimes for a whole week will not sleep more than one or two hours out of every twenty-four. Prescribed drugs and change of diet for constipation; air baths and frictions to the whole surface of the body; hot water baths once or twice a week. Three months after commencing treatment patient reported every symptom much better; can sleep six to eight hours every night; rheumatic pain in the back all gone; coughs some occasionally, but not worth noticing.

Case 3.—Unmarried lady; nineteen years old; tall, but in fair condition as to flesh; has coughed at night for two years; troubled with nasal catarrh, sore throat, and a constant tendency to "take cold." Has taken gallons of

patent medicines, to ward off consumption, of which disease she has a horror. Some soreness under the clavicles, as she complains of being hurt when I use moderate percussion. Bowels and uterine functions regular and natural.

I gave her a lecture upon the skin and how it should be treated. She thought it was not possible for her to wear flannel under clothing, as it "irritated the flesh so;" but after a few weeks of trial she subdued that sensitiveness of the skin. She writes: "Father had a bay window built to my bed-room, facing to the east, and now, every morning, when the sun's warm rays come over the eastern hills, they find me ready to receive their health-giving influence. I am surprised at the pleasure and benefit I receive from daily sun and air baths; sun and air in the morning, air at night; for I must tell you that I sometimes sit and write or read two or three hours before going to bed, clothed only with a loose robe, made of common mosquito bar netting, to keep the flies from annoying me. My friends, as well as I, are delighted with the improvement in my general health. The frictions to my chest, with gentle fillipping over and under the collar bones, and especially the trapezium exercise, has removed all soreness from my lungs and developed the muscles of my arms and shoulders very much."

I should have mentioned that I directed this patient, as well as some of my male patients, to fix a swinging bar in her bed room, and when she wished to stretch or yawn, to catch the bar with her hands and support her body for a few seconds, free from the floor.

I have a number of other cases I might report, but to save space I will condense them into a few general statements. Another young lady, annoyed with obesity, declares that she has reduced her weight fifteen pounds in six months, by daily frictions to the whole surface, in the cool air of her room. She uses dry towels and her bare hands in preference to woollen mittens or hair brushes. She remarks that my prescription is far better than the "Anti-Fat" humbug. Physicians will see nothing unreasonable in the statement that air baths in one case increase the quantity of flesh, and reduce it in another, as paucity of flesh and obesity are both departures from a normal, healthy condition.

A gentleman, forty years of age, writes that he is surprised to think that he has lived to be of that age without experiencing the luxury of air baths. His neuralgia has left him entirely, and what seems to please him as much as any feature of the "cure," is the restoration of virility, a partial loss of which seemed to affect his mind unfavorably. To the profession I here remark, that in addition to the reading of Agnew's lecture to him, I gave him a good dose from Acton on the "Reproductive Organs."

I am watching a case of asthma of ten years' duration; the patient a clerk in a county office. Latest report indicates a decided improvement in all the symptoms. The patient is enthusiastic in his praise of air baths. "Every day I long for the evening to come, when I can bolt myself in my room and read and write for hours, with not even a fig leaf to prevent free contact of air with my skin." I have heard that John Quincy Adams attributed his vigorous health to the daily practice of passing an hour or more in his room divested of all clothing. I believe it.

In conclusion I notice an idea which, no doubt, has already arisen in the minds of my readers, namely, the difficulty of putting the air and sun bath cure into practice. Laboring men and women cannot give the time often necessary to harden the skin against the tendency to take cold. Our houses are not well arranged for such daily exposure of the body as is necessary. To such objections I reply that if life and health are worth preserving, and if this system of baths adds materially to the restoration and preservation, then, "where there is a will there is a way," and some expedient will be resorted to in order to reap its benefit.

The Action of Toad Poison on the Human Body

The *Chemist and Druggist* relates this:—

A child, six years old, followed a large toad on a hot summer's day, throwing stones at it. Suddenly he felt that the animal had spurted some moisture into his eye. There suddenly set in a slight pain and spasmodic twitching of the slightly injected eye, but two hours after coma, jumping sight, desire to bite, a dread of food and drink, constipation, abundant urine, great agitation, manifested themselves, followed on the sixth day by sickness, apathy, and a kind of stupor, but with a regular pulse. Some days later, having become comparatively quiet, the boy left his bed; his eyes were injected, the skin dry, the pulse free from fever. He howled and behaved like a madman, sank into imbecility and speechlessness, from which he never rallied.

Hospital Reports.

COLLEGE OF PHYSICIANS AND SURGEONS, NEW YORK.

CLINICAL LECTURE BY PROF. T. GAILLARD THOMAS.

REPORTED BY P. BRYNBERG PORTER, M.D.

Subperitoneal Uterine Fibroids.

Gentlemen:—Our first patient to-day is Mrs. Margaret Q., a native of the United States, and forty-four years of age. She was never pregnant, and has now been a widow for four years. She comes for the purpose of having a diagnosis made in her case, and this we will endeavor to do for her.

How long have you been sick, Mrs. Q.? "About eight years, as well as I can remember." Was it before or after your marriage that you first began to complain? "After it. I was married fifteen years ago." What symptoms have you had? "I have not suffered from pain at all; but eight years ago I noticed a growing enlargement." Where was this seated? "On the left side, low down." You have had no pain at all, you say? "None whatever; but I am troubled a great deal with my bladder." In what way? "I cannot always control it, and pass my water much too often." Is there anything else that you complain of? "One time, seven or eight years ago, I had a very severe attack, which came, I think, from cold, and which kept me in bed for three months." Did your physician tell what was the nature of this attack? "No; but I think it must have been inflammation." Did you have any pain at that time? "Yes, a very high pain, and I was delirious a part of the time." Did you suffer also from pain? "Yes, the most intense pain." Are you regular in your monthly periods? "Yes."

To recapitulate briefly, the patient, about eight years ago, noticed that something was wrong about the left iliac fossa. This was an enlargement of some size; and not long after she discovered it she had an acute inflammatory attack, which confined her to bed for three months, and rendered her delirious during a portion of the time. Since then she says she has noticed nothing except that the mass in the side is, as she thinks, increasing. It gives her no trouble whatever, except some little inconvenience in regard to the bladder.

I will now show you upon the blackboard a diagram which indicates what is the condition of affairs as revealed by a physical examination. When the finger was passed into the vagina the uterus was not found in its normal position, but pressed up close against the symphysis pubis by something situated behind it. This proved to be a mass almost as hard as a billiard ball, which was found to fill up the whole cavity of the pelvis. The uterus thus being made to crowd upon the bladder, that viscus is prevented from filling with urine. The effect upon the bladder is precisely as if it were held between the two hands and thus constantly compressed. When the finger touches this mass by the vagina the observer is at once struck with its peculiar hardness and resistance. When conjoined manipulation is employed it is ascertained that the mass also extends above the uterus, that it is continuous with it, and that it can be moved with the organ, but is otherwise quite immovable.

Those of you who have followed the clinic at all closely will be at no loss in arriving at the correct diagnosis here, viz., uterine fibroids. From the peculiar nature of these growths, Virchow thought that they ought more properly to be called myomata, rather than fibroid tumors.

But what else might this mass in the pelvis be? certainly not an ovarian cyst, because it has none of the characteristics of such a tumor, and because it is so closely connected with the uterus. It might possibly be a fibroid growth of the ovary. But this is an extremely rare affection, and hence not at all likely to be met with. I myself have seen one case of it, and Professor Van Buren once removed an ovarian fibroid in this city; but these are the only two cases which I have personally known of. Dr. Peaslee refers to them in his work, but mentions very few well authenticated cases beside them.

There can be no reasonable doubt, therefore, that this patient is troubled with uterine fibroids; and the acute inflammatory attack from which she suffered a few years ago was probably one of pelvic cellulitis or peritonitis, and very likely both.

I have now something particular to say in regard to the prognosis in this case. Suppose you had recently received your diploma, and had just commenced to practice, when this patient presented herself at your office. It would be necessary for you to be very careful lest you should commit an error which would expose your want of experience. On first meeting with a mass of fibroids filling up the pelvis, as is the case here, the young observer is very apt to imagine that the condition must be a very serious one, and give a prognosis that is altogether too grave. But I do not doubt that the patient now before us has just as good a chance of long life as any individual in the room. You will understand, I trust, that I am not now speaking of the prognosis of uterine fibroids in general, but only of this particular case. Were the patient twenty years younger than she is, with the greater portion of her menstrual life still before her, and especially were she of the negro race, in which the development of fibroids is so remarkable, I should certainly speak by no means so confidently. But this woman is forty-four years of age. The uterus is, I think, already beginning to grow smaller, and the fibroids here present are now of a character which is peculiarly unlikely to increase in size, viz., they are spherical in shape and exceedingly firm. Were they soft and

pulpy to the touch, the case would be very different. These are so firm and resisting as to be almost like billiard balls, and they are evidently having no injurious effects upon the patient's general system. Then, look at the past history. Many women come here with uterine fibroids, who are completely exhausted from hemorrhage, and the interference with digestion and nutrition by the opium which they have been obliged to take for the relief of pain. Yet this patient has had them for at least eight years, and still remains perfectly strong and well. We, therefore, make a very favorable prognosis here; probably more so than in any case, with possibly a single exception, which has been before us during the whole course.

Now as to treatment, I should say, make it a point not to interfere at all, but to let the patient absolutely alone. Here, again, you must remember that I am speaking of this particular case, and not of fibroids in general. In a year more the menopause will probably occur, and then these fibroids will also be affected by the same atrophy which is always seen in the uterus after the climacteric period has been passed.

I have just been asked whether I introduced the uterine probe or sound in this case. I did not do so, for two reasons: first, because there was really no object to be gained by so doing, and secondly, because, in order to have passed it, some wounding of the uterus would probably have been unavoidable, on account of its malposition, and there was, of course, no necessity for doing this.

Small Monocystic Tumor of the Ovary in Douglas' Cul-de-Sac.

Our next patient is Mrs. Mary G., a native of the United States, and fifty years old. She has had four children and one miscarriage, and has been a widow for the last fifteen years. Her last pregnancy occurred seventeen years ago. First let us get the history of the case from the patient herself, as far as we are able.

How long have you been complaining, Mrs. G.? "Well, I cannot exactly say how long." For five years? "Yes, for at least seven years; but I have been worse during the last two years." From what have you suffered during that time? "Weak back, pain in the back, and hot flushes running over the bowels and then down along the thighs." From anything else? "A great pressure on the bladder, causing me to pass my water very often."

Any one practicing medicine in a superficial manner would be very apt to prescribe for such a case as this in a general way, without thinking it worth while to make any physical examination whatever, and, perhaps, he might not be very greatly to blame for doing so. You have heard the symptoms of which this patient has been complaining for seven or eight years, and which have become greatly aggravated during the last two years. Suppose she had come to your office with this history, and you were not satisfied to treat the case on general principles—perhaps as a neurosis of the part of the system affected—and had insisted on making an examination per vaginam. The following is the condition of affairs which you would thus have discovered. In the first place, the uterus is markedly anteflexed, and so pressing directly against the bladder. At once, you perceive, we have a sufficient explanation of the symptoms in connection with the latter organ, without resorting to the hypothesis of any neurosis. As the menopause occurred five years ago, this malposition of the uterus is important only on account of its effect upon the bladder.

But this is not all that you would have ascertained by your exploration. On passing two fingers up behind the uterus (and I would strongly advise you always to employ two fingers, instead of the index one alone, whenever you wish to reach well up into the pelvic cavity, on account of the great advantage which this method gives for so doing), you would have discovered a perfectly movable mass of considerable size, in Douglas' cul-de-sac. The first thing that suggested itself to me when I found it, was, that it was a fibroid, and I thought that its mobility might be explained by the fact that it, perhaps, had a long pedicle. But on resorting to conjoined manipulation (which could be performed with peculiar facility in this case, both on account of the senile atrophy of the tissues of the abdominal walls and their laxity, from the effect of child-bearing), I found it was altogether too soft for a fibroid.

Further palpation, with one finger pressed up into the rectum, enabled me to determine that it was undoubtedly a slowly growing ovarian cyst, of about the size of a goose egg, which had fallen down into Douglas' cul-de-sac. By its presence there all the symptoms of the case were satisfactorily explained. By its mechanical effect in pressing the body of the uterus forward upon the bladder the irritability of that viscus was unquestionably due, and the other troubles of which the patient complained were all accounted for by the reflex nervous disturbance occasioned by the presence of this mass in such a position.

By thus ascertaining by physical exploration the actual condition of the pelvic viscera we have gained two very important points. First, we have found how utterly useless all general remedies would be in the case, and, secondly, we may be able to save the patient from the serious operation of ovariotomy.

It is impossible to say whether this cyst is going to increase much in size or not; for it is, in my experience, a very uncertain matter. These growths not infrequently remain dormant, or, at all events, increase but very slowly, for many years. I now recall the case of a young lady in this city, who, while returning from the theatre one evening, in a stage, suddenly felt a severe pain which seemed to be caused by the jolting of the vehicle. I was sent for late at night, and on making an examination, I discovered a cyst of the size of a large apple, just in the position of this one. For eight and a half years its growth was exceedingly

slow, but it then suddenly began to increase very rapidly, and at the end of six months more I removed a very lare monocystic tumor, by ovariotomy.

I have also known of another case in which the mass was in the pelvic cavity, and could be felt through the abdominal walls, rolling about under the hand when palpation was made, but in which there was neither increase nor diminution in size for a period of four years, during which the patient was under observation. The above remarks apply only to this monocystic variety of ovarian growths, and not to the polycystic tumors which are so much more frequently met with.

But suppose this cyst should increase markedly in size. I should then recommend aspiration through the wall of Douglas's cul-de-sac. This would not be done for the purpose of establishing the diagnosis, but in the hope of effecting a cure in this way, as is sometimes the case. Should such a happy result not be obtained, I would perform vaginal ovariotomy, an operation which, to my certain knowledge, has been performed in at least twelve or fourteen cases, and in no instance, so far as I am aware, with a fatal result. The manner of performing it is, briefly, as follows: When the growth has attained the size of a child's head at birth, an incision is made through the posterior wall of the vagina, and the contents of the cyst drawn off with the aspirator. The walls of the sac are then hooked with a tenaculum, and having been drawn down through the wound, its attachments are slowly severed by means of the écraseur. But, you must understand that, notwithstanding the immunity from loss of life that has hitherto attended it, this is a capital operation, and is by all means to be avoided, if possible.

What, then, is to be our treatment here at present? Very little attention need be paid directly to the cyst, I may remark. Some would apply electricity, the constant current being employed for the purpose. But the question of the utility of this agent in the treatment of ovarian growths is, as yet, in a state of utter chaos. One gentleman, Dr. Semileder, of the city of Mexico, was successful in curing six cases in succession by electrolysis, and hence, encouraged by this remarkable result, he naturally recommended it in all cases. The method was tried here very extensively, and I have myself seen it employed in three instances. The first case was at the Woman's Hospital, and was under the charge of Dr. Semileder himself. He made three applications of the electricity, and by the time they were completed the temperature had gone up to 104 degrees. The operation of ovariotomy then had to be hurried through with, and I think the patient was thereby saved from the peritonitis which seemed so imminent.

In the second case in which I saw electrolysis employed, I had made a little mistake in diagnosis, thinking the tumor to be of a fibro-cystic character, while it was in reality an ordinary polycist of the ovary. In that case the application was repeated five or six times, when acute peritonitis supervened, and soon put an end to the patient's life. The third case was that of a female physician, and ten days after the electrolysis I saw her death in the paper, the fatal result being caused here also by acute peritonitis, in consequence of the operation.

In this connection, I merely state facts which have come under my own observation, and draw no deductions; but I think I have said enough to warn you that it is at least best to be cautious in the use of this method of treatment. Some time ago I went to Boston, on the invitation of Dr. Ephraim Cutler, a very faithful worker in this department, and there saw him make use of electrolysis in the case of a colored woman. This was the only instance in which I have seen an ovarian cyst in one of the negro race. The rarity of this affection, however, is compensated for by the remarkable frequency of fibroids among negresses. By this means Dr. Cutler succeeded in reducing the tumor to the size of a cocoanut, but, unfortunately, after a time it commenced growing again, and having rapidly attained a size greater than it had ever had before, ovariotomy was finally resorted to. I do not know the result of the operation.

Dr. Ward informs me that just a month before his death Dr. Peaslee performed ovariotomy in the case of a patient in whom electrolysis had been employed by another gentleman, and had given rise to acute peritonitis. She died upon the table.

In this case no medicine of which I have any knowledge will be of the slightest service in getting rid of the cyst or preventing its further growth.

Ovariotomy: Resulting Peritonitis Successfully Treated by Cold-Water Applications.

Last Saturday afternoon, just a week ago lacking one day, a number of the gentlemen who are now present saw me perform ovariotomy at the Woman's Hospital; and as the case has proved an unusually interesting one, I will now give you a short history of it, and the subsequent treatment that has been employed. It was one of the worst cases in which I ever operated, on account of the extreme exhaustion of the patient. The physicians who had been in attendance upon her had made an error in diagnosis; for they had not only supposed her to be pregnant, but had even gone so far as to predict that she would give birth to twins. The ovarian disease had thus been allowed to progress unmolested until the patient, as I said, was utterly exhausted. But as ovariotomy offered her the only possible chance of her life, I concluded to undertake it. The operation was performed at 3 o'clock on Saturday afternoon, and at 6 A.M. on Sunday her temperature was 100°. At 8 it was 100½°; at 10, 102°; at 12 (noon), 102½°; at 1 P.M., 102¾°; at 3 o'clock (twenty-four hours after), it was 103°. In other respects, also, the patient's condition was exceedingly alarming. She suffered the most

agonizing pain, notwithstanding the fact that she was semi-narcotized with morphia; her pulse was 130, and she was constantly retching and gulping up bile. I felt perfectly sure that unless some active interference was made in the case, the temperature would be 105° or 106° by the next morning, and that within twenty-four hours after that death would result

For the last three months I had been waiting for just such a case as this, and had fully made up my mind as to the course I should pursue, in the treatment of it. By my direction one of Dr. G. W. Kibbee's fever cots, which is provided with a webbing or network instead of the ordinary canvas used in cots, was brought, and a folded blanket placed over the meshes of the latter. The patient was then placed on it, with her night dress gathered up under her arms, and her whole trunk enveloped in a sheet. This was kept saturated with cold water, which an India-rubber cloth, conveniently arranged, prevented from wetting the floor. In one hour the temperature had gone down to 102°, in two hours to 100°; and during the course of the evening it fell to 97°. The pulse also went down in a corresponding manner. The patient has now been kept in this wet-pack for nearly a week, and whenever the temperature has shown a tendency to rise fresh applications have been made, and always with the result of at once reducing it. To-day her temperature is 97° and her pulse 110 to 115; so that I think she can safely be pronounced out of danger.

There is no doubt that she has had acute peritonitis, and from the great severity of the onset of the attack I cannot but believe that it would have proved rapidly fatal but for the promptness of the treatment and the persistency with which it has been carried out. On account of the intensity of the pain suffered it has been necessary to administer immense amounts of morphia hypodermically; but it was simply for the purpose of relieving this that it was given. Whenever, in a case of this kind, the temperature goes up to 103°, and this is accompanied by a rapid pulse and the vomiting of bile, I feel sure that the patient is going to have peritonitis. The method of treatment employed in the present instance, I may say, has fully come up to my anticipations, though I do not think its results have at all surpassed them.

Fungoid Proliferation of the Lining Membrane of the Uterus; Hysterical Aphonia in Consequence of the Hemorrhage Resulting from it.

Our last patient to-day is Mrs. Louisa S., a native of Germany, and forty-one years of age. She has had eleven children and three miscarriages, and her last pregnancy occurred three years ago. She is unable to speak any English, and so her physician has sent her with a letter, in which he states that she suffers from painful, profuse, and very irregular menstruation. The uterine hemorrhage not infrequently lasts for six weeks at a time. It never ceases for any extended period, and is often so exhausting as to cause the patient to faint away. While the flow continues, her voice is natural in character, but as soon as it ceases she suffers from complete aphonia.

Whenever you find uterine hemorrhage present, always look for some definite cause for it, and I cannot too emphatically warn you against attributing it, in a hap-hazard way (without investigation), to chronic endometritis, the change of life, or, least of all, to that convenient resource, "congestion." This is sometimes a useful term to make use of in speaking with patients, but it is generally employed as a cloak for ignorance.

On making an examination here, I found the uterus (whose cavity I afterward ascertained to measure three and a half inches,) rather lower in the pelvis than it should have been; but I think this descent is merely owing to the increased weight of the organ. I looked first at the cervix, for I would not have been surprised to find that the hemorrhage was due to an extensive laceration there; but this I found was not the case. Then I endeavored to ascertain if there were any fibroids present; but was able to detect no sign whatever of anything of this kind. These growths originate and keep up hemorrhage from the uterus, by interfering with venous return, and so causing constant engorgement of the organ. Another cause of frequent and severe metrorrhagia is impaction of fecal matter in the rectum, which acts very much in the same manner. Neither, however, did this exist in the present instance.

I now looked for a cause of uterine hemorrhage which is more frequently met with than any other with which I am acquainted, and that is fungoid proliferation of the lining mucous membrane of the organ. Turning the patient upon the side, I introduced the speculum and passed the copper wire curette into the cavity of the uterus. After gently scraping the surface of the latter, I withdrew it, and with it a number of little polypoid growths, which at once amply accounted for all the flow that has so exhausted the patient. In a case of this kind it is always of service to introduce the curette, for if none of these fungoid masses are removed by it, it enables us to exclude the most frequent, as I said, of all the sources of uterine hemorrhage. Its use is all the more strongly to be urged for the reason that no possible harm can result from it.

Now, having ascertained the cause of all the trouble, the treatment of the case is exceedingly simple. By means of the curette the whole surface of the uterine cavity should be carefully scraped, and this little operation can be performed with perfect impunity here at the clinic. At the first menstrual period after this is done the patient will, in all probability, lose considerably more blood than she ought to do; but after that the amount of flow will only be of normal quantity. As a result of the application of the curette, the uterus will also return to its natural size, on account of the removal of

the engorgement which has hitherto been kept up in it.

The loss of voice here noted is, no doubt, to be regarded as what is known as *hysterical aphonia*, a condition which may be induced by any cause profoundly affecting the nervous system, like the exhaustion resulting from the profuse hemorrhages in this case. When the patient once more regains her usual state of health it is to be expected that it will entirely disappear.

Medical Societies.

COLLEGE OF PHYSICIANS OF PHILADELPHIA.

At the regular meeting of the College in September a report of the committee

On Meteorology and Epidemics, for the Year 1877,

including a notice of the increasing frequency of deaths from cancer, was read by Richard A. Cleemann, M.D.

He gave the thermometric mean of the year at 54.2°. The highest point reached by the thermometer during the year was 95° Fahr., in July, and the lowest 8° Fahr., in January, making a range for the whole year through 87° Fahr. The differences between the extremes of temperature in the several months were greatest in those of the spring, and least, as is usual, in those of the summer and early fall; the latter were indeed more equable in temperature than common, as were also the winter months, the ranges of January and February being each 9° Fahr. less than their average variations for six years; during the whole of the former month the surface of the Schuylkill River remained frozen over. The order of the individual months, with regard to their extent of range, is, March, 52° Fahr., April 50° Fahr., May 49° Fahr., November 46° Fahr., February 44° Fahr., January and December each 41° Fahr., June 39° Fahr., October 38° Fahr., September 36° Fahr., July 34° Fahr., and August 30° Fahr. The first autumnal frost was observed on the 23d of October, and ice appeared on the 12th of November.

Rainfall.—Only 37.26 inches of rain and melted snow are recorded for 1877, a considerably less amount than the average rainfall for six years, 45.43 inches, while the number of wet days falls below the mean of 139 to the figures 113. But one heavy snow storm, that of January 1st, occurred during the year. The lightness of rainfall belonged to all the seasons except the fall, in which the latter months, especially October, were more wet than usual.

There was a gratifying falling off in the death-rate of Philadelphia for 1877, since the number of interments, excluding those of children dying after premature birth and of the stillborn, was but sixteen thousand and four, less by two thousand eight hundred and eighty-eight than in the year before, a reduction of somewhat more than fifteen per cent. (Table C.)

Estimating the population of the city at the middle of the year to have been 860,000, the ratio of mortality for 1877 is 18.6 deaths per thousand of inhabitants, a ratio 4.3 per thousand inhabitants less than the ratio for the previous year, and 3 per thousand inhabitants below the average for ten years, 1866–1875. This is the lowest death-rate to be found in the records of Philadelphia during the last eighteen years, the period in which the registration is sufficiently accurate to be depended upon, being less than that of 1867 and that of 1874, exceptionally healthy years. It even rivals the ten years' mean of certain of the more healthy rural districts of England.

The deaths of males, in number 8138, exceeded, as is the rule in Philadelphia, those of females, recorded as 7866. Of the whole mortality, 24.5 per cent. occurred within the first year of life; 7.5 per cent. between the first and second years; 8 per cent. between the second and fifth years; 5 per cent. between the fifth and fifteenth; 13.4 per cent. between the fifteenth and thirtieth; 24 per cent. between the thirtieth and sixtieth; and beyond the sixtieth year 17 per cent. These figures echo, notwithstanding the general healthfulness of the year, the old story of excessive infantile mortality.

An examination of a list of the deaths, classified according to their causes (Table C), shows the mortality to be divided among the several classes in the following proportions: zymotic diseases 23 per cent.; constitutional diseases 24.5 per cent.; local diseases 38 per cent.; developmental diseases 10.6 per cent.; and violent deaths 3.4 per cent. In the previous year the ratios of the several classes in the same sequence had been 25, 22, 39, 10 and 3 per cent. respectively, so that in 1877 there was a relative decrease of deaths in the zymotic and local classes. When the actual ratios in the several classes in each year are compared there is found a falling off in every one of them in 1877: the zymotic diseases decrease 23 per cent., the constitutional 7, the local 16, the developmental 11, and the violent deaths 8 per cent. Analyzing, now, the decrease in the zymotic class, it appears that the deaths were less in every important one of the special diseases but scarlatina, which numbered a slight excess of victims. Yet the quota of several are still high. The record gives small-pox only 155, but scarlatina 379; diphtheria 458; croup 338; typhoid fever 542; and cholera infantum 979.

In the report for 1875, a year in which the deaths from scarlatina numbered above a thousand, I laid some stress on the good effects, as regarded the limitation of the disease, to be looked for from isolation of the patient and disinfection of his surroundings; therefore, I need say nothing more on those subjects here; yet I wish to present an incident which lately fell under my notice, that illustrates the deplorable results which may attend a disregard of the infective powers of the poison. A young girl

suffering from scarlatina was received into the house of a relative and lodged in the garret; it was in the month of July, and this room was stored with the heavy bed quilts which the warmth of the season had temporarily banished from use. The case was a mild one, the patient soon recovering. In November following I was called again to the dwelling to treat two sick children, both of whom I found to be also attacked with scarlatina, one of them, a boy of six years, so severely that he evidently had but a few hours to live. They were lying in a lower story of the house, but before they were taken sick, some bed coverings had been brought down from the room which the young girl had occupied in the summer, and spread upon their bed, to guard them from the increasing cold of the autumn nights. No point is strained in connecting these two cases of the fever with a contagion lurking in the quilt

Diphtheria, though it decreased in mortality more than one-third from its rate in 1876, was yet responsible, as we have seen, for 458 deaths; falling off but slowly, as I ventured to predict in my last report. The decrease was quite generally distributed through the city, the chief exceptions being that the richer quarter, the "city proper," with some adjoining territory, showed a slight excess, a fact parallel with one to which I have called attention above, in speaking of scarlatina. In the 21st Ward (Manayunk), however, where it will be remembered the disease was especially severe during the two years previous, the decline in mortality was very marked, the numbers 72 and 39 of those years being now replaced by 7. This experience also has a counterpart in certain features of the course of scarlatina, its behavior in Germantown and Frankford, already cited. The frequent intercourse between the inhabitants of small towns, a condition by which I attempted to explain, in an earlier report, the greater severity of epidemics in such places, may be now invoked to account for their more abrupt decline there; evidently the stock of the susceptible is more quickly exhausted, just as it is in filthy localities, where the dirt proves such an efficient poison bearer.

In summing up the mortality of diphtheria by the quarters of the year, it comes out that the last quarter furnishes the most deaths, 157 to 120 in the first. Notwithstanding, then, its general decline, the disease was again, like saarlatina, making a fresh start at the close of the year, giving an ominous outlook for 1878.

The deaths from croup were 12 per cent. less than in the previous year. The greatest falling off was in the 21st Ward (Manayunk), from a mortality of 23 to 2. I have alluded above to the very considerable diminution of the deaths from both scarlatina and diphtheria in this same locality. The 23d Ward (Frankford) also had a much lessened mortality, side by side with the diminution in the number of deaths from diphtheria, while the 13th, 14th, 15th, and 28th Wards also declined in this special death-rate more than the general average of its decrease. On the other hand, as with scarlatina and diphtheria in the "city proper," there was an excess of deaths from croup over those of the previous year in that district. The mortality also increased very much proportionately in the 18th Ward, the 22d (Germantown), and the 28th; in the last, where only one death was reported from the disease in 1876, there were 7 noted in 1877.

The general tendency of croup at the close of the year was toward an increase of mortality, the first quarter having given but 93 deaths, while the last gave 146. This parallelism in behavior with the last two mentioned zymotics, keeps before us the close relationship of the conditions which give rise to these several manifestations of disease.

In 1876, as my last report declared, the special feature in the mortuary list was the increased mortality from typhoid fever. Last year the deaths from this cause fell off 30 per cent. Their actual number, 542, is still, however, considerably above the average (386) computed for a period of ten years (1866–1875). The mortality (Table E) was less than that of 1876, in each of the wards except the 3d (which had not shared the increase of the previous year, and now only reached its ten years' average), the 7th, the 12th, and some of those municipal divisions which are suburban, namely, the 21st (Manayunk), the 23d (Frankford), the 25th (Bridesburg), and the 28th. In general, it may be said there was a decided tendency on the part of the several wards to approximate in their mortality their ten years' averages. This is what was to be expected if the chief cause of the epidemic in the previous year was, as I supposed, of the nature of an exceptional meteorological condition, like the unusally long-continued high temperature of 1876.

The class in which the greatest reduction of mortality is observed is that of local diseases, the one which furnishes the largest contingent to the whole mortuary list. Here it is not difficult to trace the benign influence of the meteorological conditions, keeping down the death rate of the diseases of the nervous system in the summer, and of affections of the respiratory organs in the colder months. In the class of developmental diseases there was a diminution of more than 250 deaths from the special causes of debility and inanition, conditions eminently influenced by extremes of temperature.

Thus, in reviewing together the mortality of the two years, 1876 and 1877, we must be deeply impressed with the great weight of meteorological conditions in determining the death rate; and, as a consequence, must recognize the great importance of guarding against the pernicious effects of these by the wear of suitable clothing at all times, the judicious use of fires in winter and bathing in summer. These are measures, the mention of which may be trite enough, but it is possible they may be lost sight of in the greater prominence given of late years to other agencies, valuable in the preservation of health, such as drainage, sewerage and ventilation.

An exception to the almost general decrease of mortality among the several nosological orders in 1877, is found in the case of diathetic diseases, under which heading are recorded 539 deaths against 518 in the previous year. The excess is due to the registration of 25 more deaths under cancer, the whole number reported from this cause being 327. There is, however, no special significance in this increase for a single year, since in going back over the records for several years I came upon instances where, in a twelvemonth, an equal decrease was observed, but it recalls to me a question which I have heard asked, "Is not cancer increasing among us?" The answer must prove interesting, and with a view of throwing some light upon it, I have appealed to the bills of mortality accumulated through many years in the office of the City Registrar. Though these records were but indifferently kept till the Act of Legislature for the "Registration of Births, Marriages, and Deaths," approved March 8th, 1860, went into effect, many deaths, no doubt, escaping registration, yet it is likely that the special death rate from cancer was not diminished thereby any more proportionately than the general mortality. So it has been assumed that the comparison of the ratio of the deaths from cancer to the whole number of deaths reported for each year will furnish us at least approximatively true results for our purpose. But for the later years, when the statistics became sufficiently reliable, I have also made use of the ratio of the deaths from the special disease to the living population.

Going back seventy years, from 1876 to 1807, I have tabulated (Table F) for that period 6279 deaths from cancer in a mortality from all causes of 564,518; including under the heading "cancer," 216 deaths registered as from scirrhus, 96 recorded as from fungus hæmatodes, and 30 which were distributed under other names. The whole number of years have been divided into groups of five, an arrangement which possesses several advantages, as, for instance, giving us larger values to deal with, which is desirable in calculating ratios; serving to eliminate in some degree the disturbing effects of meteorological and epidemic influences on the general mortality of single years, and securing brevity. The sex and the age of those who died from cancer are given, their actual number, the total mortality from all diseases, and the ratio of the deaths from cancer to this; also, for the later years, the ratio of the special disease to living population.

The table (F) gives 4.5 per thousand as the proportion of the deaths from cancer to the mortality from all causes in the first period of five years (1807–1811), and in the last lustre (1872–1876) the ratio 16.4; hence, according to these figures, there has been an increase during sixty-five years in the proportion of the special death rate to that from all causes, of nearly 400 per. cent. The increment, however, does not appear to have been evenly acquired, for while during the first twenty-five years the variation does not reach 25 per cent., it leaps forward in the next five years nearly 40 per cent.; then, for a period of twenty-five years the ratio is less augmented, though in one contained lustre (1842–1846) an advance of more than 30 per cent. is made, to be lost again in those subsequent; then there is another great step of 40 per cent. in the next five years; once more a pause, or indeed a slight decline for a lustre, followed by a rise for the last ten years of 28 per cent.

The astonishing result is in great measure confirmed when we appeal to calculations made with the ratio of the deaths from cancer to the population of the city; a more reliable method evidently, than the one employed above, because we get rid of the influences which disturb the value of the general mortality. By this means we learn that in the period from 1862 to 1866 there was a yearly average of 3.14 deaths per ten thousand of the population living, while in that from 1872 to 1876 the ratio was 3.92 per ten thousand, making an advance for the later years of 25 per cent.

The objection may be made to accepting the increase of cancer as a fact, that the greater precision of modern diagnosis has brought under the head of cancer many cases which would formerly have been classed as tumors, ulcerations, strictures, or simply diseases of various organs.

In answer to this supposed criticism, to which I was at first inclined to allow a great deal of force, I offer a table (G), recording the deaths assigned to tumor during the same period as that covered by the table for cancer, and of like construction to the latter; having chosen the caption "tumor" because it is the term which seems to me most likely to cause confusion in the records of cancer.

From the table (G) it will be seen, however, that the number of deaths attributed to tumor, relative to the mortality for all causes, has not decreased as it should have done were more morbid growths recognized in later years as cancer, but that on the contrary the value of the proportion has been augmenting, like that of cancer. It is worth noting, however, in this connection, that if the two tables were consolidated the march forward of the combined values in the successive periods would be more uniform than is that of either alone; and it may be added, that for the later years, at least, the reported increase in the deaths from cancer has been at a more rapid rate than has any change of pathological views.

Analyzing the cancer table with reference to the distribution of the deaths between the sexes, only a little variation in this respect is seen to have been wrought in the long period; but this little is constant, and tends to diminish the preponderance on the side of the females. For instance, between the years 1832–1861, 71 per cent. of the deaths fell among the latter, while between 1862–1876 the proportion fell to 70 per cent., and between 1872–1876 reached only 68 per cent.

In regard to age, the figures would show that

cancer in the earlier years of life was more common formerly, but the numbers are not large enough to give weight to this result. The vast majority of the cases are seen to have always occurred in persons between the 40th and 70th year of life, and the greatest number in those between the 50th and 60th. Were the tables relating to cancer and tumor consolidated as above suggested, the distribution of the deaths among the young would not vary so much in the different periods.

The rise in the number of deaths reported from cancer is not confined to the mortality records of Philadelphia. In looking over the lists of deaths in London for thirty years (1845–1874), I have found that the mortality from this cause has advanced from 3.4 per thousand inhabitants to 5.7 in that period, or 70 per cent. Comparing the respective mortality from cancer in the two cities during the year 1862, and again during 1874, I found that the deaths in London during the earlier year were 1333 in a population of 2,860,117 souls, or in the ratio of 4.7 per ten thousand inhabitants, in the later year 1929 in a population of 3,400,701, or 5.7 per ten thousand. In Philadelphia the ratios were 3.1 and 4.0 respectively in the same years. So that in latter times the number of deaths reported from cancer has been increasing in both cities in large proportions; at a less rate in the British metropolis than among ourselves, but the disease carries off relatively a larger proportion of the inhabitants of London.

These statistics paint for us an awful picture of the future ravages of cancer, if we assume that the disease will continue augmenting the number of its victims at the present rate. But we have seen that the advance has been irregular and halting, and we may hope that the halt will be some time prolonged, or, perhaps, even a retreat take place, else would not the disease, well known in the far-off days of Hippocrates, before this time have exterminated the race?

Nevertheless, the origin of cancer is so obscure, and the special conditions favoring its growth so little known, that we can with certainty predict nothing of the future. The well-established fact of the influence of inheritance in determining the expression of the disease, will lead the cautious physician to disapprove of marriages between members of families known to be tainted with the evil, while the occasional connection between sources of chronic irritation and its development, will make him sound the note of warning against these; meanwhile we are incited to study the horrible malady with redoubled zeal.

The Use of Arsenic in Nervous Exhaustion.

Dr. W. Myers writes to the Cincinnati *Lancet and Clinic*—

In the capricious nervous exhaustion due to hereditary tendency the sympathetic and pneumogastric nerves are usually most at fault—when such is the case, arsenic and nux vomica are the most reliable remedies; in fact, their influence is almost specific, but they must be given with great care. Not so much from dread of overdosing as from fear of the dose not being retained long enough to be assimilated.

Care must be taken in employing arsenic, to arrange the dose and the occasion of taking it, so that the mucous lining of the alimentary canal may not be irritated. This is of great importance, as neglect of this caution will render the remedy useless, confuse and disappoint the physician, while it weakens his means of cure.

In all cases where there is much nervous irritability present, watchfulness, despondency, alarm or sense of impending, although unknown danger, gentle sponging night and morning, with cold or tepid water over the body, particularly the loins, abdomen, and spine, will have a very calming effect, and induce better nights and more cheerful days when employed with the other treatment.

The uncertainty of memory, feelings of alarm, and confusion of the mental faculties, due to the state of exhaustion, will gradually pass away as the treatment begins to take effect, and their subsidence may be taken as good evidence of improvement, while some of the minor though still unpleasant symptoms may remain a considerable time, or come and go in a most aggravating manner, before their permanent removal can be fairly depended on.

Relation of the Diphtheritic Fungus to Diphtheria.

The *Lancet*, October 26th, states that the researches of Schweniger, undertaken at Munich, on the inoculation and character of the diphtheritic poison, have led him to the conclusion that the fungus found in the false membrane cannot be regarded as the essential bearer of the contagion; because, first, the micrococci are, as a rule, found only in the epithelial layer; secondly, because in less recent bodies, as when rapid decomposition of the separated particles has taken place, they are

found in these also, and thus appear *pari passu* with the septic or pyæmic poisons, which are found at the same time in the adjacent vessels and lymphatic glands, and elsewhere in the body, especially in the kidney. These are, however, only an accidental accompaniment of diphtheria. The substance from the pharynx and trachea, introduced into the bodies of other animals by inoculation, never produces the combination of symptoms which we recognize as diphtheria, nor the special anatomical changes in the throat and trachea. Inoculation with the diphtheritic fungus only gives rise to the symptoms produced by inoculation with the organisms which accompany putrefaction.

Infantile Laryngismus Produced by a Feather in the Intestine.

Dr. Chamberlain reported to the New York Obstetrical Society a case which had fallen under the observation of a medical friend. An infant, age five months, was supposed to be suffering from membranous croup. The hoarseness began early in the morning, increased through the day, and when the medical attendant arrived in the night, there were severe symptoms of laryngeal obstruction. It was stated by the mother that for two or three days the child had seemed to be suffering from colic, and that a carminative mixture was administered, with the effect of relieving the pain and at the same time producing constipation. Learning of the constipation, it occurred to the doctor to examine the rectum. In the pouches of the rectum was found a plug, which, when removed, was covered with puriform mucus, and measured 3½ or 4 inches in length. As soon as the plug was removed, the symptoms of croup immediately disappeared. When the plug was dissolved, it was found to have for its nucleus a *white feather*. It was regarded as a case of laryngismus stridulus, produced by irritation in the rectum.

The Hypodermic Use of Mercurialized Peptone.

From a clinic in the *British Medical Journal* we learn that during the present year Dr. Buzzard has been employing in some cases the mercurial peptone which was introduced by Professor Bamberger of Vienna (*Wiener Medizin. Wochensch.*, 1876, No. 44), and which has been largely employed in various parts of the continent. The principle upon which the preparation is contrived is an ingenious advance upon that already acted upon in the invention of chloro albuminate of mercury. If a salt of mercury, dissolved in water, be injected under the skin, it immediately unites with the albumen of the tissue, so that destruction occurs, with accompanying pain and inflammation. In the chloro-albuminate solution, the chloride of mercury being already combined with albumen, this destructive influence was prevented, but the solution was very unstable. Dr. Buzzard, therefore, obtained some meat peptone, and having succeeded in mercurializing this, found that the resulting preparation was very soluble in water, and would keep almost any length of time. The preparation employed by Dr. Buzzard was one per cent. In each case there was a history of syphilis. An experience of over two hundred injections of this solution has now been gained, the quantities employed varying from five to fifteen minims.

Case 1.—A female, aged 18, had twenty hypodermic injections of ten minims and nine of fifteen minims. The first thirteen injections were made in the forearm, the rest between the scapulæ. The patient complained of pain at the seat of injection, and of aching in the fingertips, which lasted all the rest of the day and through the night, disturbing rest. On the morning following there was almost universal swelling and tenderness at the point of injection. Forty-eight hours afterward, this would to a great extent have subsided. An old injection spot was marked by swelling and induration, and the needle could only be got in with difficulty. No affection of the gums or bowels occurred.

Case 2.—In a man, about forty years of age, fifteen injections of five minims, twenty eight of ten minims, and twenty-nine of fifteen minims were given. The patient complained very much of pain produced by the injections, which were made sometimes in the legs, at other times in the back. Under these latter circumstances, the patient urged that he could not lie down. The injections caused local swelling and induration, but no affection of the gums or intestines.

Physiological Explanation of "Seeing Double."

In an article in the *Journal of Mental Science*, Dr. W. W. Ireland says—

Seeing double, which sometimes comes on in the advanced stage of drunkenness and after the use of opium, is probably owing to the loss of mutual accommodation of the muscles of the eyeballs, and this explanation sometimes holds good where the same appearance occurs with lunatics; but it is evident that it cannot always do so, since there are cases where a single object is seen multiplied three or fourfold. Brierre de Boismont, in his well-known work on "Hallucinations," reproduces from a German writer a curious instance, which I translate without being clearly able to understand his explanations: "Madame N., a washerwoman, tormented by violent rheumatismal pains, left her trade and took to sewing. Having little practice in this kind of work, she sat up far into the night to gain enough to live upon. This did not save her from being very poor, and she was seized with severe ophthalmia, which soon became chronic. As she continued to work, she saw at the same time four hands, four needles and four seams. There was double diplopia, in consequence of a slight divergence of the visual axes. Madame N. imagined that God, pitying her misfortune, performed a miracle in her favor, and that she really sewed four seams at once."

Reviews and Book Notices.

NOTES ON CURRENT MEDICAL LITERATURE.

——Dr. F. M. Murray, of this city, has had printed a large broadside, showing the arrangement of drugs with regard to natural orders, locality, dose, etc. It is neatly prepared, and sold for 75 cents.

——We have received the announcement of the *Southern Practitioner*, a monthly medical journal, published at Nashville, Tenn. Each number to contain thirty-two or more pages. Subscription, $1 per annum, in advance.

——Another forthcoming venture is *The Voice*, a monthly, devoted to voice culture, with special attention to stuttering and stammering. Subscription price, $1 a year. Edgar S. Werner, editor and publisher, 401 Broadway, Albany, N. Y.

BOOK NOTICES.

On Rest and Pain: A Course of Lectures on the Influence of Mechanical and Physiological Rest in the Treatment of Accidents and Surgical Diseases, and the Diagnostic Value of Pain. By John Hilton, F.R.S. Second edition. New York, Wm. Wood & Co.

The recent death of the author of this book renders appropriate the issue of this, his principal work, at least, his best known one. In a notice of his decease, one of the English medical journals expressed some surprise that his treatise on "Rest and Pain" had achieved such a moderate sale, considering the value of its contents. The answer, we think, would be that the lectures were first published in a medical journal of easy access, and the second and more important the somewhat repellant style of the author. For example, he gives the details of very numerous cases, one after another, and long letters concerning them, in full. No doubt this is instructive, but it is not an engaging style of writing, and therefore it was not popular.

The lectures were delivered in 1860–62, and their general theme is the advantages of rest as a material aid in the treatment of surgical cases, and the indications given by pain. As one of the consulting surgeons to Guy's Hospital, and a practitioner of extensive practice in the great metropolis, Mr. Hilton had an unsurpassed field for his observation, and these lectures show that he was well calculated to improve it. That they were delivered seventeen or eighteen years ago, of course, detracts somewhat from their present value; but Mr. Jacobson, who edited them for the author in 1876, has endeavored to remedy this defect, and has in a large degree succeeded.

This is the first volume of the American Publishers' Library of Standard Medical Authors, which they intend publishing by subscription at $1.00 to $1.25 per volume. It is very reasonable at this price, and will no doubt meet with the wide popularity it deserves.

A Manual of Prescription Writing, with a Full explanation of the methods of writing prescriptions, a table of doses, rules for avoiding incompatibilities, etc. By Matthew D. Mann, A.M., M.D. New York, G. P. Putnam's Sons. Cloth, 12mo, pp. 155. Price 90 cents.

The intention of the author is to give a synopsis of medical Latin grammar more full than that contained in the works of Griffith and Gerrith, and also to explain the metric system of prescribing, proper medical combinations, etc.

This intention is good, and its execution not amiss, so far as the plan and extent of the work are concerned, but its pages are so replete with typographical errors and with erroneous Latin forms (no doubt attributable to hurry and negligence), that we cannot recommend the present edition to students, as it would almost as often lead them astray as set them right.

A Handbook of Nursing for Family and General Use. Published under the direction of the Connecticut Training School for Nurses. Philadelphia, J. B. Lippincott & Co. 8vo, pp. 266. Price $1.25.

From a hasty examination of this volume we believe we can recommend it as a sensible, instructive, well written book, just such a one as the physician would be glad to see in frequent perusal in the families he visits. For nothing is more discouraging than to have to contend not only against disease, but against the ignorance, stupidity and prejudice of those who care for the patient. This volume, well studied by a large public, would save more lives than a "new remedy," though, to be sure, that is temperate praise.

THE

Medical and Surgical Reporter.

A WEEKLY JOURNAL,

Issued every Saturday.

D. G. BRINTON, M.D., EDITOR.

The terms of subscription to the serial publications of this office are as follows, payable in advance:—

Med. and Surg. Reporter (weekly), a year,	$5.00
Half-Yearly Compendium of Med. Science,	2.50
Reporter and Compendium, - - -	7.00
Physician's Daily Pocket Record, - -	1.50
Reporter and Pocket Record, - - -	6.25
Reporter, Comp. and Pocket Record, - -	8.25

For advertising terms address the office.

Marriages, Deaths, and Personals are inserted free of charge.

All letters should be addressed, and all checks and postal orders drawn to order of

D. G. BRINTON, M.D.,
115 South Seventh Street,
PHILADELPHIA, PA.

1879.

PREMIUMS FOR NEW SUBSCRIBERS.

Special Offer to Our Old Subscribers.

From and after October 1st, any new subscriber will receive the REPORTER

15 MONTHS FOR $5.00,

to wit, from Oct. 1st, 1878, to Dec. 31st, 1879.

To enlist the interests of our Old Subscribers in the extension of our circulation, we offer, if they will send us, along with their own renewals, the amount for ONE new subscriber for one year (who will be entitled to the 15 months mentioned) to send them either (1) the HALF-YEARLY COMPENDIUM, for 1879; or (2), the PHYSICIAN'S POCKET RECORD, for 1879; or any of our other publications, to the amount of $2.50. These publications will include the following works now in press:—

GOODELL. Lessons in Gynecology.
LANDOLT. Manual of Examination of the Eyes.
SAYRE. Organic Materia Medica.

Besides, already published, Napheys' *Surgical Therapeutics*, Napheys' *Medical Therapeutics*, Dobell *On Cough and Consumption*, Bernard & Huette's *Operative Surgery*, Butler's *Medical Directory of the United States, etc., etc.*

INNOCENT SUFFERERS FROM SPECIFIC DISEASES.

That observant practitioner, Dr. H. R. STORER, some years ago wrote an instructive article on instances of gonorrhœa derived from non-specific sources (*Gynecological Journal*, April, 1870). He had been convinced, after considerable doubting, that the menses of some women at all times, and of other women at certain times, and various chronic vaginal discharges of a leucorrhœal or catarrhal type, and strictly non-specific, can produce true rhœa in the male. Dr. STORER, in his article, however, took occasion to avow his utter disbelief in all alleged inoculation of gonorrhœa from unclean sheets, privy seats, etc., and said he laughed at all such excuses, whether proffered by males or females.

Now, here is where Dr. STORER showed an incredulity for which it gives us pleasure to hold him and others indulging in it to account. For there is a rational pleasure in convincing such doubting Thomases that a girl may have a gonorrhœa who has never anywhere subjected herself to illicit approaches; and a man may have his share of this affliction when age and prudence vindicate, beyond doubt, his morality. And the mere fact that either has this annoying complaint does not give grounds for any allegation of unchastity, or even of indulgence.

For this purpose we quote two recent cases, one reported by Dr. JOHN MORRIS, of Baltimore, in the Virginia *Medical Monthly;* the other by Dr. GOULEY, of New York, in the *Medical Record.*

In Dr. GOULEY's case the patient was an old man, who had formerly had gonorrhœa, but had not recently exposed himself to the risk of getting it again. Yet he had a copious purulent discharge from the urethra. It was probably due to the catheterism which had been found necessary in order to accomplish the free dilatation of a stricture of long standing which he had, and Dr. GOULEY stated that he had sometimes seen these urethral discharges in

old men who had never had gonorrhœa at all, but were troubled with some chronic affection of the urethra or prostate. One gentleman that he knew, who had been obliged to catheterize himself for years, had a constant purulent discharge, almost the entire length of the urethra being the seat of undilatable stricture.

In Dr. MORRIS' case we will quote his words:—

"In female children gonorrhœa is not an uncommon trouble, owing to the prominence of the external sexual organs in childhood. The father of the family contracts the disease; he infects his wife; the little girls sleep with their parents on the bed linen, or towels become tainted, and, as a consequence, the female children are infected. I have treated a great many cases of gonorrhœa contracted in this manner. Even the privy and the water closet (though there are a great many jokes derived from Joseph Miller to oppose the theory) may become means of contagion. I remember the case of two beautiful young girls, now matronly women, who contracted the disease in this manner from an apprentice boy in their father's household. The intense specific virulence of gonorrhœal poison is markedly shown by its spread through a whole family from one child to another. I lost a family, some years ago—not a very valuable one, I may add—through a diagnosis of gonorrhœa in a child. My friend, Dr. B., was called to treat the case, and with extreme readiness at once pronounced the disease a simple vaginitis, due to worms or some other phantom. I knew what he did not know—that a colored servant in the house had gonorrhœa; that I had treated another little girl, the companion of the one he was called to see, for gonorrhœa; and that the same water closet was used in common."

Since this is so, it behooves every physician to restrain his judgment, or at least the expression of it, in the case of gonorrhœas, whether in males or females. Not only is character at stake, but, in certain circumstances, life itself may be jeopardized by a hasty expression of opinion. Family ties may be severed without reason, and an ineffaceable stain be left on virtue. Probably no decision which a physician is called upon to make, not even when the life of a man is concerned, may be fraught with such consequences as this one, when character, position, and the kinship of children may be at once involved.

NOTES AND COMMENTS.

Innervation of the Uterus and of its Vessels.

The *Lancet* says—

A communication is made in the *Wiener Med. Jahrbücher*, by v. Basch and Hofmann, giving the results of numerous experiments they have performed on dogs. They find that the uterus receives its motor fibres from two sources. On the one hand, from the hypogastric nerves proceeding from the posterior mesenteric ganglion: and, secondly, from nerve-fibres issuing from the sacral plexus. It is well known that Spiegelberg denied any motor power to the hypogastric branches, and Frankenhäuser considered that the sacral branches were destitute of motor power. Now, according to the remarks of v. Basch and Hofmann, a very distinct antagonism exists between these two sets of nerves. If the hypogastric branches be electrically stimulated, contraction of the circular fibres of the uterus takes place, the cervix descends into the vagina, while the os opens. On the other hand, on stimulation of the sacral nerves, the longitudinal fibres are made to contract, the uterus becomes shorter, and the os remains closed. Suppression of respiration, or stimulation of the sciatic nerve, acts in a reflex manner, chiefly on the hypogastric nerves. Their experiments further showed that the vessels of the uterus obtain their nerves from the same sources as the muscular tissue, the nervi hypogastrici supplying the constricting, and the sacral nerves the dilating fibres, which can likewise be brought into action reflectorially through the sciatics.

The Differentiation of Coma from Drunkenness.

Dr. Macewen, of Glasgow, in opening the winter session of the Glasgow School of Medicine, chose for the subject of his address the means of distinguishing the coma produced by alcohol from that produced by apoplexy, opium, and other causes. After alluding to Dr. Richardson's statement that in alcoholic coma the temperature falls, and that this is a distinguishing mark from other forms of coma, Dr. Macewen states that he has observed the temperature in a series of cases of fracture of the skull, opium-poisoning, and apoplexy, and that in all these cases the temperature was found very much below the normal. Consequently this point is not to be relied on for purposes of diag-

nosis. He also controverted the statement that in alcoholic coma there is dilatation of the pupil. He had found contraction the rule. But he had accidentally discovered that if a patient was shaken or disturbed, the pupil dilated, but very soon contracted again. He, therefore, lays down the rule that an insensible person, who, being left undisturbed for from ten to thirty minutes, has contracted pupils, which dilate on his being shaken, without any return of consciousness, and then contract again, can be laboring under no other state than alcoholic coma.

The Modes of Administering Mercury in Syphilis.

Dr. John Duncan (*Edin. Med. Journal*, August, 1878), made a comparative trial of subcutaneous injection, fumigation, inunction, and administration by the mouth, in the treatment by mercurials of the syphilitic patients in the Lock Hospital in the Edinburgh Royal Infirmary. He has found that inunction and subcutaneous injection do not hold out sufficient inducement to employ them, otherwise than as exceptional measures in cases of peculiar weakness or individual idiosyncrasy. He points out that the effects of fumigation depend greatly on inhalation of the vapor; one patient who, contrary to orders, kept her head under the blanket for several minutes, suffered, in consequence, from a very severe attack of bronchitis. In administering by the mouth, the advocacy of particular preparations is not warranted by any special advantages which are possessed by one as compared with another. Small doses frequently repeated are better borne and more effectual than larger doses administered at longer intervals.

A New Operation for Phimosis.

Being struck by the inconvenience of the ordinary bleeding operation, M. Jude Hue (*Le Progrès Médicale*) has proposed a section of the prepuce in the median line and on the dorsal surface, by means of the elastic ligature. For this purpose a needle, threaded with an elastic band, is passed between the prepuce and the gland until the bottom of the cul-de-sac is reached. The prepuce is then transfixed, and two ends of the elastic are knotted at the free border of the prepuce. In ten days or a fortnight the ligature comes away and the operation is complete. M. Horteloup had invited M. Hue to operate upon patients in his hospital, and the results at first were not encouraging, as a good deal of pain resulted for twenty-four or forty-eight hours. When the patients were seen three months afterward, the results were found to be very satisfactory, so that M. Horteloup recommends this simple method in cases of phimosis without hypertrophy of the prepuce, and where there is no inflammation or thickening of the integument, and he thinks this plan will be found of great service in children.

A New Syphilide.

Dr. Maurice Raynaud (*Société Médicale des Hôpitaux de Paris*) brings to notice the case of a patient attacked by a new form of cutaneous syphilis, named by the author "syphilitic leontiasis." The diagnosis of the case was difficult; there are no syphilitic antecedents, but in the mucous membranes syphilitic manifestations are undoubted, scrofula being excluded by the age of the patient, which was fifty-nine. M. Coutard, in a thesis on this subject, says that syphilis may produce hypertrophic lesions of the skin, the gummy element instead of being circumscribed, existing in the state of infiltration. In such a case ulceration is not produced, as it is in the dry, tubercular, degenerative form. The face is the favorite seat of this form of syphilis.

New Chemical Studies.

Besides his most recent researches on the condensation of gases, M. Pictet has carried out other investigations on those phenomena, the consideration of which lies between the provinces of physics and chemistry. Among such investigations may be mentioned his observations on the application of the mechanical theory of heat to the study of volatile liquids and to some simple relations between the latent heats, atomic weights, and tensions of vapors. M. Pictet has also been successful in applying his scientific investigations to practical use, in the perfecting of apparatus for the rapid production of large quantities of ice.

The So-called Compensatory Emphysema in Acute Thoracic Diseases.

Dr. Harvey, of London, lately read a paper on this subject, with the object of disproving a doctrine held by some, namely, that the peculiar resonance, sometimes amounting to tympany, heard over the healthy portion of the lung in acute inflammation, etc., is due to a distention of that portion of lung com-

pensating for the non-action of the affected portion. Having referred to the use of the healthy pleura, and the manner in which compensatory emphysema is brought about by pleural adhesions, Dr. Harvey proceeded to show that the very reverse of the conditions necessary for the production of compensatory emphysema are present in the kind of case referred to; that, in other words, there must be a diminished, and not an increased, pulmonary tension in these cases. Finally, he referred to the explanation given in modern text-books (Guttmara, Gil), which recognize the diminished tension of the pulmonary parenchyma as the cause of the increased resonance.

Correspondence.

The Yellow Fever in Southern Kentucky.

Ed. Med. and Surg. Reporter:—

As I reside near the yellow fever zone, and as our little city was considerably ruffled by a small current from the epidemical wave that swept up the Mississippi Valley, I will give you a few items concerning its history, habitat, etc.

Bowling Green is situated 261 miles from Memphis, and we had daily communication by rail during the prevalence of the plague.

We had, as a consequence, fifteen imported cases, with seven deaths; and about thirty native, with twelve deaths; but I am certain that after a thorough investigation not a single indigenous case is traceable to an imported one.

The question naturally arises, what were the factors in the development of the disease at this point? The germs or fomites were brought by trains from the infected district, as the first cases will abundantly prove. These occurred in the only three houses that stood fronting the railroad side track (distance sixty feet), where passenger coaches, sleepers, and occasionally hospital cars, were swept, cleaned and aired, after a trip to the fever-stricken districts. Ten cases occurred in the three dwellings fronting this side track, and the rest of the stricken cases were persons that visited the first cases or resided in the immediate vicinity, with the exception of one case, and this could not be traced, unless she received the poison from washing her son's clothing, he being a railroader.

These are facts pertaining to the introduction of the disease into our city. Fortunately for us it did not make its appearance until about the 1st of October, consequently it did not harvest its victims to the extent it might have done if it had made its appearance earlier in the season.

Facts for Malariaists and Non-contagionists to Consider.—Three passenger conductors with their crews ran constantly to Memphis during the prevailing epidemic. To protect themselves as much as possible from exposure to the fever, they would return seven miles, to the first station, remain over night, and go back to Memphis next morning before starting on their return trip. After a while, the disease developing in a violent form at this point, they concluded to fall back to a station called Galloway, twenty-eight miles from Memphis; on arriving here the citizens opposed their stopping, but their resident physician, Dr. Terry, prevailed on them to allow them to remain, assuring them that they need not have any apprehension, and showed his faith by inviting the conductor to sleep with him, as the town did not afford any hotel accommodation. He accepted the invitation and slept with the doctor, and so did the two succeeding conductors. Imagine the surprise of the first conductor, three or four days following, on his return, to find the doctor sick with yellow fever, and his death occurred after an illness of forty-eight hours. Seven deaths succeeded immediately, in a population of not more than fifty to seventy-five inhabitants. No case had occurred previous to the arrival of the conductors with their trains.

None of these had the disease, while several of their crews died. Here the question naturally suggests itself, what protected them? They say that they were advised by some physician en route from Paris, Ky., to New Orleans, to have their under garments steeped in brine or salted water before drying, after being washed. What influence the salt had on the epidermis, and through it operating as a prophylactic, I cannot elucidate, but suffice it to say that these conductors attribute their escape to the potency of the saline properties suspended in their garments. Will some of your readers give some plausible physiological explanation of its therapeutic action on the skin, and the process by which the salt may have assisted in the elimination of the poison. R. C. Thomas, M.D.

Bowling Green, Ky., December 1st, 1878.

The Nature of Bilious Attacks.

Ed. Med. and Surg. Reporter:—

I noticed an article in the Reporter (October 19th), by J. H. Nowlin, headed, "Bilious Diseases—What are they and Why so called." These so-called bilious diseases usually occur during the spring and autumn, in a malarial district, with the following symptoms, as I have frequently noticed them in my practice. The attack usually begins either with a marked rigor or a succession of rigors, often simulating intermittent fever. Sometimes these rigors only occur once or twice a week for two or three weeks, and sometimes they are absent altogether. Slight chilly sensations, followed by slight pyrexia, take their place. These symptoms last for a variable length of time, sometimes only a few days and sometimes for two or three weeks, if not checked by proper remedies. Then comes the actual attack, with slight but constant pyrexia. The temperature is sometimes increased, often remains normal; and the same may be said of the pulse, although it is

generally increased in frequeney. There is constipation, and the stools are clay-colored; sometimes nausea and vomiting, though these are not constant symptoms. The patients always complain of a bitter, acrid taste in the mouth, and slight pain, with a sense of weight, in the right hypochondriac region; there is also pain and a dizziness about the head, and furred tongue. The premonitory symptoms as given above are often almost entirely absent, and there is really no distinction between the two stages.

A physician called to see a case with all the above symptoms would naturally, at first, make a diagnosis of bilious fever, or as some would term it, simply a malarial fever. Scarcely any of such cases are confined entirely to their bed, but go around and attend to their work during the whole course of the disease. All the symptoms will readily yield to one or two good doses of some cathartic, such as podophyllin or calomel, or small doses repeated at short intervals, which is probably better. If there is not some trouble about the liver why is it the symptoms, or rather the disease that causes these symptoms, will so readily yield to these remedies? Sometimes it is necessary to give quinine when the disease assumes an intermittent or remittent form. My opinion is that in these attacks there is a slight congestion of the liver, and when this congestion and consequent torpor of the liver is relieved, and the organ excited to its proper functions by the so-called cholagogue cathartics the symptoms are all relieved and the patient cured.

These so-called bilious attacks, as I said before, usually occur in malarial districts, and it is my opinion that they are usually if not always attributable to the malarial influence (I believe most authors agree upon the fact that this influence often causes congestion and torpor of the liver), and therefore, the attack might be called a malarial fever in most cases. There is no doubt that the term bilious attack is often used when some other name would be more suitable, and I agree with Dr. Nowlin, that every physician should try to prevent such an extensive use of the term, and thereby probably, to some extent at least, do away with those liver regulators and other patent remedies that are now so numerous and so detrimental to the healthy action of the liver, and as Dr. Nowlin says, "Are generally gotten up by mercenary quacks" who do not have the interest and good health of the community in view, but only their own pocket-book and pecuniary interest. I have always tried to persuade my patients that the use of such remedies is detrimental.

The symptoms as given above, or some of them, I have no doubt are also often caused by indigestion, from overloading the stomach, which renders the organ unable to perform its proper functions, and therefore compelled to rid itself of this indigestible food, which it does by emesis, during which act there is sometimes large quantities of bile thrown off, thereby causing the patient, and sometimes the attending physician, to think the liver is at fault, and call it simply a bilious attack. But I have no doubt that the liver is sometimes functionally at fault, because these attacks often come on when the patient has eaten nothing for several days previous, excepting some very light, digestible diet; then if the liver is not at fault, to what are these symptoms attributable, and what name is to be given to the disease, or rather the attack, because it can hardly be called a disease.

G. E. Dickinson, M.D.

Upper Fairmount, Md., Dec. 2d, 1878.

News and Miscellany.

Bulletin of the Public Health

Issued by the Surgeon General United States Marine Hospital Service, for the week ended November 30th, 1878.

During the week ended Nov. 29th very few new cases of yellow fever, or deaths, occurred at any of the infected points. At Mobile there were 3 cases and 1 death; at New Orleans there were 8 deaths—no new cases reported; at Memphis there were 2 deaths; at Greenville, Miss., 1 death—a refugee.

A Clergyman's Testimony on the Sanitary Supervision of Prostitution.

It gives us pleasure to quote from the *Medical Press and Circular*, of November 20th, the following statements made as replies by the Rev. E. P. Grant, Vicar of Portsmouth, to the questions addressed by Convocation to the Clergy, as to the Operation of the Contagious Diseases Acts in that city. They are of general interest:—

The result of the Contagious Diseases Acts has been most beneficial

(*a*) In diminishing prostitution; for while in 1865 there were 789 prostitutes on the register in Portsmouth, there were on December 31st, 1870, 476.

(*b*) In diminishing the amount of disease in women; for, whereas in 1865 the ratio of disease per every 100 cases of examination was 70, it has been gradually reduced until December 31st, 1876, it was only 4.84.

It is not possible to state with equal accuracy what the ratio of disease in men is, but there is every reason to believe that it is rather less than half what it used to be.

These results have been brought about by the general working of the Contagious Diseases Acts; and, most especially, the fortnightly examination of the women, with the consequent detection of the disease at its immediate commencement.

The number of brothels has decreased by very nearly half since the introduction of the Acts, the number being, in 1865, 263; in 1876, 133.

There are no special police regulations beyond those which obtain, I believe, in all towns; but the ordinary regulations are being very energetically and effectually carried out.

The number of persons living by the practice of this sin has considerably decreased; there being fewer prostitutes, fewer brothel-keepers, and consequently fewer people hanging on to them.

The number of private houses, as distinct from brothels, in which prostitutes lodge, or are received, is gradually diminishing, the number being, in 1865, 160; in 1876, 115; and there are now only nine (so-called) indiscriminate houses.

The effects of the Acts is most beneficial (*a*) upon men; in that, with regard to soldiers and sailors especially, they are in a better state of health, and therefore not only less expensive, but better able to do their work to their country than they were before. As to their sinning more, because they think they can sin with impunity, I do not believe they ever think of it. (*b*) Upon women; in that, in addition to their number being considerably reduced, they are much more cleanly and orderly in their appearance and conduct than they used to be.

Proceedings of the Medical Society of Harford County, Md.—Suggestions on Veterinary Medicine.

The regular meeting of the Medical Society of Harford county was held in Churchville, on Tuesday, November 12th, 1878. The Society was called to order by the President, Dr. W. W. Hopkins.

Dr. R. D. Lee, lecturer for the day, being absent, was continued as lecturer for next regular meeting.

The following resolutions were presented by Dr. W. Stump Forwood:—

Resolutions in regard to the establishing of Colleges for the education of Veterinary Physicians—

Whereas, In consideration of the fact that there are so few educated Veterinary physicians in our county, notwithstanding the existence in our midst of such an immense number of domestic animals, so essential to man's use and sustenance, at all times liable to require the physician's aid; therefore be it

Resolved, That we, of the Medical Society of Harford county, Maryland, suggest to the American Medical Association, through our delegates at its next meeting, the propriety of taking cognizance of, and action in, the premises, and respectfully advise it, in the exercise of its weighty and wide-spread influence, to recommend the establishment of Veterinary Colleges, to be conducted by strictly scientific professors; and that the Association also advise many of the young men of the country to enter this new and ungleaned field, instead of increasing the already overcrowded ranks of the regular medical profession.

The above resolutions were ordered to be spread on the Secretary's minute book.

Dr. Forwood and others made the following remarks, viz.:—

If a horse is sick, the village blacksmith prescribes aloes, turpentine, nitre, young chickens, Scotch snuff, new milk, and a host of other things, without knowing what for; with the result—more deaths than cures. Among the multiplicity of remedies, some may do good. From the fact that the unskilled have had and still have it in their hands, it has brought the profession into disrepute. Do away with ignorance and educate the people, or rather a doctor, for such cases. As the medical field is crowded, so the field in veterinary surgery is open. The practice would be more lucrative than the regular profession, for a time at least. Any person who owns stock would be willing to pay for medical attention. For many years the profession would pay well. Some would object to the respectability of the veterinary, but it is just as respectable to treat lower animals as the higher. There is no reason why it should be otherwise. Notice the great saving of money, too. I know of a fine horse, valued at $10,000, that was killed by driving a nail in the foot, when the doctor, for, say $20, could have cured the animal.

It is proper here to state that it would be impossible to combine the professions. One branch or the other must suffer for want of time to attend.

The regular medical subjects being discussed at length by the members present, after partaking of a bountiful and elegant dinner, prepared by the host, Mr. Sauner, they adjourned, to meet on the second Tuesday in May, 1879, at Bel Air.

H. Clay Whiteford, M.D., *Secretary.*

Items.

—*Correction.*—Page 445, column 1, line six, for *internal*, read *intense.*

—Some excitement is growing out of numerous cases of diphtheria at Harlem, but Dr. James, a local physician, says that there is no cause for alarm, as the outbreak is occasioned by local causes. The city, as a whole, is in an excellent sanitary condition. The main cause of diphtheria he declares to be defective plumbing, and he offers many suggestions and remedies of this evil.

—To ascertain the real cause of sudden deaths, experiments have been tried in Europe and reported to a scientific congress held at Strasburg. Sixty-six cases of sudden death were made the subject of a thorough post-mortem examination. In these only two were found who died from disease of the heart. Nine of the number had died of apoplexy, while there were forty-six cases of congestion of the lungs.

—The doctors of Montreal were masters of the situation, the other day, in a measure, in the extraordinary order issued from the Vice Regal Court in passing through that city. Nice customs curtsey, it seems, to the Canadian climate, and although the Queen of England permits no deviation from the rigid dress etiquette of her drawing-rooms, the rough journey across the Atlantic or the icy blasts of

a Canadian winter appear to have had considerable effect in tempering the severity of the junior Court in Canada; and so it was ordered that a *medical certificate*, properly attested, would excuse any lady who was obliged, by delicate health, to make her curtsey to the Princess in a high-shouldered dress, which permitted only a patch of throat to be seen!

Personal.

—Sir Henry Thompson, who stands at the head of the surgical profession in London, is said to take a peremptory tone with his patients, and to refuse to attend such as will not, for a period which he prescribes, put themselves on a platform of the strictest temperance. This is so pointed out by the nature of many surgical cases that it scarcely needs a comment; but it serves to show how a great doctor can lay down the law of hygienic living, and have it enforced —or quit the case.

—As Mrs. Dr. Mary Walker, with her peculiar dress, was going along Broadway, she was followed by such a crowd that a policeman took her to Police Headquarters. Superintendent Walling proposed to release her, and the officer was about to explain that she was a woman in male attire, when the prisoner inquired: "How does he know that I'm a woman?" This was too much for the officer, and the charge was withdrawn.

—M. Paul Broca, the famous anthropologist, is authority for the statement that the tallest man ever actually measured was a Finlander, nine feet three and seven-tenths inches high, and that the shortest man known reached a decimal under seventeen inches in his stocking feet.

—The Mutter lectures on Surgical Pathology, before the College of Physicians of this city, are delivered this year by Dr. S. W. Gross. The subject is "the Surgical Pathology of Tumors."

—Dr. C. H. Carpenter, a physician having an extensive practice in Geneva, N. Y., died last Sunday, in that city, of diphtheria, and Dr. D. S. Gallagher is seriously ill with the same disease.

Human Longevity.

Mr. William J. Thoms, the well-known writer on human longevity, in a recent communication to the *London Times*, comments upon some remarkable cases of long life that had been recently reported, and lays down the following "Canon on Centenarianism:" "The age of an individual is a fact; and like all other facts, is to be proved, not inferred; to be established by evidence, not accepted on the mere assertion of the individual or the belief of his friends; not deduced from his physical condition if living, or from his autopsy if dead; but proved by the register of his birth or baptism, or some other authentic record; and in proportion as the age claimed is exceptionally extreme ought the proof of it to be exceptionally strong, clear, and irrefragable."

OBITUARY.

DR. EMELINE HORTON CLEVELAND

Died at her residence in this city, Dec. 8th, of phthisis.

Emeline Horton was born in Ashford, Connecticut, in 1829, the family soon afterward removing to Stockbridge, Madison county, New York, where the future Professor grew up as a hearty little country girl. A student of Oberlin College, Ohio, she graduated in 1853, and came at once to Philadelphia to enter the Woman's Medical College, with the purpose of assisting her future husband, then a candidate for the missionary field, as a medical missionary. In 1854 she married the Rev. Giles Cleveland, a Congregational clergyman, who had been a fellow-student at Oberlin, and in 1855 she was graduated as a physician. The failing health of her husband not long after her marriage compelled the relinquishment of other plans, and Dr. Cleveland began to practice medicine in this city, in connection with her duties as instructor in the Woman's College, first as Demonstrator and afterward Professor of Anatomy.

In 1860, at the request of a number of philanthropic ladies of Philadelphia, who had in view the establishment of a Hospital for Women and Children, Professor Cleveland went abroad for especial study and to note the management of hospitals. She entered the School of Obstetrics in connection with the Hospital *Maternite*, at Paris, and, after receiving the diploma of that institution, found ready access to the ward and lecture rooms of other hospitals, with the privilege of studying their administrative departments. On her return she was appointed Resident Physician of the then chartered Woman's Hospital, which position she held for seven years, and was, at the same time, elected Professor of Obstetrics and Diseases of Women and Children in the Woman's Medical College, the chair which she filled until her death. Professor Cleveland has made a number of important surgical operations, and is the first professional woman, so far as known, to perform operations in ovariotomy. A paper, presented by her and read by Dr. Albert H. Smith before the Philadelphia Obstetrical Society, a year ago, was accepted and published in its transactions. She has occasionally contributed to the MEDICAL AND SURGICAL REPORTER, and always thoughtful and valuable articles.

MARRIAGES.

BENNETT—REED.—By Rev. A. C. Crist, at the home of the bride, Nov. 7th, Dr. W. C. Bennett and Miss Belle Reed.

CHEATHAM—PRICHETT.—On Thursday, November 21st, at the residence of Major Richard W. Bonner (the stepfather of the bride), by Rev. Walker Lewis, Mr. Thomas A. Cheatham, PH.G., and Miss Mattie Pritchett, all of Macon, Ga. Mr. Thomas A. Cheatham is the second son of Dr. C. A. Cheatham, of Dawson, Ga.

POWERS—ANDREWS.—In Barre, Vt., November 16th, by Rev. L. Tenney, Merritt L. Powers, M.D., and Hattie L. Andrews.

RANSOM—BAKER.—At Ransomville, N. Y., October 9th, 1878, by Rev. W. P. Pickard, assisted by Rev. Z. Hurd, Walter J. Ransom, M.D., of Lockport, N. Y., and M. Lillie Baker, of Ransomville, N. Y.

SNELLING.—Suddenly, on November 26th, at his residence, in New York, Frederick Greenwood Snelling, M.D., son of the late Andrew Symmes Snelling.

SWASEY—METCALF.—In Royalton, Vt., November 13th, by Rev. L. H. Elliot, W. F. Swasey, M.D., of Norwich, and Sarah L. Metcalf, of Royalton.

DEATHS.

SHERWOOD.—At Southport, Conn., Dec. 4th, Justus Sherwood, M.D.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

DUCRO'S ALIMENTARY ELIXIR

A Combination uniting the properties of ALCOHOL and RAW MEAT. It has been Mr. Ducro's aim in preparing this elixir to present under the form of a pleasant cordial the nutritive and restoring properties of raw meat and the stimulating properties of alcohol. In this he has been eminently successful, judging from the great number of physicians who prescribe and use this food medicine. This preparation, which has been used with great success in the hospitals of Paris since 1868, is adapted to the treatment of all diseases requiring the administration in a small volume of a tonic able to stimulate and support the vital forces, as in *Pulmonary Phthisis, Depression* and *Nervous Debility, Adynamia, Malarial Cachexia,* etc. It is especially adapted for delicate ladies and children, debilitated old people and convalescents.

Paris: Place de Vosges, 20. **New York: E. FOUGERA & CO., Depositaries.**

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner ; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, P. Rigollot

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

TO PHYSICIANS.

THE scarcity and high prices of Cinchona barks and Sulphate of Quinia, and the prospect of only a slight reduction in these prices, makes the present a favorable opportunity of calling the attention of the profession to the *combination of all the bark alkaloids.*

Much attention has been given to this subject in Europe and India.

The growing appreciation by the medical profession of the United States of

CINCHO-QUININE

is due to the fact that it retains the important alkaloids IN COMBINATION, — a combination which in practice is *preferable to perfect isolation or separation* of these alkaloids.

In addition to its superior efficacy as a tonic and anti-periodic, it has the following advantages, which greatly increase its value to physicians: —

1st, *It exerts the full therapeutic influence of* Sulphate of Quinine, *in the same doses*, without oppressing the stomach, creating nausea, or producing cerebral distress, as the Sulphate of Quinine frequently does; and it produces much less constitutional disturbance.

2d, It has the great advantage of being *nearly tasteless.* The bitter is very slight, and not unpleasant to the most sensitive, delicate woman or child.

3d, It is *less costly*: the price will fluctuate with the rise and fall of barks, but will always be much less than the Sulphate of Quinine.

4th, It meets indications not met by that Salt.

The following well-known Analytical Chemists say: —

"UNIVERSITY OF PENNSYLVANIA, Jan. 22, 1875.
"I have tested CINCHO-QUININE, and have found it to contain *quinine, quinidine, cinchonine, cinchonidine.*
F. A. GENTH,
Professor of Chemistry and Mineralogy."

"LABORATORY OF THE UNIVERSITY OF CHICAGO,
Feb. 1, 1875.
"I hereby certify that I have made a chemical examination of the contents of a bottle of CINCHO-QUININE; and by direction I made a qualitative examination for *quinine, quinidine,* and *cinchonine,* and hereby certify that I found these alkaloids in CINCHO-QUININE.
C. GILBERT WHEELER,
Professor of Chemistry."

"I have made a careful analysis of the contents of a bottle of your CINCHO-QUININE, and find it to contain *quinine, quinidine, cinchonine,* and *cinchonidine.*
S. P. SHARPLES, *State Assayer of Mass.*"

TESTIMONIALS.

"WELLFLEET, MASS., Nov. 17, 1876.
"I have used CINCHO-QUININE, and can say without any hesitation it has proved superior to the sulphate of quinine. J. G. JOHNSON, M.D."

"MARTINSBURG, MO., Aug. 15, 1876.
"I use the CINCHO-QUININE altogether among children, preferring it to the sulphate.
DR. E. R. DOUGLASS."

"LIVERPOOL, PENN., June 1, 1876.
"I have used CINCHO-QUININE, obtaining better results than from the sulphate in those cases in which quinine is indicated.
DR. I. C. BARLOTT."

"RENFROW'S STATION, TENN., July 4, 1876.
"I am well pleased with the CINCHO-QUININE, and think it is a better preparation than the sulphate. W. H. HALBERT."

"ST. LOUIS, MO., April, 1875
"I regard it as one of the most valuable additions ever made to our materia medica.
GEORGE C. PITZER, M.D."

"RICHMOND, VA., March 28, 1877.
"I believe that the *combination* of the several cinchona alkaloids is more generally useful in practice than the sulphate of quinine uncombined.
"Yours truly, LANDON B. EDWARDS, M.D.
Member Va. State Board of Health, and Sec'y and Treas. Medical Society of Va."

"CENTREVILLE, MICH.
"I have used several ounces of the CINCHO-QUININE, and have not found it to fail in a single instance. I have used no sulphate of quinine in my practice since I commenced the use of the CINCHO-QUININE, as I prefer it. F. C. BATEMAN, M.D."

"NORTH-EASTERN FREE MEDICAL DISPENSARY.
908 East Cumberland St., Philadelphia, Penn.,
Feb. 29, 1876.
"In typhoid and typhus fevers I always prescribe the CINCHO-QUININE in conjunction with other appropriate medicines, the result being as favorable as with former cases where the sulphate had been used.
"F. A. GAMAGE, M.D."

SYRUP-GLYCEROLE

OF

FERROUS CHLORIDE.

The Combination which all Forms of Iron must assume before Assimilation.

Superior to all other Iron Salts in that, while it is readily taken into the circulation, and does referruginate the blood, it does not ordinarily cause constipation nor headache. It is very pleasant to the taste, and is unalterable.

Ferrous Chloride is a neutral salt, consequently it has no action upon the teeth, and may be administered fearlessly. This fact and the delightful taste of my preparation render it an advantageous form for administration to children. Each fluid drachm contains one grain of Ferrous Chloride, which, owing to the certainty of its assimilation, is a full, active, adult dose.

Lectures
on
EXPERIMENTAL PHYSIOLOGY.

Delivered in the Physiological Laboratory of the University of Pennsylvania,

BY ROBERT MEADE SMITH, M.D.,

Demonstrator of Experimental Physiology in the University of Pennsylvania.

Reported expressly for the Medical and Surgical Reporter.

Lecture I—Introduction.

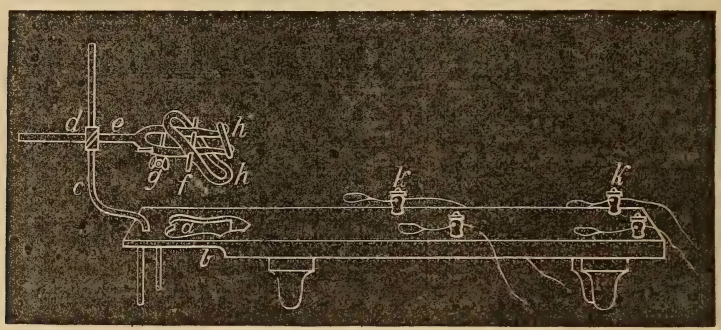
Gentlemen:—The course which we commence to-day will be devoted, not only to the demonstration of the more important of the physiological facts which are due to experimental inquiry, but to your instruction in the *technique* of our subject—the management of apparatus and of animals, the method of performing the various operations, and, in fact, all those details which are so essential to successful experimentation. The use of the instruments and the selection of appropriate animals for the points under investigation, as well as the operative procedure in each instance, will be considered separately as we study each subject. There are, however, two points in this connection that I desire now to call your attention to. One a point of principle, the other, of practice. The first of these is that no experiments should be made upon sentient animals unless the circumstances of the case render the use of narcotics entirely inadmissible, for though we have a perfect right to take the life of a lower animal for any purpose that may directly or indirectly be of value to man, we have no right to inflict upon them any unnecessary suffering. Therefore, the majority of experiments which I propose to make before you are those which can satisfactorily be made on insensible animals. To narcotize animals, chloroform, ether, opium and chloral, may be employed; chloroform is the most rapid anæsthetic that we possess, but its use is dangerous, particularly to dogs, unless air is also freely supplied. It is generally advisable to chloroform a dog before he is tied down on the operating table, as he appears to suffer more in the act of restraining him than in any step of the operation. I, therefore, generally muzzle the dog, and then put his front legs on my knees, while I sit down and hold his body with my left arm. If now a few drops of chloroform are poured into a towel folded into a cone and held over his nose he can be soon narcotized, the most reliable sign being the loss of sensation in the cornea. As soon as he is insensible he can be fastened down, and the chloroform cautiously continued, or ether substituted for it; his respiration must be closely watched, and if it is found to stop, no time must be lost in performing artificial respiration; and if this fails, the trachea must be opened and connected with a bellows. Laudanum and morphia are reliable anæsthetic agents for dogs, about 2½ c.c. of laudanum, or 0.5 gram. of morphia when intravenously injected, being full doses for medium-sized dogs. When rabbits are to be used, chloral is preferable, given in doses of about ten grains per pound weight of the rabbit. Chloral may also be given in the same proportion to cats and guinea pigs. This is also the best agent for frogs, since opium and morphia tetanize them,

and chloroform is apt to be fatal; dose for frogs 0.2–0.5 gram. Chloroform, or any of the other volatile anæsthetics may be readily administered to all the smaller animals, such as frogs, mice, pigeons, guinea pigs or kittens, by placing the animal under a bell jar, containing a sponge wetted with the anæsthetic. Since the vapor of chloroform is heavier than air, if this agent is used, it is well to have an opening in the top of the jar, into which a sponge can be placed and saturated with chloroform; the action is then more rapid and safer.

When it is desired to keep an animal perfectly motionless, curara is used; but since this paralyzes the motor nerves, and hence necessitates the use of artificial respiration, I will defer its consideration until it becomes necessary for us to employ it.

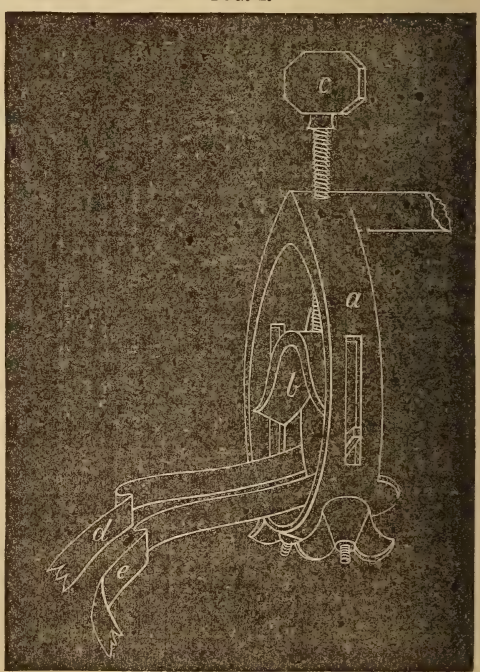
The other point that I want now to call your attention to is the method of securing animals. Frogs may be fastened on a board by a cord with a slip knot fastened over each foot and ankle, and secured at each corner of the board; or when they are insensible they may be fastened by passing a tack through the point of the nose into the board and one through each foot. Rabbits and cats are best secured on Czermak's rabbit holder. This consists of a strong wooden board (Fig. 1), mounted on four feet, about thirty inches long, eight inches wide, and four inches high, strengthened at one end by an iron plate (*b*), perforated by a large opening (*a*) to permit operation on the back of the neck, such as dividing the cord, etc. This opening, when not used, may be covered with an iron plate. Screwed into this plate is a strong, vertical stem (*c*) which bears a sliding block of brass (*d*) into which a fork-shaped steel rod (*e*) slides horizontally, and can be clamped fast by a binding screw. The forks of this rod are hollow, and receive the ends of the forceps which secure the animal's head. When it is desired to fasten a rabbit, the bar (*f*) is placed behind its incisor teeth (behind the canines when a cat is used), and the screw (*g*) turned until (*h*) and (*h'*) fit tightly over its muzzle, (*h'*) being always in contact with the lower jaw. The animal's legs are confined by slip-knots passed around each ankle, the cord being secured in the binding screws (*k*).

FIG. 1.



CZERMAK'S RABBIT HOLDER.

FIG. 2.



BERNARD'S DOG HOLDER.

Dogs are best fastened in Bernard's holder. It consists of a long wooden trough, with holes

along the sides for the cords which fasten the legs, while the animal's head is secured by means of a special arrangement. (Fig. 2.) It consists of a strong metal ring (*a*) fastened to a horizontal arm. The sides of this ring have slits in them, to permit of the up and down motion of a metal compress (*b*), which can be elevated or depressed by means of a screw (*c*), and thus when depressed confine the animal's jaws. The snout having been placed under this compress, the animal is prevented from retracting its head by two straps (*d* and *e*), which are fastened behind the animal's neck, and are connected by their anterior extremities with movable pieces of metal which can also be elevated or depressed according to the conditions required. A very simple method of fastening dogs, when these special contrivances are not on hand, is to place transversely behind their canine teeth a piece of wood, which, when rendered stationary by tying the animal's jaws together, may serve as a support in securing them.

Physiology of Digestion.

You are all aware, gentlemen, that the appropriation of a definite amount of nutriment forms one of the essential conditions of life, whether of animal or vegetable, and it has seemed to me that we cannot begin more appropriately a series of demonstrations of physiological facts than by following the changes which that material must undergo, and the means by which these modifications are accomplished, before it can serve as nutriment.

We will, therefore, commence our experiments by studying successively the various fluids to whose action the material taken as food is subjected—saliva, gastric juice, bile, and the intestinal fluids—examining to a limited extent their composition, since this branch belongs more particulary to physiological chemistry, while we will study with more detail the character of their digestive action, the circumstances which modify it, and the influence of the nervous system upon their secretion. We will commence, therefore, with the rôle of the salivary secretion.

The uses of saliva are both mechanical and chemical. Mechanically, it assists in the formation of the bolus of food, after having previously aided its mastication, and acts as a lubricant to its passage into the stomach; it aids the appreciation of taste, and by lubricating the surfaces of the mouth and teeth, prevents the adhesion of viscid substances and permits the movements of rapid articulation. Its chemical attributes are even more important; these we will examine in detail presently. The saliva is a remittent secretion formed by the three pairs of salivary glands, to which is added the fluids furnished by the lingual and palatine glands, and the numerous follicular glands of the buccal mucous membrane. We will examine first this mixed saliva.

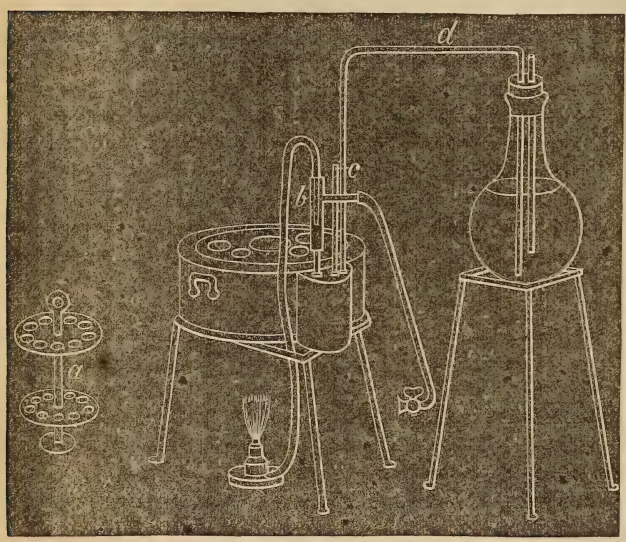
I have here about 30 c.c. of fresh mixed saliva, obtained by expectoration after stimulating its flow by chewing a piece of rubber tubing. You see that it is opalescent, with quite a decided froth on its surface, from the air bubbles detained through its viscidity, and that there is a marked white precipitate, composed mainly of epithelial cells and salivary corpuscles. (In this other specimen, which has stood for two or three days, a thin pellicle of carbonate of lime has formed.) Its specific gravity is 1.005; its reaction, as shown by the litmus paper, decidedly alkaline. The instances in which an acid reaction has been found in the fluids of the mouth are due to an increased acidity of the buccal mucus from some pathological cause, such as the fermentation of retained fragments of food, the tartar of the teeth; saliva is invariably alkaline.

Of its inorganic constituents, I will only call your attention to the sulphocyanide of potassium and the chlorides.

I have here a few c.c. of saliva which has been filtered, to remove the epithelial cells and mucus. To a portion of this I add a drop of a solution of perchloride of iron, so dilute as to be almost colorless, and you see, as I stir it, a decided red color is developed, showing the presence of the sulphocyanide. Occasionally the reaction fails, but it can almost always be produced if the saliva is evaporated to about one-third of its bulk. There is probably no other one element of an organic fluid which has caused so much dispute as this salt, whose presence I have just demonstrated. The reaction has been supposed to be due to the presence of nicotin, to the presence of acetates, of decomposed matters from carious teeth, to hydrophobia, etc. This reaction may become important in a medico-legal point of view, since it is identical with that of meconic acid; the two substances can be distinguished, however, in a very simple manner. I will add a few drops of a solution of mercuric chloride to a

mixture of the saliva and the perchloride of iron, and the color disappears; no such result would have been obtained had the saliva contained meconic acid. The red color produced by meconic acid and perchloride of iron remains unaltered by the addition of corrosive sublimate. The presence of chlorides may be proved by taking this other portion of the filtered saliva, and acidifying it strongly with nitric acid; and now the addition of a few drops of a solution of nitrate of silver causes quite a decided precipitate, which, you observe, dissolves readily in aqua ammonia.

FIG. 3.



WATER BATH.

a. Test-tube Rack. *b*. Gas Regulator. *c*. Thermometer. *d*. Syphon arrangement by which the water is kept at a constant level.

The organic constituents of saliva are albumen, mucin, and ptyalin. The presence of albumen is shown by what is termed the xanthoproteic reaction. To a portion of fresh saliva I add a few drops of strong nitric acid, and you notice that although the mixture becomes slightly turbid, there is no distinct precipitate; upon boiling it becomes clearer and takes on a faint, yellowish hue. I will let this stand for a few moments until it cools off somewhat before finishing the test. To the presence of mucin is due the tenacity and stickiness of saliva. To another portion of the same saliva I will add gradually a few drops of acetic acid, stirring all the time, and the fluid becomes more and more tenacious, until finally the mucin separates in stringy flakes. The test for albumen has now cooled considerably, so we can proceed with the reaction. You remember I added nitric acid and boiled the fluid with the production of this yellowish tint as the result. I will now add a little ammonia, and the faint yellow becomes very decidedly marked, almost orange-red, in fact, showing the presence, to a considerable degree, of albuminoids. Ptyalin, or "animal diastase" is the substance on which the property of converting starch into sugar depends. It has been obtained in this instance by extraction from the salivary glands of an ox with glycerine. The gland is finely minced and covered, in a corked flask, with absolute alcohol. In twenty-four hours the alcohol is poured off, and as much as possible driven off from the gland by pressure; the residue is then covered with glycerine and allowed to stand for several days, being stirred occasionally. At the end of this time the whole is strained through muslin, and then filtered, and the ptyalin is precipitated from the filtrate by an excess of alcohol. The precipitate can then be collected by subsidence and decantation, and must be dried at a low temperature, over sulphuric acid. It is soluble in water, and differs entirely in its reaction from albumen. The xanthoproteic reaction cannot be produced, nor is any precipitate produced with acetic acid and potassium ferrocyanide.

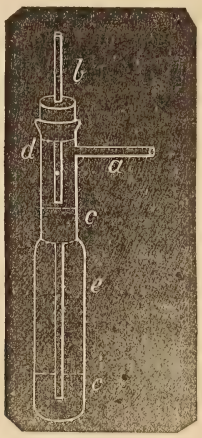
We come now to the study of the most important of the attributes of the salivary secretion, viz., its power of converting starch into sugar.

In each of these three test tubes, which we will number 1, 2, 3, I have placed the same quantity of starch mucilage, made by mixing one grain of powdered starch into a thin paste with a few drops of cold water, and then adding the paste to 100 c.c. of boiling water, and allowing it to boil for ten minutes; then, after standing until the sediment has settled, the clear, supernatant fluid is filtered off and is ready for use. I will now divide this specimen of fresh filtered saliva into two equal parts; one part I add to the test tube marked 2, and the other, after boiling thoroughly for three or four minutes, I add to 3. Into this fourth test tube

I will put saliva alone. I will put them all, now, for a few minutes, into the water bath, heated to 38° C. 1, containing starch mucilage alone; 2, containing one part of saliva to three times its bulk of starch mucilage; 3, starch and saliva in the same proportions, the saliva, however, having been boiled, while the fourth test tube contains saliva alone. While we are waiting until the test tubes have been subjected for a few minutes to the heat of the water bath, I will explain to you the mechanism of the bath (Fig. 3). The bath itself is made of copper, and is twelve inches in diameter and five inches deep; at one side it bulges out, and in the projection thus formed the thermometer and gas regulator are placed. The top consists of a movable copper plate, perforated with several large holes, into which evaporating basins can be placed, while one of them receives this rack for test tubes. Each hole is provided with a cover, which is made with a depressed margin fitting into a groove around each hole so as to make a water joint and prevent escape of steam, the vapor being condensed and falling back into the bath as water. The water is kept at the same constant level by this syphon arrangement. It consists of a glass tube bent twice at a right angle, one end dipping into the bath and the other into this flask containing water; the cork in the mouth of the flask is also perforated for the passage of a straight glass tube, one end of which dips in the water in the flask, and the other communicates with the air. The syphon tube is then filled with water by blowing into the straight tube and so driving the water over into the bath, and then the straight tube is pushed down into the water until its lower end is at the level at which it is desired to keep the water in the bath; this end must be slightly above that of the syphon tube, the vertical difference between the level of these ends forming the effective syphon power. When, now, the level of water in the bath falls below the end of the straight tube, from evaporation, the syphon acts, and the water flows over from the flask into the bath, until the water in the latter attains its former level.

The most important part of the whole arrangement, however, is the gas regulator, modified from Bunsen (Fig. 4), which keeps the bath at a constant temperature. It consists of a wide glass tube, about six inches long, with a narrow horizontal arm coming off at its upper part, and divided at about the centre by a horizontal partition or septum, from which a tube runs down nearly to the bottom of the large tube. The large tube is fitted with a perforated

FIG. 4.



BUNSEN'S GAS REGULATOR.

a. Tube connected with gas main, *b*, with the gas burner. When the bath has been heated to the desired temperature, the tube *b* is pushed down until its lower surface touches the upper surface of the mercury, *c*, thus shutting off all the gas except what can pass through the minute opening *d*. The bath then cools, and the expanded mercury and hot air compressed in *e* shrink and more gas passes until the bath is again heated up, when the expanding mercury again shuts off the gas.

cork, through which passes a small tube open at both ends, and having, at about an inch from the lower end, a minute opening in one side. When wanted for use, a quantity of clean, dry mercury is poured into the large tube (part of which runs down the inner tube from the septum, and compresses the air in the lower chamber), until there is about an inch of mercury over the septum. The cork is then put in, and the horizontal arm connected with the gas main, and the straight tube with the burner under the bath. When, now, the thermometer shows that the water is heated up to 38° C. the inner tube is pushed down until its lower end comes in contact with the upper surface of the mercury which has risen in the large tube, partly from the expansion of the mercury from the heat of the bath, but more especially from the expansion of the air compressed below the septum driving the mercury up the tube. When, now, the small tube is pushed down to the mercury, all the gas is shut off from the burner except as much as can pass through the minute hole in the side of the inner tube, which you see is just enough to keep the burner lit. If,

now, the bath should cool, the mercury and hot air would contract, and more gas would pass until it is again heated up to the temperature at which it was set, when the rising mercury would again shut off the gas. By this means the temperature can be kept nearly constant for weeks. We are now ready to examine our results of the combination of the saliva and starch.

Let us now examine the test tubes—

In No. 1, which you remember contained starch mucilage alone, the addition of a few drops of iodine solution, so dilute as to be almost colorless, causes the instant appearance of the characteristic *blue color* of the iodide of starch, while, if I add a few drops of Fehling's solution to another portion of the same specimen, adding merely enough to give the fluid a blue tinge and then boil, there follows no decoloration or deposit, showing that the starch employed contains *no sugar*.

To a portion of No. 2, which contained starch mucilage and saliva, I add a few drops of the same solution of iodine, and you see the result is very different; there is no such decided blue as occurred in the first instance, merely a faint tinge of *violet*, from the presence of dextrine. The starch has disappeared. To another portion of the same specimen I now add a few drops of Fehling's solution, and upon boiling there is a copious, yellowish-red precipitate, due to the reduction of the cupric to cuprous oxide, and showing the presence of a considerable quantity of sugar. The sugar has replaced the starch.

With the fluid from No. 3, which contains starch and saliva, which latter, however, you remember was boiled, a few drops of iodine gives still the reaction of starch, while boiling with Fehling's fluid shows no sugar. You will learn from this that boiling destroys the property possessed by saliva, of turning starch into sugar. In some instances, when there is an appreciable quantity of proteids in the saliva, the blue of the Fehling's solution is changed to violet.

With the fluid of No. 4, containing merely saliva, there is no reaction to iodine, and the Fehling's solution, when boiled with it, has, I think, more of a violet tint than before.

You have seen, then, that when starch mucilage is subjected to the action of saliva *for a few minutes*, at a temperature of about that of the body, the starch is entirely converted into sugar.

I lay stress upon the condition "for a few minutes," for I want you to appreciate that this conversion is not instantaneous. It was taught by Bidder and Schmidt, that momentary contact of the saliva with starch was all that was necessary to turn the starch into sugar, and an experiment which has been long used to substantiate this view, and which appears, at first, to demonstrate its truth, is really by no means conclusive. The experiment is as follows: Into this beaker, which contains a little saliva, warmed up to 40° C., I will add, drop by drop, a solution of starch which has been colored blue by iodine, and you see, as each drop falls, it is decolorized. It has been supposed that the starch was instantly converted into sugar, breaking, in this manner, the combination of the iodine and starch. That this view, however, is erroneous, was pointed out by Schiff. He showed that the decoloration was due to the conversion by the saliva of the iodine into hydriodic acid, and that many other organic fluids, which would not convert starch into sugar, would decolorize iodide of starch.

I have here a quantity of dog's urine, which you see also decolorizes the iodide of starch; and, if I add a little morphia to another portion of solution of iodide of starch, you see the color disappears. In neither of these substances is there the property of converting starch into sugar, but the result is due to the oxidization of the iodide. There are two practical points to be drawn from this demonstration: First, since the starch is not instantaneously converted into sugar upon contact with the saliva, mastication should be prolonged and thorough, though by no means can all the starch be converted into sugar in the mouth. And second, that starch cannot be considered as a conclusive test for the presence of iodine in the various secretions. It is often desired to test urine, milk, etc., for iodine, as in cases of iodism, and all that is deemed necessary is to add a solution of starch mucilage to the suspected liquid, and if the characteristic blue color does not appear, it is concluded that no iodine is present. This procedure is doubly fallacious; not only because these very fluids have the power of decolorizing solutions of the iodide of starch, but even when iodine is present, it is not in the form of free iodine, but as hydriodic acid, the very agent through which this decolorization is effected.

Let me anticipate here what I will demonstrate to you directly; viz., that cold saliva has little, if any action on raw starch, unless in con-

tact for some hours; yet you see that if I add a little iodine to this mixture of raw starch paste and saliva, no blue coloration is produced, while the iodine will act on raw starch as I now show you. This is another proof that the decolorization was not due to the conversion of starch into sugar.

Continuing our study of the chemical properties of mixed saliva, we have now to examine the influence of temperature, and of acids and alkalies on the diastatic properties of saliva. I have here four test tubes, into each of which I introduce a little saliva with a pipette. 1 I place in a mixture of salt and ice; 2 in the rack on the table; 3 in the water bath at 40° C., and the 4th I boil vigorously for a few minutes, and allow it to cool. After they have been reduced to the temperature of their respective media, I add to each a little starch paste, and after waiting a few minutes test each of them for sugar. None is found in 1; a little in 2; more in 3, and none in 4. I now place the remaining portions of 1 and 4 in the water bath, and after waiting a few minutes test them each again for sugar. Sugar is now found in 1, but none in 4. Therefore you have seen that the power of saliva for converting starch into sugar is more or less suspended at a low temperature, while it is destroyed at a high temperature.

I have shown you that the conversion of starch into sugar is by no means instantaneous, and that even with the most prolonged mastication some unconverted starch is swallowed, and it, therefore, becomes interesting to know whether the acid of the gastric juice will interfere with the process. It is also known that in some pathological cases the reaction of the mouth is acid; is the conversion of starch into sugar thereby prevented?

In these three test tubes 1, 2, and 3, I have placed equal bulks of starch mucilage and saliva. To 1 I add an equal bulk of distilled water; to 2 an equal bulk of distilled water containing 0.65 per cent. of mercantile muriatic acid, which forms an acid of about 0.2 per cent. of H.Cl. being about the degree of acidity of the gastric juice; to 3 I add the same bulk of 10 per cent. muriatic acid. We will put them each into the water bath. After allowing them to remain for a few minutes I will test them each for sugar. It is found in 1 and 2, but none in 3. I will now carefully neutralize the acidity of 3, by adding, drop by drop, a weak solution of caustic potash, carefully avoiding excess until this litmus paper which I have put in the tube gradually becomes pinkish instead of the decided red which it showed before. I will now put it back in the bath, and in a few minutes test again for sugar; and you see it is present in considerable quantity. You will learn from this that although all the starch does not become sugar in the mouth, the acidity of the gastric juice will not interrupt its conversion, and if from any cause either the secretion of the mouth or that of the stomach should become extremely acid, the process will again go on when the excess of acidity has been neutralized by the intestinal fluids, which, you know, are alkaline. It is also well for you to know that the diastatic action of saliva is *destroyed* by the caustic alkalies, not recoverable upon neutralization; but the weaker alkalies, such as lime water, ammonia, carbonate of soda, etc., merely suspend its power of converting starch into sugar. You have, therefore, in these facts the rationale of the administration of alkalies in cases of excessive acidity, either of the mouth or stomach, as in pyrosis, to permit the digestion of amylaceous articles of food, while you also see that in the many cases in which it may be necessary to administer alkalies, there is no danger of arresting this function of the saliva, since, when neutralized in the stomach, the process again goes on.

You have seen that saliva converts starch mucilage rapidly into glucose; the action on raw starch, however, is much slower and more complex. It does not transform it directly, but extracts from it a part, which alone is converted into glucose, while the rest remains unaltered.

Those of you who have examined starch granules under the microscope, know that each granule consists of a number of layers, arranged in an eccentric manner around a point called the hilum. These layers consist alternately of two substances, which are termed respectively starch cellulose and starch granulose. The latter alone is colored by iodine, unless the granules have been previously acted on by sulphuric acid or chloride of zinc. Saliva acts only on the granulose, and hence, when raw starch has been subjected for several hours to saliva, the granules are not colored by iodine though they still retain their form. The saliva has extracted part of the starch granules, the granulose, which it has converted into glucose, while it still leaves intact the cellulose. With starch mucilage, made with boiling water,

however, the case is different; under these circumstances the starch is totally changed; no residue can be discovered upon microscopic examination. The cellulose has itself been altered by the action of the boiling water, and both the cellulose and granulose are changed into dextrine, and it is the dextrine which is converted into glucose. That the cellulose is really the agent which prevents the action of saliva on raw starch, can be readily proved by removing the cellulose artificially, as by powdering starch granules with fine sand, when the cellular envelop is broken up, and an aqueous solution of the granulose can be readily made, which will be comparatively rapidly acted on by saliva.

That the conversion of starch is due to the presence of ptyaline, is proved by the experiment showed to you a few minutes ago, in which you saw that boiling saliva destroyed this property, from which, on the other hand, you would be justified in inferring that ptyaline is what is known as a ferment, and acts "catalytically," a convenient expression of our ignorance.

There is only one other point that I want to call your attention to, in reference to the action of mixed saliva on starch, or rather, I should say in reference to the result of that action; and that is that sugar dialyses, and starch does not.

Into one of these dialysers, formed by tying a piece of parchment paper over one end of a bell-shaped tube, after having found by testing that they are perfectly tight, I have placed some dilute starch mucilage; in the other, another portion, with some saliva. Both were then suspended in separate vases of water for twenty-four hours. We will now examine them. Upon adding iodine to the fluid around the first, there is no evidence of starch; nor, upon testing with Fehling's fluid of sugar. While in the fluid around the second, there is no starch, but there is decided evidence of sugar. Sugar, therefore, dialyses, but starch does not. All the preceding experiments can be made with an aqueous infusion of the salivary glands of most of the lower animals; *e.g.*, guinea pigs, oxen, sheep or rabbits.

Duboisin.

This new remedy, derived from the leaves of the cork-wood tree of Australia, is now coming into considerable use as a mydriatic, and also as a preventive of night sweats. In the latter field it is preferred by some to atropine or belladonna. From the reports received, it is doubtless a valuable alkaloid.

Communications.

VESICO-VAGINAL FISTULA, OF EIGHT YEARS' STANDING.

BY E. C. DUNNING, M.D.,
Of Wilmington, Del.

Mrs. Catharine B., a native of Ireland, aged 44 years, the mother of six children, was seized with labor at full term, during the month of August, 1870. She states the labor was difficult, and after fifteen hours she was delivered, with instruments, of a dead male fœtus. For some days after she urinated in the natural way, but complained of being extremely sore, and as she expressed it, "gathered inside." After ten days, while sitting in a chair, she felt something give way in the vagina, and a warm gush of urine flow over her parts. A vesico-vaginal fistula was thus formed, no doubt, from a slough, resulting either from long continued pressure of the fetal head upon the vesico-vaginal septum, or from injury to this part by the instruments employed. During the next three years, 1871 to 1873, she was operated upon four times, in the hospitals of Philadelphia, for the closure of the fistula, but without success. She became pregnant in the autumn of 1873, and in the following spring came to me with a note from the surgeon who had operated upon her in Philadelphia, requesting me to take charge of her in her confinement. Upon the 19th of June, 1874, I delivered her of a healthy male child.

The fistula was not enlarged by this labor. She returned to Philadelphia in the fall of 1874, and during the three succeeding years, 1874–77, was operated upon four more times, but without success. Indeed, the fistulous opening had been enlarged to twice its original size, being now fully two inches in its long or transverse diameter. She found herself again pregnant in the fall of 1877, and in the following August, 1878, I delivered her of another healthy male child. She had been now for eight years suffering with this loathsome and distressing malady, and had been operated upon eight different times for the cure of the same. Discouraged by her friends from any further efforts for relief, she had become sad and despondent. She now turned to me and asked me to undertake her cure. I called Dr. D. W. Maull in consultation, and after an examination it was decided to operate, although the surrounding

circumstances were not the most favorable. The patient's general health was good. On the 18th of October, the bowels having been freely moved the previous day, the following operation for closure of the fistula was performed by Dr. D. W. Maull, assisted by Drs. Lewis P. Bush, Willard Springer, and myself. The patient having been thoroughly etherized, was turned upon her abdomen, across some hard pillows, before a good light, and a Sims duck-bill speculum introduced, which brought the fistulous opening clearly into view.

The fistula involved the inferior fundus of the bladder, was transverse in direction, oval in shape, and fully two inches in its long diameter. The fundus of the bladder dipped through the fistulous opening into the vagina, forming a vesical hernia, and had been accompanied with severe bearing down pains. Adhesive inflammation had glued the bladder to the upper margin of the fistula, so that this viscus could not be entirely returned to its normal position. The bladder was now seized with a pair of long forceps and dissected away from the upper margin of the opening, and returned to its natural position. The edges of the fistula were then well freshened, and after the hemorrhage had ceased, were brought together by seven silver wire sutures, which were twisted upon themselves, no button or shot being used. The ends of the sutures were encased in a piece of gum tubing and brought out of the vagina. The woman was now placed upon her back, in bed, and after she had recovered from the anæsthesia, a Sims self-retaining catheter was introduced into the bladder, to which was attached a piece of gum tubing, to conduct the urine to a vessel placed in a chair alongside of the bed, and thus the bladder kept well drained. A half a grain of morphia was now administered and repeated in six hours. On the following morning, October 19th, patient had rested well, but was suffering from nausea and had some retching. A teaspoonful of liq. bismuthi ammonia citratis relieved these symptoms, and half a grain of pulv. opii was substituted for the morphia, to be continued morning and evening. Perfect rest and a light, but nutritious diet was ordered, the catheter to be changed every twelve hours, and the vagina syringed with tepid water, into which a little carbolic water had been poured. October 23d all inflammatory symptoms had disappeared; urine clear and flowed freely; skin soft and general condition excellent. Same treatment continued.

As there was no purulent discharge from the wound, and the sutures were causing no irritation, they were allowed to remain until October 30th, twelve days after the operation, when they were removed, and the wound had united throughout.

As the fistula was of large size, it was thought best to retain the catheter in the bladder for a few days longer, to allow the cicatrix to become thoroughly solidified before subjecting it to any strain.

November 1st. The opiate was now withdrawn, and the bowels were opened with small doses of ol. ricini, given every six hours, having been confined two weeks without causing the patient any inconvenience.

November 7th. The catheter was removed and the patient urinated through the urethra, which she had been unable to do for the previous eight years. She was now permitted to rise from bed. There was no incontinence, but perfect control of her urine at this writing.

November 20th. The cicatrix is firm: she has perfect control; urinates naturally, and is entirely restored, and is attending to her home duties with a cheerfulness of disposition and buoyancy of spirit which clearly attest the change which has been wrought in her condition.

Hospital Reports.

PHILADELPHIA HOSPITAL.

CLINIC OF DR. F. F. MAURY.

REPORTED BY DR. C. W. DULLES.

Case 1.—Erysipelas of the Face and Scalp.

Gentlemen:—This patient was brought before you a week ago, expecting an operation for the relief of an epithelioma which had destroyed a large part of the floor of the mouth on the right side, had opened its way through the right cheek, and promised before long to terminate the man's existence. He was very anxious to have any operation done which would relieve him of some of the horrors entailed by this disease, no matter at what risk, and I had made up my mind to attempt to help him, when, you will remember, the appearance of his face led me to fear he was threatened with erysipelas, and I sent him to the ward, telling you my reason at the time. And now you see how well-grounded was my fear. The next day erysipelas broke out, and has since pursued its typical course, so that, as the man lies before you, with his face enormously swollen and disfigured, no one could

mistake what has taken place. His skin, you see, is much discolored, of a bronze hue. This is dependent upon the fact that it and his shaven scalp have been painted with a solution of equal parts of alcohol and tincture of iodine. In addition, Dr. Moore, my resident, has judiciously given him, three times daily, twenty-four drops of the tincture of the chloride of iron and five grains of quinine, as well as from fourteen to eighteen fluid ounces of whisky every twenty-four hours. His food has been entirely fluid—for the poor fellow cannot eat, on account of the destruction of so large a part of his face—and it has been necessary to inject it into the œsophagus with a syringe, to which was attached a piece of rubber tube.

The man says, as well as he can, that he is now feeling pretty comfortable; he has no pain about his head, and sleeps well, for him. I promise him I will operate next week, if he is in good enough condition.

Case 2.—Injury of the Shoulder Joint.

This man comes before us with some trouble at the left shoulder, not as yet clearly distinguished. There is no surgical subject in regard to which so many mistakes are made, so many suits for malpractice instituted, as that of the injuries of bones and joints. The elbow joint is perhaps the one about which there is most trouble, and it furnishes a fine opportunity for an original thesis, which, if it added to our knowledge, would make its writer to be remembered.

In the case before us we see a shoulder whose rotundity, as compared with the right, is lost; there is an apparent shrinking of the deltoid muscle, the fibres of which look a little stretched, and in which I find gutters, for this muscle is coarse, like the glutei. When I tell the patient to put his hand on his opposite shoulder, he does it, though with difficulty; when he attempts to put it on the crown of his head, however, he cannot, without bending his head down to meet his hand.

I now examine his shoulder joint by grasping firmly the scapula above and the humerus below. In conducting such an examination, never take hold of the hand, for then you have two joints, the wrist and the elbow, between you and the part to be examined, and you cannot do it properly. You must grasp firmly the part just above and the part just below.

When the man lets me have his arm to myself, I find only an abnormal stiffening and impairment of motion. My fingers, thrust up into the axilla, find that the head of the humerus is not displaced, and so I make the diagnosis that there has been a luxation of the humerus, which has been reduced, and we have now to deal with adhesions formed in consequence of the luxation.

The treatment must be passive motion, which I will now practice and have it repeated every day until the joint moves freely. It causes considerable pain, but I don't think it necessary to give ether. The man must be willing to bear something if he would be cured. If the process proves irritating we may suspend it for short intervals and make anodyne applications. At the same time I will have the parts about this joint well rubbed with the following liniment:—

℞.	Spts. rosmarin,		f.℥ij
	Lin. ammon.,		f.℥vj
	Lin. sapon.,	q. s. ad	f.℥vj.

Case 3.—Sinus of the Leg.

On the inner aspect of this young man's leg you see two openings, with purplish, unhealthy looking margins, from which a small amount of semi-purulent matter can be pressed. The origin of this trouble he associates with a gunshot injury, and it has now lasted a long while.

The appearance of the openings would lead us to suspect—especially in this location—that they communicate with dead bone. If this be the case we must remove it; if not, if we have but a sinus here, a free incision will enable us to ascertain this, and also put it in the best condition for healing.

We begin by applying Esmarch's bandage. This consists of a roller of rubber, which is applied tight, and without reverses, from the very extremity of a limb to a point above where an operation is to be performed; and a piece of rubber tubing which is drawn very firmly about the limb several times and fastened just above the last turn of the roller, which is then removed from this point downward. The roller drives out of the limb almost every particle of blood, and the tube, acting as a tourniquet, prevents its return. We thus have the means of doing tedious, and otherwise bloody, operations without any hemorrhage to interfere with our work or hide it from our eyes. This is of special value in operations upon the bones, and I consider Esmarch's bandage as one of the greatest achievements of modern surgery. For my own part, I may say, too, that I have never seen any evil results from its employment, such as other surgeons have reported, and have no fear of it.

Now, in proceeding with our operation, I make a free incision between these openings, as I have over and over again charged you to do. Make an exploratory incision in the skin, free. Don't be afraid. Then I examine with my finger—the best probe possible—the bottom of this tract, and I find no dead bone; we have only a sinus here. I now scrape out a large quantity of cacoplastic lymph, to freshen the walls of the sinus, and put it in a good condition for repair.

In all this, you see, there has not been a drop of blood lost—not a drop. But now, as my resident slowly loosens the rubber tube, you see the pallid limb growing rosy. The blood is returning to it, and comes welling up from the raw surface I have made. I do not check this at once, for I believe the depletion will do good; but after it has continued for a while, if it do not cease spontaneously, we will insert a piece of sponge soaked in equal parts of Monsell's solution and water, and leave it in for a

day. In this way we shall expect to secure the healing of this sinus before long.

Case 4.—Phagedena.

The woman now brought before you is the one whom you saw some weeks ago (vide MEDICAL AND SURGICAL REPORTER, October 19th, 1878), with a deep ulcer at the side of her vulva, the origin of which she said was traumatic. I was then inclined to believe she was right, but now I am by no means satisfied of this. Our treatment was the local application of iodoform and general tonics; but the ulcer has not been doing well. As you now see, it has destroyed the right labium, dissected up a part of the mons veneris and the perineum, leaving an ugly gap toward the right ischiatic fossa. The edges and surface of the ulcer are indurated and dense, and I have concluded to make an application of a very decided character, namely, the hot iron. You have seen me use this frequently, for I have great faith in its merits, and I think you know that the results I have obtained are such as would encourage my faith.

Our patient has been etherized, and we must be careful not to set fire to the ether vapor with our irons. Such an accident happens every now and then. The irons are heated to a white heat, and I apply one firmly against the surface of the ulcer, and press it into its recesses. Another is necessary, for the surface to be cauterized is extensive, and I wish to do it thoroughly. When this is attained, I place against the parts a folded towel which has been soaked in cold water. I will now order the application of a light poultice, to assist in the removal of the eschar, after which we will apply a stimulating ointment, to aid the granulating process.

Case 5.—Syphilis.

Here is a young man who has a large swelling over each sterno-cleido-mastoid muscle, and on examining his anus we find on the flexor aspect of each, and going around toward their extensor surfaces, a profuse eruption, vesicular, squamous and papular. What is it? Beyond a doubt, syphilis. There never was a disease in the world which presented such an appearance as you see before you, except syphilis. It has manifested itself on this man's skin in three several types, constituting what is called the polymorphic variety. The glands involved in the present case are not those most frequently affected. Generally we look for what is called post-cervical adenitis, or, to speak in plain English, kernels in the back of the neck. But in the present case I find none. This does not surprise me, for I know how varied may be the manifestations of syphilis, what different parts of the body may be attacked by the hydra-headed monster.

Occasionally, a man comes into my office and says: "But, doctor, there is something strange about my trouble; I never heard of a case acting like this." To which I always reply, "I never saw two cases of syphilis exactly alike." Nor did I. So much depends upon a patient's constitution, and the circumstances with which he is surrounded, that no man can say beforehand just how he will be affected by this disease.

The patient before you is deeply impressed with the poison; he is in a miserable, pulled-down, cachectic condition, and must be built up with tonics and stimulants. At the same time I will have him given the sirop-Gibert as a specific, hoping it will aid in freeing his system from the poison.

MEDICAL DEPARTMENT OF THE UNIVERSITY OF NEW YORK.

CLINIC OF WILLIAM A. HAMMOND, M.D.,

Professor of Diseases of the Mind and Nervous System.

REPORTED BY WORTHINGTON MYERS, A.M., M.D.

Cerebral Congestion.

(*Concluded from page* 360.)

Cerebral hyperæmia, the first stage in a majority of cases, and very rarely arrested in the first or hyperæmic stage, seldom progresses further, and if so, is developed by symptoms much more serious in their character. In the hyperæmic stage the vessels have lost their elasticity, thereby preventing the access of blood to the head.

In the treatment the measures adopted are both sanitary and hygienic. Hygienic—first, removal of the cause. This is in a measure dependent upon the intellectual condition of the patient. Emotional disturbances must be avoided. If the patient continues to do those things which caused the attack, or which aggravate it when it does exist, no amount of sanitary precaution will cause the cure or removal of the disease. Exercise in the open air is most beneficial. A brisk walk, so as to draw the blood from the veins, and where all the muscles are brought into action, tends to draw the blood from the head. The patient must have sound and refreshing sleep. His room must not be kept at a temperature exceeding 60° in winter. The pillow must be neither too high nor too low. The head must be on a line with the body; if not, an angle is produced in the neck, which impedes the return of blood to the head. A round pillow should be used. The Japanese have the best ideas concerning this. They are constructed so as to fit in and fill up this space, and are admirably adapted. Attention should be paid to diet, not only as regards quantity, but quality of the food. Persons with weak stomachs, especially those subject to dyspepsia, suffer from cerebral congestion, caused by the pressure on the abdominal veins, thereby impeding the return of blood to the head. The food must be nutritious, not overstimulating, but of a character which will create healthy blood without exciting the action of the heart in too great a degree.

Medical Treatment.—Medicines must be employed which diminish the amount of blood to the head. Now, the bromides, in conjunction with ergot, possess the property of directly diminishing this amount of blood without producing anæmia. Of the bromides we have sodium, potassa and lithium, but no choice is requisite to accomplish this. They all possess the same property, viz., of diminishing the amount of blood to the brain and contracting the cerebral blood vessels. We do not wish to produce the condition, *bromism*, which indicates congestion, but merely to reduce cerebral hyperæmia. Now, in cases like epilepsy, for instance, it is different; here we give larger doses, so as to produce the condition, *bromism*. In cases of this kind I place the patient upon the following—

℞. Bromid. sodium, ℥j
Ex. ergot, fld., ℥ij
Pepsin,
Pulv. charcoal, "saccharated," āā ℥iij
Water, ℥ij.

of which a teaspooonful is given every three or four hours. This treatment should be persevered in for three or four weeks. He will tell me he feels better in a day or two, but the action must be still kept up. The cerebral vessels will gradually relax in their ordinary size. Nervous dyspepsia, gastric derangement, over-exertion of the mind, etc., are all most speedily benefited by this treatment.

Should the disease be caused by malaria, the treatment must be in accordance; but if caused by emotional disturbance, the above treatment is most effective. Of the local applications, the actual cautery is the best, and should be applied to the back of the neck, and repeated once in ten days. The old custom was to place keys and cold substances down the back, for the purpose of controlling hemorrhage. Here they acted on the sympathetic circle and thereby contracted the blood-vessels, and they in turn contract the cerebral vessels. The same action is produced by the actual cautery.

The action of any medicine which acts powerfully on the system is debilitating. The bromides produce, at first, an uncomfortable feeling. Their ultimate action is most beneficial. If you would give him strychnia, quinine, or any nerve tonic, you would not succeed in getting the blood out of his head. To control this action, the most efficient preparation is the following—

℞. Zinc phosphide
Nux vomica, āā grs.x.

To be made into thirty pills, one three times daily. If malarious, give him, in addition, quinine with hydrobromic acid. The effect of quinia to increase the quantity of blood in the brain is controlled by the acid. In the fully developed form of the disease, the treatment does not materially differ, only more active. Cold to head, cups to back of neck. Bromides fully and freely, and, if necessary, five or six ounces of blood from the arm, etc.

If the bowels are constipated, open them; not otherwise. The best and simplest cathartic which I have employed for years, is composed of ox-gall and extract aloes, fifteen grains each, with three grains podophyllin. One pill to be taken every night or every other night. This preparation or combination will relieve constipation in any form. The ox-gall is a mild and pleasant purgative, and softens the fæces. In this disease there is a tendency of the fæces to become hardened. If you have a quantity of fæces low down in the colon, then use this as an injection.

Lumbago.

Here is an illustration of a common affection, which we will be often called upon to treat, viz., lumbago. The question arises, What is lumbago? Some authors locate it in the muscles of the lumbar region; others in the nerves, as brachialgia in the brachial nerve, sciatica in the sciatic nerve. Lumbago is simply a slight inflammation of the neurilemma of the nerve. In some cases we find it red, in others no change whatever, upon examination. In sciatica we sometimes have atrophy in the limb.

This man has been a hack driver. Such persons are peculiarly liable to this affection, from exposure, and the position they occupy on the box, which tend to aggravate it, as does everything which tends to bring these muscles into action in contact with the nerves, thus developing a powerful paroxysm. He has taken mercury, potass. iodide, etc., with local applications, but without benefit.

We will give him hypodermic injections of ⅛ grain morphia. No better plan of treatment can be pursued in these affections, but they *must be continued*. The dose must be increased each day. Commence with ⅛ grain and inject, whether there is pain or not, and increase this until you have reached one or two grains, when you will find he will bear the last as well as the first; then commence and reduce the quantity each day, until you have reached the starting point, viz., ⅛ grain, and then stop.

In sciatica it is a little more obstinate. Now, here it makes *all the difference where you make your injection*. Endeavor to reach the nerve as nearly as possible, and this you can best do by making your incision midway between a line drawn between the tuberosity of the ischium and the great trochanter. It greatly facilitates the treatment to inject at this point. In lumbago we inject at the seat of greatest pain. In sciatica place the nerve upon a stretch; that is, cut down upon it, place the handle of your scalpel under it, and gently lift it up. It will stretch about an inch; then press it very lightly, and you will radically cure the patient. This is useful in extreme cases, which have resisted all other treatment. It will be found beneficial in all neuralgic affections. We will place a hypodermic injection and increase it each day, and apply the actual cautery to the small of the back on each side of the vertebral column.

Periscope.

Metalloscopy and Metallo-therapy.

These pseudo-therapeutical methods still continue to attract considerable attention in Europe. Though distrusting the value of the results, we present them to our readers.

Professor Eulenburg, of Griefswald (*Ueber Metallotherapie, Deutsche Medicinische Wochenschrift*, Nos. 25 and 26), has recently made some researches on the subject. He repeated Regnard's experiment, by bringing a galvanometer into connection with the skin, applying the metal plates, and then causing electric currents to pass between the two. After further experiments on six individuals, he came to the following conclusions: 1. The same plates, applied to various healthy individuals on the same parts of the skin, and under similar conditions, appear to be more active in some cases than in others, sometimes having almost no effect. 2. The galvanometric intensity of the metals is by no means alike in all healthy individuals; zinc, more effective than gold in some persons, is less so in others, and *vice versa;* the proportions even vary at times in the same individuals (owing, perhaps, to some alteration in the dampness of the skin).

Dr. C. Westphal (*Ueber Metalloskopie, Berliner Klin. Wochenschrift*, No. 30, 1878) has also made researches on the same subject, and almost at the same time as Eulenburg. After making himself personally acquainted with Charcot's experiments, and selecting like cases (effeminate, hysterical, hemi-anæsthetic individuals), he began by using silver coins, and arrived at conclusions similar to those of Charcot—namely, the return of sensibility, sometimes local, sometimes affecting the entire side of the body; and also the "transfer," *i. e.*, with increased sensibility of the anæsthetic spot, a corresponding diminution on the symmetrical spot of the opposite side of the body. He then tried the application of iron, magnetic stone, copper covered with varnish or sealing wax, and bone-markers, and obtained similar, although somewhat weaker, results. His assistant, Dr. Adamkiewicz, produced them also by means of mustard plaster, while hot water and the electric brush were used without effect. Westphal says, in conclusion, that one must admit the fact that sensibility is restored by means of metallic plates, but he doubts whether (as Eulenburg says) it takes place through galvanic currents, inasmuch as non-metallic plates produce the same results. He thinks, in opposition to Burq, that no absolute idiosyncrasy for special metals exists, because two metals may be effectual in one and the same patient. The therapeutic result is at the best but limited and temporary.

M. Thennes reported to the Biological Society, at the meeting of October 12th, that he had ascertained, in the cases of two hysterical patients, that thermal agents are capable of acting in the same way as metals and currents. With applications of ice in one case and of hot water in the other, the hemi-anæsthesia, achromatopsy and contraction disappeared.

A case is given in the *British Medical Journal*, October 12th, of hemi-anesthesia treated by the metals, under the care of Dr. Bennett. This practitioner has made a large number of experiments on this and others of a similar nature, the details of which, and his conclusion as regards metallic treatment, he proposes soon to publish. He pointed out to several who witnessed some of the facts here described, that it is obvious that the phenomena following external applications to anæsthetic skin is perfectly genuine, and the manner in which the experiments were performed certainly gave little opportunity for voluntary deception on the part of the patient, or partiality of theory on the part of the observer. He remarked that, so far as his experience went, the phenomena were not due to any special metallic action, as the application of wood was followed by all the results attributable to the metals. As far as he could judge from his own observations, the changes were due to the efforts of expectant attention, and the result of the manipulations acting on the body through the mind. This is not in discord with known facts, and more especially with such a symptom as anæsthesia, which is well known to be so changeable and so easily affected by the emotions. This is rendered all the more probable by the fact that the large majority of subjects treated successfully in this way are women of a hysterical and impressionable temperament.

On the Employment of Digitalis.

Professor Teissier, of Paris, in a recent discussion, said that after a clinical experience of thirty-five years Professor Teissier has come to the conclusion that there are few affections of the heart in which it is not a suitable medicine, and that it becomes in turn sedative or stimulant, according to the condition of the heart. He does not regard either hypertrophy or aortic affections as contraindicating its employment; and as to the diseases of the right side of the heart, they can but benefit by a remedy which both increases the *vis a tergo* and increases the nervous circulation. Professor Gubler observed that digitalis is truly a tonic of the heart, although its tonic action may be only indirect. The cases in which it succeeds best are those

where the cardiac disorders are most considerable, the increased energy being accompanied by debility of the organ. Every one is aware that, as regards force, there is a great difference between the impulse of the heart and the arterial pulse, all having seen cases wherein, while the heart beats violently, the pulse remains small and feeble. It is in such cases that tonic action is advantageous, digitalis proving useful when the cardiac action is the dominant feature. The true contraindications are found in the fundamental feebleness of the heart and irregularities of rhythm—what may be termed cardioplegia. Professor Gubler considers that sphygmographic tracings are highly deceptive, the positions of the instrument with relation to the artery entirely changing their character.

Electro-Puncture in Aneurism of the Aorta.

Drs. Dujardin-Beaumetz and Proust read a memoir at the recent meeting of the French Society for the Advancement of Science, in which they state that, as the result of the employment of electro-punctures in six cases of aneurism of the aorta, they are enabled to conclude that Ciniselli's procedure, as they have modified it, has become a simple operation unattended with danger, and constitutes an efficacious and rational mode of treatment. In one case, described by Dr. Proust, the patient having died from hemorrhagic infiltration of the lungs, it became possible to show that a thick layer of fibrinous coagula existed in the portion of the aneurismal sac where the needles had been applied. This case showed that the electro-puncture could be successfully practiced in patients whose general condition was a very grave one; that the coagula were deposited at the point of application of the positive pole; and that M. Gaiffe's improved instruments should be employed. M. Teissier observed that several experiments which he had performed corroborated the above conclusions, for he had found sphacelus produced in the arterial wall at the point of application of the negative pole, while several accidents arose during the application. But the application of the positive pole never gave rise to any accident, so that Drs. Dujardin and Proust have good reason for modifying Ciniselli's procedure by employing only the positive pole as the active agent, applying the negative one to a moistened plate with a broad surface placed at a distant part of the body.

—The physicians of Long Branch, N. J., have recently organized a medical association. During one of their meetings a query arose as to the number of people who never paid their doctors' bills, and a committee was appointed to investigate the matter. It was found that there are three hundred families who do not and have not for years paid a physician, but call upon first one and then another, as occasion requires. It was determined to organize a protective union.

Reviews and Book Notices.

NOTES ON CURRENT MEDICAL LITERATURE.

——Dr. J. B. Marvin, in a reprint from the *American Practitioner*, gives a sketch of yellow fever as it appeared at the Louisville Hospital last summer, of which institution he had charge. He enters carefully into its diagnosis, pathology and treatment. On the latter point he does not suggest anything new, following the old plan of commencing with diaphoretics, a purge, and quinine, a plan, we may add, which has proved the reverse of satisfactory in cases of the continued type.

——A thoughtful report on the care of the insane appears in the *Transactions of the Pennsylvania State Medical Society*, and as a reprint. The author is Dr. John Curwen, of Harrisburg. He sums up the question of how to occupy insane patients in the following words:—

"The conclusion of the whole matter may be briefly summed up in this, that while admitting the great benefit of occupation, and using every effort to induce the insane to engage in it, the practical solution of the difficulties incident to the work must be left to the best judgment of those to whose immediate care the insane are committed, who must be admitted to have a greater interest in the decision than those who look on at a safe distance; describing in glowing terms what should be, but never giving any assistance or counsel in regard to the best means of overcoming the difficulties which beset the subject."

——Prof. F. H. Gerrish, of Portland, has republished an oration delivered before the Maine Medical Association, on the duties of the medical profession concerning prostitution and its allied vices. His proposals are exceedingly theoretical and unpractical. While fully impressed with the necessity of doing something, he resolutely avoids the only straightforward and sensible plan, the one so often recommended in this journal, that of registration and examination. It is to be regretted that timidity and prejudice have so much weakened Dr. Gerrish's opinions.

——An interesting resumé of medication, addressed to the sympathetic nerve system, especially as illustrated in the exhibition of the

alkaloids muscarin, pilocarpin and atropin, appears in the Virginia *Medical Monthly*, by Dr. J. J. Caldwell, of Baltimore.

BOOK NOTICES.

Lectures on Localization in Diseases of the Brain. By J. M. Charcot, Professor in the Faculty of Medicine of Paris. Edited by Bourneville. Translated by Edward P. Fowler, M.D. New York, Wm. Wood & Co., 1878, pp. 133.

Lectures on Bright's Disease of the Kidneys. By J. M. Charcot. Collected and published by Drs. Bourneville and Sevestre. Translated by Henry B. Millard. New York, Wm. Wood & Co., 1878, pp. 99.

The name of Professor Charcot is intimately allied with some of the most fruitful studies of the pathology of the nervous system. He stands, with Brown-Sequard, at the head of the list of French investigators in this difficult branch. It has been a matter of surprise to us that none of his works have previously been introduced to the American public.

His work on localization of cerebral diseases begins with a series of most carefully written chapters on the anatomy, histology and nutrition of the various portions of the brain. The different lobes and convolutions are laid off and illustrated by numerous wood cuts and diagrams inserted in the text. Having in this minute manner studied the normal aspects of the organ, the author proceeds to a study of the diseases, with a special purpose of defining their symptoms in a clear language, and bringing them into relation with the portions of the brain which manifest lesions.

The chapters on the optic nerves, their origin and lesions, and the relations of these to the defects and peculiarities of vision, will have a high interest to ophthalmologists.

The general result of Charcot's researches is in favor of the cross action of lesions of the cerebrum, those in the left lobe affecting the right side of the body, and the reverse; in opposition to the views recently so vigorously urged by Brown-Sequard.

He also seems to have definitely established that the locations of cortical lesions which produce secondary degenerations correspond to the locations of the psycho-motor centers.

The second work we have mentioned above will probably appeal to a wider class of readers. The pathology of those multiform degenerations of the kidneys which we group under the title of Bright's disease has long been a mooted point.

After several introductory chapters of an anatomical and physiological character, M. Charcot divides Bright's disease into the three forms of parenchymatous nephritis, interstitial nephritis, and amyloid degeneration. The first mentioned he divides again into the acute and chronic forms, and he insists on fundamental differences between either of these and scarlatinal nephritis. The latter he classes as a variety of interstitial nephritis. In regard to amyloid kidney, while he points out that there is no pathognomonic indications of its presence, he classifies the symptoms so clearly that the reader will not find it difficult to recognize.

Two admirable colored plates accompany the book.

Essentials of Chemistry, Inorganic and Organic. For the use of Students in Medicine. By R. A. Witthaus, A.M. M.D., New York. Wm. Wood & Co., 1879. 18mo, pp. 257.

This is a sort of vest-pocket compendium of chemistry, arranged in the form of question and answer, so that the student can readily post himself on the inquiries likely to be propounded to him by the quiz master or the professor. If he makes himself able to answer the something more than a thousand questions it contains, we do not doubt he will pass with flying colors.

The Illinois State Medical Register for 1878-79. Published annually, under the supervision of the Chicago Medico-Historical Society, with the co-operation of the Illinois State Medical Society. D. W. Graham, A.M. M.D., editor. Volume IV. Chicago. W. T. Keener, 94 Washington street, 1878. pp. 200.

This State directory may be recommended, for form, accuracy, and good taste in its preparation, as equal to any in the United States. We have repeatedly insisted on the advantages to the profession arising from such publications; and when every State in the Union imitates Illinois, Massachusetts, and a few others, in this matter, the profession will have taken a long stride toward that unity of action which is essential to securing its utmost efficiency for the public welfare.

THE

Medical and Surgical Reporter.

A WEEKLY JOURNAL,

Issued every Saturday.

D. G. BRINTON, M.D., EDITOR.

The terms of subscription to the serial publications of this office are as follows, payable in advance:—

Med. and Surg. Reporter (weekly), a year,	**$5.00**
Half-Yearly Compendium of Med. Science,	**2.50**
Reporter and Compendium, - - -	**7.00**
Physician's Daily Pocket Record, - -	**1.50**
Reporter and Pocket Record, - - -	**6.25**
Reporter, Comp. and Pocket Record, - -	**8.25**

For advertising terms address the office.

Marriages, Deaths, and Personals are inserted free of charge.

All letters should be addressed, and all checks and postal orders drawn to order of

D. G. BRINTON, M.D.,
115 South Seventh Street,
PHILADELPHIA, PA.

1879.

PREMIUMS FOR NEW SUBSCRIBERS.

Special Offer to Our Old Subscribers.

From and after October 1st, any new subscriber will receive the REPORTER

15 MONTHS FOR $5.00,

to wit, from Oct. 1st, 1878, to Dec. 31st, 1879.

To enlist the interests of our Old Subscribers in the extension of our circulation, we offer, if they will send us, along with their own renewals, the amount for ONE new subscriber for one year (who will be entitled to the 15 months mentioned) to send them either (1) the HALF-YEARLY COMPENDIUM, for 1879; or (2), the PHYSICIAN'S POCKET RECORD, for 1879; or any of our other publications, to the amount of $2.50. These publications will include the following works now in press:—

GOODELL. Lessons in Gynecology.
LANDOLT. Manual of Examination of the Eyes.
SAYRE. Organic Materia Medica.

Besides, already published, Napheys' *Surgical Therapeutics*, Napheys' *Medical Therapeutics*, Dobell *On Cough and Consumption*, Bernard & Huette's *Operative Surgery*, Butler's *Medical Directory of the United States, etc., etc.*

THE VALUE OF DIAGNOSIS TO SANITARY SCIENCE.

The grand old doctors had a high opinion of diagnosis, though to our advanced thought they seem to have known little about it. *Medicus sufficiens ad cognoscendum morbum, sufficiens est ad curandum*, was their sublime boast. Perhaps it was because, after all, they could so rarely recognize a disease when they saw it. It seems incomprehensible how they could have overlooked the significance of heart and lung sounds, when there is hardly a hospital that does not present cases that you can auscult at three feet distance.

At any rate we can no longer pretend to cure all or even a respectable fraction of the diseases we can diagnose. Failing to cure them, we can, however, with some show of reason, say we can prevent them. Here is where a nice diagnosis stands vastly to our credit. Modern sanitation is, in fact, built on modern diagnosis. This was well set forth recently in an article by Dr. J. N. RADCLIFFE, in the *Practitioner*. He says:—

"The supreme merit of the discrimination of typhoid from typhus in relation to hygiene, was the clear and decisive proof then furnished that *a true sanitary method must rest upon the discrimination of diseases;* or in other words, that *the fundamental principle of true sanitary method was the discrimination of disease.*

"The recognition of this principle has governed all the sound work in hygiene since the period of which I have been speaking, as I shall have occasion to show in my next lecture. Indeed, true hygiene is only possible in proportion as clear and accurate knowledge of disease is obtained. Hygiene, the preservation of health, is in reality the art of preventing disease. In the earlier days of this art it was believed hat health could be maintained and diseases avoided in the gross. Experience has taught us otherwise, and that like all arts resting upon a scientific basis, hygiene, to be practiced successfully, must be founded on a scientific method. And such method consists in dealing with the particular conditions which favor the assaults of particular diseases in detail."

These conditions have been carefully enu-

merated by Dr. ARLIDGE, in his recent address before the British Medical Association, so far as they refer to manufactures and the arts, to what are called "trade diseases."

From a comprehensive view of the circumstances directly answerable for the production of disease, he constructs the eight following classes, some of them of wide-spreading influence, others of very limited operation.

1. The evolution of dust.
2. The evolution of unwholesome vapors and gases.
3. Materials of an irritant or poisonous nature acting through the system or only locally.
4. Over-heated air, whether dry or laden with moisture.
5. Compressed air and rarefied air.
6. External conditions acting upon the organs of special sense.
7. Over-exertion of particular parts of the body.
8. Mechanical appliances productive of bodily injury.

The most widely spread source of disease flowing directly from the labor pursued is assuredly the evolution of dust. Its presence and action are observed in all textile factories; in potteries; in mining, whether for coal or metallic ores; in cutlery manufacture; in cutting and polishing stone, ivory, and mother-o'-pearl; in the grinding of flour; and, in fact, in many other small trades that need not be specified. The other causes are, however, wide reaching, and not a physician but can recall cases brought about by them.

It will be noted that all or nearly all of them are preventable; and were the attention of inventors more prominently called to the matter, and stimulated by offers from those interested in the good of the community, no doubt there is hardly a trade but could be prosecuted innocuously. There is here a field for practical philanthropy which asks cultivation, and the benefit of any discovery in which will extend world wide. As it is an excellent mode of stimulating investigation, will not some one offer a "Prize" for the most useful discovery in this branch?

NOTES AND COMMENTS.

The Importance of Medical Observation in Rural Districts.

An esteemed correspondent, long identified with medical instruction, writes us, from a western city:—

"You have often appealed to country physicians for more facts and opinions from their experience. There is a large field that is not cultivated, or a great number of facts and observations that, if recorded, would be new, and as important as any found in the city. The practice of medicine and surgery has entirely different phases in city and country."

We avail ourselves of this opportunity to repeat the opinion referred to. Take, for instance, the very important class of malarial diseases. They are hardly ever seen in the great cities; never, with the physiognomy they present in country localities. Again, the adynamic type, so constantly met with in disease in cities, is far less rare in many healthy rural districts. Pneumonia has neither the same onset nor the same history in the two. As the vast majority of physicians and patients are not residents of cities, it is certainly most fit that the diseases of the residents of the country should receive special attention, and this can only be done by the physicians who are their medical attendants.

The Diagnosis of Early Hip Disease.

Quoting a thesis of Dr. Ollivier, a writer in the Boston *Medical and Surgical Journal* says—

Mistakes in the diagnosis of hip disease are, unfortunately, not uncommon. The results of such mistakes are deplorable.

It has been said that every case of hip disease passes through a stage when it is called "rheumatism." It is precisely at this stage that a diagnosis should be made.

Cases are not unfrequently seen where a diagnosis of "incipient" hip disease is made, although the disease has progressed so far that suppuration of the joint is imminent; it being apparently the opinion of some that hip disease is not present until grating can be felt on manipulating the joint under an anæsthetic, or, in other words, until the disease has progressed to a dangerous extent.

The liability to error will be less if the following facts be kept in mind:—

1. Serious disease at the hip joint may exist

when no pain is complained of, and when no tenderness can be discovered.

2. Hip disease may be present, although the motion at the hip joint is quite free.

3. If the motion at one hip joint is more limited than at the other, hip disease must always be suspected, and the symptom regarded as highly characteristic of hip disease.

4. At the earliest stage the limitation of motion most readily recognized is in the direction of extension.

On Opening the Abdomen to Relieve Intestinal Obstruction.

In a discussion on this subject, Mr. Teale, an eminent London surgeon, said—

"I must confess to having myself a strong bearing toward the operation, on the grounds both of theory and experience. I have six times opened the abdomen in apparently hopeless cases of obstruction of the bowels, and I do not consider that in any one of them the chance of recovery was taken away by the operation. The operation is justified on two cardinal grounds:—

"1. That the simple opening of the peritoneal cavity, in order to search for the cause of obstruction, is not of itself a dangerous operation.

"2. That there are many cases of obstruction of the bowels which must prove fatal, unless relief can be given, which can only be rightly directed by means of exploration of the abdominal cavity.

"As to the harmlessness of opening the peritoneal cavity, I need hardly remind you how constantly this is done in operations for hernia."

Alum in Baking Powders.

In a recent number of the *Scientific American*, Mr. Henry A. Mott, who had lately been appointed chemist by the United States Government for the Indian Department, publishes the result of his investigation into the quality of baking powders as they are supplied by the large manufacturers. He ascertained, he says, that 50 per cent. were adulterated. Every powder he could find in the market he submitted to analysis. He examined forty-two—twenty-nine of them came from various sections of the country, and had been offered to the Department; thirteen were procured from various grocery stores in New York.

The best powders are composed of bitartrate of potash, tartaric acid, carbonate of ammonia and bicarbonate of soda, bound together by a little starch.

The injurious powders are composed of alum and bicarbonate of soda, and often contain terra alba (white earth), insoluble phosphate of lime, etc. The effect of alum when taken internally has been shown by Wilmer and others to produce dyspepsia, constipation, vomiting, griping and even inflammation of the gastro-enteric mucous membrane, as it is a powerful astringent acting chemically on the tissues.

The Pyscho-motor Centres.

A remarkable, and at the same time extremely interesting, paper appears in the October number of *La Revue Mensuelle de Médicine et de Chirurgie* (Baillière), upon "The Pyscho-motor Centres of New-born Animals." The author is Professor de Tarchanoff, of St. Petersburg, and his experiments go to prove that these psycho-motor centres exist in certain of the lower animals, and can be electrically excited even before birth. This doctrine being so diametrically opposed to the generally accepted theories, the students of neurology will await with interest more full details on the subject.

Sanitary Legislation.

A correspondent in Tennessee requests us to remind all physicians that now is the time to urge upon political bodies active sanitary legislation. Delay will allow the impression of the late scourge to grow dull. Active work now will secure appropriate preventive measures. Let each physician make it a personal duty to do something in aid of this, and at once.

Effects of Winds on Health.

Mr. Laughton, of Greenwich, says, in a late lecture—

The warm air of Switzerland is more probably the tail-end of the air over the Atlantic Gulf Stream, which comes to the hills, is cooled, deposits its moisture, is dried, and, becoming warmer from condensation of the moisture, ascends, then descends the other side of the hills, and, being very dry, eats away the ice. Such winds have been observed elsewhere; that in North America, from the Pacific, having crossed the Rocky Mountains, is very dry, and produces the prairies. It dries up to tinder the grass and wood everywhere. The boundary

line of the prairies sways backward and forward from year to year.

Cold winds, on the other hand, are equally startling in their effects; such as the cold winds of Sydney—the "Southerly Buster"—and of Texas, and Minnesota, where the temperature of the air may in a few minutes fall 30 or 40 degrees Fahr. In South America the cold winds are felt the whole length of the continent, and kill the people, cattle, and even fish in the rivers and lakes. The cold wind of England in May has been long known. Watery vapor in the air acts as a heat.

The Contagion of Scarlatina and Diphtheria.

Dr. E. M. Snow says, in his last report as Registrar of Providence—

Whatever fanciful theories we may indulge in, and whatever may be our belief in regard to the personal contagion of scarlatina and diphtheria, there is no certain nor probable evidence that either of these diseases usually spreads in the community through contagion. It is certain that diphtheria is a filth disease, and usually spreads from the influence or effects of foul air arising from localized filth. The contagion of diphtheria never produced any extensive prevalence of the disease without the presence and aid of this local filth, and there is reason for believing that the disease often arises and becomes prevalent without the aid of any personal contagion. The tendency of belief at the present time is that scarlatina is also a filth disease, and very similar in the conditions of its prevalence to diphtheria. Pure air, personal cleanliness and abundant sunlight are the best preventives of these as well as of all other filth diseases.

Curious Form of Insanity.

Dr. W. W. Ireland says, in the *Journal of Medical Science:* Instances are by no means uncommon where the reasoning faculties are much deranged, as evinced by extravagance in speech, but where the power of doing complicated work and estimating weight and distance are well preserved.

A patient once, at Musselburgh, and now in the Roxburgh District Asylum, has often struck me as exemplifying this in a remarkable degree. The man pours forth a torrent of words, sometimes stating the wildest delusions, sometimes giving vent to the most uncouth combination of words, in astonishing variety, where one can perceive no connection, or a strange association, between the words, or the words and the ideas, often in an excited or frenzied manner, and in the midst of all this mad talk he will go on working in a calm, methodical way; for example, he will plant out leeks, tracing the lines regularly, and putting in each plant at an equal distance from the other. I do not remember ever to have heard this man make a coherent remark, but I saw an ingenious snare for birds which he had made, and he once showed me two blackbirds which he had caught.

The Form of Hystero-Epilepsy.

M. Charcot, in a paper read before the Société de Biologie July 15th (*Progrès Médical*, July 27th), shows that hystero-epilepsy, hysteria major, presents a type which, apart from secondary variations, remains always identically the same in its chief features. The attack can be divided into four periods preceded by an *aura*. The first stage is epileptoid, and does not differ from the comital malady except in being susceptible of control by ovarian pressure or the electric current; it passes through a tonic state, to which succeed clonic spasms. After a temporary remission the period of contortions commences, at the time when the first hallucinations are produced. The third stage is that of passionate attitudes; the face expresses joy, terror and pleasure, the patient recalls her friends or remembers her enemies. In the last stage the patient, having come again to herself, is still under the influence of the temporary hallucinations; then, little by little, these latter phenomena disappear.

Mechanical Methods of Relieving Hiccough.

Dr. Belot, in his monograph on yellow fever, says that hiccough may be arrested by compressing with the fingers the phrenic nerve on the level of the os hyoid. In other instances it yields to the application of cold water on the stomach, to opium, to belladonna in small doses, to ice swallowed in small pieces.

In an obstinate case of hiccough, which had resisted all the various means tried, Dr. Faivre compressed the epigastrium forcibly by means of a tourniquet. In five minutes the hiccough, which had lasted uninterruptedly for fifty days, had completely ceased. At first it reappeared on the compression being relaxed, but afterward was permanently arrested.

Correspondence.

An Unusual Midwifery Case.

Ed. Med. and Surg. Reporter:—

I was called, Monday, September 16th, 1878, at 3 P.M., to Mrs. M., aged forty-two, in labor for the sixth time; found her on her knees on the floor, waited upon by two experienced female attendants. On making an examination per vaginam found os well dilated and child presenting vertex right occipito-anterior; strong expulsive pains coming on; the child born about 3½ P.M. Cord found so short that it (the child) could not be taken entirely from the vagina until the cord was tied and cut. Put the woman in bed and introduced hand after the placenta, when I found another child lying across the womb, presenting breast and arms, with both hands hanging in the vagina. Strong pains coming on, I had a great deal of trouble in introducing right hand and getting hold of right foot. At this time, fearing some trouble, I sent for my old friend, Dr. N. M. Hoover. But, persevering in my efforts, I secured the right foot, brought it down, applied a loop over the ankle, and, by pulling on the loop and pushing hands and arms back, succeeded in delivering child about 4 P.M.; child dead. Waiting a few minutes until the woman rested, introduced hand and removed the placenta; found the placental end of the first cord two and a half inches long and partly torn away from the placenta; the other cord was of the usual length. Applied bandage. Woman rested well after her labor; left her in good condition and in good hands at 5 P.M. At 7 P.M. messenger came in haste and said Mrs. M. was suffering great pain. Dr. Hoover and I went down (distance one mile from town) and found her suffering excruciating pains in right shoulder; would change to the left side, right side, left shoulder and neck; were intermitting in character; would be very severe in one part for a few minutes, then leave for about the same length of time, and come again in the same or another part. Respiration appeared not to affect the pain in any way.

On consulting decided to get her under the influence of morphia as soon as possible; applied large hop fomentations over the regions where the severe pain is felt, introduced the hand into the vagina, turned out the clots, found the womb contracted down, pulse 140 and weak; decided to give her stimulants and beef tea at intervals of fifteen minutes, also half a grain of morphia sulphate, at intervals of half an hour, from 8 P.M. until 11½ P.M., when I stopped it and gave ten grains quinia sulphate, but still no diminution in frequency or severity, until ten minutes past 2 A.M., Tuesday, when they left and did not recur again; patient very much exhausted; became very drowsy; had to be waked up every fifteen minutes to take stimulants and beef tea, when she would relapse into her former stupid condition. Pulse at 6 A.M. reduced to 120 and stronger, temperature, 102°; drew urine during forenoon; left her at 1 P.M., to visit another patient; returned at 6 P.M.; found her nearly out of that stupid condition; recognized friends, felt much better; temperature 101½, pulse 110; drew urine; lochial discharge becoming offensive, had bed removed to middle of room and free ventilation, with removal of everything about her person that was soiled with the discharge; bowels becoming tympanitic applied large hop fomentations and gave an injection of tepid water and turpentine, which, being retained, gave her another at 12 M., which was also retained; at 4 A. M. gave her another, after which she passed off some of the water of the last injection, with considerable wind accompanying it; complained of a feeling of fullness about the bowels; temperature 100°, pulse 100 at 6 A.M., Wednesday, feeling very much better. At 10 A.M. had a very large and very offensive passage from the bowels which was of a dark-brown color. At 11 A.M. had another offensive passage; pulse ran up to 140, thready; temperature 103°; bowels very much distended. 12 M., temperature 103½; pulse 150; very weak. 1 P.M., temperature 104; pulse 160, hardly perceptible; continued sinking until 10 minutes of 2 P.M., when, turning on her right side, a few spasmodic contractions of the muscles of the left side of the face and all was over. There was not more than the usual hemorrhage; her previous labors had all been easy; her health had always been very good.

On examination of the second child, found the right humerus broken and some contusions about the neck. Could the expulsive pains have been strong enough to do this (they were very strong)?

Was the cause of the second child's death due to the rupture of the placental end of the first cord?

What was the probable cause of those neuralgic pains?

What was the immediate cause of death?

B. A. Henlen, M.D.

North Hope, Pa., Dec. 10th, 1878.

Maternal Impressions.

Ed. Med. and Surg. Reporter:—

I notice an article in the Reporter, by Dr. Snively, on "Maternal Impressions." I think the true interpretation of such abnormal fœti is as follows: A reversion by remote heredity to some former ancestor of the brute creation. It is through such exceptional individuals and the "rudimentary organs" that we frame a law of descent and development, *a la* Darwin. We see the same thing in those moral monstrosities in which, now and then, the wild beast ferocity of some precocious criminals is but the hereditary cropping out from remote savage ancestors many thousand years ago, possibly dating from some transition stage of lower brute to higher man. As this could only be accomplished by a perpetuity of transmitted

cell impressions, which after many years of favorable conditions and environment at last horrify us with a glimpse of so dark a possibility—a character destitute of one spark of human feeling and given over wholly to brutishness—I think if our religious teachers would give over their theories of "total depravity," and give more attention to what I must call brutal heredity, they would find that the race could be better improved by conscious selection in marriage than could be accomplished by all the curses and anathemas that ever issued from the rostrum of Mr. Talmage or Mr. Spurgeon. Yours respectfully,

Westtown, N. Y. A. J. Jessup, M.D.

Case of Retarded Vaccination.

Ed. Med. and Surg. Reporter:—

On March 1st, 1876, I vaccinated Ida M. with virus taken from the cow, in four places on the left arm, near the insertion of the deltoid muscle.

I called four days after, found one of the scarifications very red, but there was no sign of a papule; the others did not show any signs of taken; the redness of the one continued for five or six days then disappeared.

On the 22d of March they all looked about the same as when I scarified them; I told the mother, as they had not taken, I would call in two weeks and revaccinate her.

I called at the appointed time, but the mother declined having it done, as she was very busy, and did not want the trouble then. She asked me to call again at my convenience.

I called four weeks after, which made it eight weeks from the time I had vaccinated her, when, to my surprise, I found that the scarification which had been red had formed a papule; it passed into a vesicle, went through all the stages of a perfect vaccine scab, leaving a well marked cicatrix. Her arm was very much swollen. She had considerable fever.

The other scarifications did not take.

John R. Partenheimer, M.D.

The New California Remedies.

Several correspondents have asked for the republication of Dr. Gibbons' article on the new remedies introduced by Parke, Davis & Co., of Detroit, and largely advertised.

That firm has written us, asking a suspension of judgment until they can make certain explanations. We have called their attention to the fact that not only Dr. Gibbons, but also the St. Louis *Clinical Record*, has thrown grave doubts on these remedies with fantastic names, *yerba reuma, cascara sagrado*, etc., and its strictures must also be met.

Should Parke, Davis & Co. be able to answer fairly these criticisms, our columns will be open to them. If they fail to do so in a reasonable time, we shall republish Dr. Gibbons' article as a warning to the profession to avoid these drugs.

News and Miscellany.

Extracts from the Bulletin of the Public Health Issued by the Surgeon General United States Marine Hospital Service for the Week Ended December 7th, 1878.

Yellow fever has almost wholly disappeared from the Mississippi Valley. In New Orleans 4 deaths were reported during the past week. The total number of cases up to date is reported as 22,600. There was one death and one new case at Port Gibson, Miss. One new case (a returned refugee) at Meridian, Miss.; one death at Memphis on December 6th; 3 cases and one death at Mobile, for week ending December 10th.

Mobile.—For the month ended October 31st there were 132 deaths, 40 being from yellow fever; 12 from phthisis.

Havana.—During the week ended December 7th there were 10 deaths from yellow fever, and 12 from small-pox.

St. Thomas.—The United States Consul telegraphs that yellow fever has appeared in the Island.

German Empire.—No statistical returns received. Diphtheria is prevalent in various portions of the Empire, and public attention has been directed toward means of prevention of this scourge by the prostration of 6 members of the Royal family of Hesse with the disease, 2 having died.

Africa—Tangier.—During the 4 weeks preceding October 5th, there were 1069 deaths at Casa Blanca, from cholera, 163 from small-pox, 32 from typhus fever; the total deaths from these diseases being 1264 in a population estimated at 5500. The Consul reports that no note is taken of deaths by famine, accident, or common diseases.

India.—In Madras enteric fever of a fatal type is very prevalent in the native portions of the city, which are described as extremely filthy, and quite devoid of sanitary regulations. In 1876–77 the deaths from small-pox in India numbered 200,000, and in the preceding two years, 500,000. During 1875–76 only 2 deaths from this disease occurred among 120,000 European troops, the exemption being clearly due to vaccination.

The latest returns from the following cities give the annual death-rate per 1000: for Madras at 52; Alexandria 50; Cracow 39; Bombay 37; Munich 34; Calcutta 33.4; St. Petersburg 32; Rome 28; Vienna 27; Berlin 26; Paris 25; Rotterdam 25; Hamburg 23; Geneva 20; Copenhagen 19; Stockholm 15.

—The Surgeon of the Virginia Penitentiary says, in his annual report, that of 350 convicts hired to the James River and Kanawha Canal Company last year, 32 died from "bad treatment, exposure and filthy accommodations." This shows a mortality of 9 per cent., the mortality in the prison being only 2½ per cent. The Legislature has appointed a committee to investigate the matter.

Messrs. Wyeth's Preparations.

Several of these have been recently analyzed by the well known London chemist, Dr. C. R. C. Tichborne, F.C.S., whose results are published in the *Medical Press and Circular*, Nov. 27. In regard to their dialysed iron, he says:—

Our analysis of Wyeth's preparation gave—

Ferric oxide (in the soluble form)	6.228
Chlorine,	.100
Water,	93.672
Total,	100.000

We may say, therefore, that it contains in the ounce fluid 27.68 grains of a basic salt of iron, which, strange to say, almost exactly agrees in composition with the results obtained by Graham. In his experiments he obtained a red liquid containg 98.5 parts of oxide, and 1.5 of muriatic acid. The salt contained in Wyeth's preparation contains 98.42 ferric oxide, and 1.58 of chlorine.

In reference to their "saccharated pepsine," Dr. Tichborne says—

No analysis will absolutely show the value of a pepsine; indeed, it is of very little use, except to show up a worthless, or sham preparation, and we are sorry to say there are such in the market. No chemical analysis will give the information that a physiological test will; and we can state that ten grains of this saccharated pepsine when dissolved in two ounces of water, with the addition of a little hydrochloric acid, dissolved 150 grains of coagulated albumen in five hours, at a temperature of 80–90 deg. Fahr.

Messrs. Wyeth's preparations do them generally much credit, and deserve encouragement from the medical profession, who daily are becoming more alive to the necessity of using reliable preparations in their practice.

The Woman-Doctor Question in Russia.

It is sometimes stated that the woman doctor is a recognized institution in the empire of the Czar, a belief in some sort warranted by the prominence which has of late years been given in the medical schools of St. Petersburg to the training of women students in physic. According to the Russian *Medical Gazette*, it would appear that the question of women medical practitioners is not yet settled in Russia. On the 29th of October last the right of women who had completed a course of medical training to practice medicine in the empire was brought formally under the consideration of the Sanitary Council attached to the Ministry of the Interior. After prolonged discussion, the Council unanimously resolved, as follows:—"Although the right to practice medicine by the female students of the medical faculty has not to the present been recognized by the legislative authority, having regard to the evidence now submitted by the professors, that these students are fully competent to exercise the medical profession, the Sanitary Council will itself endeavor to obtain from the Government the authorization necessary for them to enter upon practice."

Items.

—A bill for the establishment of a Department of Public Health has been introduced into the Senate. This is a movement which should have been taken long since.

—Forty-eight American ladies, students of medicine, under the guidance of a professor, have recently visited the hospitals and scientific establishments of Venice, Milan, Florence and Parma.

—A London court has fined a man who caused a public nuisance by manufacturing sulphate of ammonia $15,000, though if he abates the nuisance and pays the costs, $10,000 in a month, the fine will be remitted.

QUERIES AND REPLIES.

Wisconsin desires suggestions for the best method of removing India-ink stains.

In reply, we would say that the only process of any avail we know of is to tattoo it with a flesh-colored fluid. Other suggestions will be gladly received.

Dr. S. B., of Pa.—Strychnia has been frequently used with success in paralysis, by the hypodermic method. One injection a day, commencing with the minimum dose, and slowly increasing until physiological symptoms appear, is the plan recommended.

Student.—It is well known that in India the British government does not attack the peculiar religions of the people. In regard to the particular point you inquire about, we observe that the British Surgeon General at Madras says, in a report on the sanitary measures in India, just presented to Parliament, that prostitution is a recognized, and not always a despised, trade; it is a form of religious consecration, and, in the shape of concubinage, is a common feature of native life. Prostitutes in India are not the social outcasts they are in this and many other countries.

MARRIAGES.

CARTER—LOWE.—In Milford, N. J., on October 29th, 1878, at the residence of the bride's parents, by the Rev. Isaac M. Patterson, Mr. Henry Carter, of Cranbury, N. J. (formerly of Bloomsbury, N. J.), and Miss Georgia, daughter of John N. Lowe, M.D.

MAYNARD—MORFORD.—At the Reformed Church, Nyack, N. Y., Wednesday, November 28th, by the Rev. W. A. McCorkle, D.D., Elsie de Reimer, second daughter of A. D. Morford, and Edward H. Maynard, M.D.

RIDER—STOUT.—At the residence of the bride's parents, Berlin, N. J., on the 20th ultimo, by Rev. E. H. Stokes, D.D., Hon. A. J. Rider, of the C. C. Commercial College, Trenton, N. J., and Ida M., second daughter of Daniel M. Stout, M.D., and niece of the officiating minister.

SHEPHERD—GENNETT.—In Cincinnati, Ohio, on Monday evening, November 18th, by Rev. D. H. Moore, D.D., President of Wesleyan Female College, at the residence of J. C. Thompson, Esq., 415 West Seventh street, Dr. G. W. I. Shepherd and Miss Annie E. Gennett.

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

SAVORY & MOORE, 143 New Bond Street, London.

Price Medal.

Silver Medal.

Gold Medal.

Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the Introduction of Pepsine by Boudault in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris.

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUCERA & CO., Agents,

NEW YORK.

TO PHYSICIANS.

THE scarcity and high prices of Cinchona barks and Sulphate of Quinia, and the prospect of only a slight reduction in these prices, makes the present a favorable opportunity of calling the attention of the profession to the *combination of all the bark alkaloids.*

Much attention has been given to this subject in Europe and India.

The growing appreciation by the medical profession of the United States of

CINCHO-QUININE

is due to the fact that it retains the important alkaloids IN COMBINATION, — a combination which in practice is *preferable to perfect isolation or separation* of these alkaloids.

In addition to its superior efficacy as a tonic and anti-periodic, it has the following advantages, which greatly increase its value to physicians : —

1st, *It exerts the full therapeutic influence of* Sulphate of Quinine, *in the same doses*, without oppressing the stomach, creating nausea, or producing cerebral distress, as the Sulphate of Quinine frequently does ; and it produces much less constitutional disturbance.

2d, It has the great advantage of being *nearly tasteless.* The bitter is very slight, and not unpleasant to the most sensitive, delicate woman or child.

3d, It is *less costly :* the price will fluctuate with the rise and fall of barks, but will always be much less than the Sulphate of Quinine.

4th, It meets indications not met by that Salt.

The following well-known Analytical Chemists say : —

"UNIVERSITY OF PENNSYLVANIA, Jan. 22, 1875.
"I have tested CINCHO-QUININE, and have found it to contain *quinine, quinidine, cinchonine, cinchonidine.*
F. A. GENTH,
Professor of Chemistry and Mineralogy."

"LABORATORY OF THE UNIVERSITY OF CHICAGO, Feb. 1, 1875.
"I hereby certify that I have made a chemical examination of the contents of a bottle of CINCHO-QUININE; and by direction I made a qualitative examination for *quinine, quinidine,* and *cinchonine,* and hereby certify that I found these alkaloids in CINCHO-QUININE.
C. GILBERT WHEELER,
Professor of Chemistry."

"I have made a careful analysis of the contents of a bottle of your CINCHO-QUININE, and find it to contain *quinine, quinidine, cinchonine,* and *cinchonidine.*
S. P. SHARPLES, *State Assayer of Mass.*"

TESTIMONIALS.

"WELLFLEET, MASS., Nov. 17, 1876.
"I have used CINCHO-QUININE, and can say without any hesitation it has proved superior to the sulphate of quinine. J. G. JOHNSON, M.D."

"MARTINSBURG, MO., Aug. 15, 1876.
"I use the CINCHO-QUININE altogether among children, preferring it to the sulphate.
DR. E. R. DOUGLASS."

"LIVERPOOL, PENN., June 1, 1876.
"I have used CINCHO-QUININE, obtaining better results than from the sulphate in those cases in which quinine is indicated.
DR. I. C. BARLOTT."

"RENFROW'S STATION, TENN., July 4, 1876.
"I am well pleased with the CINCHO-QUININE, and think it is a better preparation than the sulphate. W. H. HALBERT."

"ST. LOUIS, MO., April, 1875
"I regard it as one of the most valuable additions ever made to our materia medica.
GEORGE C. PITZER, M.D."

"RICHMOND, VA., March 28, 1877.
"I believe that the *combination* of the several cinchona alkaloids is more generally useful in practice than the sulphate of quinine uncombined.
"Yours truly, LANDON B. EDWARDS, M.D.
Member Va. State Board of Health, and Sec'y and Treas. Medical Society of Va."

"CENTREVILLE, MICH.
"I have used several ounces of the CINCHO-QUININE, and have not found it to fail in a single instance. I have used no sulphate of quinine in my practice since I commenced the use of the CINCHO-QUININE, as I prefer it. F. C. BATEMAN, M.D."

"NORTH-EASTERN FREE MEDICAL DISPENSARY.
908 East Cumberland St., Philadelphia, Penn.,
Feb. 29, 1876.
"In typhoid and typhus fevers I always prescribe the CINCHO-QUININE in conjunction with other appropriate medicines, the result being as favorable as with former cases where the sulphate had been used.
"F. A. GAMAGE, M.D."

SYRUP-GLYCEROLE
OF
FERROUS CHLORIDE.

The Combination which all Forms of Iron must assume before Assimilation.

Superior to all other Iron Salts in that, while it is readily taken into the circulation, and does referruginate the blood, it does not ordinarily cause constipation nor headache. It is very pleasant to the taste, and is unalterable.

Ferrous Chloride is a neutral salt, consequently it has no action upon the teeth, and may be administered fearlessly. This fact and the delightful taste of my preparation render it an advantageous form for administration to children. Each fluid drachm contains one grain of Ferrous Chloride, which, owing to the certainty of its assimilation, is a full, active, adult dose.

McKELWAY, APOTHECARY,

Successor to O. S. HUBBELL.

1410 CHESTNUT ST., PHILADELPHIA.

WYETH'S
DIALYSED IRON.

(FERRUM DIALYSATUM.)

A Pure Neutral Solution of Peroxide of Iron in the Colloid Form. The Result of Endosmosis and Diffusion with Distilled Water.

PREPARED SOLELY BY

JOHN WYETH & BRO.,

PHILADELPHIA.

This article possesses great advantages over every other ferruginous preparation heretofore introduced, as it is a solution of iron in as nearly as possible the form in which it exists in the blood. It is a preparation of invariable strength and purity, obtained by a process of dialysation, the iron being separated from its combinations by endosmosis, according to the law of diffusion of liquids. It has no styptic taste, does not blacken the teeth, disturb the stomach, or constipate the bowels.

It affords, therefore, the *very best* mode of administering

IRON

in cases where the use of this remedy is indicated.

The advantages claimed for this form of Iron are due to the absence of free acid, which is dependent upon the perfect dialysation of the solution. The samples of German, French and American Liquor Ferri Oxidi Dialys. which we have examined give acid reaction to test paper. If the dialysation is continued sufficiently long, it should be tasteless and neutral.

Our dialysed Iron is not a saline compound, and is easily distinguished from Salts of Iron, by not giving rise to a blood-red color on the addition of an Alkaline Sulpho-Cyanide, or a blue precipitate with Ferro-Cyanide of Potassium. It does not become cloudy when boiled. When agitated with one part of Alcohol and two parts of Ether (fortior), the Ether layer is not made yellow.

Physicians and Apothecaries will appreciate how important is the fact that, as an antidote for Poisoning by Arsenic, Dialysed Iron is quite as efficient as the Hydrated Sesquioxide (hitherto the best remedy known in such cases), and has the great advantage of being always ready for immediate use. It will now doubtless be found in every drug store, to supply such an emergency.

Full directions accompany each bottle.

Physicians will find our DIALYSED IRON in all the leading drug stores in the United States and Canada.

It is put up in bottles retailing for **ONE DOLLAR**, containing sufficient for four months' treatment Large size is intended for hospitals and dispensing. Retail at $1.50. Price Lists, etc., senton application.

JOHN WYETH & BRO.

Editorial Department

THE

Medical and Surgical Reporter.

A WEEKLY JOURNAL,

Issued every Saturday.

D. G. BRINTON, M.D., Editor.

THANKS, PROJECTS, AND REQUESTS.

In drawing to a close our editorial labors for the year 1878, we tender our thanks to our numerous readers for their continued support, and the frequent expressions of satisfaction they have sent us from time to time.

It has been in the past, and it shall steadily continue to be, our effort to publish a journal wholly free from any other influence than the benefit of the regular profession in all sections of our common country. We shall aim to discuss only such subjects as are endowed with a common interest to all; and while we have never hesitated to express in unmistakable terms our opinions on medical questions of the day, we reiterate here that correspondents who differ from us shall not on that ground be restrained the expression of their views in our columns. We do not aim to carry points, but to throw the utmost light, from all sides, on unsettled questions.

In regard to the future, we would state that on the first of the year we shall commence the volume with entirely new and clear type, and on a superior grade of paper. While the mechanical portion of the Reporter is thus improved, we have also arranged for further improvements in its hospital and clinical reports, and other literary contents. As heretofore, we shall continue to have the support in this line of the most eminent names of the American profession.

But this will not be to the exclusion of writers of less extended fields of observation, but of not less ability in their field. As we said in a recent number, the intelligent physician who resides in a small town or in the country, has opportunities of observing phases of disease which the resident of the city has not; he has time and means to make new and useful studies for which the hospitals and clinics of a metropolis offer no facilities whatever; and it has been and is our opinion that a more free use of the pen on the part of such members of our profession would advance it greatly. The Reporter offers itself as a channel for such communications, and they will be always welcome.

We would further add that it has been an object with this journal to collect and disseminate professional news; and that all our readers would do us a favor, and the medical com-

munity a pleasure, by sending us items of professional interest in their several localities, such as the marriages and deaths of physicians, meetings of medical societies, notes of prevailing epidemics, biographical sketches of deceased members of our profession, notes of malpractice suits, and also any local newspaper containing items of medical interest.

Notes and Comments.

Why the Philadelphia County Medical Society is a Secret Society.

The Philadelphia County Medical Society, however efficient in many directions, is in one respect a standing discredit to the profession of medicine. It sits with closed doors, refuses admittance to reporters, and even forbids its own members from giving so much as an epitome of the scientific papers read before it to the general professional public. We venture to say that not only no other medical society, but no other professedly scientific association in the world is equally narrow and short-sighted.

And what is the "true inwardness" of this unheard-of action? We know it, and shall divulge it for the benefit of those medical journals at a distance who have expressed surprise at such a state of things (as well they might).

There is a medical journal, not often heard of, in this city which, having failed in every other way to attain even a local circulation, its publishers thought might have some life galvanized into it as an "organ." Its editor, with a few active friends, one or two of them, we are sorry to add, officers of the society, rushed through a resolution one summer afternoon, that the "organ" should be the exclusive one, and the measure is carried out as has been noted.

The poor befooled members do not get a cent for their articles, the publisher having stipulated that he was to own them, but not to pay for them! Their papers attain a circulation of only a few hundred copies, around town principally; and as the journal in question is not of very frequent issue, and would be pretty sure to be behind time anyhow, of course, the embargo must be stringently enforced on more wide-awake periodicals. This is the explanation of the matter, and what a story it is to tell of the principal medical society of this city!

News and Miscellany.

OBITUARY.

DR. JAMES B. WILSON,

Of Salem, Indiana, died on Thanksgiving morning, at one o'clock, of paralysis.

At a regular meeting of the Washington County Medical Society, held at Salem, December 2d, 1878, the following resolutions were adopted:—

WHEREAS, Our beloved associate, Dr. James B. Wilson, has been removed from us by the hand of death, it is our sad duty to testify to the great loss sustained by us; and

Whereas, It is becoming and proper that we should bear public testimony of his excellence of character and to his high professional attainments, therefore, be it

Resolved, That in the death of Dr. James B. Wilson, this society, of which he was an honored and efficient member, has sustained a loss which is irreparable.

A. W. LUECK, M.D.,

was born at Schoenflies, Prussia, June 2d, 1838, and emigrated to the United States, with his father, in 1846. Having obtained a good literary education, he studied medicine, and graduated at Rush Medical College January 25th, 1862. He practiced successfully at Mayville, Wis., until his demise. He died of pulmonary œdema, resulting from acute inflammation of the kidney, on December 11th, 1878, after a three days' illness. He was a member of the Wisconsin State Medical Society, and of the Rock River Medical Society, for several years its secretary. He contributed many valuable papers to the Medical literature.

He was married to Miss Catharine Conrad in 1865, and leaves his wife and three promising boys, also his old father, to mourn his loss. His career was honest and benevolent, and charity marked the whole life of this good man, now forever at rest.

MARRIAGES.

BOYD—HOUGH.—By Rev. J. H. Hawk, November 21st, 1878, at the residence of Nelson Meals, M.D., in Callensburg, Mr. James Boyd, of West Monterey, and Miss Jennie Hough, of Callensburg, Clarion county, Pa.

HARMER—EALY.—In Schellsburg, Pa., November 28th, by Rev. Thomas McNinch, Elwood W. Harmer, of Bedford, and Annie, daughter of Dr. J. Ealy.

POWERS—ANDREWS.—In Barre, Vt., November 16th, by Rev. L. Tenney, Merritt L. Powers, M.D., and Hattie L. Andrews.

TAYLOR—KORTRIGHT.—In New York, on Tuesday, December 10th, by the Rev. Dr. John Hall, Isaac E. Taylor, M.D., and Sarah A. Kortright.

TOMLINSON—HAZZARD.—In Philadelphia, on the 7th ult., by Rev. James Morrow, at Grace M. E. Church, P. W. Tomlinson, M.D., and Virginia C. Hazzard, both of Milton, Del.

DEATH.

ARNOLD.—Dr. S. Augustus Arnold, the oldest member of the Rhode Island Medical Society, having joined in 1822, died suddenly, at Providence, last Thursday, aged 81 years.

CLEVELAND.—In Philadelphia, December 8th, 1878, Emeline H. Cleveland, M.D.

HARSHBERGER.—At Milroy, Pa., November 3d, of heart disease, Annie C., daughter of Dr. A. and Mary A. Harshberger, in the twenty-first year of her age.

MITCHELL.—November 18th, 1878, at Addison, Pa., of scarlet fever, Bertram McLane, son of Dr. Wm. F. and Mattie E. Mitchell, aged 3 years 6 months and 5 days.

TUCKER.—In New York, on Friday, December 6th, 1878, Georgie Virginia, daughter of Dr. Carlos P. and Georgie M. Tucker.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

DUCRO'S ALIMENTARY ELIXIR

A Combination uniting the properties of ALCOHOL and RAW MEAT. It has been Mr. Ducro's aim in preparing this elixir to present under the form of a pleasant cordial the nutritive and restoring properties of raw meat and the stimulating properties of alcohol. In this he has been eminently successful, judging from the great number of physicians who prescribe and use this food medicine. This preparation, which has been used with great success in the hospitals of Paris since 1868, is adapted to the treatment of all diseases requiring the administration in a small volume of a tonic able to stimulate and support the vital forces, as in *Pulmonary Phthisis*, *Depression* and *Nervous Debility*, *Adynamia*, *Malarial Cachexia*, etc. It is especially adapted for delicate ladies and children, debilitated old people and convalescents.

Paris: Place de Vosges, 20. **New York: E. FOUGERA & CO., Depositaries.**

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

TO PHYSICIANS.

THE scarcity and high prices of Cinchona barks and Sulphate of Quinia, and the prospect of only a slight reduction in these prices, makes the present a favorable opportunity of calling the attention of the profession to the *combination of all the bark alkaloids.*

Much attention has been given to this subject in Europe and India.

The growing appreciation by the medical profession of the United States of

CINCHO-QUININE

is due to the fact that it retains the important alkaloids IN COMBINATION, — a combination which in practice is *preferable to perfect isolation or separation* of these alkaloids.

In addition to its superior efficacy as a tonic and anti-periodic, it has the following advantages, which greatly increase its value to physicians : —

1st, *It exerts the full therapeutic influence of* Sulphate of Quinine, *in the same doses*, without oppressing the stomach, creating nausea, or producing cerebral distress, as the Sulphate of Quinine frequently does ; and it produces much less constitutional disturbance.

2d, It has the great advantage of being *nearly tasteless.* The bitter is very slight, and not unpleasant to the most sensitive, delicate woman or child.

3d, It is *less costly :* the price will fluctuate with the rise and fall of barks, but will always be much less than the Sulphate of Quinine.

4th, It meets indications not met by that Salt.

The following well-known Analytical Chemists say : —

"UNIVERSITY OF PENNSYLVANIA, Jan. 22, 1875.
"I have tested CINCHO-QUININE, and have found it to contain *quinine, quinidine, cinchonine, cinchonidine.* F. A. GENTH,
Professor of Chemistry and Mineralogy."

"LABORATORY OF THE UNIVERSITY OF CHICAGO, Feb. 1, 1875.
"I hereby certify that I have made a chemical examination of the contents of a bottle of CINCHO-QUININE ; and by direction I made a qualitative examination for *quinine, quinidine,* and *cinchonine,* and hereby certify that I found these alkaloids in CINCHO-QUININE.
C. GILBERT WHEELER,
Professor of Chemistry."

"I have made a careful analysis of the contents of a bottle of your CINCHO-QUININE, and find it to contain *quinine, quinidine, cinchonine,* and *cinchonidine.*
S. P. SHARPLES, *State Assayer of Mass.*"

TESTIMONIALS.

"WELLFLEET, MASS., Nov. 17, 1876.
"I have used CINCHO-QUININE, and can say without any hesitation it has proved superior to the sulphate of quinine. J. G. JOHNSON, M.D."

"MARTINSBURG, MO., Aug. 15, 1876.
"I use the CINCHO-QUININE altogether among children, preferring it to the sulphate.
DR. E. R. DOUGLASS."

"LIVERPOOL, PENN., June 1, 1876.
"I have used CINCHO-QUININE, obtaining better results than from the sulphate in those cases in which quinine is indicated.
DR. I. C. BARLOTT."

"RENFROW'S STATION, TENN., July 4, 1876.
"I am well pleased with the CINCHO-QUININE, and think it is a better preparation than the sulphate. W. H. HALBERT."

"ST. LOUIS, MO., April, 1875.
"I regard it as one of the most valuable additions ever made to our materia medica.
GEORGE C. PITZER, M.D."

"RICHMOND, VA., March 28, 1877.
"I believe that the *combination* of the several cinchona alkaloids is more generally useful in practice than the sulphate of quinine uncombined.
"Yours truly, LANDON B. EDWARDS, M.D.
Member Va. State Board of Health, and Sec'y and Treas. Medical Society of Va."

"CENTREVILLE, MICH.
"I have used several ounces of the CINCHO-QUININE, and have not found it to fail in a single instance. I have used no sulphate of quinine in my practice since I commenced the use of the CINCHO-QUININE, as I prefer it. F. C. BATEMAN, M.D."

"NORTH-EASTERN FREE MEDICAL DISPENSARY, 908 East Cumberland St., Philadelphia, Penn., Feb. 29, 1876.
"In typhoid and typhus fevers I always prescribe the CINCHO-QUININE in conjunction with other appropriate medicines, the result being as favorable as with former cases where the sulphate had been used.
"F. A. GAMAGE, M.D."

BILLINGS, CLAPP & CO., Manufacturing Chemists,

(SUCCESSORS TO JAMES R. NICHOLS & CO.)

BOSTON, MASS.

Analyses of Sulphate of Quinine Pills.

As we have repeatedly notified the trade, our Sulphate of Quinine Pills are made of Bleached Quinine and contain the correct amount of Quiniæ Sulphas, as represented on the label.

We submit below three analyses of our Sulphate of Quinine Pills obtained at different druggists; the first was made by Mr. Chas. Rice, of New York, one of the editors of the "*New Remedies*," and chemist of Department Public Charities and Correction of New York City, who is well known both personally and by reputation by a large number of physicians and druggists throughout the country. The other two analyses are by Dr. Polenske, former assistant of Prof. Sonnenshein, of Berlin, and now our own analytical chemist.

Our "Hospital Quinine" Pills are made as set forth in our circular of March 27th, which we reprint for the information of those who may not have seen it before.

With the assurance to the trade and medical profession, that we will always manufacture our preparations, as we have in the past, in **perfect good faith,** that we will use the best materials obtainable, increasing our knowledge by every means in our power, for examining and testing all ingredients and perfecting our business, we remain,

Very respectfully, McKESSON & ROBBINS.

NEW YORK, APRIL 17th, 1878.

"MESSRS. McKESSON & ROBBINS,

Gentlemen:—Having been requested by you to make an assay of the alkaloids contained in your Gelatine-Coated Quinine Pills, I purchased an original vial, containing 100 2 grain pills, in the store of Mr. Theodore Cole, 400 First Avenue, New York. Each ten of these pills weigh'd very nearly 34 grains, and the weight of the single pills is very uniform, varying but slightly either way from 3.4 grains. The whole number of pills (100,) yielded 14.385 grains of anhydrous alkaloid, which was found to be **pure, White Quinia**, free from other cinchona alkaloids. This amount of dry Quinia corresponds to **203.8** grains of **Sulphate of Quinia**, containing 8 molecules of water of crystallization ($2\,C_{20}\,H_{24}\,N_2\,O_2 \cdot H_2\,SO_4 + 8\,H_2\,O$); or to **201.7** grains of **Sulphate of Quinia,** containing 7½ molecules of water of crystallization ($2\,C_{20}\,H_{24}\,N_2\,O_2 \cdot H_2\,SO_4 + 7\frac{1}{2}\,H_2\,O$), which latter is, as near as possible, the formula of the commercial pure Sulphate of Quinia. The amount of Sulphate of Quinia contained in the 100 pills examined, is therefore a trifle **in excess** of the required quantity, (3.8 grains, or 1.7 grain, according to whatever formula may be adopted for the crystallized salt).

Respectfully CHARLES RICE,
Chemist, Bellevue Hospital, N. Y."

NEW YORK, MARCH 30th, 1878.

"I have analyzed McKesson & Robbins' Gelatine-Coated 5 grs. Sulphate of Quinine Pills, from an original bottle of one hundred, and find that in two analyses of 10 pills each, the result in both cases was 51 grains of pure Sulphate of Quinine.

ED. POLENSKE, Ph. D."

NEW YORK, APRIL 13th, 1878.

"One hundred McKesson & Robbins' Gelatine-Coated 2 grs. Sulphate of Quinine Pills, analyzed by me to-day, contained 198 grains of Sulphate of Quinine. The Sulphate of Quinine obtained from these pills stood the Ether test, as laid down in the U. S. Ph.

ED. POLENSKE, Ph. D."

Circular of March 27th, 1878.

Since we changed last fall, from Unbleached to Bleached Quinine in the manufacture of our Pills, we have heard from a large number of druggists and physicians stating that the therapeutical effects of the dark pills were better than the "bleached," dose for dose, where a tonic was indicated, and the antiperiodic effects of the former were as well marked. We made the change because we were disappointed in obtaining a uniform article of unbleached Quinine, were deceived in two shipments we received and the analyses of samples from the same package we submitted to different highly reputable chemists varied surprisingly, in fact analysing Quinine *quantitively* is very difficult, as it depends very largely upon the different solubilities of the alkaloids in water, while the *qualitative* analysis is very simple and reliable.

The curative properties of the other alkaloids of Cinchona Barks have been well attested and the effect of the **combined alkaloids** has been repeatedly asserted to be greater than that of any **one alone.**

In view of these facts, we accordingly propose to offer Pills made of Hospital Quinine, which differs from that which has been known and understood as "unbleached," in the process of manufacture and in the proportion of Quinine. This Hospital Quinine will contain about 50 per cent. of Quinine Sulphate, and the balance, Cinchonidia Sulphate and traces of Quinidia Sulphate; the Cinchonia Sulphate, being less powerful than the other alkaloids is separated.

These pills on account of their lower price will relieve a difficulty to which a large number of people living in malarious districts have been subjected—the inability to purchase Quinine Pills on account of price, especially when scarcity causes sudden and great advances, as at present—at the same time we believe that confidence may be felt of experiencing equal relief with similar doses.

We will continue, as now, to make our "Quinine Pills" of bleached Quinine, and the white color will readily identify them from our darker Hospital Quinines, which will be labelled "Hospital Quinine" The list of Hospital Quinine Pills we submit below is subject to same discount as our other pills and will be reduced as soon as the market on Quinine will allow. We call special attention to our Pills of Cinchona Bark Alkaloids which contain a definite quantity of each of the four alkaloids, one half grain each Sulphates Quinia, Quinidia, Cinchonia and Cinchonidia.

We annex below list of our Pills of other Cinchona Alkaloids, and remain, soliciting your correspondence and valued orders, Yours respectfully,

March 27th, 1878. McKESSON & ROBBINS.

Pills of "HOSPITAL QUININE" and the Cheaper Alkaloids.

"HOSPITAL QUININE," ¼ gr.	70	3 25	Chinoidine, ¼ and 1 gr.	60	2 75

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

FOR SALE—A PHYSICIAN'S PROPERTY and Practice, in a small country town. Reasons for selling, ill health. Address

CINCINNATI COLLEGE
OF
MEDICINE AND SURGERY.

FACULTY:

R. C. STOCKTON REED, M D. Professor of Materia Medica and Therapeutics.
D. D. BRAMBLE, M D., DEAN. Professor of Principles and Practice of Surgery and Clinical Surgery.
ABIJAH J. MILES, M D. SECRETARY, Professor of Diseases of Women and Children and Clinical Gynæcology.
JOHN A. THACKER, M D. Professor of Principles and Practice of Medicine and Clinical Medicine.
JACOB TRUSH M.D., Professor of Obstetrics and Clinical Professor of Dermatology.
CHAUNCEY R. STUNTZ A.M. M.D., Professor of Chemistry and Toxicology.
WILLIAM ADAM ROTHACKER, M. D. Professor of Anatomy and Clinical Professor of Venereal Diseases.
JOSEPH AUB, M.D. Professor of Diseases of the Eye and Ear and Clinical Ophthalmology and Otology.
ASA BRAINARD ISHAM, M.D. Professor of Physiology.
JOSHUA W. UNDERHILL, M.D. Lecturer on Medical Jurisprudence.
BERNARD TAUBER, M.D. Lecturer on Laryngology.
W. A. ROTHACKER, M.D. Demonstrator of Anatomy.

THEODORE MARTIN WITTKAMP, M.D. Assistant to Chair of Diseases of Women and Children.
JOHN M. SHALLER, M.D. Assistant to Chair of Principles and Practice of Medicine.
EDWIN WALKER ELDRIDGE. Assistant to Chair of Obstetrics and Dermatology.
SAMUEL C. CHORLTON, M.D. Assistant to Chair of Surgery.

CONRAD STUMPMEYER, Janitor, College Building.

The next Regular Session opens October 2d, 1878, and continues until the latter part of February, 1879. There will be a Preliminary Course, commencing September 4th, 1878. Students are urged to attend this course, as special instruction is given on subjects which cannot be so fully treated during the regular session.

FEES:

General Ticket	$10.00
Matriculation Ticket	5.00
Demonstrator's Ticket (including material)	10.00
Hospital Ticket	5.00
Graduation Fee	25.00

WILLIAM R. WARNER & CO.

THE THREE BEST TONICS OF THE PHARMACOPŒIA:

IRON, PHOSPHORUS, CALISAYA.

CASWELL, HAZARD & CO. call the attention of the Profession to their preparation of the above estimable Tonics, as combined in their elegant and palatable

FERRO-PHOSPHORATED ELIXIR OF CALISAYA BARK.

A combination of the Pyrophosphate of Iron and Calisaya never before attained, in which the nauseous inkiness of the iron and astringency of the Calisaya are overcome, without any injury to their active tonic principles, and blended into a beautiful Amber-colored Cordial, delicious to the taste and acceptable to the most delicate stomach. This preparation is made directly from the **ROYAL CALISAYA BARK**—not from **its ALKALOIDS OR THEIR SALTS**—being unlike other preparations called "Elixir of Calisaya and Iron," which are simply an **Elixir of Quinine and Iron.** Our Elixir can be depended upon as being a true Elixir of Calisaya Bark with Iron. Each dessertspoonful contains seven and a half grains Royal Calisaya Bark, and two grains Pyrophosphate of Iron.

Ferro-Phosphorated Elixir of Calisaya Bark with Strychnia. This preparation contains one grain of Strychnia added to each pint of our Ferro-Phosphorated Elixir of Calisaya Bark, greatly intensifying its tonic effect.

Ferro-Phosphorated Elixir of Calisaya with Bismuth, containing eight grains Ammonio-Citrate of Bismuth in each tablespoonful of the Ferro-Phosphorated Elixir of Calisaya Bark.

Elixir Phosphate Iron, Quinine and Strychnia. Each teaspoonful contains one grain Phosphate Iron, one grain Phosphate Quinine, and one sixty-fourth of a grain of Strychnia.

Ferro-Phosphorated Elixir of Gentian, containing one ounce of Gentian and one hundred and twenty-eight grains Pyrophosphate Iron to the pint, making in each dessertspoonful seven and one half grains Gentian and two grains Pyrophosphate Iron.

Ferro-Phosphorated Wine of Wild Cherry Bark. Each fluid-drachm contains twenty-five grains of the Bark, and two grains of Ferri-Pyrophosphate.

Elixir Taraxacum Comp. Each dessertspoonful contains fifteen grains of Taraxacum.

Elixir Pepsin, Bismuth, and Strychnine. Each fluid-drachm contains one sixty-fourth of a grain of Strychnine.

Juniper Tar Soap. Highly recommended by the celebrated Erasmus Wilson, and has been found very serviceable in chronic eczema and diseases of the skin generally. It is invaluable for chapped hands and roughness of the skin caused by change of temperature. It is manufactured by ourselves, from the purest materials, and is extensively and successfully prescribed by the most eminent Physicians.

CASWELL, HAZARD & CO.,
Family and Manufacturing Chemists, New York.

THE GREAT EUROPEAN NOVELTY.

HUNYADI JANOS.

NEW APERIENT WATER.

Specially recommended for richness in Aperient Salts, and its efficacy in Bilious attacks, prevention of Gout, Piles, etc., and as an ordinary Aperient, by LIEBIG, VIRCHOW, SCANZONI, *and* SIR HENRY THOMPSON, *and the entire Medical Profession in England and Germany.*

DR. J. MARION SIMS, New York.—"As a laxative, I prefer it to every other mineral water."

DR. JAMES R. WOOD, New York.—"Certain, but gentle and painless; superior to any other bitter water."

DR. WM. A. HAMMOND, New York.—"The most pleasant and efficient of all purgative waters."

DR. ALFRED L. LOOMIS, New York.—"The most prompt and most efficient; especially adapted for daily use."

DR. FORDYCE BARKER, New York.—"Requires less, is less disagreeable and unpleasant, than any other."

DR. LEWIS A. SAYRE, New York.—"Preferred to any other laxative."

LEBAIGUE'S
DIALYSED IRON,

OR

PURE PEROXIDE OF IRON,

IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate, nor cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a **solution**, which is generally preferred; or of an **elixir**, when a slight stimulant is desired.

DOCTOR GIBERT'S
DEPURATORY SYRUP AND DRAGEES,

OF IODIZED DEUTO-IODIDE OF MERCURY.

These preparations have been approved by the Academy of Medicine of Paris, and have been thoroughly tested in the hospitals of Paris in the treatment of *Syphilitic, Scrofulous* and other affections requiring the use of iodized remedies.

They are recommended for the utmost accuracy of composition, and their perfect preservation.

Prepared by VAUQUELIN-DESLAURIERS, Chemist, Paris.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus**, which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,

SOLD BY DRUGGISTS GENERALLY.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the medical profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition; containing the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 "	Lactic Acid	5 fl. "
Pancreatine	6 "	Hydrochloric Acid	5 fl. "

LACTOPEPTINE owes its great success solely to the Medical profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned, having tested REED & CARNRICK'S preparation of Pepsin, Pancreatine, Diastase, Lactic Acid and Hydrochloric Acid, made according to published formula, and called LACTOPEPTINE, find that in those diseases of the stomach where the above remedies are indicated it has proven itself a desirable, useful and well-adapted addition to the usual pharmaceutical preparations, and therefore recommend it to the profession.

Received highest and only Award (Medal and Special Diploma of Merit) over all Foreign and Home Competitors in 1876.

THE JURORS' AWARD IS SUBSTANTIALLY

ORIGINALITY.—The successful application of Rubber as a base for all medicinal and mechanical plasters.

RELIABILITY and general excellence of manufactures.

FACTS CONCERNING MEDICINAL PLASTERS IN RUBBER COMBINATION.

India-rubber-spread and Porous Plasters possess indisputable advantages over all other Plasters: (1) The Rubber combination preserves the incorporated drug or extract from decomposition or volatilization; (2) They adhere closer and firmer; (3) They do not soil the skin or linen; (4) They are always pliable, and never become hard or brittle; (5) They adhere without heat or moisture; (6) An increased effect obtained by being porous, as the Plaster neither slides nor moves from its affixed position.

BELLADONNA PLASTER, U. S. P.

IN RUBBER COMBINATION.

Messrs. SEABURY & JOHNSON claim that theirs is the most thoroughly reliable and only strictly officinal Belladonna Plaster ever offered the medical profession. It is an improvement on other Belladonna Plasters in several important particulars. First, it is incorporated with the officinal alcoholic extract only. Secondly, it is freed from all stimulating qualities, thereby insuring the uninfluenced sedative action of Belladonna. Thirdly, it adheres with greater tenacity than others. Physicians have been prejudiced in favor of Allen's English Extract; but recent analysis, fairly conducted by competent chemists, emphatically condemns the Inspissated Extract as a mild and unstable product, representing but one-half or less than one-half of the strength of the U. S. P. Alcoholic Extract of Belladonna. The following result, published in the *American Journal of Pharmacy*, in April, 1876, page 145, is furnished for your consideration, which indicates the following percentage of Atropia in the respective extracts:—

Alcoholic Extract Belladonna, U. S. P......2,571
Allen's English Extract.....1,411
Herring's English Extract.....1,179

The practitioner, as well as ourselves, has but one choice.

Considering these features from a professional standpoint, we offer a Belladonna plaster which cannot be improved upon.

SALICYLATED SURGEONS' RUBBER ADHESIVE PLASTER

This article has met with unprecedented success, and has been emphatically pronounced by our most skillful General and Orthopædic Surgeons, as "the best Surgeons' Adhesive Plaster known." It is applied without heat or moisture, conforms quickly to the parts; is perfectly flexible and waterproof, and is ready for use at any moment. It is free from irritating properties and very healing. In counter-extension it has no equal, as it does not move or slide after being applied. Our India-rubber Adhesive Plaster is also spread on twilled linen, which resists the most powerful strain. In addition to these general improvements, the plaster being impervious to water, wounds can be cleansed without removing the plaster, obviating the necessity of constant redressing, saving labor and time. **Whenever continued powerful adhesion is required, it should be procured in porous form.**

MUSTARD PLASTER (spread on Cotton Cloth).

Our Mustard Plaster is a decided improvement over the best French makes; the mustard is manipulated so as to exclude all the moisture, retaining unimpaired by such treatment, its essential properties. They are always reliable, conform quickly to the part, and when thoroughly wet do not break into pieces, as is the case with all other mustard plasters. They do not crack or peel off, and can be removed without soiling the skin or linen. Being **manufactured only of pure mustard,** they are perfectly free from Croton Oil or other dangerous substitutes, often employed to induce intense irritation.

RUBBER BLISTER PLASTER (Camphorated) U. S. P. STRENGTH.

This article has a splendid reputation; its characteristic action is not impaired by age in any climate. The whole fly is incorporated, which, by constant manipulation is thoroughly and beautifully combined with the plaster. **Its properties are developed quicker, and it blisters in less time than the cerate.** It never fails to blister when used as directed. In addition to its superior efficacy as a vesicant, we incorporate a sufficient quantity of Camphor, which, with the Olive Oil used on the face of the plaster, **prevents Strangury.** This improvement will be appreciated by every practitioner. It is more reliable than any known cantharidal preparation.

CAPSICUM PLASTER.

Recently this article has crept into favor with our most esteemed physicians, and judging from results, it is doubtless the best rubefacient known. It has the specific action of mustard without its objections. The characteristic action of Capsicum is uniformly maintained from twenty-four to forty-eight hours, without blistering, being mild, continuous, and stimulating. This plaster is spread in rubber combination and in porous form. Experience has taught practitioners that the Oleo Resin of Capsicum is too violent, frequently vesicating; we incorporate the crude drug in sufficient quantity, without risk to the patient. Our Capsicum Plasters will be found more practical for general use than the **so-called Mustard or Capsicum Papers.**

SPECIAL NOTICE TO PHYSICIANS.

QUALITY IS OF GREAT IMPORTANCE TO THE PRACTITIONER: BY RELIABLE PREPARATIONS HE SUPPLEMENTS HIS OWN SKILL. You can therefore rest assured that every article we manufacture is of strict pharmacopœia strength, and incorporated with perfectly reliable Extracts and Drugs, well selected, carefully and conscientiously prepared, and manufactured invariably under the personal superintendence of one of our firm. OUR WHOLE ATTENTION AND STUDY IS DEVOTED ENTIRELY TO THE ART OF PLASTER MAKING, and we are ready at all times to receive suggestions from the fraternity, which may be of benefit to all.

SEABURY & JOHNSON,

21 Platt Street, New York.

ALL THE ABOVE ARTICLES SOLD BY DRUGGISTS EVERYWHERE.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

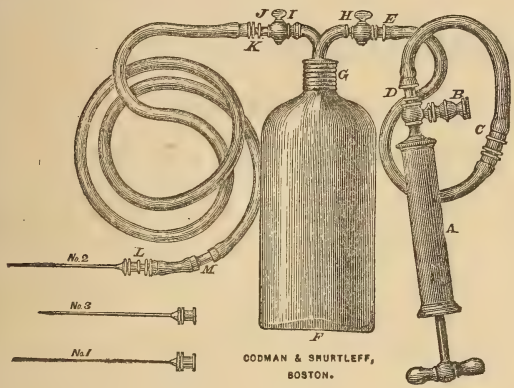

Fig. 68.

Fig. 77.

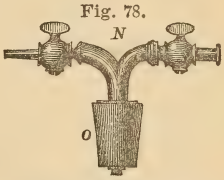

Fig. 78.

The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration.

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions.....$18 00

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions..... 16 00

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case.....$14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional..... 6 00

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

1090-1115eow

THE ST. LOUIS
MEDICAL AND SURGICAL JOURNAL.

ESTABLISHED IN 1843.—PUBLISHED MONTHLY.

THOS. F. RUMBOLD, M.D., Editor and Proprietor; HIRAM CHRISTOPHER, M.D., Associate Editor.

The Journal will hereafter be published in Two Volumes, beginning with January and July.

Each Number will contain 80 or more pages, making each Volume about 500 pages, or nearly 1000 pages for the year's subscription.

TERMS:—$3.00 a year, payable in advance. Single Copies Thirty Cents. Postage prepaid in all cases.

SUBSCRIPTIONS MAY COMMENCE AT ANY TIME.

THE ST. LOUIS MEDICAL AND SURGICAL JOURNAL is the *Pioneer Medical Journal of the West.* It commences its Thirty-fourth Volume with an increase of 24 pages, which nearly *doubles its former contents,* but its Subscription Price is *not increased.* This has had the effect of greatly increasing its popularity and, as a consequence, its circulation.

THE JOURNAL WILL CONTAIN:

1. Original Contributions. 2. Translations from the German, French and Spanish. 3. Reports of Medical Societies. 4. Clinical Reports from Private Practice. 5. Clinical Reports from Hospital Practice. 6. Selections from Current Medical and Scientific Literature. 7. Editorials. 8. Obituary Notices of Prominent Men. 9. Reviews of Medical and Scientific Books. 10. Notices of Books and Pamphlets Received. 11. News Items. 12. Meteorological Observations taken in St. Louis. 13. Mortality Report of the City of St. Louis. 14. Comparative Mortality Rates of the ten largest cities in the United States.

The Translations from the German, French and Spanish medical and scientific journals, will be from those articles which contain the *advance* views of the medical and scientific men living in those countries.

The Journal will contain a full Report of the Proceedings of the St. Louis Medical Society, and a summary of all the societies in Missouri, and of many in Illinois and other States, thus placing before its readers the latest views and experiences of the profession in all the Departments of Medicine, practical as well as theoretical.

It will be the aim of the editors, in all respects, to maintain the high and honorable position it has so long held. No personalities shall ever soil its pages; when discussions cannot be carried on without these, space in its columns will be declined.

Contributions of Original Articles on both Medical and Scientific subjects are invited from all parts of the country.

Articles on the following subjects will appear in the present volume:—

Contributions on Fractures. By John T. Hodgen, M.D., Professor of Surgical Anatomy, Fractures and Dislocations in St. Louis Medical College.

Contributions on Syphilis. By Thomas Kennard, M.D., of St. Louis.

Contributions on Lithotomy. By David Prince, M.D., of Jacksonville, Illinois.

Contributions on Genito-Urethral and Rectal Surgery. By W. Hutson Ford, M.D., of St. Louis.

Contributions on the Present State of Pathology of Phthisis Pulmonalis. A series of papers. By J. Hilgard Tyndale, M.D., of New York City.

Contributions on Genesis. A series of papers. By the Associate Editor.

Contributions on Urinary and Renal Diseases. By John Bryson, M.D., of St. Louis.

Contributions on Medical Experts as Witnesses. By Fred. T. Ledergerber, Esq., of St. Louis.

Contributions on Nasal, Pharyngeal, Aural, Laryngeal and Bronchial Diseases. By the Editor.

From the above it will be seen that it is not the intention of the editors to confine the Journal to subjects relating to Medicine and Surgery alone; subjects collateral to these will receive attention, and such are invited from the profession. The departments of science are so closely connected as to make it almost impossible for a Physician or Surgeon to be proficient as such, without considerable knowledge of kindred branches.

Communications and all Subscriptions should be addressed to THE EDITOR, 1225 Washington Avenue, St. Louis, Mo.

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

ALWAYS SPECIFY "K. & M." GRANULATED EFFERVESCENT SALTS.

K. & M.
GRANULATED EFFERVESCENT
PEPSIN, BISMUTH & STRYCHNIA.
ORIGINATED BY KEASBEY & MATTISON.

We again offer this preparation confidently to the profession. It has, for four years, enjoyed an extensive prescription among the most eminent of our practitioners. Its use has been attended with the most marked success, perhaps, of any of the various remedies recommended in dyspepsia, gastralgia, and kindred disorders. Its association with Carbonic Acid renders it palatable, and causes it to be retained by the most sensitive stomach. It is the only soluble form in which Pepsin and Bismuth should be ever given together, and is FIVE TIMES THE PEPSIN STRENGTH of the various elixirs, wines, liquors, etc., of the market. In reference to its reliability, we refer to the most prominent physicians in all sections of this country, who will very generally be found to be using it in their practice.

Always prescribe the GRANULATED EFFERVESCENT form, and always specify the "K. & M.' Preparation.

Each drachm or heaping teaspoonful contains FIVE GRAINS Saccharated Pepsin, two grains soluble Citrate of Bismuth, and one-fiftieth grain Citrate of Strychnia.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 21, 1877.

Gentlemen:—I have used a large number of your preparations for several years past with great satisfaction, and am happy to commend them to others from what I know both of your drugs and of yourselves.

Very truly yours, W. W. KEEN, M. D.

K. & M.
GRANULATED EFFERVESCENT
CITRATE CAFFEINE.
ORIGINATED BY KEASBEY & MATTISON.

The recent extensive employment of this salt as a remedy, amounting almost to a specific in cases of sick headache, and its use in nervous diseases generally, have caused us to place it upon our list. Its value is much enhanced by its administration with Carbonic Acid, so agreeably and efficiently produced by this form.

A heaping teaspoonful, containing ONE GRAIN of Citrate of Caffeine, should be given in sick headache, every hour or two before and during the paroxysms.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 27, 1877.

Gentlemen:—It gives me pleasure to add my testimony in regard to your preparations, which I have used for a long time; they are thoroughly reliable.

Truly yours, THOMAS G. MORTON, M. D.

K. & M.
GRANULATED EFFERVESCENT
CITRATE LITHIA.

In the effervescent form this chemical is administered in a peculiarly advantageous manner. Its association with Carbonic Acid renders it much less liable to disturb the stomach, while in strength it is greatly superior to Lithia Water. A valuable diuretic and lithontriptic, its importance in the treatment of rheumatic, gouty, and analogous disorders can scarcely be over-estimated.

We have doubled the strength of this preparation, each drachm or heaping teaspoonful containing FOUR GRAINS of the chemically pure salt.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 25, 1877.

Gentlemen:—I have employed your Extract of Malt and Infants' Food, in a large number of cases, much to my own satisfaction, and to the benefit of the patient. The Infants' Food I regard as especially useful in cases of Infants requiring artificial food from any cause. Yours, etc., W. B. ATKINSON, M. D., *Sec. American Med. Asso.*

ALWAYS SPECIFY "K. & M." GRANULATED EFFERVESCENT SALTS.

Analyses of Sulphate of Quinine Pills.

As we have repeatedly notified the trade, our Sulphate of Quinine Pills are made of Bleached Quinine and contain the correct amount of Quiniæ Sulphas, as represented on the label.

We submit below three analyses of our Sulphate of Quinine Pills obtained at different druggists; the first was made by Mr. Chas. Rice, of New York, one of the editors of the "*New Remedies*," and chemist of Department Public Charities and Correction of New York City, who is well known both personally and by reputation by a large number of physicians and druggists throughout the country. The other two analyses are by Dr. Polenske, former assistant of Prof. Sonnenshein, of Berlin, and now our own analytical chemist.

Our "Hospital Quinine" Pills are made as set forth in our circular of March 27th, which we reprint for the information of those who may not have seen it before.

With the assurance to the trade and medical profession, that we will always manufacture our preparations, as we have in the past, in **perfect good faith,** that we will use the best materials obtainable, increasing our knowledge by every means in our power, for examining and testing all ingredients and perfecting our business, we remain,

Very respectfully, McKESSON & ROBBINS.

NEW YORK, APRIL 17th, 1878.

"MESSRS. McKESSON & ROBBINS,

Gentlemen:—Having been requested by you to make an assay of the alkaloids contained in your Gelatine-Coated Quinine Pills, I purchased an original vial, containing 100 2 grain pills, in the store of Mr. Theodore Cole, 409 First Avenue, New York. Each ten of these pills weighed very nearly 34 grains, and the weight of the single pills is very uniform, varying but slightly either way from 3.4 grains. The whole number of pills. (100,) yielded 145.385 grains of anhydrous alkaloid, which was found to be **pure, White Quinia,** free from other cinchona alkaloids. This amount of dry Quinia corresponds to **203.8** grains of **Sulphate of Quinia,** containing 8 molecules of water of crystallization ($2\,C_{20}\,H_{24}\,N_2\,O_2 - H_2\,SO_4 - 8\,H_2\,O$); or to **201.7** grains of **Sulphate of Quinia,** containing 7½ molecules of water of crystallization ($2\,C_{20}\,H_{24}\,N_2\,O_2 - H_2\,SO_4 - 7\frac{1}{2}\,H_2\,O$), which latter is, as near as possible, the formula of the commercial pure Sulphate of Quinia. The amount of Sulphate of Quinia contained in the 100 pills examined, is therefore a trifle **in excess** of the required quantity, (3.8 grains, or 1.7 grain, according to whatever formula may be adopted for the crystallized salt).

Respectfully CHARLES RICE,
Chemist, Bellevue Hospital, N. Y."

NEW YORK, MARCH 30th, 1878.

"I have analyzed McKesson & Robbins' Gelatine-Coated 5 grs. Sulphate of Quinine Pills, from an original bottle of one hundred, and find that in two analyses of 10 pills each, the result in both cases was 51 grains of pure Sulphate of Quinine. ED. POLENSKE, Ph. D."

NEW YORK, APRIL 13th, 1878.

"One hundred McKesson & Robbins' Gelatine-Coated 2 grs. Sulphate of Quinine Pills, analyzed by me to-day, contained 198 grains of Sulphate of Quinine. The Sulphate of Quinine obtained from these pills stood the Ether test, as laid down in the U. S. Ph. ED. POLENSKE, Ph. D."

Circular of March 27th, 1878.

Since we changed, last fall, from Unbleached to Bleached Quinine in the manufacture of our Pills, we have heard from a large number of druggists and physicians stating that the therapeutical effects of the dark pills were better than the "bleached," dose for dose, where a tonic was indicated, and the antiperiodic effects of the former were as well marked. We made the change because we were disappointed in obtaining a uniform article of unbleached Quinine, were deceived in two shipments we received and the analyses of samples from the same package we submitted to different highly reputable chemists varied surprisingly, in fact, analysing Quinine *quantitively* is very difficult, as it depends very largely upon the different solubilities of the alkaloids in water, while the *qualitative* analysis is very simple and reliable.

The curative properties of the other alkaloids of Cinchona Barks have been well attested and the effect of the **combined alkaloids** has been repeatedly asserted to be greater than that of any **one alone.**

In view of these facts, we accordingly propose to offer Pills made of Hospital Quinine, which differs from that which has been known and understood as "unbleached," in the process of manufacture and in the proportion of Quinine. This Hospital Quinine will contain about 50 per cent. of Quinine Sulphate, and the balance, Cinchonidia Sulphate and traces of Quinidia Sulphate; the Cinchonia Sulphate, being less powerful than the other alkaloids is separated.

These pills on account of their lower price will relieve a difficulty, to which a large number of people living in malarious districts have been subjected—the inability to purchase Quinine Pills on account of price, especially when scarcity causes sudden and great advances, as at present—at the same time we believe that confidence may be felt of experiencing equal relief with similar doses.

We will continue, as now, to make our "Quinine Pills" of bleached Quinine, and the white color will readily identify them from our darker Hospital Quinines, which will be labelled "Hospital Quinine" The list of Hospital Quinine Pills we submit below is subject to same discount as our other pills, and will be reduced as soon as the market on Quinine will allow. We call special attention to our Pills of Cinchona Bark Alkaloids, which contain a definite quantity of each of the four alkaloids, one half grain each Sulphates Quinia, Quinidia, Cinchonia and Cinchonidia.

We annex below list of our Pills of other Cinchona Alkaloids, and remain, soliciting your correspondence and valued orders, Yours respectfully,

March 27th, 1878. McKESSON & ROBBINS.

Pills of "HOSPITAL QUININE" and the Cheaper Alkaloids.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

FOR SALE—A PHYSICIAN'S PROPERTY and Practice, in a small country town. Reasons for selling, ill-health. Address
ISRAEL D. FOX,
1112-tf Richlandtown, Bucks County, Pa.

400 DOLLARS WILL BUY HORSE, Vehicles, Medicines, Office Fixtures, etc., of a physician engaged in a paying practice, in Delaware. Any M. D., that means business, will address "DOCTOR," office of MED. AND SURG. REPORTER.
1107-tf

Pennsylvania College of Dental Surgery.

Twenty-third Annual Session, 1878-79.

The regular Winter Session for 1878-79 will commence on Tuesday, October 1, 1878, and continue five months, in the new and commodious college building, on Twelfth Street, below Arch. The size and equipment of the rooms in this building will enable the Faculty to offer the Dental student the advantages accruing from lecture-rooms with high ceilings and comfortable seatings, clinical rooms with an abundance of light, well-furnished laboratories, mechanical and chemical, and a large and well-lighted and well-ventilated dissecting room. For further information, address

C. N. PEARCE, Dean,
1617 Green Street, Philadelphia.

PROTAGON.

(*Prepared under the supervision of Dr. C. G. Polk.*)

A solution of all the nitrogenous phosphorous compounds of *Animal Brain*, and the *Germinal Portion of Wheat.*

As the *Phosphates, Phosphites* and *Hypophosphites* are isolated without the employment of heat, they represent exactly the phosphorous compounds of the vegetable and animal organism, and consequently PROTAGON is the *most perfect form of a chemical food* yet offered to the profession.

In Debility associated with Leucorrhœa, Bronchorrhœa, Hemorrhoids, or other mucous fluxes, in which there is always a heavy drain of these vital essentials; in the various forms of nervous debility incident to the female sex, and in general nutritive defect in children, PROTAGON will be found superior to any other nutritive tonic. It is also valuable in Tubercular Phthisis, and in brain prostration, or premature decay of memory, concentration of thought, or that general deteriorated constitutional condition consequent on sexual excesses:—

FORMULA:

	Parts.
Isolated Hopophosphite of Ammonium	4
" " Potassium	4
" " Sodium	5
" " Calcium	3
" Nitrogeneous Phosphorous Compounds	6
" Glycero-Hypophosphorous Acid	2
Pure Glycerine	76

DOSE: Ten drops thrice daily.

Sole Agent for U. S. and Europe:

WILLIAM R. WARNER & CO.

RELIABLE

ANIMAL VACCINE.

The undersigned respectfully announces that he has discontinued the practice of furnishing Vaccine *at his residence.*

Physicians can obtain the *Animal Vaccine* of MESSRS. CASWELL, HAZARD & CO., BROADWAY, CORNER 24TH STREET.

FRANK P. FOSTER, M.D.

By our arrangement with Dr. Foster, *all* Vaccine supplied by *us* is *absolutely fresh.*
We can furnish it in any quantity desired, either by express or by mail, if remittance is made to cover postage.
Dr. Foster's Animal Vaccine is the only kind that may be said to have the unqualified endorsement of the Medical Profession of New York.

QUILL SLIPS (half quill, charged on convex surface, at square-cut end).....25 cts.
CAPILLARY TUBES.....$2 00

For ordinary use *Quill Slips* are the most reliable of all forms of stored Vaccine, and in cases of failure with them in *primary* vaccination, if used within one week of their issue, and strictly in accordance with the printed directions, *being in the meantime kept cool and dry*, a second supply will be furnished gratis.
Tubes are intended chiefly for transportation to long distances, as the virus is preserved for a considerable length of time. They are superior to crusts, but inferior to quill slips.
Crusts are not recommended, and are not sold, for the reason that, however fresh, and however well formed they may be, they are apt to prove inefficient.

CASWELL, HAZARD & CO., New York.

APOLLINARIS

NATURAL MINERAL WATER.

THE QUEEN OF TABLE WATERS.

HIGHLY EFFERVESCENT.

DR. LEWIS A. SAYRE.—"A delightful beverage.
DR. WILLIAM A. HAMMOND.—"Far superior to Vichy, Seltzer, or any other."
DR. ALFRED L. LOOMIS.—"Most grateful and refreshing."
DR. E. OGDEN DOREMUS.—"Absolutely pure and wholesome; superior to all for daily use; free from all the objections urged against Croton and artificial aerated waters."
PROF. WANKLYN, London, Eng.—"Impregnated only with its own gas."
DR. E. R. PEASLEE.—"Useful and very agreeable."
DR. AUSTIN FLINT.—"Healthful, and well suited for Dyspepsia, and cases of acute disease."
DR. JAMES R. WOOD.—"Mildly antacid; agrees well with dyspeptics, and where there is a gouty diathesis."
DR. FORDYCE BARKER.—"By far the most agreeable, alone or mixed with wine; useful in Catarrhs of Stomach or Bladder, and in Gout."
DR. J. MARION SIMS.—"Not only a luxury, but a necessity."

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and Wholesale of

FRED'K DE BARY & CO.,
41 and 43 Warren Street, New York.
Sole Agents for the United States.

Every Genuine Bottle bears the YELLOW Label. 1035-1116eow

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

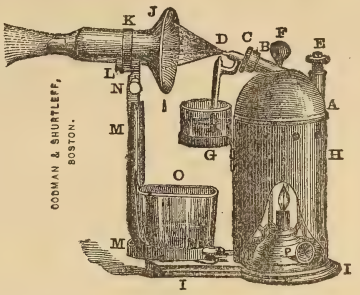
CODMAN & SHURTLEFF'S

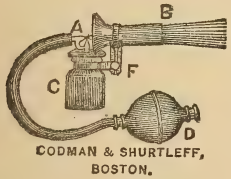
ATOMIZING APPARATUS.

PRICES REDUCED.

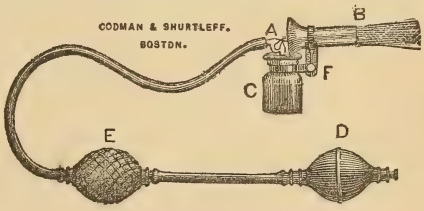


THE COMPLETE STEAM ATOMIZER. (Patented March 24, 1868.)

All its joints are hard-soldered.
Every one is tested by hydrostatic pressure, to more than one hundred pounds to the square inch.
It cannot be injured by exhaustion of water, or any attainable pressure, and will last for many years.
It does not throw spirts of hot water, is convenient, durable, portable, compact, and cheap, in the best sense of the word. Price $5.00. Postage 59c.
Brass parts, nickel-plated, additional, $2.00.
Neatly made, strong Black Walnut Box, with convenient Handle, additional, $2.50. Postage 44c.



THE BOSTON ATOMIZER. (Patented.)



SHURTLEFF'S ATOMIZING APPARATUS. (Patented.)

The most desirable Hand Apparatus. Rubber warranted of the very best quality. Valves imperishable, every one carefully fitted, and will work perfectly in all positions. Price $3.50.
The Bulbs are adapted to all the Atomizing Tubes made by us.
Each of the above Apparatus is supplied with two carefully-made annealed glass Atomizing Tubes, and accompanied with directions for use. Each Apparatus is carefully packed for transportation, and warranted perfect.

The Antiseptic Atomizer		*$15.00, $25.00, $45.00, and $50.00*

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly,
SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With*	*Hops (Plain)*,		$1.00
"	"	"	*Pyrophosphate of Iron (Ferrated)*,	1.00
"	"	"	*Cod Liver Oil*,	1.00
"	"	"	*Cod Liver Oil and Iodide of Iron*,	1.00

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

NAPHEYS' SURGICAL THERAPEUTICS.

1 Vol., large 8vo, tinted paper, pp. 587.

Price, Mailed Prepaid to any Address, Cloth, $4.00; Full Leather, $5.00.

The following are some of the numerous subjects treated of in this volume:—

The Preventive Treatment of Inflammation. The Constitutional and Local Treatment of the Sthenic, Asthenic and Irritative Types of Inflammation. General and Local Anæsthetics. Anæsthesia of the Larynx. The Open Treatment of Wounds. Guerin's Raw Cotton Dressings. Hewson's Earth Dressings. Gamgee's Dry Dressings. Dolbeau's Alcohol Dressings. Lister's Antiseptic Dressings. Spence's Boracic Acid Dressings. Polli on the Sulphites as Antiseptics. Dr. Garretson's Specific Treatment of Erysipelas. Directions for Richardson's Styptic Colloid, Styptic Collodion, Cotton, Lint and Wool, Pancoast's Styptic, etc. Methods of Torsion and Pressure in Hemorrhage. Treatment of Shock, by Drs. Brunton, Hood, Gross, Fothergill, Fuller, Wm. Holmes, Hutchinson, etc. The Use of Physostigma, Aconite, Atropia, Strychnia, etc., in Tetanus. Weir Mitchell on Traumatic Paralysis and Neuralgia. The Latest Views of the German Surgeons, Esmarch, Stromeyer and Billroth on Gunshot Wounds. The Best Remedies in Hydrophobia. Halford's Ammonia Treatment of Snake-bites. Numerous Applications for Burns, Scalds, Frost-bites, Bedsores, Carbuncles and Boils. Syme's Treatment of Indolent Ulcers. Villate's Solution for Caries. Morton's Improved Treatment of Spina Bifida. Massage in Paralysis, Sprains, etc. Squire's Method, with Nævus. Miner, Vallette, Colles and others, on Varicose Veins. Various authors on Caries of the Teeth, Pharyngitis and Tonsillitis. Ruppaner's London Paste for Enlarged Tonsils. Heaton's New Method for the Radical Cure of Hernia by Subcutaneous Injections. The Carbolic Acid Treatment of Hemorrhoids. Impotence, Masturbation and Spermatorrhœa occupy 30 pages, a monograph in itself.

The chapter on Lesions of the Organs of Special Sense includes the Nose, Eye, and Ear, as Ozæna, Epistaxis, Rhinitis, Conjunctival Diseases, Iritis, Styes, Wounds of the Eye, Otorrhœa, Tinnitus, etc. Under new growths are given Mackenzie and others on Goitre, and the medical and local treatment of Fatty Tumors, Polypi, Warts, Corns, etc.; and twenty-four pages are devoted to Cancer, giving Williams' Bromine Treatment, the Arsenical cure of Marsden and Esmarch, Maissonneuve's Caustic Arrows, Michel's Sulphuric Acid Paste, etc., and the famous "Cancer Salves" of Landolfi, Fell, Payne, Bright, etc. A chapter is given to the treatment of Scrofula as recommended by Gross, Toland, Savory, J. L. Smith, Porcher, etc., including Scrofulous Ophthalmia, Ulcers, Glandular Enlargements, etc. The volume closes with chapters on the Therapeutics of Skin Diseases, Gonorrhœa and Syphilis, in the last of which Keyes' tonic treatment is described.

Especial pains have been taken to give carefully the uses and indications of recently introduced remedies, such as Chrysophanic Acid, Terebene, the Salicylates, Hamamelis, Discorein, Daturia, Eserin, Grindelia, Hydrobromic Acid, etc. The number of formulæ given is 987, drawn from the practice of the most eminent living surgeons. The therapeutical directions are clear and minute, and the volume will be found unique of its kind, and invaluable in practice.

[Unguentum Petrolei]

SAMPLES FURNISHED
ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

University of Pennsylvania,

MEDICAL DEPARTMENT.

113th ANNUAL SESSION, 1878–79.

The higher plan of medical education is now enforced, requiring attendance upon three graded courses of five months each. Didactic instruction is increased. Bedside instruction of each student in Physical Diagnosis, Clinical Medicine and Surgery, and Gynæcology is provided. The clinical and laboratory facilities are unrivaled in America. Pharmacy, Analytical and Medical Chemistry, Histology, Normal and Morbid Anatomy, and Operative Surgery are taught practically.

A Dental Department has recently been instituted.

For particulars, see ANNOUNCEMENT, for which address

JAMES TYSON, M. D.,
Secretary,

P. O. Box 2838, Philadelphia, Pa.

NEW YORK STATE

INEBRIATE ASYLUM,

Binghamton, Broome County, N. Y.

This Asylum is admirably situated, overlooking a fine section of country, and is complete in all the appointments of a first-class home, with ample means to meet the wants of every case. It is located three miles from the city, and removed from all temptation. Its management is the same as all other State charities, under the control of a Board of Managers appointed by the Governor. The law provides for the maintenance of indigent inebriates, similar to that of the insane, but patients from other States may be admitted.

The experience of this Asylum, for the past ten years, indicates an increasing usefulness and necessity for such institutions, and the original intention of making this an Asylum Hospital, where this disorder may be thoroughly understood and treated on broad scientific principles is nearer realized than ever before. All rules are strictly enforced, and no patient permitted to go beyond the Asylum grounds without permission from the Superintendent, or in the care of an attendant.

THE CHARGES FOR BOARD

will include medical care, washing, lights, fuel, etc., with ordinary attention. The exigencies of each particular case will be acted upon, as it may present itself, to those of moderate and limited means as well as the rich.

All inquiries and applications for admission should be addressed to the Superintendent.

WILLARD PARKER, M.D.,
New York, N. Y.,
President Board of Managers.

DANIEL H. KITCHEN, M.D., *Superintendent,*

STAUFER'S

SERIES OF HARD RUBBER UTERINE SUPPORTERS.

Fig. 1 from Paragraph 1 to 10.

1. Improvements—*a.* The Spring Stem Supporters are now sustained by double elastic gums S S, separating both anteriorly and posteriorly after passing through the base T. These gums are furnished to order of more than ordinary strength, when required as in some cases of long standing Procidentia. *b.* The tops C, are of increased volume, hollow and light. *c.* Upon the stems (*m n*) of Spring Cups A, and E, may now duplicates C, or small globes G, be used. Thus on stems A, do work tops A, C, E, or G; the C, and G, by the attachments H. *d.* An additional belt XX. *e.* belt Y, improved. *f.* Retroversion correction through the rectum. *g.* Stem Levers.

2. Tops and Springs.—Each design has numerous sizes. They all unscrew, giving access to the coil spring concealed in tube (*m*). The spring prevents the shock when the base T, is accidentally struck, and together with the elastic gums SS, give the Supported Uterus a double rocking motion.

3. Spring Stem Cup A.—This corrects *Prolapsus* and *Procidentia* and the immobility of the Uterus, unless locked by tumors. This immobility may be diagnosed with certainty by the hard rubber speculums or Lever G, in Examining Case. Another proof of its existence is that when the stem will protrude, at first, and the elevation gradually takes place. In such all self-sustaining instruments are powerless.

4. Globe B.—This is a self-sustaining Hard Rubber Shell, with a cord attached for ready removal, and guarding against loosing. When this can be effectually used of a small size, it is a simple and an admirable support. But when the immobility of the Uterus is known to exist, it is in vain to try any self-sustaining instrument. Plugging up the vagina with a light large size ball usually succeeds in *Procidentia*. But it is not altogether commendable, since it must lie where contraction should take place. The stem supporters should therefore have the preferance. *Procidentia* is the simplest of all displacements to correct, notwithstanding the many and cruel operations still performed.

5. Anteversion C.—This top is of the form of a chestnut. It has no advantage over the globe top, except that in some cases it may retain its position better. The latest experience proves, that when the Uterus is properly carried up with the Stem Cup A, or E C, that the Anteversion in common surrenders. Such is frequently the case in Retroversion. It only requires to place the body in such a position before the cup is fully moved up, that the intestines gravitate in position, and the fundus will follow. Rigid flexions are however exceptions.

6. Fast-handle Cup D.—This is also self-sustaining, when capped over the cervix of a well-fitting size. The brim constitutes a ring, which lodges in the folds of the Vagina, and prevents the Uterus from sliding down.

7. Retroversion E.—This is similar to A, except the *Lever Back*. This elevates and corrects the Retroverted Uterus with certainty. But sometimes the sensitiveness will not tolerate the correction and elevation simultaneous. Hence the advantage of the duplicate tops as a change. Retroversion, the most lamentable of all displacements, when traced in common, is found to proceed from long standing, relapsed, or neglected *Prolapsus*.

8. F's—These are small attachments to cover the screws of Cups A, or E, and Globes G, to make them self-sustaining, as a change or when sufficient contraction of the walls of the Vagina takes place to suspense with the external support.

9. Globe Tops G.—These are used in *Anteversion* and *Retroversion* of small sizes; for the latter with longer stems. In Prolapsus, when immobility of the Uterus exists, they are apt to lodge by the side of the Cervix, rather than dislodge it from its unnatural position. No instrument has ever revealed the necessity of a cup and external attachment in so many cases as this.

10. Oblong H.—This was originally designed for the aged and debilitated, since, it is easier to remove and replace than any of the other stem supporters, unless it be the stem lever. It is however confirmed by experience that it is well adapted to the *Prolapsus of the Bladder*. The base of the bulb resists the protrusion while the top rests in the summit of the vagina, and corrects the always attending abnormity of the uterus and its connections, by elongating the Vaginia.

11. Stem Levers, Fig. 14.—The original Hodge's Lever, or its modifications, are still recommended by some of the latest authorities, but no modification has removed its liability of becoming displaced. The circular walls of the vagina cannot grasp and hold an irregular and unequally touching instrument, unless it is wedged in position, which is contrary to the laws of nature. This stem lever lodges with the curve against the rear of the cervix; according to Hodge's Original design. A free movable size can be selected, and the natural contractions of the vagina are not impeded, but stimulated by elongation.

12. Uterine Supporter E C, Fig. 5—(*Economy*) and elastic abdominal belt Z. The stems are permanent, but the cups of numerous sizes. The cup sets oblique so that the axis of the cup and stem correspond with the axis of the Uterus and Vagina. The omission of the spring is considered by some over-balanced by its complete simplicity. But the self-sustaining cup A D, is a material loss, unless cup D, is also procured. The unscrewing and shifting is thus obviated, and when D, is of a slight increase in size the external support may sooner and more safely be laid aside.

13. Economy.—A womb supporter, with the free exchange privilege of the Hard Rubber part until correct, and warranted to sustain comfortably even already long standing ***Procidenta,*** for $4 50; including the chief of all self-sustaining pessaries, for $6 00, has no parallel in the catalogue of mechanical support of the uterus.

14. Retroversion and Rectum Supporter. Fig. 4.—F, is the rectum supporter. The bulb A, is hollow, and opened by unscrewing cap B. This may be filled with ointment for lubricating the rectum and to prevent the stem from becoming dry and hot. Impregnating the ointment with Monsell's Solution, to arrest the bleeding of piles. C, represents the base of the screw by which a piston is moved within the bulb while in position, and the ointment pressed out. G, the retroversion lever, is screwed on top in place of B.

BELTS.

15. Belt X—Fig. 1. The anterior portion is silk elastic, expanding and contracting within a cover. Duplicate. Price, $2 00.

16. Belt XX.—Fig. 2. The front is strong silk elastic, capped above the pubes to grasp the Abdomen. Stayed with whalebones. The sides and rear are divided to admit the lower portion to be drawn tightest. Both X, and XX, are coutil finished.

17. Belt Y.—Fig. 3. This is a well-fitted coutil belt, stayed with whalebones, and the straps over the hips are elastic. This is also furnished in neat cotton material, at $2 00; or with the instruments, in price as with belt X. This is the first design of an abdominal supporting belt sufficiently economical for all classes, that I with justice could recommend.

18. Belts—Both X X, and Y, are cheap and efficient abdominal supporters when required in pregnancy, tumors, inflation, or when varicose veins exist. When ordered with the instruments, will be provided with the necessary attachments. They should not be bare-worn, since the perspiration has a tendency to destroy the elasticity of any elastic webbing.

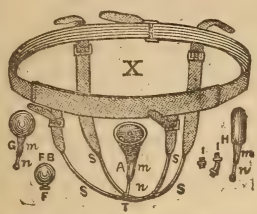
19. Belt Z.—Fig. 5. This is an elastic webbing of two inches wide. Both belts X, an Z, set above the hips, and support the instruments only. In some cases the lifting of the abdomen takes weight from the internal support, and assists it materialy; whereas, in others it has a reverse action. I know of no rule to diagnose this variation.

20. Selection.—The outside diameter of the cup; diameter of the globe, &c., should be given; the style and length of belt; the measure to be taken around the waist for X, and Z. Over the hips for X X, and Y. When the selection in part or wholly is left to me, the case should be described as follows:—How displaced? Age, and how long standing? If children how many? State of catamenia now and heretofore. Whether it be the result of an accident or unknown cause? When a pessary already worn, its name, size and result If retroversion, the condition as regards helplessness, &c.

21. Exchanges.—The Hard Rubber part has a free exchange privilege in size or style, until correct. The difference to be remitted when more costly ones are required. The duplicate tops, also B; and D, are taken back at cost in exchange for a complete set unless damaged. No spring working stems, however, are sold alone to supply duplicates.

STAUFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.

SERIES OF UTERINE SUPPORTERS. *1.*



Spring Stem Cup A.—Complete on Belt X, $7.00; on XX, $9.00; on Y, $8.00; and on Z, $6.00. Without belt on SS, $5.00.

Anteversion C, Globe Top G, and Oblong H, in price the same as A, with similar attachments.

Retroversion E, on Belt X, $8.00; on XX, $10.00; on Y, $9.00; and on Z $7.00. Without Belt $6.00

Duplicate Cups—A, $2.00; E, $3.00; Globe Tops G, with attachments to screw on A or E Stem $2.00.

P. S.—Shifting Top, with solid or no Spring Stem, 50 cents less on either belt. No Shifting Top Stem sold alone.

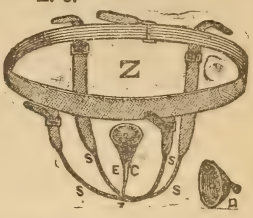
Self-Sustaining Globe B, or Cup D. $1.50 each.

Gums are mailed, 2 at 20 cts; 4 at 35 cts; and Springs at 3 cts. each.

Abdominal Supporters. *2.* *3.*

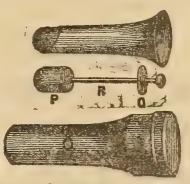
Price, $4.00. Price, $3.00.

SOLID STEM CUP SUPPORTER E. C. *5.*



Price, $4.50. Including Cup D, $6.00. Or E C, on Abdominal Belt X, $5.50. X X, $7.50. Y, $6.50. Including D, on each, $1.50 extra.

SPECULUMS AND CASE. *6.*



Prices.—The series encased, $14.00. With complete but non-shifting conductor, $2.50 each. Flesh color enameled inside.

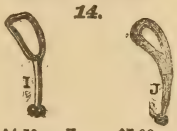
REFLECTOR, OR DENTISTS' LIGHT. *10.*

Price, $3.50.

Rectum Supporter and Ointment Holder. *4.*

$3.50.

STEM LEVERS. *14.*

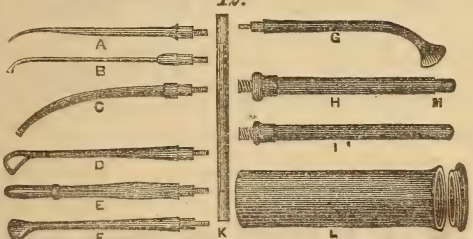


$4.50 on Z, $7.00 on X.

Permanent Stem I.—The same in price as E C, Fig. 5, on all the belts.

Spring Stem J.—The same as Spring Stem Cup A, Fig. 1, on either belt.

HARD RUBBER UTERINE EXAMINING CASE. *12.*



Prices.—Full case, $8.00; Quill Caustic holder H, or camel hair brush holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2.50.

Fenestrated Vaginal and Anal. *7.*

Prices.—Vaginal T, $2.00. Anal U, $1.50.

Caustic Bottle and Case. *11.*

Price, $1.50.

Hymen—Pointed.

8.

Price, $1.50.

Vaginal and Vulva Dilator.

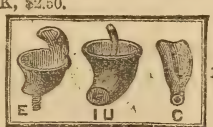
9.

Price, $1.50.

STAUFER'S NON-EVAPORATING INKSTAND.

Price, $1.00.

Price $1.00. *15.*



13.

Supporters E. C. or Economy.—Fig 5, on its elastic belt Z, is the least in price, and by the oblique construction of the cup sets direct within the angle of the axis of the uterus and vagina, (well seen by IU. Fig. 13.) If properly selected, or made so by the exchange privilege, (which admits the interchange of all the hard rubber parts in the catalogue, to cover the purchaser's risk.) It is warranted to correct and sustain even any ***Procidentia.*** The spring stems and shifting tops with their supplements, Fig. 1. Also, improved ***Retroversion, Cup E. Anterversion C.*** and ***Intra-Uterine Stem Cup, IU,*** Fig 13. The stem locks in a square socket after the cup is in position, and is supported on the elastic gums SS, as A Fig. 1, and same in price. Stem Levers, Fig. 14, etc. All are fully explained in the catalogue. The ***Series*** comprises upwards of 150 in style and size instruments, of which two-thirds belong to the support and correction of the uterus. ***Speculums***—Thomas' objections p. 67—'76, are by them completely overcome. The case contains four. The clear and large view, and facility to work through them, far exceeds any other. The ***Ex. Case,*** and physician's favorite, is admirably represented by Fig. 12—weight but 4 oz. ***Catalogue*** sent free on application. In addition to the description of the above series of instruments, it contains important information on this line of treatment.

MAILED ON RECEIPT OF PRICES.

ALWAYS SPECIFY "K. & M." IMPROVED EXTRACT OF MALT.

K. & M.
IMPROVED EXTRACT OF MALT.

Made from Canada Barley, selected, malted, dried, and extracted by, and under the immediate supervision of, Graduates of the Philadelphia College of Pharmacy. CONCENTRATED IN VACUO. This is as perfect an extract of the highest grade of carefully selected Barley Malt as can be PREPARED BY THE USE OF THE MOST IMPROVED VACUUM APPARATUS, recently designed for our own laboratory. As A FOOD in Syphilis, Typhoid and other fevers, Consumption and similar wasting diseases, it is without an equal for the rapid building up of a degenerate or depraved condition of the blood or tissues, since it acts not only as food itself, but its use converts and changes other kinds of food into a condition allowing easy assimilation.

We append the following letter from a gentleman well known to all:

Messrs. KEASBEY & MATTISON: PHILADELPHIA, September 25, 1877.

Gentlemen:—I have employed your Extract of Malt and Infant's Food in a large number of cases, much to my own satisfaction and to the benefit of the patient. The Infant's Food I regard as especially useful in cases of infants requiring artificial food, from any cause.

Yours, etc., W. B. ATKINSON, *Secretary American Medical Association.*

K. & M.
EXTRACT OF MALT WITH COD LIVER OIL.

ORIGINATED BY KEASBEY & MATTISON.

THE MOST NUTRITIVE EMULSION EVER MADE.

Our Improved Extract of Malt, with 50 per cent, of our fine Norwegian Oil, is pre-eminently the emulsion of Cod Liver Oil, since it has double the nutritive effect of any other emulsion of oil. It not only contains the largest amount of nutritive food in the smallest bulk of liquid, but, by the action of the Diastase contained in the malt, it is capable of transforming many times its bulk of amylaceous or graminaceous food into saccharine, thus rendering it easily digestible, even by the most delicate stomach of the invalid. The disagreeable eructations from the stomach, which constitute one of the greatest objections to the use of all preparations of Cod Liver Oil, are completely obviated in this preparation. We would direct the attention of physicians to the special fact that it unites perfectly with water in any proportion, and that the oil does not again separate, thus showing how perfectly the oil is emulsified.

Dose—A Dessert to a Tablespoonful immediately after Meals.

K. & M.
IMPROVED EXTRACT OF MALT WITH PEPSIN.

This is our Improved Extract of Malt, with the addition of five grains of our Saccharated Pepsin to the tablespoonful. For dyspeptic disorders it is found of great value, since it digests both albuminoid and amylaceous matter, thus furnishing a preparation that is needed in the majority of cases of dyspepsia and other derangements of the stomach dependent upon the non-assimilation of the food

Dose—A Dessert to a Tablespoonful immediately after Meals.

K. & M.
BEEF, IRON AND WINE, WITH EXTRACT OF MALT.

ORIGINATED BY KEASBEY AND MATTISON.

A Nourishing Diet for Invalids and Convalescents.

As a simple restorative food, where a tonic effect is desired, there is perhaps nothing in the whole line of tonic dietetics of so much real value as this preparation. It furnishes the diseased stomach with the power of assimilating amylaceous diet, and supplies readily assimilable food at the same time, in the articles of Malt Extract. The iron salt supplies the red corpuscles that are deficient in the blood, while to the nutrient effect of beef is added the stimulant effect of a fine sherry wine. Each tablespoonful represents two grains of the soluble citrate of iron, and one ounce of finely chopped raw lean beef, with equal quantities of our Improved Extract of Malt and sherry wine.

For sale by Druggists everywhere. Samples may be obtained of

ALWAYS SPECIFY "K. & M." IMPROVED EXTRACT OF MALT.

Analyses of Sulphate of Quinine Pills.

As we have repeatedly notified the trade, our Sulphate of Quinine Pills are made of Bleached Quinine and contain the correct amount of Quiniæ Sulphas, as represented on the label.

We submit below three analyses of our Sulphate of Quinine Pills obtained at different druggists; the first was made by Mr. Chas. Rice, of New York, one of the editors of the "*New Remedies*," and chemist of Department Public Charities and Correction of New York City, who is well known both personally and by reputation by a large number of physicians and druggists throughout the country. The other two analyses are by Dr. Polenske, former assistant of Prof. Sonnenshein, of Berlin, and now our own analytical chemist.

Our "Hospital Quinine" Pills are made as set forth in our circular of March 27th, which we reprint for the information of those who may not have seen it before.

With the assurance to the trade and medical profession, that we will always manufacture our preparations, as we have in the past, in **perfect good faith,** that we will use the best materials obtainable, increasing our knowledge by every means in our power, for examining and testing all ingredients and perfecting our business, we remain,

Very respectfully, McKESSON & ROBBINS.

NEW YORK, APRIL 17th, 1878.

"MESSRS. McKESSON & ROBBINS,

Gentlemen:—Having been requested by you to make an assay of the alkaloids contained in your Gelatine-Coated Quinine Pills, I purchased an original vial, containing 100 2 grain pills, in the store of Mr. Theodore Cole, 409 First Avenue, New York. Each ten of these pills weighed very nearly 34 grains, and the weight of the single pills is very uniform, varying but slightly either way from 3.4 grains. The whole number of pills, (100,) yielded 145.385 grains of anhydrous alkaloid, which was found to be **pure, White Quinia,** free from other cinchona alkaloids. This amount of dry Quinia corresponds to **203.8** grains of **Sulphate of Quinia,** containing 8 molecules of water of crystallization ($2\ C_{20}\ H_{24}\ N_2\ O_2 — H_2\ SO_4 — 8\ H_2\ O$); or to **201.7** grains of **Sulphate of Quinia,** containing 7½ molecules of water of crystallization ($2\ C_{20}\ H_{24}\ N_2\ O_2 — H_2\ SO_4 — 7½\ H_2\ O$), which latter is, as near as possible, the formula of the commercial pure Sulphate of Quinia. The amount of Sulphate of Quinia contained in the 100 pills examined, is therefore a trifle **in excess** of the required quantity, (3.8 grains, or 1.7 grain, according to whatever formula may be adopted for the crystallized salt).

Respectfully CHARLES RICE,
Chemist, Bellevue Hospital, N. Y."

NEW YORK, MARCH 30th, 1878.

"I have analyzed McKesson & Robbins' Gelatine-Coated 5 grs. Sulphate of Quinine Pills, from an original bottle of one hundred, and find that in two analyses of 10 pills each, the result in both cases was 51 grains of pure Sulphate of Quinine.

ED. POLENSKE, Ph. D."

NEW YORK, APRIL 13th, 1878.

"One hundred McKesson & Robbins' Gelatine-Coated 2 grs. Sulphate of Quinine Pills, analyzed by me to-day, contained 198 grains of Sulphate of Quinine. The Sulphate of Quinine obtained from these pills stood the Ether test, as laid down in the U. S. Ph.

ED. POLENSKE, Ph. D."

Circular of March 27th, 1878.

Since we changed, last fall, from Unbleached to Bleached Quinine in the manufacture of our Pills, we have heard from a large number of druggists and physicians stating that the therapeutical effects of the dark pills were better than the "bleached," dose for dose, where a tonic was indicated, and the antiperiodic effects of the former were as well marked. We made the change because we were disappointed in obtaining a uniform article of unbleached Quinine, were deceived in two shipments we received and the analyses of samples from the same package we submitted to different highly reputable chemists varied surprisingly, in fact, analysing Quinine *quantitively* is very difficult, as it depends very largely upon the different solubilities of the alkaloids in water, while the *qualitative* analysis is very simple and reliable.

The curative properties of the other alkaloids of Cinchona Barks have been well attested and the effect of the **combined alkaloids** has been repeatedly asserted to be greater than that of any **one alone.**

In view of these facts, we accordingly propose to offer Pills made of Hospital Quinine, which differs from that which has been known and understood as "unbleached," in the process of manufacture and in the proportion of Quinine. This Hospital Quinine will contain about 50 per cent. of Quinine Sulphate, and the balance, Cinchonidia Sulphate and traces of Quinidia Sulphate; the Cinchonia Sulphate, being less powerful than the other alkaloids is separated.

These pills on account of their lower price will relieve a difficulty, to which a large number of people living in malarious districts have been subjected—the inability to purchase Quinine Pills on account of price, especially when scarcity causes sudden and great advances, as at present—at the same time we believe that confidence may be felt of experiencing equal relief with similar doses.

We will continue, as now, to make our "Quinine Pills" of bleached Quinine, and the white color will readily identify them from our darker Hospital Quinines, which will be labelled "Hospital Quinine." The list of Hospital Quinine Pills we submit below is subject to same discount as our other pills, and will be reduced as soon as the market on Quinine will allow. We call special attention to our Pills of Cinchona Bark Alkaloids, which contain a definite quantity of each of the four alkaloids, one-half grain each Sulphates Quinia, Quinidia, Cinchonia and Cinchonidia.

We annex below list of our Pills of other Cinchona Alkaloids, and remain, soliciting your correspondence and valued orders,

Yours respectfully,

March 27th, 1878. McKESSON & ROBBINS.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,

1110-1135 92 CASS STREET, DETROIT.

FOR SALE.—A PHYSICIAN IN ILL health will dispose of a first-class opportunity to practice medicine, in a thriving village in New Jersey. Address "A. B. C.," care of MEDICAL AND SURGICAL REPORTER. 1t

A RARE OPPORTUNITY.—A WELL-established office practice—chiefly eye and ear—can be secured if applied for immediately. Business large and lucrative. No competition in the city. Practitioner retires and possession given August 1st. Address, with stamp, "Medicus," care MEDICAL AND SURGICAL REPORTER, Philadelphia, Pa. 1116-1117

WANTED—A POSITION BY A COMpetent chemist. High American and European references. Address "G. H.," office of MEDICAL AND SURGICAL REPORTER. 1116-1117

FOR SALE—A PHYSICIAN'S PROPERTY and Practice, in a small country town. Reasons for selling, ill-health. Address
ISRAEL D. FOX,
1112-tf Richlandtown, Bucks County, Pa.

400 DOLLARS WILL BUY HORSE, Vehicles, Medicines, Office Fixtures, etc., of a physician engaged in a paying practice, in Delaware. Any M. D., that means business, will address "DOCTOR," office of MED. AND SURG. REPORTER. 1107-tf

LEBAIGUE'S
DIALYSED IRON,
OR
PURE PEROXIDE OF IRON,
IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate, nor cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a **solution,** which is generally preferred; or of an **elixir,** when a slight stimulant is desired.

DOCTOR GIBERT'S
DEPURATORY SYRUP AND DRAGEES,
OF IODIZED DEUTO-IODIDE OF MERCURY.

These preparations have been approved by the Academy of Medicine of Paris, and have been thoroughly tested in the hospitals of Paris in the treatment of *Syphilitic, Scrofulous* and other affections requiring the use of iodized remedies.

They are recommended for the utmost accuracy of composition, and their perfect preservation.

Prepared by VAUQUELIN-DESLAURIERS, Chemist, Paris.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER of the ABOVE,
To whom all special communications should be addressed.

E. FOUGERA & CO.,

SOLE GENERAL AGENTS for the ABOVE,
To whom all orders should be addressed.

SOLD BY DRUGGISTS GENERALLY.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the medical profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition; containing the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 "	Lactic Acid	5 fl. "
Pancreatine	6 "	Hydrochloric Acid	5 fl. "

LACTOPEPTINE owes its great success solely to the Medical profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned, having tested REED & CARNRICK'S preparation of Pepsin, Pancreatine, Diastase, Lactic Acid and Hydrochloric Acid, made according to published formula, and called LACTOPEPTINE, find that in those diseases of the stomach where the above remedies are indicated it has proven itself a desirable, useful and well-adapted addition to the usual pharmaceutical preparations, and therefore recommend it to the profession.

NEW YORK, *April 6th*, 1875.

ALFRED L. LOOMIS, M. D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

SEABURY & JOHNSON,

Originators and Manufacturers of

U. S. PHARMACOPŒIA MEDICINAL AND SURGICAL

PLASTERS, POROUS AND SPREAD IN RUBBER COMBINATION,

NEW YORK AND LONDON.

Received highest and only Award (Medal and Special Diploma of Merit) over all Foreign and Home Competitors in 1876.

THE JURORS' AWARD IS SUBSTANTIALLY

ORIGINALITY.—The successful application of Rubber as a base for all medicinal and mechanical plasters.

RELIABILITY and general excellence of manufactures.

FACTS CONCERNING MEDICINAL PLASTERS IN RUBBER COMBINATION.

India-rubber-spread and Porous Plasters possess indisputable advantages over all other Plasters: (1) The Rubber combination preserves the incorporated drug or extract from decomposition or volatilization; (2) They adhere closer and firmer; (3) They do not soil the skin or linen; (4) They are always pliable, and never become hard or brittle; (5) They adhere without heat or moisture; (6) An increased effect obtained by being porous, as the Plaster neither slides nor moves from its affixed position.

BELLADONNA PLASTER, U. S. P.

IN RUBBER COMBINATION.

Messrs. SEABURY & JOHNSON claim that theirs is the most thoroughly reliable and only strictly officinal Belladonna Plaster ever offered the medical profession. It is an improvement on other Belladonna Plasters in several important particulars. First, it is incorporated with the officinal alcoholic extract only. Secondly, it is freed from all stimulating qualities, thereby insuring the uninfluenced sedative action of Belladonna. Thirdly, it adheres with greater tenacity than others. Physicians have been prejudiced in favor of Allen's English Extract; but recent analysis, fairly conducte t by competent chemists, emphatically condemns the Inspissated Extract as a mild and unstable product, representing but one-half or less than one-half of the strength of the U. S. P. Alcoholic Extract of Belladonna. The following result, published in the *American Journal of Pharmacy*, in April, 1876, page 145, is furnished for your consideration, which indicates the following percentage of Atropia in the respective extracts:—

Alcoholic Extract Belladonna, U. S. P......2,571
Allen's English Extract.....1,411
Herring's English Extract.....1,179

The practitioner, as well as ourselves, has but one choice.

Considering these features from a professional standpoint, we offer a Belladonna plaster which cannot be improved upon.

SALICYLATED SURGEONS' RUBBER ADHESIVE PLASTER

This article has met with unprecedented success, and has been emphatically pronounced by our most skillful General and Orthopædic Surgeons, as "the best Surgeons' Adhesive Plaster known." It is applied without heat or moisture, conforms quickly to the parts; is perfectly flexible and waterproof, and is ready for use at any moment. It is free from irritating properties and very healing. In counter-extension it has no equal, as it does not move or slide after being applied. Our India-rubber Adhesive Plaster is also spread on twilled linen, which resists the most powerful strain. In addition to these general improvements, the plaster being impervious to water, wounds can be cleansed without removing the plaster, obviating the necessity of constant redressing, saving labor and time. **Whenever continued powerful adhesion is required, it should be procured in porous form.**

MUSTARD PLASTER (spread on Cotton Cloth).

Our Mustard Plaster is a decided improvement over the best French makes; the mustard is manipulated so as to exclude all the moisture, retaining unimpaired by such treatment, its essential properties. They are always reliable, conform quickly to the part, and when thoroughly wet do not break into pieces, as is the case with all other mustard plasters. They do not crack or peel off, and can be removed without soiling the skin or linen. Being **manufactured only of pure mustard,** they are perfectly free from Croton Oil or other dangerous substitutes, often employed to induce intense irritation.

RUBBER BLISTER PLASTER (Camphorated) U. S. P. STRENGTH.

This article has a splendid reputation; its characteristic action is not impaired by age in any climate. The whole fly is incorporated, which, by constant manipulation is thoroughly and beautifully combined with the plaster. **Its properties are developed quicker, and it blisters in less time than the cerate.** It never fails to blister when used as directed. In addition to its superior efficacy as a vesicant, we incorporate a sufficient quantity of Camphor, which, with the Olive Oil used on the face of the plaster, **prevents Strangury.** This improvement will be appreciated by every practitioner. It is more reliable than any known cantharidal preparation.

CAPSICUM PLASTER.

Recently this article has crept into favor with our most esteemed physicians, and judging from results, it is doubtless the best rubefacient known. It has the specific action of mustard without its objections. The characteristic action of Capsicum is uniformly maintained from twenty-four to forty-eight hours, without blistering, being mild, continuous, and stimulating. This plaster is spread in rubber combination and in porous form. Experience has taught practitioners that the Oleo Resin of Capsicum is too violent, frequently vesicating; we incorporate the crude drug in sufficient quantity, without risk to the patient. Our Capsicum Plasters will be found more practical for general use than the **so-called Mustard or Capsicum Papers.**

SPECIAL NOTICE TO PHYSICIANS.

QUALITY IS OF GREAT IMPORTANCE TO THE PRACTITIONER: BY RELIABLE PREPARATIONS HE SUPPLEMENTS HIS OWN SKILL. You can therefore rest assured that every article we manufacture is of strict pharmacopœia strength, and incorporated with perfectly reliable Extracts and Drugs, well selected, carefully and conscientiously prepared, and manufactured invariably under the personal superintendence of one of our firm. OUR WHOLE ATTENTION AND STUDY IS DEVOTED ENTIRELY TO THE ART OF PLASTER MAKING, and we are ready at all times to receive suggestions from the fraternity, which may be of benefit to all.

SEABURY & JOHNSON,

21 Platt Street, New York.

ALL THE ABOVE ARTICLES SOLD BY DRUGGISTS EVERYWHERE.

ALWAYS SPECIFY SEABURY & JOHNSON'S PLASTERS.

NEW HYPODERMIC SYRINGES.

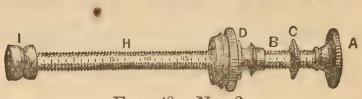

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

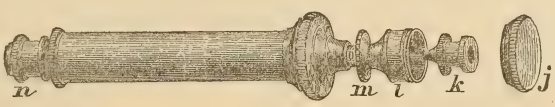
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$4.00* No. 2, *$4.50* Postage, .03
" No. 3, *3.00* No. 4, *4.00* " .02



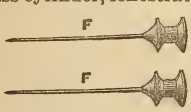
No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).



No. 11.

As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case *$3.50* Postage. .02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

CODMAN & SHURTLEFF,

Makers and Importers of Superior Surgical Instruments,

1088-1139eow **13 & 15 TREMONT STREET, BOSTON, MASS.**

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

1090-1115eow

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

☞ For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

JEFFERSON MEDICAL COLLEGE,

PHILADELPHIA.

The Fifty-fourth Session of the Jefferson Medical College will begin on Tuesday, October 1, 1878, and will continue until March 1st, 1879. Preliminary Lectures will be held from Monday, 2d September.

PROFESSORS.

JOSEPH PANCOAST, M.D., General, Descriptive and Surgical Anatomy (*Emeritus*).
SAMUEL D. GROSS, M.D., LL.D., D.C.L. Oxon., Institutes and Practice of Surgery.
ELLERSLIE WALLACE, M.D., Obstetrics and Diseases of Women and Children.
JOHN B. BIDDLE, M.D., Materia Medica and General Therapeutics.
J. AITKEN MEIGS, M.D., Institutes of Medicine and Medical Jurisprudence.
J. M. DA COSTA, M.D., Practice of Medicine.
WILLIAM H. PANCOAST, M.D., General, Descriptive and Surgical Anatomy.
ROBERT E. RODGERS, M.D., Medical Chemistry and Toxicology.

Continuous Instruction is given throughout the year (with the exception of the months of July and August), which is free to the matriculates of the Winter Session. The following special subjects are taught during the Preliminary Course in September:—

Medical Jurisprudence, by Professor Meigs.

Dermatology and Syphilitic Diseases, by Dr. F. F. Maury, one of the Surgeons to the Philadelphia Hospital.

Pathological Anatomy, by Dr. Longstreth, Pathologist to the Pennsylvania Hospital.

Operative Surgery, with Operations on the Cadaver, by Dr. John H. Brinton, one of the Surgeons to the Philadelphia Hospital.

Diseases of the Urino-Genital Organs, by Dr. S. W. Gross, one of the Surgeons to the Philadelphia Hospital.

Ophthalmology is treated both clinically and didactically during the entire course, by Dr. William Thomson, one of the Surgeons to the Wills Ophthalmic Hospital.

Laryngoscopy, with Diseases of the Throat, by Dr. J. Solis-Cohen.

The Demonstrator of Surgery, Dr. J. Ewing Mears, delivers a distinct course of *Demonstrations of Surgery,* with illustrations on the Cadaver, during the entire session.

Practical Chemistry, with Qualitative and Quantitative Analysis, the Examination of Normal and Abnormal Products, and Manipulation by the student himself, is taught by the Professor of Chemistry, assisted by the Demonstrator, G. M. Ward, M.D.

Practical Anatomy and Morbid Anatomy.—For the study of Practical Anatomy a full supply of material is furnished, free of charge. The anatomical rooms are spacious and provided with every convenience, and not only are subjects for dissection to be had without expense, but there are no incidental or extra charges of any kind. Demonstrator of Anatomy, T. H. Andrews, M.D.

Bedside Instruction is furnished to advanced students. The practical use of the laryngoscope is taught to all candidates for graduation, in classes of convenient size, at the College Hospital, by J. Solis-Cohen, and the use of the ophthalmoscope, by Dr. W. Thomson.

Laboratory Instruction is at the disposal of all the members of the class in the Chemical and Physiological Laboratories, and Practical Instruction in the use of the Microscope is also given.

Post-Mortem Examinations.—During the past winter opportunity was afforded to the graduating class of being present in sections, at autopsies, by Dr. Morris Longstreth, Pathologist to the Jefferson Medical College Hospital and to the Pennsylvania Hospital; and these facilities will be continued during the ensuing session.

The New Hospital of the Jefferson Medical College, which was begun in November, 1875, is now completed and in operation. It is situated immediately west of the College, fronting on Sansom Street, and is bounded on three sides by streets, and by a wide private passage way on the fourth side. It is 107 feet square, five stories in height, and is designed for the easy accommodation of 125 patients. In connection with the Hospital is the Out Door or Dispensary Department, which furnishes much valuable material for clinical instruction. The amphitheatre, provided for Clinical Lectures, is probably the largest and most convenient in the United States, and will seat more than six hundred students. The most approved appliances for heating, ventilation, etc., have been provided, and in architectural construction, and all desirable conveniences, this hospital will be found at least equal to any American clinical hospital. Daily Clinical Lectures are given at the hospital, through the entire year, by members of the Faculty and by the hospital staff, which is constituted as follows:—

Surgeons:
JOHN H. BRINTON, M.D.,
F. F. MAURY, M.D.,
S. W. GROSS, M.D.,
R. J. LEVIS, M.D.

Ophthalmic Surgeon:
WILLIAM THOMSON, M.D.

Aural Surgeon:
L. TURNBULL, M.D.

Physicians:
J. SOLIS-COHEN, M.D.,
JAMES C. WILSON, M.D.,
JOHN B. ROBERTS, M.D.,
OLIVER P. REX, M.D.

Gynæcologists:
F. H. GETCHELL, M.D.,
J. EWING MEARS, M.D.,

Pathologist:
MORRIS LONGSTRETH, M.D.

A Summer Course of Supplementary Lectures is given, beginning 17th March, 1879, and extended through the months of April, May, and June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non matriculates pay thirty five dollars, which is, however, credited on the amount of fees paid for the ensuing winter course.

FEES.

For a Full Course.....$140 00
Matriculation Fee (paid once only)..... 5 00
Graduation Fee..... 30 00

Students who have attended two full courses on Materia Medica, Institutes, Anatomy, or Chemistry, may be examined on any of these branches at the end of their second course.

The Annual Announcement will be sent, on application to

1116-1122eow1123, 1124, 1126 **J. B. BIDDLE, M.D., Dean.**

MIAIM MEDICAL COLLEGE,
OF CINCINNATI.

The next Session will begin October 3, 1878, with Preliminary Course from September 15th. The College is well supplied with means for demonstrative teaching, having large Museums, a Student's Laboratory, Microscopes, etc.

The Clinical advantages are superior, two large Dispensaries being under the exclusive care of the Faculty, and daily Lectures in the largest Hospital of the West.

FEES, $45.

The Recitation Course will commence March 15, 1879.

FACULTY—John A. Murphy, M.D., Dean; Wm. H. Mussey, M.D., E. Williams, M.D., Wm. Clendenin, M.D., Wm. H. Taylor, M.D., T. H. Kearney, M.D., J. C. Mackenzie, M.D., J. B. Hough, M.D., Wm. B. Davis, M.D., Byron Stanton, M.D.

ALWAYS SPECIFY "K. & M." GRANULATED EFFERVESCENT SALTS.

K. & M.
GRANULATED EFFERVESCENT
PEPSIN, BISMUTH & STRYCHNIA.
ORIGINATED BY KEASBEY & MATTISON.

We again offer this preparation confidently to the profession. It has, for four years, enjoyed an extensive prescription among the most eminent of our practitioners. Its use has been attended with the most marked success, perhaps, of any of the various remedies recommended in dyspepsia, gastralgia, and kindred disorders. Its association with Carbonic Acid renders it palatable, and causes it to be retained by the most sensitive stomach. It is the only soluble form in which Pepsin and Bismuth should be ever given together, and is FIVE TIMES THE PEPSIN STRENGTH of the various elixirs, wines, liquors, etc., of the market. In reference to its reliability, we refer to the most prominent physicians in all sections of this country, who will very generally be found to be using it in their practice.

Always prescribe the GRANULATED EFFERVESCENT form, and always specify the "K. & M. ' Preparation.

Each drachm or heaping teaspoonful contains FIVE GRAINS Saccharated Pepsin, two grains soluble Citrate of Bismuth, and one-fiftieth grain Citrate of Strychnia.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 21, 1877.

Gentlemen:—I have used a large number of your preparations for several years past with great satisfaction, and am happy to commend them to others from what I know both of your drugs and of yourselves.

Very truly yours, W. W. KEEN, M. D.

K. & M.
GRANULATED EFFERVESCENT
CITRATE CAFFEINE.
ORIGINATED BY KEASBEY & MATTISON.

The recent extensive employment of this salt as a remedy, amounting almost to a specific in cases of sick headache, and its use in nervous diseases generally, have caused us to place it upon our list. Its value is much enhanced by its administration with Carbonic Acid, so agreeably and efficiently produced by this form.

A heaping teaspoonful, containing ONE GRAIN of Citrate of Caffeine, should be given in sick headache, every hour or two before and during the paroxysms.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 27, 1877.

Gentlemen:—It gives me pleasure to add my testimony in regard to your preparations, which I have used for a long time; they are thoroughly reliable.

Truly yours, THOMAS G. MORTON, M. D.

K. & M.
GRANULATED EFFERVESCENT
CITRATE LITHIA.

In the effervescent form this chemical is administered in a peculiarly advantageous manner. Its association with Carbonic Acid renders it much less liable to disturb the stomach, while in strength it is greatly superior to Lithia Water. A valuable diuretic and lithontriptic, its importance in the treatment of rheumatic, gouty, and analogous disorders can scarcely be over-estimated.

We have doubled the strength of this preparation, each drachm or heaping teaspoonful containing FOUR GRAINS of the chemically pure salt.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 25, 1877.

Gentlemen:—I have employed your Extract of Malt and Infants' Food, in a large number of cases, much to my own satisfaction, and to the benefit of the patient. The Infants' Food I regard as especially useful in cases of Infants requiring artificial food from any cause. Yours, etc., W. B. ATKINSON, M. D., *Sec. American Med. Asso.*

K. & M.
GRANULATED EFFERVESCENT PREPARATIONS

of Magnesium Citrate, Potassium Bicarb., Citrate Benzoate, and Bromide; Lithium Benzoate and Carbonate; Cerium Nitrate and Oxalate; Bismuth Citrate (SOLUBLE), Pepsin, and Bismuth; Pepsin, Bismuth, and Iron, etc., etc., etc.; also the following:—

K. & M.
GRANULATED EFFERVESCENT
MINERAL WATER SALTS.

Vichy, Kissingen, Seltzer, Carlsbad, Congress, Crab Orchard, Pullna, Friedrichshall, etc., etc.

ALWAYS SPECIFY "K. & M." GRANULATED EFFERVESCENT SALTS.

Analyses of Sulphate of Quinine Pills.

As we have repeatedly notified the trade, our Sulphate of Quinine Pills are made of Bleached Quinine and contain the correct amount of Quiniæ Sulphas, as represented on the label.

We submit below three analyses of our Sulphate of Quinine Pills obtained at different druggists; the first was made by Mr. Chas. Rice, of New York, one of the editors of the "*New Remedies*," and chemist of Department Public Charities and Correction of New York City, who is well known both personally and by reputation by a large number of physicians and druggists throughout the country. The other two analyses are by Dr. Polenske, former assistant of Prof. Sonnenshein, of Berlin, and now our own analytical chemist.

Our "Hospital Quinine" Pills are made as set forth in our circular of March 27th, which we reprint for the information of those who may not have seen it before.

With the assurance to the trade and medical profession, that we will always manufacture our preparations, as we have in the past, in **perfect good faith,** that we will use the best materials obtainable, increasing our knowledge by every means in our power, for examining and testing all ingredients and perfecting our business, we remain,

Very respectfully, **McKESSON & ROBBINS.**

NEW YORK, APRIL 17th, 1878.

"MESSRS. McKESSON & ROBBINS,

Gentlemen:—Having been requested by you to make an assay of the alkaloids contained in your Gelatine-Coated Quinine Pills, I purchased an original vial, containing 100 2 grain pills, in the store of Mr. Theodore Cole, 409 First Avenue, New York. Each ten of these pills weighed very nearly 34 grains, and the weight of the single pills is very uniform, varying but slightly either way from 3.4 grains. The whole number of pills, (100,) yielded 148.385 grains of anhydrous alkaloid, which was found to be **pure, White Quinia,** free from other cinchona alkaloids. This amount of dry Quinia corresponds to **203.8** grains of **Sulphate of Quinia,** containing 8 molecules of water of crystallization ($2\ C_{20}\ H_{24}\ N_2\ O_2—H_2\ SO_4—8\ H_2\ O$); or to **201.7** grains of **Sulphate of Quinia,** containing 7½ molecules of water of crystallization ($2\ C_{20}\ H_{24}\ N_2\ O_2—H_2\ SO_4—7½\ H_2\ O$), which latter is, as near as possible, the formula of the commercial pure Sulphate of Quinia. The amount of Sulphate of Quinia contained in the 100 pills examined, is therefore a trifle **in excess** of the required quantity, (3.8 grains, or 1.7 grain, according to whatever formula may be adopted for the crystallized salt).

Respectfully CHARLES RICE,
Chemist, Bellevue Hospital, N. Y."

NEW YORK, MARCH 30th, 1878.

"I have analyzed McKesson & Robbins' Gelatine-Coated 5 grs. Sulphate of Quinine Pills, from an original bottle of one hundred, and find that in two analyses of 10 pills each, the result in both cases was 51 grains of pure Sulphate of Quinine.

ED. POLENSKE, Ph. D."

NEW YORK, APRIL 18th, 1878.

"One hundred McKesson & Robbins' Gelatine-Coated 2 grs. Sulphate of Quinine Pills, analyzed by me to-day, contained 198 grains of Sulphate of Quinine. The Sulphate of Quinine obtained from these pills stood the Ether test, as laid down in the U. S. Ph.

ED. POLENSKE, Ph. D."

Circular of March 27th, 1878.

Since we changed, last fall, from Unbleached to Bleached Quinine in the manufacture of our Pills, we have heard from a large number of druggists and physicians stating that the therapeutical effects of the dark pills were better than the "bleached," dose for dose, where a tonic was indicated, and the antiperiodic effects of the former were as well marked. We made the change because we were disappointed in obtaining a uniform article of unbleached Quinine, were deceived in two shipments we received and the analyses of samples from the same package we submitted to different highly reputable chemists varied surprisingly, in fact, analysing Quinine *quantitively* is very difficult, as it depends very largely upon the different solubilities of the alkaloids in water, while the *qualitative* analysis is very simple and reliable.

The curative properties of the other alkaloids of Cinchona Barks have been well attested and the effect of the **combined alkaloids** has been repeatedly asserted to be greater than that of any **one alone.**

In view of these facts, we accordingly propose to offer Pills made of Hospital Quinine, which differs from that which has been known and understood as "unbleached," in the process of manufacture and in the proportion of Quinine. This Hospital Quinine will contain about 50 per cent. of Quinine Sulphate, and the balance, Cinchonidia Sulphate and traces of Quinidia Sulphate; the Cinchonia Sulphate, being less powerful than the other alkaloids is separated.

These pills on account of their lower price will relieve a difficulty, to which a large number of people living in malarious districts have been subjected—the inability to purchase Quinine Pills on account of price, especially when scarcity causes sudden and great advances, as at present—at the same time we believe that confidence may be felt of experiencing equal relief with similar doses.

We will continue, as now, to make our "Quinine Pills" of bleached Quinine, and the white color will readily identify them from our darker Hospital Quinines, which will be labelled "Hospital Quinine." The list of Hospital Quinine Pills we submit below is subject to same discount as our other pills, and will be reduced as soon as the market on Quinine will allow. We call special attention to our Pills of Cinchona Bark Alkaloids, which contain a definite quantity of each of the four alkaloids, one-half grain each Sulphates Quinia, Quinidia, Cinchonia and Cinchonidia.

We annex below list of our Pills of other Cinchona Alkaloids, and remain, soliciting your correspondence and valued orders,

Yours respectfully,

March 27th, 1878. **McKESSON & ROBBINS.**

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

$300 WILL BUY HORSE, TWO CARriages, Harness, Robe, Blankets, etc., all in good condition, and a practice worth $1800 yearly. Reason for selling, ill-health. Immediate possession given. Address R. J. M., Office of MEDICAL AND SURGICAL REPORTER. 1117-tf

RING-FOLDING SPECULUM. WHAT Eminent Physicians say of it. Quotations from Descriptive Circular:—

"I have found the Speculum of Dr. SHILAND perfectly satisfactory."

"It is an admirable instrument."

"I am pleased with it more than any other."

"For ease of introduction, and exposure of the walls of the vagina, I believe Dr. SHILAND'S Speculum superior, and recommend it in the treatment of uterine disease."

For sale by leading instrument dealers. Sent by mail on receipt of the price, $5.00.

A. SHILAND, M.D.,
1117-tf West Troy, N. Y.

A RARE OPPORTUNITY.—A WELLestablished office practice—chiefly eye and ear—can be secured if applied for immediately. Business large and lucrative. No competition in the city. Practitioner retires and possession given August 1st. Address, with stamp, "Medicus," care MEDICAL AND SURGICAL REPORTER, Philadelphia, Pa. 1116-1117

WANTED—A POSITION BY A COMpetent chemist. High American and European references. Address "G. H.," office of MEDICAL AND SURGICAL REPORTER. 1116-1117

THE PHILADELPHIA

DRUGGIST AND CHEMIST.

A NEW MONTHLY JOURNAL,

DEVOTED TO

MATERIA MEDICA,
PHARMACY,
CHEMISTRY,
THERAPEUTICS, and
THE COLLATERAL SCIENCES.

It is also a thorough TRADE REGISTER, and a reliable Advertising Medium for Druggists and Chemists everywhere.

—o—

Experienced writers have been engaged, and the literary contents are of such a character as to make the DRUGGIST AND CHEMIST an invaluable Journal for the Pharmacist, Physician and Scientist.

It is of practical value, moreover, to the general reading public—to all who desire scientific information, and to apply such to the practical affairs of life.

The arrangement of the journal is as follows:—

1. ORIGINAL DEPARTMENT.—Embracing original articles, communications.
2. CORRESPONDENCE.—Containing letters of general interest, queries and replies.
3. EDITORIAL DEPARTMENT.—This portion will be divided into gleanings and comments, editorial reviews and book notices.
4. SCIENTIFIC NEWS, marriages, deaths, etc.

The journal is printed from clear type, and in the best style of the art, and no pains will be spared to make it a superior monthly magazine.

TERMS: $1.50 per Annum, in Advance.

Twice the Amount of Reading Matter since the First Issue, January, 1878.

All communications should be sent to

C. C. VANDERBECK, M.D., Ph.D.,

RAW MEAT

(IN POWDER)

DESSICATED IN VACUUM, POWDERED AND MEDICATED WITH THE HYPOPHOSPHITES; IS PLEASANT TO TAKE. FOR THE CURE OF CONSUMPTION, AND ALL PULMONARY AND EXHAUSTIVE DISEASES.

DOSE 1 TO 4 TEASPOONFULS 4 TIMES DAILY
WITH MILK, WINE, WATER, OR EXT. MALT.

WILLIAM R. WARNER & CO.

SOLUTION
FERROUS CHLORIDE.

This Solution of Iron is the lowest form of Chloride. It is much less styptic in taste than Tr. Iron Chloride, consequently pleasanter to the patient; it is much more easily assimilated by weak and irritable stomachs.

Knowing how difficult it is to introduce into the blood, in a proper form, a sufficient quantity of iron to be beneficial, we have manufactured and introduce the **Ferrous Chloride** as being easily absorbed and acting with much efficacy, even when given in small doses.

Dr. Rabuteau, who has specially studied the protochloride of iron, and shown that it is the most natural of ferruginous salts, thinks that he has found the very thing required:—

EXTRACT FROM THE REPORTS OF THE ACADEMY OF SCIENCES OF PARIS.
(*Sitting of* 11 *December*, 1871.)

"..... The most important thing is the facility with which the protochloride of iron is absorbed by the stomach. Two or three hours after from 4 to 10 grains of this salt have been ingested, almost the whole is absorbed. Having finally observed that the reduced iron and the ferruginous oxyds and carbonates are changed into protochloride in the stomach by the contact with the hydrochloric acid of the gastric juice, I thought it necessary to substitute this salt for all the preceding for medicinal purposes. My observations in the wards of hospitals and in my own practice have convinced me of the successful results of the protochloride of iron, which is easily borne when pure and administered in a proper way."

For details, see the memoirs on the protochloride of iron published in the *Union Médicale, Paris*, 1871 and 1872.

Each fluid drachm contains two grains of the Anhydrous **Ferrous Chloride.**

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

AS SUPPLIED TO

SAVORY & MOORE, 143 New Bond Street, London.

Agents for America, E. FOUGERA & CO., NEW YORK.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

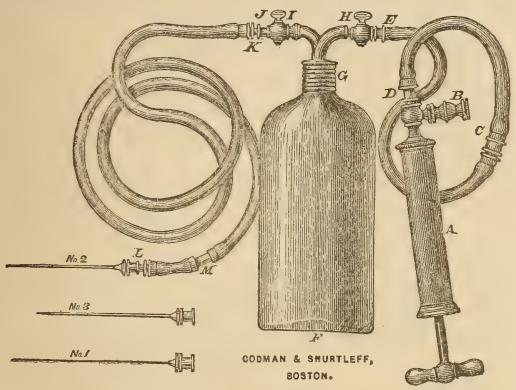

Fig. 77.

Fig. 68.

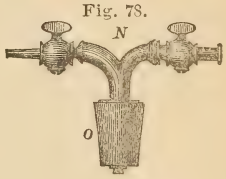

Fig. 78.

The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration.

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions.....$18 00

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions..... 16 00

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case.....$14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional..... 6 00

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

An illustrated Catalogue of Surgical Instruments, also a New Pamphlet on Atomization of Liquids, with description of Improved Apparatus and Formulæ of Remedies successfully employed, will be forwarded, post-paid, on application.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expenses of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,			*With Hops (Plain)*,	$1.00

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878–'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878–1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

MACMILLAN & CO.'S
NEW MEDICAL PUBLICATIONS.

BRAIN.

A JOURNAL OF NEUROLOGICAL SCIENCE.

Edited by Drs. BUCKNILL, CREIGHTON-BROWN, FERRIER and HUGHLINGS JACKSON.

Published Quarterly. $1.25 per number. Annual Subscription $4.00; free by mail.

A sample copy of Number One sent on receipt of Seventy-five cents.

It will be the object of "BRAIN" to keep its readers well abreast of modern progress in Neurology, and to advance the knowledge of a class of diseases respecting which it is universally admitted that much has yet to be learned.
Sent free by mail to any address, on receipt of the price.

THE JOURNAL OF PHYSIOLOGY.

Edited, with the coöperation in England of Prof. A. GAMGEE, F. R. S., Prof. W. RUTHERFORD, F. R. S., Prof. J. B. SANDERSON, F. R. S., and in America of Prof. H. P. BOWDITCH, of Boston, and Prof. H. N. MARTIN, of Baltimore; By Dr. M. FOSTER, F. R. S., Trinity College, Cambridge.

Vol. I., Part I., Now Ready, $3.00.

The Subscription Price per Volume will be, when paid in advance, $5.25. Sent free by mail.

The morphologists in England and America already possess an appropriate periodical literature; but the physiologists have hitherto been without an organ devoted exclusively to the publication in the English language of the results of physiological research. The want of such a periodical has long existed, and is daily increasing.
It is with a view of meeting this want that the JOURNAL OF PHYSIOLOGY has been established; and its conductors trust that the nature of the communications of which they hope to make it the medium will be at once readily understood by all workers in Biology.

THE PRACTITIONER.

A MONTHLY JOURNAL OF THERAPEUTICS AND PUBLIC HEALTH.

Edited by T. LAUDER BRUNTON, M. D., F. R. S.

"To hard-worked medical men, with little time for reading, and few opportunities for professional conversation, such a journal as this, bringing every month the latest ideas in medical practice and latest records of important cases, ought to be invaluable."—*London Guardian.*

Sample Copies, 40 cents. Annual Subscription, $4.00.

INSANITY AND ITS PREVENTION,

Insanity in Ancient and Modern Life. With Chapters on its Prevention. By D. H. TUKE, M. D. 12mo, cloth, $1.75.

PRACTICAL CHEMISTRY FOR MEDICAL STUDENTS.

By W. M. PATTISON MUIR, F. R. S. E. 18mo, cloth, limp, 60 cents.

CLINICAL MEDICINE.

Lectures on Clinical Medicine, delivered in the Royal and Western Infirmaries of Glasgow. By Dr. MCCALL ANDERSON, Author of the "Treatment of Diseases of the Skin." With Illustrations. 8vo, cloth, $3.00.

PRESCRIPTIONS AND PRESCRIBING.

Lessons on Prescriptions and the Art of Prescribing. By W. HANDSEL GRIFFITHS, PH. D., L. R. C. P. E. Third Edition. 18mo, cloth, $1.25.

PHYSIOLOGY.

A Text-Book of Physiology. By M. FOSTER, M. A., M. D., F. R. S. Second Edition, revised. 8vo, cloth, $6.50; sheep, $7.50.

"I recommend it to my students as the latest, and in some respects the best, Physiology in the English language."—*From a Letter from Prof. Burt G. Wilder.*

Any of the above works sent free by mail on receipt of the price.

[Unguentum Petrolei]

SAMPLES FURNISHED
ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

University of Pennsylvania,

MEDICAL DEPARTMENT.

113th ANNUAL SESSION, 1878–79.

The higher plan of medical education is now enforced, requiring attendance upon three graded courses of five months each. Didactic instruction is increased. Bedside instruction of each student in Physical Diagnosis, Clinical Medicine and Surgery, and Gynæcology is provided. The clinical and laboratory facilities are unrivaled in America. Pharmacy, Analytical and Medical Chemistry, Histology, Normal and Morbid Anatomy, and Operative Surgery are taught practically.

A Dental Department has recently been instituted.

For particulars, see ANNOUNCEMENT, for which address

JAMES TYSON, M. D.,
Secretary,

NEW YORK STATE

INEBRIATE ASYLUM,

Binghamton, Broome County, N. Y.

This Asylum is admirably situated, overlooking a fine section of country, and is complete in all the appointments of a first-class home, with ample means to meet the wants of every case. It is located three miles from the city, and removed from all temptation. Its management is the same as all other State charities, under the control of a Board of Managers appointed by the Governor. The law provides for the maintenance of indigent inebriates, similar to that of the insane, but patients from other States may be admitted.

The experience of this Asylum, for the past ten years, indicates an increasing usefulness and necessity for such institutions, and the original intention of making this an Asylum Hospital, where this disorder may be thoroughly understood and treated on broad scientific principles is nearer realized than ever before. All rules are strictly enforced, and no patient permitted to go beyond the Asylum grounds without permission from the Superintendent, or in the care of an attendant.

THE CHARGES FOR BOARD

will include medical care, washing, lights, fuel, etc., with ordinary attention. The exigencies of each particular case will be acted upon, as it may present itself, to those of moderate and limited means as well as the rich.

All inquiries and applications for admission should be addressed to the Superintendent.

WILLARD PARKER, M.D.,
New York, N. Y.,
President Board of Managers.

THE ADVANTAGES AND ACCIDENTS OF ARTIFICIAL ANÆSTHESIA.

BEING A MANUAL OF

ANÆSTHETIC AGENTS AND THEIR MODES OF ADMINISTRATION.

BY LAURENCE TURNBULL, M.D., PH.G.

WITH TWENTY-FIVE ILLUSTRATIONS.

12mo, pp. 208. Price, in Paper, 75 Cents. In Cloth, $1.00.

ABSTRACT OF CONTENTS.

ANÆSTHETICS OF THE ANCIENTS.—List of the Principal Agents that will Produce Anæsthetic Sleep.
GENERAL ANÆSTHETICS.—Methylic Alcohol for Inhalation; Mode of Action of the Lightest and Least Injurious: its Resemblance to Chloroform. The Method of Administering Ether. Test when the Patient is fully under its Influence, with Cautions in regard to Solid Food before Etherization. The Three Stages of Etherization. Ether Inhalers, etc.
SULPHURIC ETHER always gives Warning. Use of Air, Artery Forceps, Artificial Respiration in Fainting, etc. Statistics in Reference to Death. Experiments by the Sphygmograph. Primary and Secondary Effects. Death from Ether. Abstract of Report of Boston Committee. Inflammability. Conclusions of Author.
MIXTURES OF ETHER AND CHLOROFORM.—Dr. W. L. Atlee on their Employment. Use of Bichloride of Methylene, by Dr. Spencer Wells; his Doubts about its Composition. Amylene; Introduction and Use by Dr. Snow. Bromide of Ethyl or Hydrobromic Ether; Experiments by "Rabuteau." Mode of Preparation. Experiments of Writer.
CHLOROFORM, Chemical Composition, Impurities, Tests. Recent Investigations. Anæsthetics in Labor. Dr. Sims on Nelaton's Method. Nitrite of Amyl as an Antidote to Chloroform. Mixed Narcosis, Use of Morphia before Inhalation of Chloroform. Richardson's Report on Causes of Death from Chloroform. Conclusions by Drs. Erichsen and Gross.
ORIGINAL OBSERVATIONS AND EXPERIMENTS WITH HYDRATE OF CHLORAL.—Liebreich on the Impurity of Chloral in Cakes, Test of Purity, etc. On Chloral as an Anæsthetic in Children, by Dr. Bouchut, of Paris. Dr. J. M. Fothergill, of London, on the Great Utility of Strychnia in Chloral Poisoning. Use of Chloral by Author.
NITROUS OXIDE GAS AS AN ANÆSTHETIC.—Practical Observations and Experiments of Dr. J. D. Thomas. Thomas' Inhaler; Description and Mode of Use. Mode of Manufacturing Nitrous Oxide. Impurities and Mode of Purification. Coxeter's Form of Cylinder for Liquid Nitrous Oxide.
PHYSIOLOGICAL ACTION OF NITROUS OXIDE GAS.—Summary of the Facts Bearing on this Subject. Dr. Evans' (of Paris) Experiments with Nitrous Oxide and other Gases. Experiments of Dr. J. H. McQuillen in 1868; of Dr. Robert Amory in 1870, and Opinions of Dr. Johnston; of Profs. H. Ranke and D. C. Binz on Morphia, Chloral, Ether, etc.
J. F. CLOVER'S IMPROVED APPARATUS FOR THE COMBINED USE OF NITROUS OXIDE GAS AND ETHER.—Sir Henry Thompson, of London; Successful Use of these Agents Combined. Bonwill's Method of Anæsthesia, etc.
ETHER, ITS LOCAL APPLICATION IN THE FORM OF SPRAY.—Rhigolene. Anæsthetic Mixture of Ether and Camphor. Excision of Cancer under Ether Spray. Extract of Eucalyptus as a Local Anæsthetic in Dental Operations.
THERAPEUTIC EMPLOYMENT OF CHLOROFORM AND ETHER, of Chloral Hydrate, and of Butylchloral.
MEDICO-LEGAL RELATIONS OF ANÆSTHETICS.—Whether Chloroform can be Administered for Criminal Purposes? Cases in France, England, and the United States. Ether as a Poison. Chloroform; its Action as a Poison; Treatment.
APPENDIX.—Discovery of the Art of Artificial Anæsthesia.

"Close upon the occurrence of two fatal administrations of chloroform, in Philadelphia and Brooklyn, comes to us a little work under the title given above. It is as truly a *multum in parvo* as has fallen into our hands for many a day.

"From the beginning to the end of the book the reader will be impressed with the fairness and candor with which the author has pursued his work. As the subject is one that has absorbed the attention of the medical profession for a quarter of a century, the views of the more eminent and careful observers have been fully but concisely given, so that the reader can find ample material for deciding upon his course of action.

"The work is one that should have a universal circulation. Though designed for the medical profession, and especially the younger members, it presents a far greater interest to the general reader than often appertains to medical works."—THE MEDICAL AND SURGICAL REPORTER, April 27, 1878.

"This little work of 210 pages should be on the table of every practitioner who expects to administer an anæsthetic of any kind. We have carefully examined it and cordially recommend it to the profession. It supplies a want in the medical library, and this want will be the more easily recognized after the book is even casually examined."—*St. Louis Medical and Surgical Journal*, May, 1878.

"The volume should not only find a place in the library of every practitioner who administers anæsthetics, but many of its facts, cautions, and directions should be carefully pondered and remembered. When trouble comes to a patient from any cause, during the anæsthetic state, it is not a good time to hunt up information."—*The Dental Cosmos*, Philadelphia, May, 1878.

"This is a manual of anæsthetic agents and their modes of administration, considering their relative risk, tests of purity, treatment of asphyxia, spasm of the glottis, syncope, and their medico-legal relations. It is well written, shows research, and the conclusions are safe to follow. In reference to the use of chloroform the author concludes: 'I would limit the use of this most potent of all the anæsthetics to very young children; to puerperal eclampsia; in very violent convulsions in male adults, or females during delivery, where rapidity of dilatation of the os uteri is absolutely necessary to save the mother's life. In some rare cases of painful operation, where, after continued efforts, no complete insensibility can be produced by ether, I would feel justified in the use of a portion of chloroform on a clean sponge or inhaler.' He thinks ether, given with an inhaler, is the safest and best anæsthetic, and would use no other except in the cases enumerated above."—*Buffalo Medical and Surgical Journal*, June, 1878.

"Whenever the question of anæsthesia and the relative safety of the different anæsthetics is ventilated by a body of medical men, the desultory manner of the discussion is its most noteworthy feature. The earnestness with which the subject is discussed, and the great number participating actively in the debate, show the profound interest medical men take in this all-important question. While, on the other hand, the opinions of the different speakers, generally founded solely upon their limited personal experience, betray the fact that physicians are often ignorant of a great many things which have been published in relation to this subject of anæsthesia.

"We do not make these remarks for the purpose of casting any reproach upon our professional friends; we simply wish to point to the fact that valuable information which is annually published in hundreds of medical periodicals in the different tongues of the civilized world is practically inaccessible to the busy practitioner. A book, therefore, which presents this information in the condensed form of a small compendium, must be welcome to every physician, for it meets a great real want. A good compilation of this kind represents a vast amount of work, and also reflects the sound judgment of the author in critically sifting the material.

"Such is the character of the little book before us. In a concise form, the properties and actions of the agents now used as anæsthetics are exhibited; the best methods of their administration are well described, and directions added for prompt action in cases of asphyxia and other accidents. The question as to the comparative safety of the different anæsthetics (especially ether and chloroform), is thoroughly ventilated and impartially decided in favor of sulphuric ether.

"This excellent little work cannot be too warmly recommended to every busy practitioner who wishes to obtain much information by little reading."—*Chicago Medical Journal and Examiner*, Chicago, Ill., June, 1878.

"This book is much more than its title imports. It contains almost everything worth knowing, in practice, relative to the different anæsthetics, their mode of administration, their relative merits, and, in fact, as much valuable information on the subject as can be compressed in the same space."—*Pacific Medical and Surgical Journal*, San Francisco, Cal., June, 1878.

"Dr. Turnbull's book is a good manual to guide those who desire truth, and is quite a complete repository of late facts on the subject of anæsthesia—a good book to have in the house—and that is all that need really be said of it in introducing it to the profession."—*Ohio Medical and Surgical Journal*.

Published by LINDSAY & BLAKISTON, Philadelphia. For sale by Booksellers generally, or will be sent by Mail, postage paid, on receipt of the Price, from this Office. 1117-

ALWAYS SPECIFY "K. & M." IMPROVED EXTRACT OF MALT.

K. & M.
IMPROVED EXTRACT OF MALT.

Made from Canada Barley, selected, malted, dried, and extracted by, and under the immediate supervision of, Graduates of the Philadelphia College of Pharmacy. CONCENTRATED IN VACUO. This is as perfect an extract of the highest grade of carefully selected Barley Malt as can be PREPARED BY THE USE OF THE MOST IMPROVED VACUUM APPARATUS, recently designed for our own laboratory. As A FOOD in Syphilis, Typhoid and other fevers, Consumption and similar wasting diseases, it is without an equal for the rapid building up of a degenerate or depraved condition of the blood or tissues, since it acts not only as food itself, but its use converts and changes other kinds of food into a condition allowing easy assimilation.

We append the following letter from a gentleman well known to all:

Messrs. KEASBEY & MATTISON: PHILADELPHIA, September 25, 1877.

Gentlemen:—I have employed your Extract of Malt and Infant's Food in a large number of cases, much to my own satisfaction and to the benefit of the patient. The Infant's Food I regard as especially useful in cases of infants requiring artificial food, from any cause.

Yours, etc., W. B. ATKINSON, *Secretary American Medical Association.*

K. & M.
EXTRACT OF MALT WITH COD LIVER OIL.

ORIGINATED BY KEASBEY & MATTISON.

THE MOST NUTRITIVE EMULSION EVER MADE.

Our Improved Extract of Malt, with 50 per cent, of our fine Norwegian Oil, is pre-eminently the emulsion of Cod Liver Oil, since it has double the nutritive effect of any other emulsion of oil. It not only contains the largest amount of nutritive food in the smallest bulk of liquid, but, by the action of the Diastase contained in the malt, it is capable of transforming many times its bulk of amylaceous or graminaceous food into saccharine, thus rendering it easily digestible, even by the most delicate stomach of the invalid. The disagreeable eructations from the stomach, which constitute one of the greatest objections to the use of all preparations of Cod Liver Oil, are completely obviated in this preparation. We would direct the attention of physicians to the special fact that it unites perfectly with water in any proportion, and that the oil does not again separate, thus showing how perfectly the oil is emulsified.

Dose—A Dessert to a Tablespoonful immediately after Meals.

K. & M.
IMPROVED EXTRACT OF MALT WITH PEPSIN.

This is our Improved Extract of Malt, with the addition of five grains of our Saccharated Pepsin to the tablespoonful. For dyspeptic disorders it is found of great value, since it digests both albuminoid and amylaceous matter, thus furnishing a preparation that is needed in the majority of cases of dyspepsia and other derangements of the stomach dependent upon the non-assimilation of the food

Dose—A Dessert to a Tablespoonful immediately after Meals.

K. & M.
BEEF, IRON AND WINE, WITH EXTRACT OF MALT.

ORIGINATED BY KEASBEY AND MATTISON.

A Nourishing Diet for Invalids and Convalescents.

As a simple restorative food, where a tonic effect is desired, there is perhaps nothing in the whole line of tonic dietetics of so much real value as this preparation. It furnishes the diseased stomach with the power of assimilating amylaceous diet, and supplies readily assimilable food at the same time, in the articles of Malt Extract. The iron salt supplies the red corpuscles that are deficient in the blood, while to the nutrient effect of beef is added the stimulant effect of a fine sherry wine. Each tablespoonful represents two grains of the soluble citrate of iron, and one ounce of finely chopped raw lean beef, with equal quantities of our Improved Extract of Malt and sherry wine.

For sale by Druggists everywhere. Samples may be obtained of

ALWAYS SPECIFY "K. & M." IMPROVED EXTRACT OF MALT.

Analyses of Sulphate of Quinine Pills.

As we have repeatedly notified the trade, our Sulphate of Quinine Pills are made of Bleached Quinine and contain the correct amount of Quiniæ Sulphas, as represented on the label.

We submit below three analyses of our Sulphate of Quinine Pills obtained at different druggists; the first was made by Mr. Chas. Rice, of New York, one of the editors of the "*New Remedies*," and chemist of Department Public Charities and Correction of New York City, who is well known both personally and by reputation by a large number of physicians and druggists throughout the country. The other two analyses are by Dr. Polenske, former assistant of Prof. Sonnenshein, of Berlin, and now our own analytical chemist.

Our "Hospital Quinine" Pills are made as set forth in our circular of March 27th, which we reprint for the information of those who may not have seen it before.

With the assurance to the trade and medical profession, that we will always manufacture our preparations, as we have in the past, in **perfect good faith,** that we will use the best materials obtainable, increasing our knowledge by every means in our power, for examining and testing all ingredients and perfecting our business, we remain,

Very respectfully, **McKESSON & ROBBINS.**

NEW YORK, APRIL 17th, 1878.

"MESSRS. McKESSON & ROBBINS,

Gentlemen:—Having been requested by you to make an assay of the alkaloids contained in your Gelatine-Coated Quinine Pills, I purchased an original vial, containing 100 2 grain pills, in the store of Mr. Theodore Cole, 409 First Avenue, New York. Each ten of these pills weighed very nearly 84 grains, and the weight of the single pills is very uniform, varying but slightly either way from 3.4 grains. The whole number of pills, (100,) yielded 148.385 grains of anhydrous alkaloid, which was found to be **pure, White Quinia,** free from other cinchona alkaloids. This amount of dry Quinia corresponds to **203.8** grains of **Sulphate of Quinia,** containing 8 molecules of water of crystallization ($2\ C_{20}\ H_{24}\ N_2\ O_2 — H_2\ SO_4 — 8\ H_2\ O$); or to **201.7** grains of **Sulphate of Quinia,** containing 7½ molecules of water of crystallization ($2\ C_{20}\ H_{24}\ N_2\ O_2 — H_2\ SO_4 — 7½\ H_2\ O$), which latter is, as near as possible, the formula of the commercial pure Sulphate of Quinia. The amount of Sulphate of Quinia contained in the 100 pills examined, is therefore a trifle **in excess** of the required quantity, (3.8 grains, or 1.7 grain, according to whatever formula may be adopted for the crystallized salt).

Respectfully CHARLES RICE,
Chemist, Bellevue Hospital, N. Y."

NEW YORK, MARCH 30th, 1878.

"I have analyzed McKesson & Robbins' Gelatine-Coated 5 grs. Sulphate of Quinine Pills, from an original bottle of one hundred, and find that in two analyses of 10 pills each, the result in both cases was 51 grains of pure Sulphate of Quinine. ED. POLENSKE, Ph. D."

NEW YORK, APRIL 13th, 1878.

"One hundred McKesson & Robbins' Gelatine-Coated 2 grs. Sulphate of Quinine Pills, analyzed by me to-day, contained 198 grains of Sulphate of Quinine. The Sulphate of Quinine obtained from these pills stood the Ether test, as laid down in the U. S. Ph. ED. POLENSKE, Ph. D."

Circular of March 27th, 1878.

Since we changed, last fall, from Unbleached to Bleached Quinine in the manufacture of our Pills, we have heard from a large number of druggists and physicians stating that the therapeutical effects of the dark pills were better than the "bleached," dose for dose, where a tonic was indicated, and the antiperiodic effects of the former were as well marked. We made the change because we were disappointed in obtaining a uniform article of unbleached Quinine, were deceived in two shipments we received and the analyses of samples from the same package we submitted to different highly reputable chemists varied surprisingly, in fact, analysing Quinine *quantitively* is very difficult, as it depends very largely upon the different solubilities of the alkaloids in water, while the *qualitative* analysis is very simple and reliable.

The curative properties of the other alkaloids of Cinchona Barks have been well attested and the effect of the **combined alkaloids** has been repeatedly asserted to be greater than that of any **one alone.**

In view of these facts, we accordingly propose to offer Pills made of Hospital Quinine, which differs from that which has been known and understood as "unbleached," in the process of manufacture and in the proportion of Quinine. This Hospital Quinine will contain about 50 per cent. of Quinine Sulphate, and the balance, Cinchonidia Sulphate and traces of Quinidia Sulphate; the Cinchonia Sulphate, being less powerful than the other alkaloids is separated.

These pills on account of their lower price will relieve a difficulty, to which a large number of people living in malarious districts have been subjected—the inability to purchase Quinine Pills on account of price, especially when scarcity causes sudden and great advances, as at present—at the same time we believe that confidence may be felt of experiencing equal relief with similar doses.

We will continue, as now, to make our "Quinine Pills" of bleached Quinine, and the white color will readily identify them from our darker Hospital Quinines, which will be labelled "Hospital Quinine." The list of Hospital Quinine Pills we submit below is subject to same discount as our other pills, and will be reduced as soon as the market on Quinine will allow. We call special attention to our Pills of Cinchona Bark Alkaloids, which contain a definite quantity of each of the four alkaloids, one-half grain each Sulphates Quinia, Quinidia, Cinchonia and Cinchonidia.

We annex below list of our Pills of other Cinchona Alkaloids, and remain, soliciting your correspondence and valued orders, Yours respectfully,

March 27th, 1878. **McKESSON & ROBBINS.**

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

$300 WILL BUY HORSE, TWO CARriages, Harness, Robe, Blankets, etc., all in good condition, and a practice worth $1800 yearly. Reason for selling, ill-health. Immediate possession given. Address R. J. M., Office of MEDICAL AND SURGICAL REPORTER. 1117-tf

RING-FOLDING SPECULUM. WHAT Eminent Physicians say of it. Quotations from Descriptive Circular:—

"I have found the Speculum of Dr. SHILAND perfectly satisfactory."

"It is an admirable instrument."

"I am pleased with it more than any other."

"For ease of introduction, and exposure of the walls of the vagina, I believe Dr. SHILAND's Speculum superior, and recommend it in the treatment of uterine disease."

For sale by leading instrument dealers. Sent by mail on receipt of the price, $5.00.

A. SHILAND, M.D.,
1117-tf West Troy, N. Y.

CINCINNATI COLLEGE
OF
MEDICINE AND SURGERY.

FACULTY:

R. C. STOCKTON REED, M.D. Professor of Materia Medica and Therapeutics.
D. D. BRAMBLE, M.D., DEAN. Professor of Principles and Practice of Surgery an i Clinical Surgery.
ABIJAH J. MILES, M.D. SECRETARY, Professor of Diseases of Women and Children and Clinical Gynæcology.
JOHN A. THACKER, M.D. Professor of Principles and Practice of Medicine and Clinical Medicine.
JACOB TIUSH, M.D., Professor of Obstetrics and Clinical Professor of Dermatology.
CHAUNCEY R. STUNTZ, A.M. M.D., Professor of Chemistry and Toxicology.
WILLIAM ADAM ROTHACKER, M.D. Professor of Anatomy and Clinical Professor of Venereal Diseases.
JOSEPH AUB, M.D. Professor of Diseases of the Eye and Ear and Clinical Ophthalmology and Otology.
ASA BRAINARD ISHAM, M.D. Professor of Physiology,
JOSHUA W. UNDERHILL, M.D. Lecturer on Medical Jurisprudence.
BERNARD TAUBER, M.D. Lecturer on Laryngology,
W. A. ROTHACKER, M.D. Demonstrator of Anatomy.

THEODORE MARTIN WITTKAMP, M.D. Assistant to Chair of Diseases of Women and Children.
JOHN M. SHALLER, M.D. Assistant to Chair of Principles and Practice of Medicine.
EDWIN WALKER ELDRIDGE. Assistant to Chair of Obstetrics and Dermatology.
SAMUEL C. CHORLTON, M.D. Assistant to Chair of Surgery.

CONRAD STUMPMEYER, Janitor, College Building.

The next Regular Session opens October 2d, 1878, and continues until the latter part of February, 1879. There will be a Preliminary Course, commencing September 4th, 1878. Students are urged to attend this course, as special instruction is given on subjects which cannot be so fully treated during the regular session.

FEES:

General Ticket	$40.00
Matriculation Ticket	5.00
Demonstrator's Ticket (including material).	10.00
Hospital Ticket	5.00
Graduation Fee	25.00

For further information or circulars address:—

LEBAIGUE'S
DIALYSED IRON,

OR

PURE PEROXIDE OF IRON,

IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate, nor cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a **solution,** which is generally preferred; or of an **elixir,** when a slight stimulant is desired.

DOCTOR GIBERT'S
DEPURATORY SYRUP AND DRAGEES,

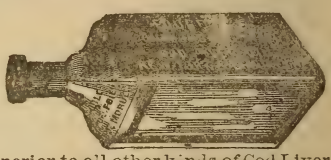
OF IODIZED DEUTO-IODIDE OF MERCURY.

These preparations have been approved by the Academy of Medicine of Paris, and have been thoroughly tested in the hospitals of Paris in the treatment of *Syphilitic, Scrofulous* and other affections requiring the use of iodized remedies.

They are recommended for the utmost accuracy of composition, and their perfect preservation.

Prepared by VAUQUELIN-DESLAURIERS, Chemist, Paris.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

SOLD BY DRUGGISTS GENERALLY.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the medical profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition; containing the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 "	Lactic Acid	5 fl. "
Pancreatine	6 "	Hydrochloric Acid	5 fl. "

LACTOPEPTINE owes its great success solely to the Medical profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned, having tested REED & CARNRICK'S preparation of Pepsin, Pancreatine, Diastase, Lactic Acid and Hydrochloric Acid, made according to published formula, and called LACTOPEPTINE, find that in those diseases of the stomach where the above remedies are indicated it has proven itself a desirable, useful and well-adapted addition to the usual pharmaceutical preparations, and therefore recommend it to the profession.

NEW YORK, *April 6th*, 1875.

SEABURY & JOHNSON,

Originators and Manufacturers of

U. S. PHARMACOPŒIA MEDICINAL AND SURGICAL

PLASTERS, POROUS AND SPREAD IN RUBBER COMBINATION,

NEW YORK AND LONDON.

Received highest and only Award (Medal and Special Diploma of Merit) over all Foreign and Home Competitors in 1876.

THE JURORS' AWARD IS SUBSTANTIALLY

ORIGINALITY.—The successful application of Rubber as a base for all medicinal and mechanical plasters.

RELIABILITY and general excellence of manufactures.

FACTS CONCERNING MEDICINAL PLASTERS IN RUBBER COMBINATION.

India-rubber-spread and Porous Plasters possess indisputable advantages over all other Plasters: (1) The Rubber combination preserves the incorporated drug or extract from decomposition or volatilization; (2) They adhere closer and firmer; (3) They do not soil the skin or linen; (4) They are always pliable, and never become hard or brittle; (5) They adhere without heat or moisture; (6) An increased effect obtained by being porous, as the Plaster neither slides nor moves from its affixed position.

BELLADONNA PLASTER, U. S. P.

IN RUBBER COMBINATION.

Messrs. SEABURY & JOHNSON claim that theirs is the most thoroughly reliable and only strictly officinal Belladonna Plaster ever offered the medical profession. It is an improvement on other Belladonna Plasters in several important particulars. First, it is incorporated with the officinal alcoholic extract only. Secondly, it is freed from all stimulating qualities, thereby insuring the uninfluenced sedative action of Belladonna. Thirdly, it adheres with greater tenacity than others. Physicians have been prejudiced in favor of Allen's English Extract; but recent analysis, fairly conducted by competent chemists, emphatically condemns the Inspissated Extract as a mild and unstable product, representing but one-half or less than one-half of the strength of the U. S. P. Alcoholic Extract of Belladonna. The following result, published in the *American Journal of Pharmacy*, in April, 1876, page 145, is furnished for your consideration, which indicates the following percentage of Atropia in the respective extracts:—

Alcoholic Extract Belladonna, U. S. P......2,571
Allen's English Extract.....1,411
Herring's English Extract.....1,179

The practitioner, as well as ourselves, has but one choice.

Considering these features from a professional standpoint, we offer a Belladonna plaster which cannot be improved upon.

SALICYLATED SURGEONS' RUBBER ADHESIVE PLASTER

This article has met with unprecedented success, and has been emphatically pronounced by our most skillful General and Orthopædic Surgeons, as "the best Surgeons' Adhesive Plaster known." It is applied without heat or moisture, conforms quickly to the parts; is perfectly flexible and waterproof, and is ready for use at any moment. It is free from irritating properties and very healing. In counter-extension it has no equal, as it does not move or slide after being applied. Our India-rubber Adhesive Plaster is also spread on twilled linen, which resists the most powerful strain. In addition to these general improvements, the plaster being impervious to water, wounds can be cleansed without removing the plaster, obviating the necessity of constant redressing, saving labor and time. **Whenever continued powerful adhesion is required, it should be procured in porous form.**

MUSTARD PLASTER (spread on Cotton Cloth).

Our Mustard Plaster is a decided improvement over the best French makes; the mustard is manipulated so as to exclude all the moisture, retaining unimpaired by such treatment, its essential properties. They are always reliable, conform quickly to the part, and when thoroughly wet do not break into pieces, as is the case with all other mustard plasters. They do not crack or peel off, and can be removed without soiling the skin or linen. Being **manufactured only of pure mustard,** they are perfectly free from Croton Oil or other dangerous substitutes, often employed to induce intense irritation.

RUBBER BLISTER PLASTER (Camphorated) U. S. P. STRENGTH.

This article has a splendid reputation; its characteristic action is not impaired by age in any climate. The whole fly is incorporated, which, by constant manipulation is thoroughly and beautifully combined with the plaster. **Its properties are developed quicker, and it blisters in less time than the cerate.** It never fails to blister when used as directed. In addition to its superior efficacy as a vesicant, we incorporate a sufficient quantity of Camphor, which, with the Olive Oil used on the face of the plaster, **prevents Strangury.** This improvement will be appreciated by every practitioner. It is more reliable than any known cantharidal preparation.

CAPSICUM PLASTER.

Recently this article has crept into favor with our most esteemed physicians, and judging from results, it is doubtless the best rubefacient known. It has the specific action of mustard without its objections. The characteristic action of Capsicum is uniformly maintained from twenty-four to forty-eight hours, without blistering, being mild, continuous, and stimulating. This plaster is spread in rubber combination and in porous form. Experience has taught practitioners that the Oleo Resin of Capsicum is too violent, frequently vesicating; we incorporate the crude drug in sufficient quantity, without risk to the patient. Our Capsicum Plasters will be found more practical for general use than the **so-called Mustard or Capsicum Papers.**

SPECIAL NOTICE TO PHYSICIANS.

QUALITY IS OF GREAT IMPORTANCE TO THE PRACTITIONER: BY RELIABLE PREPARATIONS HE SUPPLEMENTS HIS OWN SKILL. You can therefore rest assured that every article we manufacture is of strict pharmacopœia strength, and incorporated with perfectly reliable Extracts and Drugs, well selected, carefully and conscientiously prepared, and manufactured invariably under the personal superintendence of one of our firm. OUR WHOLE ATTENTION AND STUDY IS DEVOTED ENTIRELY TO THE ART OF PLASTER MAKING, and we are ready at all times to receive suggestions from the fraternity, which may be of benefit to all.

1088-1139-eow

13 and 15 TREMONT STREET, BOSTON.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

1090-1115eow

JEFFERSON MEDICAL COLLEGE,

PHILADELPHIA.

The Fifty-fourth Session of the Jefferson Medical College will begin on Tuesday, October 1, 1878, and will continue until March 1st, 1879. Preliminary Lectures will be held from Monday 2d September.

PROFESSORS.

JOSEPH PANCOAST, M.D., General, Descriptive and Surgical Anatomy (*Emeritus*).
SAMUEL D. GROSS, M.D., LL.D., D.C.L. Oxon., Institutes and Practice of Surgery.
ELLERSLIE WALLACE, M.D., Obstetrics and Diseases of Women and Children.
JOHN B. BIDDLE, M.D., Materia Medica and General Therapeutics.
J. AITKEN MEIGS, M.D., Institutes of Medicine and Medical Jurisprudence.
J. M. DA COSTA, M.D., Practice of Medicine.
WILLIAM H. PANCOAST, M.D., General, Descriptive and Surgical Anatomy.
ROBERT E. RODGERS, M.D., Medical Chemistry and Toxicology.

Continuous Instruction is given throughout the year (with the exception of the months of July and August), which is free to the matriculates of the Winter Session. The following special subjects are taught during the Preliminary Course in September:—

Medical Jurisprudence, by Professor Meigs.

Dermatology and Syphilitic Diseases, by Dr. F. F. Maury, one of the Surgeons to the Philadelphia Hospital.

Pathological Anatomy, by Dr. Longstreth, Pathologist to the Pennsylvania Hospital.

Operative Surgery, with Operations on the Cadaver, by Dr. John H. Brinton, one of the Surgeons to the Philadelphia Hospital.

Diseases of the Urino-Genital Organs, by Dr. S. W. Gross, one of the Surgeons to the Philadelphia Hospital.

Ophthalmology is treated both clinically and didactically during the entire course, by Dr. William Thomson, one of the Surgeons to the Wills Ophthalmic Hospital.

Laryngoscopy, with Diseases of the Throat, by Dr. J. Solis-Cohen.

The Demonstrator of Surgery, Dr. J. Ewing Mears, delivers a distinct course of *Demonstrations of Surgery,* with illustrations on the Cadaver, during the entire session.

Practical Chemistry, with Qualitative and Quantitative Analysis, the Examination of Normal and Abnormal Products, and Manipulation by the student himself, is taught by the Professor of Chemistry, assisted by the Demonstrator, G. M. Ward, M.D.

Practical Anatomy and Morbid Anatomy.—For the study of Practical Anatomy a full supply of material is furnished, free of charge. The anatomical rooms are spacious and provided with every convenience, and not only are subjects for dissection to be had without expense, but there are no incidental or extra charges of any kind. Demonstrator of Anatomy, T. H. Andrews, M.D.

Bedside Instruction is furnished to advanced students. The practical use of the laryngoscope is taught to all candidates for graduation, in classes of convenient size, at the College Hospital, by J. Solis-Cohen, and the use of the ophthalmoscope, by Dr. W. Thomson.

Laboratory Instruction is at the disposal of all the members of the class in the Chemical and Physiological Laboratories, and Practical Instruction in the use of the Microscope is also given.

Post-Mortem Examinations.—During the past winter opportunity was afforded to the graduating class of being present in sections, at autopsies, by Dr. Morris Longstreth, Pathologist to the Jefferson Medical College Hospital and to the Pennsylvania Hospital; and these facilities will be continued during the ensuing session.

The New Hospital of the Jefferson Medical College, which was begun in November, 1875, is now completed and in operation. It is situated immediately west of the College, fronting on Sansom Street, and is bounded on three sides by streets, and by a wide private passage way on the fourth side. It is 107 feet square, five stories in height, and is designed for the easy accommodation of 125 patients. In connection with the Hospital is the Out-door or Dispensary Department, which furnishes much valuable material for clinical instruction. The amphitheatre, provided for Clinical Lectures, is probably the largest and most convenient in the United States, and will seat more than six hundred students. The most approved appliances for heating, ventilation, etc., have been provided, and in architectural construction, and all desirable conveniences, this hospital will be found at least equal to any American clinical hospital. Daily Clinical Lectures are given at the hospital, through the entire year, by members of the Faculty and by the hospital staff, which is constituted as follows:—

Surgeons:
JOHN H. BRINTON, M.D.,
F. F. MAURY, M.D.,
S. W. GROSS, M.D.,
R. J. LEVIS, M.D.

Ophthalmic Surgeon:
WILLIAM THOMSON, M.D.

Aural Surgeon:
L. TURNBULL, M.D.

Physicians:
J. SOLIS-COHEN, M.D.,
JAMES C. WILSON, M.D.,
JOHN B. ROBERTS, M.D.,
OLIVER P. REX, M.D.

Gynæcologists:
F. H. GETCHELL, M.D.,
J. EWING MEARS, M.D.,

Pathologist:
MORRIS LONGSTRETH, M.D.

A Summer Course of Supplementary Lectures is given, beginning 17th March, 1879, and extended through the months of April, May, and June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non-matriculates pay thirty-five dollars, which is, however, credited on the amount of fees paid for the ensuing winter course.

FEES.

For a Full Course	$140 00
Matriculation Fee (paid once only)	5 00
Graduation Fee	30 00

Students who have attended two full courses on Materia Medica, Institutes, Anatomy, or Chemistry, may be examined on any of these branches at the end of their second course.

The Annual Announcement will be sent, on application to

1116-1122eow1123, 1124, 1126 J. B. BIDDLE, M.D., Dean.

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

PEPSIN, BISMUTH & STRYCHNIA.
ORIGINATED BY KEASBEY & MATTISON.

We again offer this preparation confidently to the profession. It has, for four years, enjoyed an extensive prescription among the most eminent of our practitioners. Its use has been attended with the most marked success, perhaps, of any of the various remedies recommended in dyspepsia, gastralgia, and kindred disorders. Its association with Carbonic Acid renders it palatable, and causes it to be retained by the most sensitive stomach. It is the only soluble form in which Pepsin and Bismuth should be ever given together, and is FIVE TIMES THE PEPSIN STRENGTH of the various elixirs, wines, liquors, etc., of the market. In reference to its reliability, we refer to the most prominent physicians in all sections of this country, who will very generally be found to be using it in their practice.

Always prescribe the GRANULATED EFFERVESCENT form, and always specify the "K. & M." Preparation.

Each drachm or heaping teaspoonful contains FIVE GRAINS Saccharated Pepsin, two grains soluble Citrate of Bismuth, and one-fiftieth grain Citrate of Strychnia.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 21, 1877.

Gentlemen:—I have used a large number of your preparations for several years past with great satisfaction, and am happy to commend them to others from what I know both of your drugs and of yourselves.

Very truly yours, W. W. KEEN, M. D.

K. & M.
GRANULATED EFFERVESCENT
CITRATE CAFFEINE.
ORIGINATED BY KEASBEY & MATTISON.

The recent extensive employment of this salt as a remedy, amounting almost to a specific in cases of sick headache, and its use in nervous diseases generally, have caused us to place it upon our list. Its value is much enhanced by its administration with Carbonic Acid, so agreeably and efficiently produced by this form.

A heaping teaspoonful, containing ONE GRAIN of Citrate of Caffeine, should be given in sick headache, every hour or two before and during the paroxysms.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 27, 1877.

Gentlemen:—It gives me pleasure to add my testimony in regard to your preparations, which I have used for a long time; they are thoroughly reliable.

Truly yours, THOMAS G. MORTON, M. D.

K. & M.
GRANULATED EFFERVESCENT
CITRATE LITHIA.

In the effervescent form this chemical is administered in a peculiarly advantageous manner. Its association with Carbonic Acid renders it much less liable to disturb the stomach, while in strength it is greatly superior to Lithia Water. A valuable diuretic and lithontriptic, its importance in the treatment of rheumatic, gouty, and analogous disorders can scarcely be over-estimated.

We have doubled the strength of this preparation, each drachm or heaping teaspoonful containing FOUR GRAINS of the chemically pure salt.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 25, 1877.

Gentlemen:—I have employed your Extract of Malt and Infants' Food, in a large number of cases, much to my own satisfaction, and to the benefit of the patient. The Infants' Food I regard as especially useful in cases of Infants requiring artificial food from any cause. Yours, etc., W. B. ATKINSON, M. D., *Sec. American Med. Asso.*

ALWAYS SPECIFY "K. & M." GRANULATED EFFERVESCENT SALTS.

Analyses of Sulphate of Quinine Pills.

As we have repeatedly notified the trade, our Sulphate of Quinine Pills are made of Bleached Quinine and contain the correct amount of Quiniæ Sulphas, as represented on the label.

We submit below three analyses of our Sulphate of Quinine Pills obtained at different druggists; the first was made by Mr. Chas. Rice, of New York, one of the editors of the "*New Remedies*," and chemist of Department Public Charities and Correction of New York City, who is well known both personally and by reputation by a large number of physicians and druggists throughout the country. The other two analyses are by Dr. Polenske, former assistant of Prof. Sonnenshein, of Berlin, and now our own analytical chemist.

Our "Hospital Quinine" Pills are made as set forth in our circular of March 27th, which we reprint for the information of those who may not have seen it before.

With the assurance to the trade and medical profession, that we will always manufacture our preparations, as we have in the past, in **perfect good faith,** that we will use the best materials obtainable, increasing our knowledge by every means in our power, for examining and testing all ingredients and perfecting our business, we remain,

Very respectfully, **McKESSON & ROBBINS.**

NEW YORK, APRIL 17th, 1878.

"MESSRS. McKESSON & ROBBINS,

Gentlemen:—Having been requested by you to make an assay of the alkaloids contained in your Gelatine-Coated Quinine Pills, I purchased an original vial, containing 100 2 grain pills, in the store of Mr. Theodore Cole, 409 First Avenue, New York. Each ten of these pills weighed very nearly 34 grains, and the weight of the single pills is very uniform, varying but slightly either way from 3.4 grains. The whole number of pills, (100,) yielded 148.385 grains of anhydrous alkaloid, which was found to be **pure, White Quinia,** free from other cinchona alkaloids. This amount of dry Quinia corresponds to **203.8** grains of **Sulphate of Quinia,** containing 8 molecules of water of crystallization ($2\,C_{20}\,H_{24}\,N_2\,O_2 — H_2\,SO_4 — 8\,H_2\,O$); or to **201.7** grains of **Sulphate of Quinia,** containing 7½ molecules of water of crystallization ($2\,C_{20}\,H_{24}\,N_2\,O_2 — H_2\,SO_4 — 7\frac{1}{2}\,H_2\,O$), which latter is, as near as possible, the formula of the commercial pure Sulphate of Quinia. The amount of Sulphate of Quinia contained in the 100 pills examined, is therefore a trifle **in excess** of the required quantity, (3.8 grains, or 1.7 grain, according to whatever formula may be adopted for the crystallized salt).

Respectfully CHARLES RICE,
Chemist, Bellevue Hospital, N. Y."

NEW YORK, MARCH 30th, 1878.

"I have analyzed McKesson & Robbins' Gelatine-Coated 5 grs. Sulphate of Quinine Pills, from an original bottle of one hundred, and find that in two analyses of 10 pills each, the result in both cases was 51 grains of pure Sulphate of Quinine.

ED. POLENSKE, Ph. D."

NEW YORK, APRIL 13th, 1878.

"One hundred McKesson & Robbins' Gelatine-Coated 2 grs. Sulphate of Quinine Pills, analyzed by me to-day, contained 198 grains of Sulphate of Quinine. The Sulphate of Quinine obtained from these pills stood the Ether test, as laid down in the U. S. Ph.

ED. POLENSKE, Ph. D."

Circular of March 27th, 1878.

Since we changed, last fall, from Unbleached to Bleached Quinine in the manufacture of our Pills, we have heard from a large number of druggists and physicians stating that the therapeutical effects of the dark pills were better than the "bleached," dose for dose, where a tonic was indicated, and the antiperiodic effects of the former were as well marked. We made the change because we were disappointed in obtaining a uniform article of unbleached Quinine, were deceived in two shipments we received and the analyses of samples from the same package we submitted to different highly reputable chemists varied surprisingly, in fact, analysing Quinine *quantitively* is very difficult, as it depends very largely upon the different solubilities of the alkaloids in water, while the *qualitative* analysis is very simple and reliable.

The curative properties of the other alkaloids of Cinchona Barks have been well attested and the effect of the **combined alkaloids** has been repeatedly asserted to be greater than that of any **one alone.**

In view of these facts, we accordingly propose to offer Pills made of Hospital Quinine, which differs from that which has been known and understood as "unbleached," in the process of manufacture and in the proportion of Quinine. This Hospital Quinine will contain about 50 per cent. of Quinine Sulphate, and the balance, Cinchonidia Sulphate and traces of Quinidia Sulphate; the Cinchonia Sulphate, being less powerful than the other alkaloids is separated.

These pills on account of their lower price will relieve a difficulty, to which a large number of people living in malarious districts have been subjected—the inability to purchase Quinine Pills on account of price, especially when scarcity causes sudden and great advances, as at present—at the same time we believe that confidence may be felt or experiencing equal relief with similar doses.

We will continue, as now, to make our "Quinine Pills" of bleached Quinine, and the white color will readily identify them from our darker Hospital Quinines, which will be labelled "Hospital Quinine." The list of Hospital Quinine Pills we submit below is subject to same discount as our other pills, and will be reduced as soon as the market on Quinine will allow. We call special attention to our Pills of Cinchona Bark Alkaloids, which contain a definite quantity of each of the four alkaloids, one-half grain each Sulphates Quinia, Quinidia, Cinchonia and Cinchonidia.

We annex below list of our Pills of other Cinchona Alkaloids, and remain, soliciting your correspondence and valued orders, Yours respectfully,

March 27th, 1878. McKESSON & ROBBINS.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

$300 WILL BUY HORSE, TWO CARriages, Harness, Robe, Blankets, etc., all in good condition, and a practice worth $1800 yearly. Reason for selling, ill-health. Immediate possession given. Address R. J. M., Office of MEDICAL AND SURGICAL REPORTER. 1117-tf

DR. GARRATT'S

Constant Electric Disks,

That any person may apply and wear with comfort, for relief of local *pains* and *weakness*, coldness and stiffness. It is also remarkable for its constant power to help weak lungs, heart, stomach, kidneys, sluggish liver, lame back, and other ills.

While worn, by night or day, this flexible pad is self-charging, applies a fine constant galvanism that wonderfully cures nervous ills. "For the price and purpose, there is nothing so good. It has no equal." So say physicians, druggists, and those now using this improved electric. Large Disk, $2.50; Children's Disk, $1.00; Long Disk, with straps for the body, $3.50. Do. for large body, $5.00. Can be sent by mail, on receipt of price, by GARRATT & Co., 6 Hamilton Place, Boston, Mass.
1075m-1y

Cincinnati College of Medicine and Surgery.

FACULTY:

R. C. STOCKTON REED, M. D. Professor of Materia Medica and Therapeutics.
D. D. BRAMBLE, M.D., DEAN. Professor of Principles and Practice of Surgery and Clinical Surgery.
ABIJAH J. MILES, M. D. SECRETARY, Professor of Diseases of Women and Children and Clinical Gynæcology.
JOHN A. THACKER, M.D. Professor of Principles and Practice of Medicine and Clinical Medicine.
JACOB TRUSH, M.D., Professor of Obstetrics and Clinical Professor of Dermatology.
CHAUNCEY R. STUNTZ, A.M. M.D., Professor of Chemistry and Toxicology.
WILLIAM ADAM ROTHACKER, M. D. Professor of Anatomy and Clinical Professor of Venereal Diseases.
JOSEPH AUB, M.D. Professor of Diseases of the Eye and Ear and Clinical Ophthalmology and Otology.
ASA BRAINARD ISHAM, M.D. Professor of Physiology.
JOSHUA W. UNDERHILL, M.D. Lecturer on Medical Jurisprudence.
BERNARD TAUBER, M.D. Lecturer on Laryngology.
W. A. ROTHACKER, M.D. Demonstrator of Anatomy.

THEODORE MARTIN WITTKAMP, M.D. Assistant to Chair of Diseases of Women and Children.
JOHN M. SHALLER, M.D. Assistant to Chair of Principles and Practice of Medicine.
EDWIN WALKER ELDRIDGE. Assistant to Chair of Obstetrics and Dermatology.
SAMUEL C. CHORLTON, M.D. Assistant to Chair of Surgery.

CONRAD STUMPMEYER, Janitor, College Building.

The next Regular Session opens October 2d, 1878, and continues until the latter part of February, 1879. There will be a Preliminary Course, commencing September 4th, 1878. Students are urged to attend this course, as special instruction is given on subjects which cannot be so fully treated during the regular session.

FEES:

General Ticket	$40.00
Matriculation Ticket	5.00
Demonstrator's Ticket (including material)	10.00
Hospital Ticket	5.00
Graduation Fee	25.00

THE THREE BEST TONICS OF THE PHARMACOPŒIA:

IRON, PHOSPHORUS, CALISAYA.

CASWELL, HAZARD & CO. call the attention of the Profession to their preparation of the above estimable Tonics, as combined in their elegant and palatable

FERRO-PHOSPHORATED ELIXIR OF CALISAYA BARK.

A combination of the Pyrophosphate of Iron and Calisaya never before attained, in which the nauseous inkiness of the iron and astringency of the Calisaya are overcome, without any injury to their active tonic principles, and blended into a beautiful Amber-colored Cordial, delicious to the taste and acceptable to the most delicate stomach. This preparation is made directly from the **ROYAL CALISAYA BARK**—not from **its ALKALOIDS OR THEIR SALTS**—being unlike other preparations called "Elixir of Calisaya and Iron," which are simply an **Elixir of Quinine and Iron.** Our Elixir can be depended upon as being a true Elixir of Calisaya Bark with Iron. Each dessertspoonful contains seven and a half grains Royal Calisaya Bark, and two grains Pyrophosphate of Iron.

Ferro-Phosphorated Elixir of Calisaya Bark with Strychnia. This preparation contains one grain of Strychnia added to each pint of our Ferro-Phosphorated Elixir of Calisaya Bark, greatly intensifying its tonic effect.

Ferro-Phosphorated Elixir of Calisaya with Bismuth, containing eight grains Ammonio-Citrate of Bismuth in each tablespoonful of the Ferro-Phosphorated Elixir of Calisaya Bark.

Elixir Phosphate Iron, Quinine and Strychnia. Each teaspoonful contains one grain Phosphate Iron, one grain Phosphate Quinine, and one sixty-fourth of a grain of Strychnia.

Ferro-Phosphorated Elixir of Gentian, containing one ounce of Gentian and one hundred and twenty-eight grains Pyrophosphate Iron to the pint, making in each dessertspoonful seven and one half grains Gentian and two grains Pyrophosphate Iron.

Ferro-Phosphorated Wine of Wild Cherry Bark. Each fluid-drachm contains twenty-five grains of the Bark, and two grains of Ferri-Pyrophosphate.

Elixir Taraxacum Comp. Each dessertspoonful contains fifteen grains of Taraxacum.

Elixir Pepsin, Bismuth, and Strychnine. Each fluid-drachm contains one sixty-fourth of a grain of Strychnine.

Juniper Tar Soap. Highly recommended by the celebrated Erasmus Wilson, and has been found very serviceable in chronic eczema and diseases of the skin generally. It is invaluable for chapped hands and roughness of the skin caused by change of temperature. It is manufactured by ourselves, from the purest materials, and is extensively and successfully prescribed by the most eminent Physicians.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

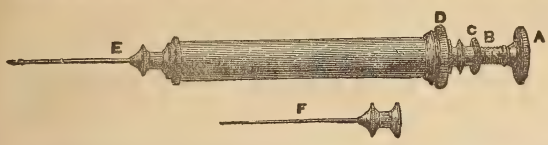
NEW HYPODERMIC SYRINGES.



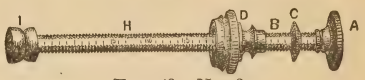


FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

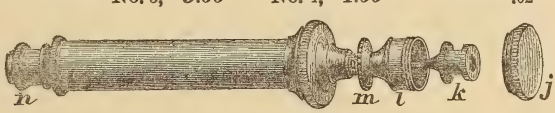
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$4.00* No. 2, *$4.50* Postage, .03
" No. 3, *3.00* No. 4, *4.00* " .02



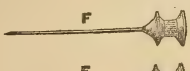
No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).



No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

Our new *Illustrated Catalogue of Surgical Instruments,* also a new Pamphlet on Inhalation of Atomized Liquids, by distinguished medical authority, with many valuable formulas, will be forwarded, postpaid, on application.

Atomizers and articles for Antiseptic Surgery, Aspirators, Clinical Thermometers, Elastic Hose, Electrical Instruments, Invalids' Articles, Manikins, Models, Ophthalmoscopes; Dr. Paquelin's Thermo-Cautery; Pessaries, Rubber Urinals; Sayre's Splints, and Apparatus for every kind of Deformity; Skeletons, Sphygmographs, Splints, Transfusion Apparatus; Vaccine Virus from our own stables; Veterinary Instruments; Waldenburg's Pneumatic Apparatus, &c., &c.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With*	*Hops (Plain)*,		$1.00

THE ADVANTAGES AND ACCIDENTS OF ARTIFICIAL ANÆSTHESIA.

BEING A MANUAL OF

ANÆSTHETIC AGENTS AND THEIR MODES OF ADMINISTRATION.

BY LAURENCE TURNBULL, M.D., PH.G.

WITH TWENTY-FIVE ILLUSTRATIONS.

12mo, pp. 208. Price, in Paper, 75 Cents. In Cloth, $1.00.

ABSTRACT OF CONTENTS.

ANÆSTHETICS OF THE ANCIENTS.—List of the Principal Agents that will Produce Anæsthetic Sleep.
GENERAL ANÆSTHETICS.—Methylic Alcohol for Inhalation; Mode of Action of the Lightest and Least Injurious: its Resemblance to Chloroform. The Method of Administering Ether. Test when the Patient is fully under its Influence, with Cautions in regard to Solid Food before Etherization. The Three Stages of Etherization. Ether Inhalers, etc.
SULPHURIC ETHER always gives Warning. Use of Air, Artery Forceps, Artificial Respiration in Fainting, etc. Statistics in Reference to Death. Experiments by the Sphygmograph. Primary and Secondary Effects. Death from Ether. Abstract of Report of Boston Committee. Inflammability. Conclusions of Author.
MIXTURES OF ETHER AND CHLOROFORM.—Dr. W. L. Atlee on their Employment. Use of Bichloride of Methylene, by Dr. Spencer Wells; his Doubts about its Composition. Amylene; Introduction and Use by Dr. Snow. Bromide of Ethyl or Hydrobromic Ether; Experiments by "Rabuteau." Mode of Preparation. Experiments of Writer.
CHLOROFORM, Chemical Composition, Impurities, Tests. Recent Investigations. Anæsthetics in Labor. Dr. Sims on Nelaton's Method. Nitrite of Amyl as an Antidote to Chloroform. Mixed Narcosis, Use of Morphia before Inhalation of Chloroform. Richardson's Report on Causes of Death from Chloroform. Conclusions by Drs. Erichsen and Gross.
ORIGINAL OBSERVATIONS AND EXPERIMENTS WITH HYDRATE OF CHLORAL.—Liebreich on the Impurity of Chloral in Cakes, Test of Purity, etc. On Chloral as an Anæsthetic in Children, by Dr. Bouchut, of Paris. Dr. J. M. Fothergill, of London, on the Great Utility of Strychnia in Chloral Poisoning. Use of Chloral by Author.
NITROUS OXIDE GAS AS AN ANÆSTHETIC.—Practical Observations and Experiments of Dr. J. D. Thomas. Thomas' Inhaler; Description and Mode of Use. Mode of Manufacturing Nitrous Oxide. Impurities and Mode of Purification. Coxeter's Form of Cylinder for Liquid Nitrous Oxide.
PHYSIOLOGICAL ACTION OF NITROUS OXIDE GAS.—Summary of the Facts Bearing on this Subject. Dr. Evans' (of Paris) Experiments with Nitrous Oxide and other Gases. Experiments of Dr. J. H. McQuillen in 1868; of Dr. Robert Amory in 1870, and Opinions of Dr. Johnston; of Profs. H. Ranke and D. C. Binz on Morphia, Chloral, Ether, etc.
J. F. CLOVER'S IMPROVED APPARATUS FOR THE COMBINED USE OF NITROUS OXIDE GAS AND ETHER.—Sir Henry Thompson, of London; Successful Use of these Agents Combined. Bonwill's Method of Anæsthesia, etc.
ETHER, ITS LOCAL APPLICATION IN THE FORM OF SPRAY.—Rhigolene. Anæsthetic Mixture of Ether and Camphor. Excision of Cancer under Ether Spray. Extract of Eucalyptus as a Local Anæsthetic in Dental Operations.
THERAPEUTIC EMPLOYMENT OF CHLOROFORM AND ETHER, of Chloral Hydrate, and of Butylchloral.
MEDICO-LEGAL RELATIONS OF ANÆSTHETICS.—Whether Chloroform can be Administered for Criminal Purposes? Cases in France, England, and the United States. Ether as a Poison. Chloroform; its Action as a Poison; Treatment.
APPENDIX.—Discovery of the Art of Artificial Anæsthesia.

"Close upon the occurrence of two fatal administrations of chloroform, in Philadelphia and Brooklyn, comes to us a little work under the title given above. It is as truly a *multum in parvo* as has fallen into our hands for many a day.

"From the beginning to the end of the book the reader will be impressed with the fairness and candor with which the author has pursued his work. As the subject is one that has absorbed the attention of the medical profession for a quarter of a century, the views of the more eminent and careful observers have been fully but concisely given, so that the reader can find ample material for deciding upon his course of action.

"The work is one that should have a universal circulation. Though designed for the medical profession, and especially the younger members, it presents a far greater interest to the general reader than often appertains to medical works."—THE MEDICAL AND SURGICAL REPORTER, April 27, 1878.

"This little work of 210 pages should be on the table of every practitioner who expects to administer an anæsthetic of any kind. We have carefully examined it and cordially recommend it to the profession. It supplies a want in the medical library, and this want will be the more easily recognized after the book is even casually examined."—*St. Louis Medical and Surgical Journal*, May, 1878.

"The volume should not only find a place in the library of every practitioner who administers anæsthetics, but many of its facts, cautions, and directions should be carefully pondered and remembered. When trouble comes to a patient from any cause, during the anæsthetic state, it is not a good time to hunt up information."—*The Dental Cosmos*, Philadelphia, May, 1878.

"This is a manual of anæsthetic agents and their modes of administration, considering their relative risk, tests of purity, treatment of asphyxia, spasm of the glottis, syncope, and their medico-legal relations. It is well written, shows research, and the conclusions are safe to follow. In reference to the use of chloroform the author concludes: 'I would limit the use of this most potent of all the anæsthetics to very young children; to puerperal eclampsia; in very violent convulsions in male adults, or females during delivery, where rapidity of dilatation of the os uteri is absolutely necessary to save the mother's life. In some rare cases of painful operation, where, after continued efforts, no complete insensibility can be produced by ether, I would feel justified in the use of a portion of chloroform on a clean sponge or inhaler.' He thinks ether, given with an inhaler, is the safest and best anæsthetic, and would use no other except in the cases enumerated above."—*Buffalo Medical and Surgical Journal*, June, 1878.

"Whenever the question of anæsthesia and the relative safety of the different anæsthetics is ventilated by a body of medical men, the desultory manner of the discussion is its most noteworthy feature. The earnestness with which the subject is discussed, and the great number participating actively in the debate, show the profound interest medical men take in this all-important question. While, on the other hand, the opinions of the different speakers, generally founded solely upon their limited personal experience, betray the fact that physicians are often ignorant of a great many things which have been published in relation to this subject of anæsthesia.

"We do not make these remarks for the purpose of casting any reproach upon our professional friends; we simply wish to point to the fact that valuable information which is annually published in hundreds of medical periodicals in the different tongues of the civilized world is practically inaccessible to the busy practitioner. A book, therefore, which presents this information in the condensed form of a small compendium, must be welcome to every physician, for it meets a great real want. A good compilation of this kind represents a vast amount of work, and also reflects the sound judgment of the author in critically sifting the material.

"Such is the character of the little book before us. In a concise form, the properties and actions of the agents now used as anæsthetics are exhibited; the best methods of their administration are well described, and directions added for prompt action in cases of asphyxia and other accidents. The question as to the comparative safety of the different anæsthetics (especially ether and chloroform), is thoroughly ventilated and impartially decided in favor of sulphuric ether.

"This excellent little work cannot be too warmly recommended to every busy practitioner who wishes to obtain much information by little reading."—*Chicago Medical Journal and Examiner*, Chicago, Ill., June, 1878.

"This book is much more than its title imports. It contains almost everything worth knowing, in practice, relative to the different anæsthetics, their mode of administration, their relative merits, and, in fact, as much valuable information on the subject as can be compressed in the same space."—*Pacific Medical and Surgical Journal*, San Francisco, Cal., June, 1878.

"Dr. Turnbull's book is a good manual to guide those who desire truth, and is quite a complete repository of late facts on the subject of anæsthesia—a good book to have in the house—and that is all that need really be said of it in introducing it to the profession."—*Ohio Medical and Surgical Journal.*

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

THE ST. LOUIS
MEDICAL AND SURGICAL JOURNAL.

ESTABLISHED IN 1843.—PUBLISHED MONTHLY.

THOS. F. RUMBOLD, M.D., Editor and Proprietor; HIRAM CHRISTOPHER, M.D., Associate Editor.

The Journal will hereafter be published in Two Volumes, beginning with January and July.

Each Number will contain 80 or more pages, making each Volume about 500 pages, or nearl 1000 pages for the year's subscription.

TERMS :—$3.00 a year, payable in advance. Single Copies Thirty Cents. Postage prepaid in all cases.

SUBSCRIPTIONS MAY COMMENCE AT ANY TIME.

THE ST. LOUIS MEDICAL AND SURGICAL JOURNAL is the *Pioneer Medical Journal of the West.* It commences its Thirty-fourth Volume with an increase of 24 pages, which nearly *doubles its former contents,* but its Subscription Price is *not increased.* This has had the effect of greatly increasing its popularity and, as a consequence, its circulation.

THE JOURNAL WILL CONTAIN:

1. Original Contributions. 2. Translations from the German, French and Spanish. 3. Reports of Medical Societies. 4. Clinical Reports from Private Practice. 5. Clinical Reports from Hospital Practice. 6. Selections from Current Medical and Scientific Literature. 7. Editorials. 8. Obituary Notices of Prominent Men. 9. Reviews of Medical and Scientific Books. 10. Notices of Books and Pamphlets Received. 11. News Items. 12. Meteorological Observations taken in St. Louis. 13. Mortality Report of the City of St. Louis. 14. Comparative Mortality Rates of the ten largest cities in the United States.

The Translations from the German, French and Spanish medical and scientific journals, will be from those articles which contain the *advance* views of the medical and scientific men living in those countries.

The Journal will contain a full Report of the Proceedings of the St. Louis Medical Society, and a summary of all the societies in Missouri, and of many in Illinois and other States, thus placing before its readers the latest views and experiences of the profession in all the Departments of Medicine, practical as well as theoretical.

It will be the aim of the editors, in all respects, to maintain the high and honorable position it has so long held. No personalities shall ever soil its pages; when discussions cannot be carried on without these, space in its columns will be declined.

Contributions of Original Articles on both Medical and Scientific subjects are invited from all parts of the country.

Articles on the following subjects will appear in the present volume :—

Contributions on Fractures. By John T. Hodgen, M.D., Professor of Surgical Anatomy, Fractures and Dislocations in St. Louis Medical College.

Contributions on Syphilis. By Thomas Kennard, M.D., of St. Louis.

Contributions on Lithotomy. By David Prince, M.D., of Jacksonville, Illinois.

Contributions on Genito-Urethral and Rectal Surgery. By W. Hutson Ford, M.D., of St. Louis.

Contributions on the Present State of Pathology of Phthisis Pulmonalis. A series of papers. By J. Hilgard Tyndale, M.D., of New York City.

Contributions on Genesis. A series of papers. By the Associate Editor.

Contributions on Urinary and Renal Diseases. By John Bryson, M.D., of St. Louis.

Contributions on Medical Experts as Witnesses. By Fred. T. Ledergerber, Esq., of St. Louis.

Contributions on Nasal, Pharyngeal, Aural, Laryngeal and Bronchial Diseases. By the Editor.

From the above it will be seen that it is not the intention of the editors to confine the Journal to subjects relating to Medicine and Surgery alone; subjects collateral to these will receive attention, and such are invited from the profession. The departments of science are so closely connected as to make it almost impossible for a Physician or Surgeon to be proficient as such, without considerable knowledge of kindred branches.

Communications and all Subscriptions should be addressed to THE EDITOR, 1225 Washington Avenue, St. Louis, Mo.

[Unguentum Petrolei]

SAMPLES FURNISHED
ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

University of Pennsylvania,

MEDICAL DEPARTMENT.

113th ANNUAL SESSION, 1878–79.

The higher plan of medical education is now enforced, requiring attendance upon three graded courses of five months each. Didactic instruction is increased. Bedside instruction of each student in Physical Diagnosis, Clinical Medicine and Surgery, and Gynæcology is provided. The clinical and laboratory facilities are unrivaled in America. Pharmacy, Analytical and Medical Chemistry, Histology, Normal and Morbid Anatomy, and Operative Surgery are taught practically.

A Dental Department has recently been instituted.

For particulars, see ANNOUNCEMENT, for which address

JAMES TYSON, M. D.,
Secretary,

P. O. Box 2838, Philadelphia, Pa.
1105-1130eow

NEW YORK STATE

INEBRIATE ASYLUM,

Binghamton, Broome County, N. Y.

This Asylum is admirably situated, overlooking a fine section of country, and is complete in all the appointments of a first-class home, with ample means to meet the wants of every case. It is located three miles from the city, and removed from all temptation. Its management is the same as all other State charities, under the control of a Board of Managers appointed by the Governor. The law provides for the maintenance of indigent inebriates, similar to that of the insane, but patients from other States may be admitted.

The experience of this Asylum, for the past ten years, indicates an increasing usefulness and necessity for such institutions, and the original intention of making this an Asylum Hospital, where this disorder may be thoroughly understood and treated on broad scientific principles is nearer realized than ever before. All rules are strictly enforced, and no patient permitted to go beyond the Asylum grounds without permission from the Superintendent, or in the care of an attendant.

THE CHARGES FOR BOARD

will include medical care, washing, lights, fuel, etc., with ordinary attention. The exigencies of each particular case will be acted upon, as it may present itself, to those of moderate and limited means as well as the rich.

All inquiries and applications for admission should be addressed to the Superintendent.

WILLARD PARKER, M.D.,
New York, N. Y.,
President Board of Managers.

MOREAU MORRIS, M.D., *Superintendent,*
Binghamton, Broome Co., N. Y. 1105-1155eow

Boylston Medical Prize Questions.

The Boylston Medical Committee, appointed by the President and Fellows of Harvard University, consists of the following Physicians:—

J. B. S. JACKSON, M.D.,
D. H. STORER, M.D.,
MORRILL WYMAN, M.D.,
HENRY J. BIGELOW, M.D.,
RICHARD M. HODGES, M.D.,
CALVIN ELLIS, M.D.,
SAMUEL CABOT, M.D.

At the annual meeting, held June 10, 1878, it was voted that no dissertation worthy of a prize had been offered on either of the subjects proposed for 1878.

The following are the questions proposed for 1879:

I. The relation of Animal Contact to the disease known as Hydrophobia.

II. Evidence showing that so-called "filth diseases" are not dependent upon "filth."

The author of a dissertation considered worthy of a prize, on either of the subjects proposed for 1879, will be entitled to a premium of Two Hundred Dollars.

Dissertations on the above subjects must be transmitted, postpaid, to J. B. S. Jackson, M.D., Boston, *on or before the first Wednesday in April*, 1879.

The following are the questions proposed for 1880:

I. Antiseptic Treatment. What are its essential details? How are they best carried out in practical form?

II. Diphtheria. Its causes, diagnosis, and treatment.

The author of a dissertation considered worthy of a prize, on either of the subjects proposed for 1880, will be entitled to a premium of One Hundred and Fifty Dollars.

Dissertations on these subjects must be transmitted as above, on or before the first Wednesday in April, 1880.

Each dissertation must be accompanied by a sealed packet, on which shall be written some device or sentence, and within which shall be enclosed the author's name and residence. The same device or sentence is to be written on the dissertation to which the packet is attached.

The writer of each dissertation is expected to transmit his communication to the President of the Committee, J. B. S. Jackson, M.D., in a distinct and plain handwriting, *and with the pages bound in book form*, within the time specified.

Any clew by which the authorship of a dissertation is made known to the Committee will debar such dissertation from competition.

Preference will be given to dissertations which exhibit original work.

All unsuccessful dissertations are deposited with the Secretary, from whom they may be obtained, with the sealed packet unopened, if called for within one year after they have been received.

By an order adopted in 1826, the Secretary was directed to publish annually the following votes:—

1st. That the Board do not consider themselves as approving the doctrines contained in any of the dissertations to which premiums may be adjudged.

2d. That in case of publication of a successful dissertation, the author be considered as bound to print the above vote in connection therewith.

RICHARD M. HODGES, M.D., *Sec., Boston, Mass.*

Publishers of Newspapers and Medical Journals throughout the country are respectfully requested o notice the above. 1117-1119eow

ALWAYS SPECIFY "K. & M." IMPROVED EXTRACT OF MALT.

K. & M.
IMPROVED EXTRACT OF MALT.

Made from Canada Barley, selected, malted, dried, and extracted by, and under the immediate supervision of, Graduates of the Philadelphia College of Pharmacy. CONCENTRATED IN VACUO. This is as perfect an extract of the highest grade of carefully selected Barley Malt as can be PREPARED BY THE USE OF THE MOST IMPROVED VACUUM APPARATUS, recently designed for our own laboratory. As A FOOD in Syphilis, Typhoid and other fevers, Consumption and similar wasting diseases, it is without an equal for the rapid building up of a degenerate or depraved condition of the blood or tissues, since it acts not only as food itself, but its use converts and changes other kinds of food into a condition allowing easy assimilation.

We append the following letter from a gentleman well known to all:

Messrs. KEASBEY & MATTISON: PHILADELPHIA, September 25, 1877.

Gentlemen:—I have employed your Extract of Malt and Infant's Food in a large number of cases, much to my own satisfaction and to the benefit of the patient. The Infant's Food I regard as especially useful in cases of infants requiring artificial food, from any cause.

Yours, etc., W. B. ATKINSON, *Secretary American Medical Association.*

K. & M.
EXTRACT OF MALT WITH COD LIVER OIL.

ORIGINATED BY KEASBEY & MATTISON.

THE MOST NUTRITIVE EMULSION EVER MADE.

Our Improved Extract of Malt, with 50 per cent, of our fine Norwegian Oil, is pre-eminently the emulsion of Cod Liver Oil, since it has double the nutritive effect of any other emulsion of oil. It not only contains the largest amount of nutritive food in the smallest bulk of liquid, but, by the action of the Diastase contained in the malt, it is capable of transforming many times its bulk of amylaceous or graminaceous food into saccharine, thus rendering it easily digestible, even by the most delicate stomach of the invalid. The disagreeable eructations from the stomach, which constitute one of the greatest objections to the use of all preparations of Cod Liver Oil, are completely obviated in this preparation. We would direct the attention of physicians to the special fact that it unites perfectly with water in any proportion, and that the oil does not again separate, thus showing how perfectly the oil is emulsified.

Dose—A Dessert to a Tablespoonful immediately after Meals.

K. & M.
IMPROVED EXTRACT OF MALT WITH PEPSIN.

This is our Improved Extract of Malt, with the addition of five grains of our Saccharated Pepsin to the tablespoonful. For dyspeptic disorders it is found of great value, since it digests both albuminoid and amylaceous matter, thus furnishing a preparation that is needed in the majority of cases of dyspepsia and other derangements of the stomach dependent upon the non-assimilation of the food

Dose—A Dessert to a Tablespoonful immediately after Meals.

K. & M.
BEEF, IRON AND WINE, WITH EXTRACT OF MALT.

ORIGINATED BY KEASBEY AND MATTISON.

A Nourishing Diet for Invalids and Convalescents.

As a simple restorative food, where a tonic effect is desired, there is perhaps nothing in the whole line of tonic dietetics of so much real value as this preparation. It furnishes the diseased stomach with the power of assimilating amylaceous diet, and supplies readily assimilable food at the same time, in the articles of Malt Extract. The iron salt supplies the red corpuscles that are deficient in the blood, while to the nutrient effect of beef is added the stimulant effect of a fine sherry wine. Each tablespoonful represents two grains of the soluble citrate of iron, and one ounce of finely chopped raw lean beef, with equal quantities of our Improved Extract of Malt and sherry wine.

For sale by Druggists everywhere. Samples may be obtained of

THE MANUFACTURERS,

KEASBEY & MATTISON,

332 N. FRONT STREET, **PHILADELPHIA.**

ALWAYS SPECIFY "K. & M." IMPROVED EXTRACT OF MALT.

Analyses of Sulphate of Quinine Pills.

As we have repeatedly notified the trade, our Sulphate of Quinine Pills are made of Bleached Quinine and contain the correct amount of Quiniæ Sulphas, as represented on the label.

We submit below three analyses of our Sulphate of Quinine Pills obtained at different druggists; the first was made by Mr. Chas. Rice, of New York, one of the editors of the "*New Remedies*," and chemist of Department Public Charities and Correction of New York City, who is well known both personally and by reputation by a large number of physicians and druggists throughout the country. The other two analyses are by Dr. Polenske, former assistant of Prof. Sonnenshein, of Berlin, and now our own analytical chemist.

Our "Hospital Quinine" Pills are made as set forth in our circular of March 27th, which we reprint for the information of those who may not have seen it before.

With the assurance to the trade and medical profession, that we will always manufacture our preparations, as we have in the past, in **perfect good faith,** that we will use the best materials obtainable, increasing our knowledge by every means in our power, for examining and testing all ingredients and perfecting our business, we remain,

Very respectfully, **McKESSON & ROBBINS.**

NEW YORK, APRIL 17th, 1878.

"MESSRS. McKESSON & ROBBINS,

Gentlemen:—Having been requested by you to make an assay of the alkaloids contained in your Gelatine-Coated Quinine Pills, I purchased an original vial, containing 100 2 grain pills, in the store of Mr. Theodore Cole, 409 First Avenue, New York. Each ten of these pills weighed very nearly 34 grains, and the weight of the single pills is very uniform, varying but slightly either way from 3.4 grains. The whole number of pills, (100,) yielded 148.385 grains of anhydrous alkaloid, which was found to be **pure, White Quinia,** free from other cinchona alkaloids. This amount of dry Quinia corresponds to **203.8** grains of **Sulphate of Quinia,** containing 8 molecules of water of crystallization ($2\ C_{20}\ H_{24}\ N_2\ O_2 — H_2\ SO_4 — 8\ H_2\ O$); or to **201.7** grains of **Sulphate of Quinia,** containing 7½ molecules of water of crystallization ($2\ C_{20}\ H_{24}\ N_2\ O_2 — H_2\ SO_4 — 7½\ H_2\ O$), which latter is, as near as possible, the formula of the commercial pure Sulphate of Quinia. The amount of Sulphate of Quinia contained in the 100 pills examined, is therefore a trifle **in excess** of the required quantity, (3.8 grains, or 1.7 grain, according to whatever formula may be adopted for the crystallized salt).

Respectfully CHARLES RICE,
Chemist, Bellevue Hospital, N. Y."

NEW YORK, MARCH 30th, 1878.

"I have analyzed McKesson & Robbins' Gelatine-Coated 5 grs. Sulphate of Quinine Pills, from an original bottle of one hundred, and find that in two analyses of 10 pills each, the result in both cases was 51 grains of pure Sulphate of Quinine.

ED. POLENSKE, Ph. D."

NEW YORK, APRIL 13th, 1878.

"One hundred McKesson & Robbins' Gelatine-Coated 2 grs. Sulphate of Quinine Pills, analyzed by me to-day, contained 198 grains of Sulphate of Quinine. The Sulphate of Quinine obtained from these pills stood the Ether test, as laid down in the U. S. Ph.

ED. POLENSKE, Ph. D."

Circular of March 27th, 1878.

Since we changed, last fall, from Unbleached to Bleached Quinine in the manufacture of our Pills, we have heard from a large number of druggists and physicians stating that the therapeutical effects of the dark pills were better than the "bleached," dose for dose, where a tonic was indicated, and the antiperiodic effects of the former were as well marked. We made the change because we were disappointed in obtaining a uniform article of unbleached Quinine, were deceived in two shipments we received and the analyses of samples from the same package we submitted to different highly reputable chemists varied surprisingly, in fact, analysing Quinine *quantitively* is very difficult, as it depends very largely upon the different solubilities of the alkaloids in water, while the *qualitative* analysis is very simple and reliable.

The curative properties of the other alkaloids of Cinchona Barks have been well attested and the effect of the **combined alkaloids** has been repeatedly asserted to be greater than that of any **one alone.**

In view of these facts, we accordingly propose to offer Pills made of Hospital Quinine, which differs from that which has been known and understood as "unbleached," in the process of manufacture and in the proportion of Quinine. This Hospital Quinine will contain about 50 per cent. of Quinine Sulphate, and the balance, Cinchonidia Sulphate and traces of Quinidia Sulphate; the Cinchonia Sulphate, being less powerful than the other alkaloids is separated.

These pills on account of their lower price will relieve a difficulty, to which a large number of people living in malarious districts have been subjected—the inability to purchase Quinine Pills on account of price, especially when scarcity causes sudden and great advances, as at present—at the same time we believe that confidence may be felt on experiencing equal relief with similar doses.

We will continue, as now, to make our "Quinine Pills" of bleached Quinine, and the white color will readily identify them from our darker Hospital Quinines, which will be labelled "Hospital Quinine." The list of Hospital Quinine Pills we submit below is subject to same discount as our other pills, and will be reduced as soon as the market on Quinine will allow. We call special attention to our Pills of Cinchona Bark Alkaloids, which contain a definite quantity of each of the four alkaloids, one-half grain each Sulphates Quinia, Quinidia, Cinchonia and Cinchonidia.

We annex below list of our Pills of other Cinchona Alkaloids, and remain, soliciting your correspondence and valued orders, Yours respectfully,

March 27th, 1878. McKESSON & ROBBINS.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

FOR SALE.—PROPERTY, PRACTICE and Drug Store, in one of the best towns in the Lehigh Valley. Population about 1500; business worth between $3000 and $4000 per year. Convenient to Railroad, Schools, Churches, etc. Heat and Water in the House. Basement rents for a Market House and a Grocery. Pays well. Not much competition. Good reasons for selling. For terms, particulars, etc., apply soon, to

RELIABLE

ANIMAL VACCINE.

The undersigned respectfully announces that he has discontinued the practice of furnishing Vaccine *at his residence.*

Physicians can obtain the *Animal Vaccine* of MESSRS. CASWELL, HAZARD & CO., BROADWAY, CORNER 24TH STREET.

FRANK P. FOSTER, M.D.

By our arrangement with Dr. Foster, *all* Vaccine supplied by *us* is *absolutely fresh.*

We can furnish it in any quantity desired, either by express or by mail, if remittance is made to cover postage.

Dr. Foster's Animal Vaccine is the only kind that may be said to have the unqualified endorsement of the Medical Profession of New York.

QUILL SLIPS (half quill, charged on convex surface, at square-cut end).....25 cts.
CAPILLARY TUBES.....$2 00

For ordinary use *Quill Slips* are the most reliable of all forms of stored Vaccine, and in cases of failure with them in *primary* vaccination, if used within one week of their issue, and strictly in accordance with the printed directions, *being in the meantime kept cool and dry*, a second supply will be furnished gratis.

Tubes are intended chiefly for transportation to long distances, as the virus is preserved for a considerable length of time. They are superior to crusts, but inferior to quill slips.

Crusts are not recommended, and are not sold, for the reason that, however fresh, and however well formed they may be, they are apt to prove inefficient.

CASWELL, HAZARD & CO., New York.

THE GREAT EUROPEAN NOVELTY.

HUNYADI JANOS.

NEW APERIENT WATER.

Specially recommended for richness in aperient salts, and its efficacy in Bilious attacks, prevention of Piles, etc., and as an ordinary Aperient, by LIEBIG, SCANZONI, VIRCHOW, *and* SIR HENRY THOMPSON, *and the entire Medical Profession in England and Germany.*

Approved by the Academy of Medicine of France, and its sale in France authorized by special order of the French Government.

DR. J. MARION SIMS, New York.—"As a laxative, I prefer it to every other mineral water."

DR. JAMES R. WOOD, New York.—"Certain, but gentle and painless; superior to any other bitter water."

DR. WILLIAM A. HAMMOND, New York.—"The most pleasant and efficient of all purgative waters."

DR. ALFRED L. LOOMIS, New York.—"The most prompt and most efficient; specially adapted for daily use."

DR. FORDYCE BARKER, New York.—"Requires less, is less disagreeable and unpleasant, than any other."

DR. LEWIS A. SAYRE, New York.—"Preferred to any other laxative."

The Label on every Genuine Bottle is printed on BLUE paper.

For Sale by Dealers, Grocers and Druggists.

1117-1168eow

LEBAIGUE'S
DIALYSED IRON,
OR
PURE PEROXIDE OF IRON,
IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate, nor cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a **solution**, which is generally preferred; or of an **elixir**, when a slight stimulant is desired.

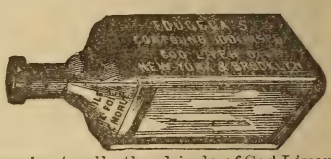
DOCTOR GIBERT'S
DEPURATORY SYRUP AND DRAGEES,
OF IODIZED DEUTO-IODIDE OF MERCURY.

These preparations have been approved by the Academy of Medicine of Paris, and have been thoroughly tested in the hospitals of Paris in the treatment of *Syphilitic, Scrofulous* and other affections requiring the use of iodized remedies.

They are recommended for the utmost accuracy of composition, and their perfect preservation.

Prepared by VAUQUELIN-DESLAURIERS, Chemist, Paris.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus**, which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue**, and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER of the ABOVE,
To whom all special communications should be addressed.

E. FOUGERA & CO.,

SOLE GENERAL AGENTS for the ABOVE,
To whom all orders should be addressed.

SOLD BY DRUGGISTS GENERALLY.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin.....8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine.....6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....per oz. $1.00
" (" ").....per doz. 10.00
" (in ½ lb ").....per lb. 12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

SEABURY & JOHNSON,

Originators and Manufacturers of

U. S. PHARMACOPŒIA MEDICINAL AND SURGICAL

PLASTERS, POROUS AND SPREAD IN RUBBER COMBINATION,

NEW YORK AND LONDON.

Received highest and only Award (Medal and Special Diploma of Merit) over all Foreign and Home Competitors in 1876.

THE JURORS' AWARD IS SUBSTANTIALLY

ORIGINALITY.—The successful application of Rubber as a base for all medicinal and mechanical plasters.

RELIABILITY and general excellence of manufactures.

FACTS CONCERNING MEDICINAL PLASTERS IN RUBBER COMBINATION.

India-rubber-spread and Porous Plasters possess indisputable advantages over all other Plasters: (1) The Rubber combination preserves the incorporated drug or extract from decomposition or volatilization; (2) They adhere closer and firmer; (3) They do not soil the skin or linen; (4) They are always pliable, and never become hard or brittle; (5) They adhere without heat or moisture; (6) An increased effect obtained by being porous, as the Plaster neither slides nor moves from its affixed position.

BELLADONNA PLASTER, U. S. P.

IN RUBBER COMBINATION.

Messrs. SEABURY & JOHNSON claim that theirs is the most thoroughly reliable and only strictly official Belladonna Plaster ever offered the medical profession. It is an improvement on other Belladonna Plasters in several important particulars. First, it is incorporated with the officinal alcoholic extract only. Secondly, it is freed from all stimulating qualities, thereby insuring the uninfluenced sedative action of Belladonna. Thirdly, it adheres with greater tenacity than others. Physicians have been prejudiced in favor of Allen's English Extract; but recent analysis, fairly conducted by competent chemists, emphatically condemns the Inspissated Extract as a mild and unstable product, representing but one-half or less than one-half of the strength of the U. S. P. Alcoholic Extract of Belladonna. The following result, published in the *American Journal of Pharmacy*, in April, 1876, page 145, is furnished for your consideration, which indicates the following percentage of Atropia in the respective extracts:—

Alcoholic Extract Belladonna, U. S. P......2,571
Allen's English Extract.....1,411
Herring's English Extract.....1,179

The practitioner, as well as ourselves, has but one choice.

Considering these features from a professional standpoint, we offer a Belladonna plaster which cannot be improved upon.

SALICYLATED SURGEONS' RUBBER ADHESIVE PLASTER

This article has met with unprecedented success, and has been emphatically pronounced by our most skillful General and Orthopædic Surgeons, as "the best Surgeons' Adhesive Plaster known." It is applied without heat or moisture, conforms quickly to the parts; is perfectly flexible and waterproof, and is ready for use at any moment. It is free from irritating properties and very healing. In counter-extension it has no equal, as it does not move or slide after being applied. Our India-rubber Adhesive Plaster is also spread on twilled linen, which resists the most powerful strain. In addition to these general improvements, the plaster being impervious to water, wounds can be cleansed without removing the plaster, obviating the necessity of constant redressing, saving labor and time. **Whenever continued powerful adhesion is required, it should be procured in porous form.**

MUSTARD PLASTER (spread on Cotton Cloth).

Our Mustard Plaster is a decided improvement over the best French makes; the mustard is manipulated so as to exclude all the moisture, retaining unimpaired by such treatment, its essential properties. They are always reliable, conform quickly to the part, and when thoroughly wet do not break into pieces, as is the case with all other mustard plasters. They do not crack or peel off, and can be removed without soiling the skin or linen. Being **manufactured only of pure mustard,** they are perfectly free from Croton Oil or other dangerous substitutes, often employed to induce intense irritation.

RUBBER BLISTER PLASTER (Camphorated) U. S. P. STRENGTH.

This article has a splendid reputation; its characteristic action is not impaired by age in any climate. The whole fly is incorporated, which, by constant manipulation is thoroughly and beautifully combined with the plaster. **Its properties are developed quicker, and it blisters in less time than the cerate.** It never fails to blister when used as directed. In addition to its superior efficacy as a vesicant, we incorporate a sufficient quantity of Camphor, which, with the Olive Oil used on the face of the plaster, **prevents Strangury.** This improvement will be appreciated by every practitioner. It is more reliable than any known cantharidal preparation.

CAPSICUM PLASTER.

Recently this article has crept into favor with our most esteemed physicians, and judging from results, it is doubtless the best rubefacient known. It has the specific action of mustard without its objections. The characteristic action of Capsicum is uniformly maintained from twenty-four to forty-eight hours, without blistering, being mild, continuous, and stimulating. This plaster is spread in rubber combination and in porous form. Experience has taught practitioners that the Oleo Resin of Capsicum is too violent, frequently vesicating; we incorporate the crude drug in sufficient quantity, without risk to the patient. Our Capsicum Plasters will be found more practical for general use than the **so-called Mustard or Capsicum Papers.**

SPECIAL NOTICE TO PHYSICIANS.

QUALITY IS OF GREAT IMPORTANCE TO THE PRACTITIONER: BY RELIABLE PREPARATIONS HE SUPPLEMENTS HIS OWN SKILL. You can therefore rest assured that every article we manufacture is of strict pharmacopœia strength, and incorporated with perfectly reliable Extracts and Drugs, well selected, carefully and conscientiously prepared, and manufactured invariably under the personal superintendence of one of our firm. OUR WHOLE ATTENTION AND STUDY IS DEVOTED ENTIRELY TO THE ART OF PLASTER MAKING, and we are ready at all times to receive suggestions from the fraternity, which may be of benefit to all.

SEABURY & JOHNSON,

21 Platt Street, New York.

ALL THE ABOVE ARTICLES SOLD BY DRUGGISTS EVERYWHERE.

ALWAYS SPECIFY SEABURY & JOHNSON'S PLASTERS.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

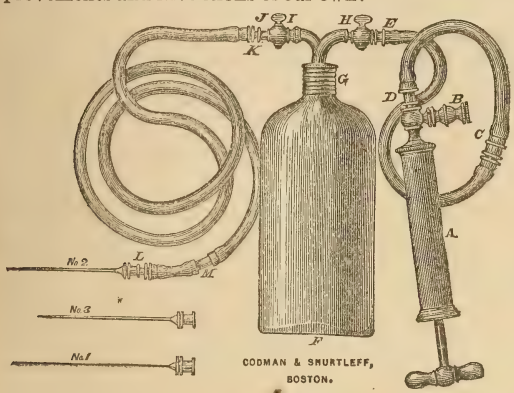

Fig. 68.

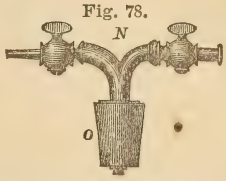
Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

Fig. 77.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated **Aspiratory Needles**, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions.....$18 00

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions..... 16 00

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case.....$14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional..... 6 00

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

An illustrated Catalogue of Surgical Instruments, also a New Pamphlet on Atomization of Liquids, with description of Improved Apparatus and Formulæ of Remedies successfully employed, will be forwarded, post-paid, on application.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

1090-1115eow

JEFFERSON MEDICAL COLLEGE,

PHILADELPHIA.

The Fifty-fourth Session of the Jefferson Medical College will begin on Tuesday, October 1, 1878, and will continue until March 1st, 1879. Preliminary Lectures will be held from Monday 2d September.

PROFESSORS.

JOSEPH PANCOAST, M.D., General, Descriptive and Surgical Anatomy (*Emeritus*).
SAMUEL D. GROSS, M.D., LL.D., D.C.L. Oxon., Institutes and Practice of Surgery.
ELLERSLIE WALLACE, M.D., Obstetrics and Diseases of Women and Children.
JOHN B. BIDDLE, M.D., Materia Medica and General Therapeutics.
J. AITKEN MEIGS, M.D., Institutes of Medicine and Medical Jurisprudence.
J. M. DA COSTA, M.D., Practice of Medicine.
WILLIAM H. PANCOAST, M.D., General, Descriptive and Surgical Anatomy.
ROBERT E. RODGERS, M.D., Medical Chemistry and Toxicology.

Continuous Instruction is given throughout the year (with the exception of the months of July and August), which is free to the matriculates of the Winter Session. The following special subjects are taught during the Preliminary Course in September:—

Medical Jurisprudence, by Professor Meigs.

Dermatology and Syphilitic Diseases, by Dr. F. F. Maury, one of the Surgeons to the Philadelphia Hospital.

Pathological Anatomy, by Dr. Longstreth, Pathologist to the Pennsylvania Hospital.

Operative Surgery, with Operations on the Cadaver, by Dr. John H. Brinton, one of the Surgeons to the Philadelphia Hospital.

Diseases of the Urino-Genital Organs, by Dr. S. W. Gross, one of the Surgeons to the Philadelphia Hospital.

Ophthalmology is treated both clinically and didactically during the entire course, by Dr. William Thomson, one of the Surgeons to the Wills Ophthalmic Hospital.

Laryngoscopy, with Diseases of the Throat, by Dr. J. Solis-Cohen.

The Demonstrator of Surgery, Dr. J. Ewing Mears, delivers a distinct course of *Demonstrations of Surgery,* with illustrations on the Cadaver, during the entire session.

Practical Chemistry, with Qualitative and Quantitative Analysis, the Examination of Normal and Abnormal Products, and Manipulation by the student himself, is taught by the Professor of Chemistry, assisted by the Demonstrator, G. M. Ward, M.D.

Practical Anatomy and Morbid Anatomy.—For the study of Practical Anatomy a full supply of material is furnished, free of charge. The anatomical rooms are spacious and provided with every convenience, and not only are subjects for dissection to be had without expense, but there are no incidental or extra charges of any kind. Demonstrator of Anatomy, T. H. Andrews, M.D.

Bedside Instruction is furnished to advanced students. The practical use of the laryngoscope is taught to all candidates for graduation, in classes of convenient size, at the College Hospital, by J. Solis-Cohen, and the use of the ophthalmoscope, by Dr. W. Thomson.

Laboratory Instruction is at the disposal of all the members of the class in the Chemical and Physiological Laboratories, and Practical Instruction in the use of the Microscope is also given.

Post-Mortem Examinations.—During the past winter opportunity was afforded to the graduating class of being present in sections, at autopsies, by Dr. Morris Longstreth, Pathologist to the Jefferson Medical College Hospital and to the Pennsylvania Hospital; and these facilities will be continued during the ensuing session.

The New Hospital of the Jefferson Medical College, which was begun in November, 1875, is now completed and in operation. It is situated immediately west of the College, fronting on Sansom Street, and is bounded on three sides by streets, and by a wide private passage way on the fourth side. It is 107 feet square, five stories in height, and is designed for the easy accommodation of 125 patients. In connection with the Hospital is the Out-door or Dispensary Department, which furnishes much valuable material for clinical instruction. The amphitheatre, provided for Clinical Lectures, is probably the largest and most convenient in the United States, and will seat more than six hundred students. The most approved appliances for heating, ventilation, etc., have been provided, and in architectural construction, and all desirable conveniences, this hospital will be found at least equal to any American clinical hospital. Daily Clinical Lectures are given at the hospital, through the entire year, by members of the Faculty and by the hospital staff, which is constituted as follows:—

Surgeons:
JOHN H. BRINTON, M.D.,
F. F. MAURY, M.D.,
S. W. GROSS, M.D.,
R. J. LEVIS, M.D.

Ophthalmic Surgeon:
WILLIAM THOMSON, M.D.

Aural Surgeon:
L. TURNBULL, M.D.

Physicians:
J. SOLIS-COHEN, M.D.,
JAMES C. WILSON, M.D.,
JOHN B. ROBERTS, M.D.,
OLIVER P. REX, M.D.

Gynæcologists:
F. H. GETCHELL, M.D.,
J. EWING MEARS, M.D.,

Pathologist:
MORRIS LONGSTRETH, M.D.

A Summer Course of Supplementary Lectures is given, beginning 17th March, 1879, and extended through the months of April, May, and June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non-matriculates pay thirty-five dollars, which is, however, credited on the amount of fees paid for the ensuing winter course.

FEES.

For a Full Course	$140 00
Matriculation Fee (paid once only)	5 00
Graduation Fee	30 00

Students who have attended two full courses on Materia Medica, Institutes, Anatomy, or Chemistry, may be examined on any of these branches at the end of their second course.

The Annual Announcement will be sent, on application to

1116-1122eow1123, 1124, 1126 J. B. BIDDLE, M.D., Dean.

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

MIAMI MEDICAL COLLEGE,
OF CINCINNATI.

The next Session will begin October 3, 1878, with Preliminary Course from September 15th. The College is well supplied with means for demonstrative teaching, having large Museums, a Student's Laboratory, Microscopes, etc.

The Clinical advantages are superior, two large Dispensaries being under the exclusive care of the Faculty, and daily Lectures in the largest Hospital of the West.

FEES, $45.

The Recitation Course will commence March 15, 1879.

FACULTY—John A. Murphy, M.D., Dean; Wm. H. Mussey, M.D., E. Williams, M.D., Wm. Clendenin, M.D., Wm. H. Taylor, M.D., T. H. Kearney, M.D., J. C. Mackenzie, M.D., J. B. Hough, M.D., Wm. B. Davis, M.D., Byron Stanton, M.D.

For Circulars, etc., address *JOHN A. MURPHY, M.D., Dean, 163 West Seventh St., or*

ALWAYS SPECIFY "K. & M." GRANULATED EFFERVESCENT SALTS.

K. & M.
GRANULATED EFFERVESCENT
PEPSIN, BISMUTH & STRYCHNIA.
ORIGINATED BY KEASBEY & MATTISON.

We again offer this preparation confidently to the profession. It has, for four years, enjoyed an extensive prescription among the most eminent of our practitioners. Its use has been attended with the most marked success, perhaps, of any of the various remedies recommended in dyspepsia, gastralgia, and kindred disorders. Its association with Carbonic Acid renders it palatable, and causes it to be retained by the most sensitive stomach. It is the only soluble form in which Pepsin and Bismuth should be ever given together, and is FIVE TIMES THE PEPSIN STRENGTH of the various elixirs, wines, liquors, etc., of the market. In reference to its reliability, we refer to the most prominent physicians in all sections of this country, who will very generally be found to be using it in their practice.

Always prescribe the GRANULATED EFFERVESCENT form, and always specify the "K. & M." Preparation.

Each drachm or heaping teaspoonful contains FIVE GRAINS Saccharated Pepsin, two grains soluble Citrate of Bismuth, and one-fiftieth grain Citrate of Strychnia.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 21, 1877.

Gentlemen:—I have used a large number of your preparations for several years past with great satisfaction, and am happy to commend them to others from what I know both of your drugs and of yourselves.

Very truly yours, W. W. KEEN, M. D.

K. & M.
GRANULATED EFFERVESCENT
CITRATE CAFFEINE.
ORIGINATED BY KEASBEY & MATTISON.

The recent extensive employment of this salt as a remedy, amounting almost to a specific in cases of sick headache, and its use in nervous diseases generally, have caused us to place it upon our list. Its value is much enhanced by its administration with Carbonic Acid, so agreeably and efficiently produced by this form.

A heaping teaspoonful, containing ONE GRAIN of Citrate of Caffeine, should be given in sick headache, every hour or two before and during the paroxysms.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 27, 1877.

Gentlemen:—It gives me pleasure to add my testimony in regard to your preparations, which I have used for a long time; they are thoroughly reliable.

Truly yours, THOMAS G. MORTON, M. D.

K. & M.
GRANULATED EFFERVESCENT
CITRATE LITHIA.

In the effervescent form this chemical is administered in a peculiarly advantageous manner. Its association with Carbonic Acid renders it much less liable to disturb the stomach, while in strength it is greatly superior to Lithia Water. A valuable diuretic and lithontriptic, its importance in the treatment of rheumatic, gouty, and analogous disorders can scarcely be over-estimated.

We have doubled the strength of this preparation, each drachm or heaping teaspoonful containing FOUR GRAINS of the chemically pure salt.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 25, 1877.

Gentlemen:—I have employed your Extract of Malt and Infants' Food, in a large number of cases, much to my own satisfaction, and to the benefit of the patient. The Infants' Food I regard as especially useful in cases of Infants requiring artificial food from any cause. Yours, etc., W. B. ATKINSON, M. D., *Sec. American Med. Asso.*

K. & M.
GRANULATED EFFERVESCENT PREPARATIONS
of Magnesium Citrate, Potassium Bicarb., Citrate Benzoate, and Bromide; Lithium Benzoate and Carbonate; Cerium Nitrate and Oxalate; Bismuth Citrate (SOLUBLE), Pepsin, and Bismuth; Pepsin, Bismuth, and Iron, etc., etc., etc.; also the following:—

K. & M.
GRANULATED EFFERVESCENT
MINERAL WATER SALTS.
Vichy, Kissingen, Seltzer, Carlsbad, Congress, Crab Orchard, Pullna, Friedrichshall, etc., etc.

ALWAYS SPECIFY "K. & M." GRANULATED EFFERVESCENT SALTS.

Analyses of Sulphate of Quinine Pills.

As we have repeatedly notified the trade, our Sulphate of Quinine Pills are made of Bleached Quinine and contain the correct amount of Quiniæ Sulphas, as represented on the label.

We submit below three analyses of our Sulphate of Quinine Pills obtained at different druggists; the first was made by Mr. Chas. Rice, of New York, one of the editors of the "*New Remedies*," and chemist of Department Public Charities and Correction of New York City, who is well known both personally and by reputation by a large number of physicians and druggists throughout the country. The other two analyses are by Dr. Polenske, former assistant of Prof. Sonnenshein, of Berlin, and now our own analytical chemist.

Our "Hospital Quinine" Pills are made as set forth in our circular of March 27th, which we reprint for the information of those who may not have seen it before.

With the assurance to the trade and medical profession, that we will always manufacture our preparations, as we have in the past, in **perfect good faith,** that we will use the best materials obtainable, increasing our knowledge by every means in our power, for examining and testing all ingredients and perfecting our business, we remain,

Very respectfully, **McKESSON & ROBBINS.**

NEW YORK, APRIL 17th, 1878.

"MESSRS. McKESSON & ROBBINS,

Gentlemen:—Having been requested by you to make an assay of the alkaloids contained in your Gelatine-Coated Quinine Pills, I purchased an original vial, containing 100 2 grain pills, in the store of Mr. Theodore Cole, 409 First Avenue, New York. Each ten of these pills weighed very nearly 34 grains, and the weight of the single pills is very uniform, varying but slightly either way from 3.4 grains. The whole number of pills, (100,) yielded 148.385 grains of anhydrous alkaloid, which was found to be **pure, White Quinia,** free from other cinchona alkaloids. This amount of dry Quinia corresponds to **203.8** grains of **Sulphate of Quinia,** containing 8 molecules of water of crystallization ($2\ C_{20}\ H_{24}\ N_2\ O_2—H_2\ SO_4—8\ H_2\ O$); or to **201.7** grains of **Sulphate of Quinia,** containing 7½ molecules of water of crystallization ($2\ C_{20}\ H_{24}\ N_2\ O_2—H_2\ SO_4—7½\ H_2\ O$), which latter is, as near as possible, the formula of the commercial pure Sulphate of Quinia. The amount of Sulphate of Quinia contained in the 100 pills examined, is therefore a trifle **in excess** of the required quantity, (3.8 grains, or 1.7 grain, according to whatever formula may be adopted for the crystallized salt).

Respectfully CHARLES RICE,
Chemist, Bellevue Hospital, N. Y."

NEW YORK, MARCH 30th, 1878.

"I have analyzed McKesson & Robbins' Gelatine-Coated 5 grs. Sulphate of Quinine Pills, from an original bottle of one hundred, and find that in two analyses of 10 pills each, the result in both cases was 51 grains of pure Sulphate of Quinine. ED. POLENSKE, Ph. D."

NEW YORK, APRIL 13th, 1878.

"One hundred McKesson & Robbins' Gelatine-Coated 2 grs. Sulphate of Quinine Pills, analyzed by me to-day, contained 198 grains of Sulphate of Quinine. The Sulphate of Quinine obtained from these pills stood the Ether test, as laid down in the U. S. Ph. ED. POLENSKE, Ph. D."

Circular of March 27th, 1878.

Since we changed, last fall, from Unbleached to Bleached Quinine in the manufacture of our Pills, we have heard from a large number of druggists and physicians stating that the therapeutical effects of the dark pills were better than the "bleached," dose for dose, where a tonic was indicated, and the antiperiodic effects of the former were as well marked. We made the change because we were disappointed in obtaining a uniform article of unbleached Quinine, were deceived in two shipments we received and the analyses of samples from the same package we submitted to different highly reputable chemists varied surprisingly, in fact, analysing Quinine *quantitively* is very difficult, as it depends very largely upon the different solubilities of the alkaloids in water, while the *qualitative* analysis is very simple and reliable.

The curative properties of the other alkaloids of Cinchona Barks have been well attested and the effect of the **combined alkaloids** has been repeatedly asserted to be greater than that of any **one alone.**

In view of these facts, we accordingly propose to offer Pills made of Hospital Quinine, which differs from that which has been known and understood as "unbleached," in the process of manufacture and in the proportion of Quinine. This Hospital Quinine will contain about 50 per cent. of Quinine Sulphate, and the balance, Cinchonidia Sulphate and traces of Quinidia Sulphate; the Cinchonia Sulphate, being less powerful than the other alkaloids is separated.

These pills on account of their lower price will relieve a difficulty, to which a large number of people living in malarious districts have been subjected—the inability to purchase Quinine Pills on account of price, especially when scarcity causes sudden and great advances, as at present—at the same time we believe that confidence may be felt of experiencing equal relief with similar doses.

We will continue, as now, to make our "Quinine Pills" of bleached Quinine, and the white color will readily identify them from our darker Hospital Quinines, which will be labelled "Hospital Quinine." The list of Hospital Quinine Pills we submit below is subject to same discount as our other pills, and will be reduced as soon as the market on Quinine will allow. We call special attention to our Pills of Cinchona Bark Alkaloids, which contain a definite quantity of each of the four alkaloids, one-half grain each Sulphates Quinia, Quinidia, Cinchonia and Cinchonidia.

We annex below list of our Pills of other Cinchona Alkaloids, and remain, soliciting your correspondence and valued orders, Yours respectfully,

March 27th, 1878. McKESSON & ROBBINS.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

AN OPPORTUNITY SELDOM OFFERED. For sale, a lucrative and well-established practice and fine outfit; located in one of the finest agricultural valleys in Pennsylvania; country thickly settled; population of town, 1500; a live country town. *Lebanon Valley College* is located here, with about two hundred students in attendance. Reason for selling, ill health and change of business. Price and terms easy. None but those who mean business and can come well recommended need apply. Would remain with successor from three to six months. Annual business from $2500 to $3000. Address J. W. COBLE, M.D., Annville, Lebanon county, Pa. 1121-1122

FOR SALE.—PROPERTY, PRACTICE and Drug Store, in one of the best towns in the Lehigh Valley. Population about 1500; business worth between $3000 and $4000 per year. Convenient to Railroad, Schools, Churches, etc. Heat and Water in the House. Basement rents for a Market House and a Grocery. Pays well. Not much competition. Good reasons for selling. For terms, particulars, etc., apply soon, to
J. B. TWEEDLE, M.D.,
1120-1123 Weatherly, Carbon Co., Pa.

WANTED IMMEDIATELY.—SINGLE Physician, experience, unexceptionable references, for Private Asylum.
Address DR. BURRELL,
1121 Canandaigua, N. Y.

Woman's Medical College
OF
PENNSYLVANIA.

The Twenty-Ninth Winter Session will open on Thursday, October 3d, 1878, in the commodious new college building.

Clinical instruction is given in the Woman's Hospital, Pennsylvania, Wills, Philadelphia, and Orthopædic Hospitals.

Spring Course of Lectures, Practical Demonstrations, and Winter Quizzes are free (except for expense of material) to all matriculants of the year.

Superiority and Reliability of WARNER & CO.'S SUGAR-COATED Quinine Pills.

QUININE PILLS of our make are prepared from SULPHATE OF QUINIA of American manufacture, noted for ITS PURITY AND EXCELLENCE. Each Pill contains the FULL COMPLEMENT OF MATERIAL as expressed on the label, without the necessity of adding any excess to compensate for impurities. They are PERFECTLY SOLUBLE, and physicians can depend upon obtaining the FULL BENEFIT of this valuable remedy in a PLEASANT FORM. Always specify WARNER & CO., AND AVOID THE SUBSTITUTION OF CHEAPER AND INFERIOR BRANDS.

SUGAR-COATED QUININE PILLS.

"I take pleasure in testifying that W. R. WARNER & CO.'S QUININE PILLS are practically just WHAT THEY CLAIM TO BE, whether judged by ANALYTICAL TESTS or by the THERAPEUTIC EFFECT obtained from their use.

Detroit, Mich. A. B. LYONS, M. D., *Analytical Chemist.*

SUGAR-COATED PILLS.

BRIDGEPORT, CONN., February 9th, 1877.

"I have used WARNER & CO.'S SUGAR-COATED PILLS for more than fifteen years, and I do not hesitate to say that, in respect of solubility, THEY ARE SUPERIOR TO ANY COATED PILLS I HAVE EVER TRIED, not excepting those coated by gelatine. They possess one quality which I do not find in most other pills, viz: a moist condition of the enclosed ingredients." ROBT. HUBBARD, M. D.

WARNER & CO.'S STANDARD PREPARATIONS.

SUGAR-COATED PILLS,—Warner & Co.'s
Reliable, Soluble and Permanent.

Warner & Co.'s—PHOSPHORUS PILLS,
In 24 combinations—unexampled for perfection.

PARVULES, (Minute Pills,)—Warner & Co.'s
Minimum doses for children and others.

Warner & Co.'s—INCLUVIN, (from gizzard of chicken,)
More efficacious than Pepsin, prescribed in the same manner and the same combinations.

DIALYSED IRON,—Warner & Co.'s
Superior, as attested by chemical analysis.

Warner & Co.'s—FLUID EXTRACT OF ERGOT,
From fresh Ergot of Rye—equal to the best in the market.

LIQUID PANCREOPEPSIN,—Warner & Co.'s
The combined principles of digestion.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With Hops (Plain)*,	- - - - - - -		$1.00

1879. BEGIN NOW! 1879.

UNEQUALED INDUCEMENTS!

NEW SUBSCRIBERS WILL RECEIVE

THE WEEKLY

MEDICAL AND SURGICAL REPORTER

From now until December 31st, 1879,

FOR $5.00!

The MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list, unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, double-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES.

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of *the whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

PRICES PER YEAR.

The Weekly Medical and Surgical Reporter.....$5.00
The Half-Yearly Compendium of Medical Science..... 2.50

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

[Unguentum Petrolei]

SAMPLES FURNISHED
ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

University of Pennsylvania,

MEDICAL DEPARTMENT.

113th ANNUAL SESSION, 1878–79.

The higher plan of medical education is now enforced, requiring attendance upon three graded courses of five months each. Didactic instruction is increased. Bedside instruction of each student in Physical Diagnosis, Clinical Medicine and Surgery, and Gynæcology is provided. The clinical and laboratory facilities are unrivaled in America. Pharmacy, Analytical and Medical Chemistry, Histology, Normal and Morbid Anatomy, and Operative Surgery are taught practically.

A Dental Department has recently been instituted.

For particulars, see ANNOUNCEMENT, for which address

NEW YORK STATE

INEBRIATE ASYLUM,

Binghamton, Broome County, N. Y.

This Asylum is admirably situated, overlooking a fine section of country, and is complete in all the appointments of a first-class home, with ample means to meet the wants of every case. It is located three miles from the city, and removed from all temptation. Its management is the same as all other State charities, under the control of a Board of Managers appointed by the Governor. The law provides for the maintenance of indigent inebriates, similar to that of the insane, but patients from other States may be admitted.

The experience of this Asylum, for the past ten years, indicates an increasing usefulness and necessity for such institutions, and the original intention of making this an Asylum Hospital, where this disorder may be thoroughly understood and treated on broad scientific principles is nearer realized than ever before. All rules are strictly enforced, and no patient permitted to go beyond the Asylum grounds without permission from the Superintendent, or in the care of an attendant.

THE CHARGES FOR BOARD

will include medical care, washing, lights, fuel, etc., with ordinary attention. The exigencies of each particular case will be acted upon, as it may present itself, to those of moderate and limited means as well as the rich.

All inquiries and applications for admission should be addressed to the Superintendent.

WILLARD PARKER, M.D.,
New York, N. Y.,
President Board of Managers.

R. C. S. REED, M.D.

THE MEDICAL NEWS

IS DEVOTED TO

Medicine, Surgery, Obstetrics, Microscopy, and the Collateral Sciences.

Besides publishing Original Communications by leading medical men, Selections are freely made from the best journals of our own and foreign countries. Every number contains translations from French and German Journals, made expressly for it. The editors labor to keep subscribers well posted in

THE PROGRESS OF MEDICINE.

A feature peculiar to THE MEDICAL NEWS is, that it has a Department devoted to

MICROSCOPY,

in which everything new pertaining to this interesting study is chronicled. This feature has led many scientific men, not physicians, to become subscribers, many of whom, both of this country and England, are contributors to the Microscopical Department. To those interested in Microscopy, the Microscopical Department alone is worth more than double the price of the journal.

Price $2.50 a year, in advance. Specimen copies 25 cents, without which no specimen copy will be sent.

DR. GARRATT'S

Constant Electric Disks,

That any person may apply and wear with comfort, for relief of local *pains* and *weakness*, coldness and stiffness. It is also remarkable for its constant power to help weak lungs, heart, stomach, kidneys, sluggish liver, lame back, and other ills.

While worn, by night or day, this flexible pad is self-charging, applies a fine constant galvanism that wonderfully cures nervous ills. "For the price and purpose, there is nothing so good. It has no equal." So say physicians, druggists, and those now using this improved electric. Large Disk, $2.50; Children's Disk, $1.00; Long Disk, with straps for the body, $3.50. Do. for large body, $5.00. Can be sent by mail, on receipt of price, by GARRATT & Co., 6 Hamilton Place, Boston, Mass.

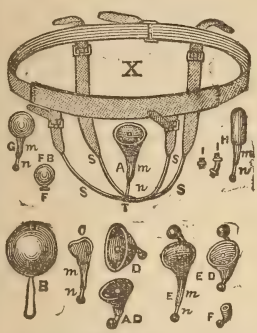
STAUFFER'S

HARD RUBBER INSTRUMENTS AND PRICE LIST.

SERIES OF UTERINE SUPPORTERS. *1.*



Spring Stem Cup A.—Complete on Belt X, $7.00; on XX, $9.00; on Y, $8.00; and on Z, $6.00. Without belt on SS, $5.00.

Anteversion C, Globe Top G, and Oblong H, in price the same as A, with similar attachments.

Retroversion E, on Belt X, $8.00; on XX, $10.00; on Y, $9.00; and on Z $7.00. Without Belt $6.00

Duplicate Cups—A, $2.00; E, $3.00; Globe Tops G, with attachments to screw on A or E Stem $2.00.

P. S.—Shifting Top, with solid or no Spring Stem, 50 cents less on either belt. No Shifting Top Stem sold alone.

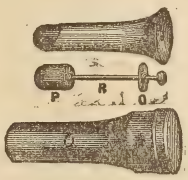
Self-Sustaining Globe B, or Cup D, $1.50 each.

Gums are mailed, 2 at 20 cts; 4 at 35 cts; and Springs at 3 cts. each.

Abdominal Supporters. *2.* *3.*

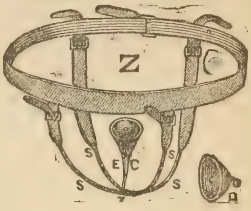
Price, $4.00. Price, $3.00.

SPECULUMS AND CASE. *6.*



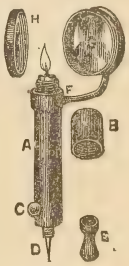
Prices.—The series encased, $14.00. With complete but non-shifting conductor, $2.50 each. Flesh color enameled inside.

SOLID STEM CUP SUPPORTER E. C. *5.*



Price, $4.50. Including Cup D, $6.00. Or E C, on Abdominal Belt X, $5.50. X X, $7.50. Y, $6.50. Including D, on each, $1.50 extra.

REFLECTOR, OR DENTISTS' LIGHT. *10.*



Price, $3.50.

Rectum Supporter and Ointment Holder. *4.*

$3.50.

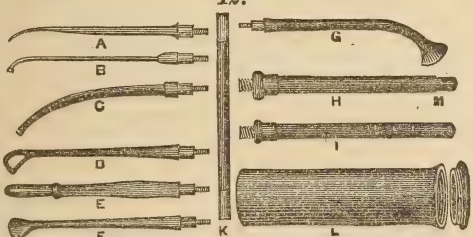
STEM LEVERS. *14.*

$4.50 on Z, $7.00 on X.

Permanent Stem I—The same in price as E C, Fig. 5, on all the belts.

Spring Stem J—The same as Spring Stem Cup A, Fig. 1, on either belt.

HARD RUBBER UTERINE EXAMINING CASE. *12.*



Prices.—Full case, $8.00; Quill Caustic holder H, or camel hair brush holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2.50.

Fenestrated Vaginal and Anal. *7.*

Prices.—Vaginal T, $2.00. Anal U, $1.50.

Hymen—Pointed. *8.*

Price, $1.50.

Vaginal and Vulva Dilator. *9.*

Price, $1.50.

Caustic Bottle and Case. *11.*

Price, $1.50.

STAUFFER'S NON-EVAPORATING INKSTAND.

Price, $1.00.

Price, $1.00. *15.*

13.

Supporters E. C. or Economy.—Fig 5, on its elastic belt Z, is the least in price, and by the oblique construction of the cup sets direct within the angle of the axis of the uterus and vagina, (well seen by IU. Fig. 13) If properly selected, or made so by the exchange privilege, (which admits the interchange of all the hard rubber parts in the catalogue, to cover the purchaser's risk.) It is warranted to correct and sustain even any *Procidentia.* The spring stems and shifting tops with their supplements, Fig. 1. Also, improved ***Retroversion, Cup E. Anterversion C.*** and ***Intra-Uterine Stem Cup, IU,*** Fig. 13. The stem locks in a square socket after the cup is in position, and is supported on the elastic gums SS, as A Fig. 1, and same in price Stem Levers, Fig. 14, etc. All are fully explained in the catalogue. The ***Series*** comprises upwards of 150 in style and size instruments, of which two-thirds belong to the support and correction of the uterus. ***Speculums***—Thomas' objections p. 67—'76, are by them completely overcome. The case contains four. The clear and large view, and facility to work through them, far exceeds any other. The ***Ex. Case,*** and physician's favorite, is admirably represented by Fig. 12—weight but 4 oz. ***Catalogue*** sent free on application. In addition to the description of the above series of instruments, it contains important information on this line of treatment.

MAILED ON RECEIPT OF PRICES.

ALWAYS SPECIFY "K. & M." IMPROVED EXTRACT OF MALT.

K. & M.
IMPROVED EXTRACT OF MALT.

Made from Canada Barley, selected, malted, dried, and extracted by, and under the immediate supervision of, Graduates of the Philadelphia College of Pharmacy. CONCENTRATED IN VACUO. This is as perfect an extract of the highest grade of carefully selected Barley Malt as can be PREPARED BY THE USE OF THE MOST IMPROVED VACUUM APPARATUS, recently designed for our own laboratory. As A FOOD in Syphilis, Typhoid and other fevers, Consumption and similar wasting diseases, it is without an equal for the rapid building up of a degenerate or depraved condition of the blood or tissues, since it acts not only as food itself, but its use converts and changes other kinds of food into a condition allowing easy assimilation.

We append the following letter from a gentleman well known to all:

Messrs. KEASBEY & MATTISON: PHILADELPHIA, September 25, 1877.

Gentlemen:—I have employed your Extract of Malt and Infant's Food in a large number of cases, much to my own satisfaction and to the benefit of the patient. The Infant's Food I regard as especially useful in cases of infants requiring artificial food, from any cause.

Yours, etc., W. B. ATKINSON, *Secretary American Medical Association.*

K. & M.
EXTRACT OF MALT WITH COD LIVER OIL.

ORIGINATED BY KEASBEY & MATTISON.

THE MOST NUTRITIVE EMULSION EVER MADE.

Our Improved Extract of Malt, with 50 per cent, of our fine Norwegian Oil, is pre-eminently the emulsion of Cod Liver Oil, since it has double the nutritive effect of any other emulsion of oil. It not only contains the largest amount of nutritive food in the smallest bulk of liquid, but, by the action of the Diastase contained in the malt, it is capable of transforming many times its bulk of amylaceous or graminaceous food into saccharine, thus rendering it easily digestible, even by the most delicate stomach of the invalid. The disagreeable eructations from the stomach, which constitute one of the greatest objections to the use of all preparations of Cod Liver Oil, are completely obviated in this preparation. We would direct the attention of physicians to the special fact that it unites perfectly with water in any proportion, and that the oil does not again separate, thus showing how perfectly the oil is emulsified.

Dose—A Dessert to a Tablespoonful immediately after Meals.

K. & M.
IMPROVED EXTRACT OF MALT WITH PEPSIN.

This is our Improved Extract of Malt, with the addition of five grains of our Saccharated Pepsin to the tablespoonful. For dyspeptic disorders it is found of great value, since it digests both albuminoid and amylaceous matter, thus furnishing a preparation that is needed in the majority of cases of dyspepsia and other derangements of the stomach dependent upon the non-assimilation of the food

Dose—A Dessert to a Tablespoonful immediately after Meals.

K. & M.
BEEF, IRON AND WINE, WITH EXTRACT OF MALT.

ORIGINATED BY KEASBEY AND MATTISON.

A Nourishing Diet for Invalids and Convalescents.

As a simple restorative food, where a tonic effect is desired, there is perhaps nothing in the whole line of tonic dietetics of so much real value as this preparation. It furnishes the diseased stomach with the power of assimilating amylaceous diet, and supplies readily assimilable food at the same time, in the articles of Malt Extract. The iron salt supplies the red corpuscles that are deficient in the blood, while to the nutrient effect of beef is added the stimulant effect of a fine sherry wine. Each tablespoonful represents two grains of the soluble citrate of iron, and one ounce of finely chopped raw lean beef, with equal quantities of our Improved Extract of Malt and sherry wine.

For sale by Druggists everywhere. Samples may be obtained of

THE MANUFACTURERS,

KEASBEY & MATTISON,

ALWAYS SPECIFY "K. & M." IMPROVED EXTRACT OF MALT.

Analyses of Sulphate of Quinine Pills.

As we have repeatedly notified the trade, our Sulphate of Quinine Pills are made of Bleached Quinine and contain the correct amount of Quiniæ Sulphas, as represented on the label.

We submit below three analyses of our Sulphate of Quinine Pills obtained at different druggists; the first was made by Mr. Chas. Rice, of New York, one of the editors of the "*New Remedies*," and chemist of Department Public Charities and Correction of New York City, who is well known both personally and by reputation by a large number of physicians and druggists throughout the country. The other two analyses are by Dr. Polenske, former assistant of Prof. Sonnenshein, of Berlin, and now our own analytical chemist.

Our "Hospital Quinine" Pills are made as set forth in our circular of March 27th, which we reprint for the information of those who may not have seen it before.

With the assurance to the trade and medical profession, that we will always manufacture our preparations, as we have in the past, in **perfect good faith,** that we will use the best materials obtainable, increasing our knowledge by every means in our power, for examining and testing all ingredients and perfecting our business, we remain,

Very respectfully, **McKESSON & ROBBINS.**

NEW YORK, APRIL 17th, 1878.

"MESSRS. McKESSON & ROBBINS,

Gentlemen:—Having been requested by you to make an assay of the alkaloids contained in your Gelatine-Coated Quinine Pills, I purchased an original vial, containing 100 2 grain pills, in the store of Mr. Theodore Cole, 409 First Avenue, New York. Each ten of these pills weighed very nearly 34 grains, and the weight of the single pills is very uniform, varying but slightly either way from 3.4 grains. The whole number of pills, (100,) yielded 148.385 grains of anhydrous alkaloid, which was found to be **pure, White Quinia,** free from other cinchona alkaloids. This amount of dry Quinia corresponds to **203.8** grains of **Sulphate of Quinia,** containing 8 molecules of water of crystallization ($2\ C_{20}\ H_{24}\ N_2\ O_2 — H_2\ SO_4 — 8\ H_2\ O$); or to **201.7** grains of **Sulphate of Quinia,** containing 7½ molecules of water of crystallization ($2\ C_{20}\ H_{24}\ N_2\ O_2 — H_2\ SO_4 — 7½\ H_2\ O$), which latter is, as near as possible, the formula of the commercial pure Sulphate of Quinia. The amount of Sulphate of Quinia contained in the 100 pills examined, is therefore a trifle **in excess** of the required quantity, (3.8 grains, or 1.7 grain, according to whatever formula may be adopted for the crystallized salt).

Respectfully CHARLES RICE,
Chemist, Bellevue Hospital, N. Y."

NEW YORK, MARCH 30th, 1878.

"I have analyzed McKesson & Robbins' Gelatine-Coated 5 grs. Sulphate of Quinine Pills, from an original bottle of one hundred, and find that in two analyses of 10 pills each, the result in both cases was 51 grains of pure Sulphate of Quinine.

ED. POLENSKE, Ph. D."

NEW YORK, APRIL 13th, 1878.

"One hundred McKesson & Robbins' Gelatine-Coated 2 grs. Sulphate of Quinine Pills, analyzed by me to-day, contained 198 grains of Sulphate of Quinine. The Sulphate of Quinine obtained from these pills stood the Ether test, as laid down in the U. S. Ph.

ED. POLENSKE, Ph. D."

Circular of March 27th, 1878.

Since we changed, last fall, from Unbleached to Bleached Quinine in the manufacture of our Pills, we have heard from a large number of druggists and physicians stating that the therapeutical effects of the dark pills were better than the "bleached," dose for dose, where a tonic was indicated, and the antiperiodic effects of the former were as well marked. We made the change because we were disappointed in obtaining a uniform article of unbleached Quinine, were deceived in two shipments we received and the analyses of samples from the same package we submitted to different highly reputable chemists varied surprisingly, in fact, analysing Quinine *quantitively* is very difficult, as it depends very largely upon the different solubilities of the alkaloids in water, while the *qualitative* analysis is very simple and reliable.

The curative properties of the other alkaloids of Cinchona Barks have been well attested and the effect of the **combined alkaloids** has been repeatedly asserted to be greater than that of any **one alone.**

In view of these facts, we accordingly propose to offer Pills made of Hospital Quinine, which differs from that which has been known and understood as "unbleached," in the process of manufacture and in the proportion of Quinine. This Hospital Quinine will contain about 50 per cent. of Quinine Sulphate, and the balance, Cinchonidia Sulphate and traces of Quinidia Sulphate; the Cinchonia Sulphate, being less powerful than the other alkaloids is separated.

These pills on account of their lower price will relieve a difficulty, to which a large number of people living in malarious districts have been subjected—the inability to purchase Quinine Pills on account of price, especially when scarcity causes sudden and great advances, as at present—at the same time we believe that confidence may be felt of experiencing equal relief with similar doses.

We will continue, as now, to make our "Quinine Pills" of bleached Quinine, and the white color will readily identify them from our darker Hospital Quinines, which will be labelled "Hospital Quinine." The list of Hospital Quinine Pills we submit below is subject to same discount as our other pills, and will be reduced as soon as the market on Quinine will allow. We call special attention to our Pills of Cinchona Bark Alkaloids, which contain a definite quantity of each of the four alkaloids, one-half grain each Sulphates Quinia, Quinidia, Cinchonia and Cinchonidia.

We annex below list of our Pills of other Cinchona Alkaloids, and remain, soliciting your correspondence and valued orders,

Yours respectfully,

March 27th, 1878. **McKESSON & ROBBINS.**

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

AN OPPORTUNITY SELDOM OFFERED. For sale, a lucrative and well-established practice and fine outfit; located in one of the finest agricultural valleys in Pennsylvania; country thickly settled; population of town, 1500; a live country town. *Lebanon Valley College* is located here, with about two hundred students in attendance. Reason for selling, ill health and change of business. Price and terms easy. None but those who mean business and can come well recommended need apply. Would remain with successor from three to six months. Annual business from $2500 to $3000. Address J. W. COBLE, M.D., Annville, Lebanon county, Pa. 1121-1122

FOR SALE.—PROPERTY, PRACTICE and Drug Store, in one of the best towns in the Lehigh Valley. Population about 1500; business worth between $3000 and $4000 per year. Convenient to Railroad, Schools, Churches, etc. Heat and Water in the House. Basement rents for a Market House and a Grocery. Pays well. Not much competition. Good reasons for selling. For terms, particulars, etc., apply soon, to
J. B. TWEEDLE, M.D.,
1120-1123 Weatherly, Carbon Co., Pa.

WANTED IMMEDIATELY.—SINGLE Physician, experience, unexceptionable references, for Private Asylum.
Address DR. BURRELL,
1121 Canandaigua, N. Y.

Starling Medical College,
COLUMBUS, OHIO.

The Thirty-second Annual Session of STARLING MEDICAL COLLEGE will begin on Oct. 2d, preceded by a Preliminary Session, beginning Sept. 4th.

FEES.

Matriculation.....$5 00
Professors' Tickets, in full.....40 00
Demonstrator's Ticket..... 5 00
Graduation Fee.....25 00

Superiority and Reliability of WARNER & CO.'S SUGAR-COATED Quinine Pills.

QUININE PILLS of our make are prepared from SULPHATE OF QUINIA of American manufacture, noted for ITS PURITY AND EXCELLENCE. Each Pill contains the FULL COMPLEMENT OF MATERIAL as expressed on the label, without the necessity of adding any excess to compensate for impurities. They are PERFECTLY SOLUBLE, and physicians can depend upon obtaining the FULL BENEFIT of this valuable remedy in a PLEASANT FORM. Always specify WARNER & CO., AND AVOID THE SUBSTITUTION OF CHEAPER AND INFERIOR BRANDS.

SUGAR-COATED QUININE PILLS.

"I take pleasure in testifying that W. R. WARNER & Co.'s QUININE PILLS are practically just WHAT THEY CLAIM TO BE, whether judged by ANALYTICAL TESTS or by the THERAPEUTIC EFFECT obtained from their use.

Detroit, Mich. A. B. LYONS, M. D., *Analytical Chemist.*

SUGAR-COATED PILLS.

BRIDGEPORT, CONN., February 9th, 1877.

"I have used WARNER & Co.'s SUGAR-COATED PILLS for more than fifteen years, and I do not hesitate to say that, in respect of solubility, THEY ARE SUPERIOR TO ANY COATED PILLS I HAVE EVER TRIED, not excepting those coated by gelatine. They possess one quality which I do not find in most other pills, viz: a moist condition of the enclosed ingredients." ROBT. HUBBARD, M. D.

WARNER & CO.'S STANDARD PREPARATIONS.

SUGAR-COATED PILLS,—Warner & Co.'s
Reliable, Soluble and Permanent.

Warner & Co.'s—PHOSPHORUS PILLS,
In 24 combinations—unexampled for perfection.

PARVULES, (Minute Pills,)—Warner & Co.'s
Minimum doses for children and others.

Warner & Co.'s—INCLUVIN, (from gizzard of chicken,)
More efficacious than Pepsin, prescribed in the same manner and the same combinations.

DIALYSED IRON,—Warner & Co.'s
Superior, as attested by chemical analysis.

Warner & Co.'s—FLUID EXTRACT OF ERGOT,
From fresh Ergot of Rye—equal to the best in the market.

LIQUID PANCREOPEPSIN,—Warner & Co.'s
The combined principles of digestion.

FRESH AND RELIABLE VACCINE VIRUS--WARRANTED.
Mailed to any address on receipt of price, $1.25 per crust.

WM. R. WARNER & CO., - - PHILADELPHIA.

SOLUTION
FERROUS CHLORIDE.

This Solution of Iron is the lowest form of Chloride. It is much less styptic in taste than Tr. Iron Chloride, consequently pleasanter to the patient; it is much more easily assimilated by weak and irritable stomachs.

Knowing how difficult it is to introduce into the blood, in a proper form, a sufficient quantity of iron to be beneficial, we have manufactured and introduce the **Ferrous Chloride** as being easily absorbed and acting with much efficacy, even when given in small doses.

Dr. Rabuteau, who has specially studied the protochloride of iron, and shown that it is the most natural of ferruginous salts, thinks that he has found the very thing required:—

EXTRACT FROM THE REPORTS OF THE ACADEMY OF SCIENCES OF PARIS.
(*Sitting of* 11 *December*, 1871.)

". . . . . The most important thing is the facility with which the protochloride of iron is absorbed by the stomach. Two or three hours after from 4 to 10 grains of this salt have been ingested, almost the whole is absorbed. Having finally observed that the reduced iron and the ferruginous oxyds and carbonates are changed into protochloride in the stomach by the contact with the hydrochloric acid of the gastric juice, I thought it necessary to substitute this salt for all the preceding for medicinal purposes. My observations in the wards of hospitals and in my own practice have convinced me of the successful results of the protochloride of iron, which is easily borne when pure and administered in a proper way."

For details, see the memoirs on the protochloride of iron published in the *Union Médicale, Paris*, 1871 and 1872.

Each fluid drachm contains two grains of the Anhydrous **Ferrous Chloride.**

LEBAIGUE'S
DIALYSED IRON,

OR

PURE PEROXIDE OF IRON,

IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate, nor cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a **solution**, which is generally preferred; or of an **elixir**, when a slight stimulant is desired.

DOCTOR GIBERT'S
DEPURATORY SYRUP AND DRAGEES,

OF IODIZED DEUTO-IODIDE OF MERCURY.

These preparations have been approved by the Academy of Medicine of Paris, and have been thoroughly tested in the hospitals of Paris in the treatment of *Syphilitic, Scrofulous* and other affections requiring the use of iodized remedies.

They are recommended for the utmost accuracy of composition, and their perfect preservation.

Prepared by VAUQUELIN-DESLAURIERS, Chemist, Paris.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

SOLD BY DRUGGISTS GENERALLY.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine ..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....per oz.	$1.00
" (" ").....per doz.	10.00
" (in ½ lb ").....per lb.	12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

SEABURY & JOHNSON,

Originators and Manufacturers of

U. S. PHARMACOPŒIA MEDICINAL AND SURGICAL

PLASTERS, POROUS AND SPREAD IN RUBBER COMBINATION,

NEW YORK AND LONDON.

Received highest and only Award (Medal and Special Diploma of Merit) over all Foreign and Home Competitors in 1876.

THE JURORS' AWARD IS SUBSTANTIALLY

ORIGINALITY.—The successful application of Rubber as a base for all medicinal and mechanical plasters.

RELIABILITY and general excellence of manufactures.

FACTS CONCERNING MEDICINAL PLASTERS IN RUBBER COMBINATION.

India-rubber-spread and Porous Plasters possess indisputable advantages over all other Plasters: (1) The Rubber combination preserves the incorporated drug or extract from decomposition or volatilization; (2) They adhere closer and firmer; (3) They do not soil the skin or linen; (4) They are always pliable, and never become hard or brittle; (5) They adhere without heat or moisture; (6) An increased effect obtained by being porous, as the Plaster neither slides nor moves from its affixed position.

BELLADONNA PLASTER, U. S. P.

IN RUBBER COMBINATION.

Messrs. SEABURY & JOHNSON claim that theirs is the most thoroughly reliable and only strictly officinal Belladonna Plaster ever offered the medical profession. It is an improvement on other Belladonna Plasters in several important particulars. First, it is incorporated with the officinal alcoholic extract only. Secondly, it is freed from all stimulating qualities, thereby insuring the uninfluenced sedative action of Belladonna. Thirdly, it adheres with greater tenacity than others. Physicians have been prejudiced in favor of Allen's English Extract; but recent analysis, fairly conducted by competent chemists, emphatically condemns the Inspissated Extract as a mild and unstable product, representing but one-half or less than one-half of the strength of the U. S. P. Alcoholic Extract of Belladonna. The following result, published in the *American Journal of Pharmacy*, in April, 1876, page 145, is furnished for your consideration, which indicates the following percentage of Atropia in the respective extracts:—

Alcoholic Extract Belladonna, U. S. P......2,571
Allen's English Extract.....1,411
Herring's English Extract.....1,179

The practitioner, as well as ourselves, has but one choice.

Considering these features from a professional standpoint, we offer a Belladonna plaster which cannot be improved upon.

SALICYLATED SURGEONS' RUBBER ADHESIVE PLASTER

This article has met with unprecedented success, and has been emphatically pronounced by our most skillful General and Orthopædic Surgeons, as "the best Surgeons' Adhesive Plaster known." It is applied without heat or moisture, conforms quickly to the parts; is perfectly flexible and waterproof, and is ready for use at any moment. It is free from irritating properties and very healing. In counter-extension it has no equal, as it does not move or slide after being applied. Our India-rubber Adhesive Plaster is also spread on twilled linen, which resists the most powerful strain. In addition to these general improvements, the plaster being impervious to water, wounds can be cleansed without removing the plaster, obviating the necessity of constant redressing, saving labor and time. **Whenever continued powerful adhesion is required, it should be procured in porous form.**

MUSTARD PLASTER (spread on Cotton Cloth).

Our Mustard Plaster is a decided improvement over the best French makes; the mustard is manipulated so as to exclude all the moisture, retaining unimpaired by such treatment, its essential properties. They are always reliable, conform quickly to the part, and when thoroughly wet do not break into pieces, as is the case with all other mustard plasters. They do not crack or peel off, and can be removed without soiling the skin or linen. Being **manufactured only of pure mustard,** they are perfectly free from Croton Oil or other dangerous substitutes, often employed to induce intense irritation.

RUBBER BLISTER PLASTER (Camphorated) U. S. P. STRENGTH.

This article has a splendid reputation; its characteristic action is not impaired by age in any climate. The whole fly is incorporated, which, by constant manipulation is thoroughly and beautifully combined with the plaster. **Its properties are developed quicker, and it blisters in less time than the cerate.** It never fails to blister when used as directed. In addition to its superior efficacy as a vesicant, we incorporate a sufficient quantity of Camphor, which, with the Olive Oil used on the face of the plaster, **prevents Strangury.** This improvement will be appreciated by every practitioner. It is more reliable than any known cantharidal preparation.

CAPSICUM PLASTER.

Recently this article has crept into favor with our most esteemed physicians, and judging from results, it is doubtless the best rubefacient known. It has the specific action of mustard without its objections. The characteristic action of Capsicum is uniformly maintained from twenty-four to forty-eight hours, without blistering, being mild, continuous, and stimulating. This plaster is spread in rubber combination and in porous form. Experience has taught practitioners that the Oleo Resin of Capsicum is too violent, frequently vesicating; we incorporate the crude drug in sufficient quantity, without risk to the patient. Our Capsicum Plasters will be found more practical for general use than the **so-called Mustard or Capsicum Papers.**

SPECIAL NOTICE TO PHYSICIANS.

QUALITY IS OF GREAT IMPORTANCE TO THE PRACTITIONER: BY RELIABLE PREPARATIONS HE SUPPLEMENTS HIS OWN SKILL. You can therefore rest assured that every article we manufacture is of strict pharmacopœia strength, and incorporated with perfectly reliable Extracts and Drugs, well selected, carefully and conscientiously prepared, and manufactured invariably under the personal superintendence of one of our firm. OUR WHOLE ATTENTION AND STUDY IS DEVOTED ENTIRELY TO THE ART OF PLASTER MAKING, and we are ready at all times to receive suggestions from the fraternity, which may be of benefit to all.

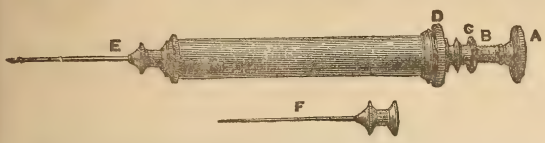
SEABURY & JOHNSON,

21 Platt Street, New York.

ALL THE ABOVE ARTICLES SOLD BY DRUGGISTS EVERYWHERE.

ALWAYS SPECIFY SEABURY & JOHNSON'S PLASTERS.

NEW HYPODERMIC SYRINGES.



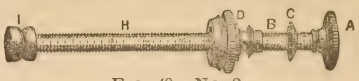


FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

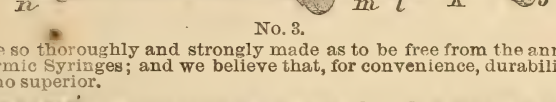
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$4.00* No. 2, *$4.50* Postage, .03
" No. 3, *3.00* No. 4, *4.00* " .02



No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).

No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

CODMAN & SHURTLEFF,

Makers and Importers of Superior Surgical Instruments,

1088-1139eow **13 & 15 TREMONT STREET, BOSTON, MASS.**

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

JEFFERSON MEDICAL COLLEGE,

PHILADELPHIA.

The Fifty-fourth Session of the Jefferson Medical College will begin on Tuesday, October 1, 1878, and will continue until March 1st, 1879. Preliminary Lectures will be held from Monday 2d September.

PROFESSORS.

JOSEPH PANCOAST, M.D., General, Descriptive and Surgical Anatomy (*Emeritus*).
SAMUEL D. GROSS, M.D., LL.D., D.C.L. Oxon., Institutes and Practice of Surgery.
ELLERSLIE WALLACE, M.D., Obstetrics and Diseases of Women and Children.
JOHN B. BIDDLE, M.D., Materia Medica and General Therapeutics.
J. AITKEN MEIGS, M.D., Institutes of Medicine and Medical Jurisprudence.
J. M. DA COSTA, M.D., Practice of Medicine.
WILLIAM H. PANCOAST, M.D., General, Descriptive and Surgical Anatomy.
ROBERT E. RODGERS, M.D., Medical Chemistry and Toxicology.

Continuous Instruction is given throughout the year (with the exception of the months of July and August), which is free to the matriculates of the Winter Session. The following special subjects are taught during the Preliminary Course in September:—

Medical Jurisprudence, by Professor Meigs.

Dermatology and Syphilitic Diseases, by Dr. F. F. Maury, one of the Surgeons to the Philadelphia Hospital.

Pathological Anatomy, by Dr. Longstreth, Pathologist to the Pennsylvania Hospital.

Operative Surgery, with Operations on the Cadaver, by Dr. John H. Brinton, one of the Surgeons to the Philadelphia Hospital.

Diseases of the Urino-Genital Organs, by Dr. S. W. Gross, one of the Surgeons to the Philadelphia Hospital.

Ophthalmology is treated both clinically and didactically during the entire course, by Dr. William Thomson, one of the Surgeons to the Wills Ophthalmic Hospital

Laryngoscopy, with Diseases of the Throat, by Dr. J. Solis-Cohen.

The Demonstrator of Surgery, Dr. J. Ewing Mears, delivers a distinct course of ***Demonstrations of Surgery,*** with illustrations on the Cadaver, during the entire session.

Practical Chemistry, with Qualitative and Quantitative Analysis, the Examination of Normal and Abnormal Products, and Manipulation by the student himself, is taught by the Professor of Chemistry, assisted by the Demonstrator, G. M. Ward, M.D.

Practical Anatomy and Morbid Anatomy.—For the study of Practical Anatomy a full supply of material is furnished, free of charge. The anatomical rooms are spacious and provided with every convenience, and not only are subjects for dissection to be had without expense, but there are no incidental or extra charges of any kind. Demonstrator of Anatomy, T. H. Andrews, M.D.

Bedside Instruction is furnished to advanced students. The practical use of the laryngoscope is taught to all candidates for graduation, in classes of convenient size, at the College Hospital, by J. Solis-Cohen, and the use of the ophthalmoscope, by Dr. W. Thomson.

Laboratory Instruction is at the disposal of all the members of the class in the Chemical and Physiological Laboratories, and Practical Instruction in the use of the Microscope is also given.

Post-Mortem Examinations.—During the past winter opportunity was afforded to the graduating class of being present in sections, at autopsies, by Dr. Morris Longstreth, Pathologist to the Jefferson Medical College Hospital and to the Pennsylvania Hospital; and these facilities will be continued during the ensuing session.

The New Hospital of the Jefferson Medical College, which was begun in November, 1875, is now completed and in operation. It is situated immediately west of the College, fronting on Sansom Street, and is bounded on three sides by streets, and by a wide private passage way on the fourth side. It is 107 feet square, five stories in height, and is designed for the easy accommodation of 125 patients. In connection with the Hospital is the Out-door or Dispensary Department, which furnishes much valuable material for clinical instruction. The amphitheatre, provided for Clinical Lectures, is probably the largest and most convenient in the United States, and will seat more than six hundred students. The most approved appliances for heating, ventilation, etc., have been provided, and in architectural construction, and all desirable conveniences, this hospital will be found at least equal to any American clinical hospital. Daily Clinical Lectures are given at the hospital, through the entire year, by members of the Faculty and by the hospital staff, which is constituted as follows:—

Surgeons:	*Physicians:*
JOHN H. BRINTON, M.D.,	J. SOLIS-COHEN, M.D.,
F. F. MAURY, M.D.,	JAMES C. WILSON, M.D.,
S. W. GROSS, M.D.,	JOHN B. ROBERTS, M.D.,
R. J. LEVIS, M.D.	OLIVER P. REX, M.D.
Ophthalmic Surgeon:	*Gynæcologists:*
WILLIAM THOMSON, M.D.	F. H. GETCHELL, M.D.,
	J. EWING MEARS, M.D.,
Aural Surgeon:	*Pathologist:*
L. TURNBULL, M.D.	MORRIS LONGSTRETH, M.D.

A Summer Course of Supplementary Lectures is given, beginning 17th March, 1879, and extended through the months of April, May, and June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non-matriculates pay thirty five dollars, which is, however, credited on the amount of fees paid for the ensuing winter course.

FEES.

For a Full Course	$140 00
Matriculation Fee (paid once only)	5 00
Graduation Fee	30 00

Students who have attended two full courses on Materia Medica, Institutes, Anatomy, or Chemistry, may be examined on any of these branches at the end of their second course.

The Annual Announcement will be sent, on application to

1116-1122eow1123, 1124, 1126 J. B. BIDDLE, M.D., Dean.

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

THE MEDICAL REGISTER AND DIRECTORY

OF THE

UNITED STATES,

SYSTEMATICALLY ARRANGED BY STATES:

COMPRISING

NAMES, POST-OFFICE ADDRESS, EDUCATIONAL AND PROFESSIONAL STATISTICS, OF MORE THAN 60,000 PHYSICIANS, WITH LISTS OF MEDICAL SOCIETIES, COLLEGES, HOSPITALS, AND OTHER MEDICAL INSTITUTIONS, WITH ABSTRACTS, OF THE MEDICAL LAWS OF EACH STATE, NOTES OF MINERAL SPRINGS. Etc.

BY

SAMUEL W. BUTLER, M. D.

SECOND EDITION, REVISED AND CORRECTED.

One Volume, large octavo, double columns, 874 pages. Price, Cloth, $5.50; Leather, $6.50.

The **SECOND EDITION** of this important work has been prepared at great cost of time and money. The lists have been carefully revised *by leading men in each State.* Nearly TEN THOUSAND new names have been added, and numerous corrections made. Those who have purchased the first edition will find this one to possess *all the value of a new work.*

This work has a *national* and *historic* value, as well as a present *business* one. Besides the names and addresses of all the physicians in the country, it contains the roster of the medical officers in the Army and Navy, list of the officers of State and County medical societies, a sketch of the medical geography of each State and Territory, analysis of the waters of all prominent mineral springs, and a mass of other information interesting to the profession. The collation of the *laws regulating the practice of medicine* in the various States is a feature of special interest and one not to be found in any other publication.

All who desire to reach medical men for business purposes, for instance, Life Insurance Companies, Medical Colleges, Wholesale Druggists, Importers and Manufacturers of Pharmaceutical Specialties, Dealers in Surgical Instruments, will find this book invaluable.

OPINIONS OF THE PRESS.

From the (London) *Lancet:*
This is the first work of the kind that has ever appeared on the other side of the Atlantic. The Editor and Compiler, Dr. S. W. Butler, and the publisher, are to be congratulated upon an undoubted success.

From the (London) *Medical Press and Circular:*
Upon opening its well-filled and well arranged pages our only surprise is that such a go-ahead race as our cousins have the credit of being, should have gone on so long without so valuable a book of reference.

From the (Philadelphia) *Medical Times:*
To publishers, druggists and those members of the profession whose sympathies and needs are wide enough to reach beyond their own immediate neighborhood, this book must be invaluable.

From the (Cincinnati) *Lancet and Observer:*
Of very great value, and will be to physicians what the city directory is to the man of business, a book he cannot get along very well without.

From the *Medical and Surgical Reporter:*
A volume of very considerable importance, the appreciation of which must grow in time, and it should find a place in every medical library of any pretensions of completeness.

Published by D. G. BRINTON,
115 South Seventh Street, Philadelphia.

ALWAYS SPECIFY "K. & M." GRANULATED EFFERVESCENT SALTS.

K. & M.
GRANULATED EFFERVESCENT
PEPSIN, BISMUTH & STRYCHNIA.
ORIGINATED BY KEASBEY & MATTISON.

We again offer this preparation confidently to the profession. It has, for four years, enjoyed an extensive prescription among the most eminent of our practitioners. Its use has been attended with the most marked success, perhaps, of any of the various remedies recommended in dyspepsia, gastralgia, and kindred disorders. Its association with Carbonic Acid renders it palatable, and causes it to be retained by the most sensitive stomach. It is the only soluble form in which Pepsin and Bismuth should be ever given together, and is FIVE TIMES THE PEPSIN STRENGTH of the various elixirs, wines, liquors, etc., of the market. In reference to its reliability, we refer to the most prominent physicians in all sections of this country, who will very generally be found to be using it in their practice.

Always prescribe the GRANULATED EFFERVESCENT form, and always specify the "K. & M." Preparation.

Each drachm or heaping teaspoonful contains FIVE GRAINS Saccharated Pepsin, two grains soluble Citrate of Bismuth, and one-fiftieth grain Citrate of Strychnia.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 21, 1877.

Gentlemen:—I have used a large number of your preparations for several years past with great satisfaction, and am happy to commend them to others from what I know both of your drugs and of yourselves.

Very truly yours, W. W. KEEN, M. D.

K. & M.
GRANULATED EFFERVESCENT
CITRATE CAFFEINE.
ORIGINATED BY KEASBEY & MATTISON.

The recent extensive employment of this salt as a remedy, amounting almost to a specific in cases of sick headache, and its use in nervous diseases generally, have caused us to place it upon our list. Its value is much enhanced by its administration with Carbonic Acid, so agreeably and efficiently produced by this form.

A heaping teaspoonful, containing ONE GRAIN of Citrate of Caffeine, should be given in sick headache, every hour or two before and during the paroxysms.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 27, 1877.

Gentlemen:—It gives me pleasure to add my testimony in regard to your preparations, which I have used for a long time; they are thoroughly reliable.

Truly yours, THOMAS G. MORTON, M. D.

K. & M.
GRANULATED EFFERVESCENT
CITRATE LITHIA.

In the effervescent form this chemical is administered in a peculiarly advantageous manner. Its association with Carbonic Acid renders it much less liable to disturb the stomach, while in strength it is greatly superior to Lithia Water. A valuable diuretic and lithontriptic, its importance in the treatment of rheumatic, gouty, and analogous disorders can scarcely be over-estimated.

We have doubled the strength of this preparation, each drachm or heaping teaspoonful containing FOUR GRAINS of the chemically pure salt.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 25, 1877.

Gentlemen:—I have employed your Extract of Malt and Infants' Food, in a large number of cases, much to my own satisfaction, and to the benefit of the patient. The Infants' Food I regard as especially useful in cases of Infants requiring artificial food from any cause. Yours, etc., W. B. ATKINSON, M. D., *Sec. American Med. Asso.*

K. & M.
GRANULATED EFFERVESCENT PREPARATIONS

of Magnesium Citrate, Potassium Bicarb., Citrate Benzoate, and Bromide; Lithium Benzoate and Carbonate; Cerium Nitrate and Oxalate; Bismuth Citrate (SOLUBLE), Pepsin, and Bismuth; Pepsin, Bismuth, and Iron, etc., etc., etc.; also the following:—

K. & M.
GRANULATED EFFERVESCENT
MINERAL WATER SALTS.

Vichy, Kissingen, Seltzer, Carlsbad, Congress, Crab Orchard, Pullna, Friedrichshall, etc., etc.

ALWAYS SPECIFY "K. & M." GRANULATED EFFERVESCENT SALTS.

Analyses of Sulphate of Quinine Pills.

As we have repeatedly notified the trade, our Sulphate of Quinine Pills are made of Bleached Quinine and contain the correct amount of Quiniæ Sulphas, as represented on the label.

We submit below three analyses of our Sulphate of Quinine Pills obtained at different druggists; the first was made by Mr. Chas. Rice, of New York, one of the editors of the "*New Remedies*," and chemist of Department Public Charities and Correction of New York City, who is well known both personally and by reputation by a large number of physicians and druggists throughout the country. The other two analyses are by Dr. Polenske, former assistant of Prof. Sonnenshein, of Berlin, and now our own analytical chemist.

Our "Hospital Quinine" Pills are made as set forth in our circular of March 27th, which we reprint for the information of those who may not have seen it before.

With the assurance to the trade and medical profession, that we will always manufacture our preparations, as we have in the past, in **perfect good faith,** that we will use the best materials obtainable, increasing our knowledge by every means in our power, for examining and testing all ingredients and perfecting our business, we remain,

Very respectfully, **McKESSON & ROBBINS.**

NEW YORK, APRIL 17th, 1878.

"MESSRS. McKESSON & ROBBINS,

Gentlemen:—Having been requested by you to make an assay of the alkaloids contained in your Gelatine-Coated Quinine Pills, I purchased an original vial, containing 100 2 grain pills, in the store of Mr. Theodore Cole, 409 First Avenue, New York. Each ten of these pills weighed very nearly 34 grains, and the weight of the single pills is very uniform, varying but slightly either way from 3.4 grains. The whole number of pills, (100,) yielded 148.385 grains of anhydrous alkaloid, which was found to be **pure, White Quinia,** free from other cinchona alkaloids. This amount of dry Quinia corresponds to **203.8** grains of **Sulphate of Quinia,** containing 8 molecules of water of crystallization ($2\ C_{20}\ H_{24}\ N_2\ O_2—H_2\ SO_4—8\ H_2\ O$); or to **201.7** grains of **Sulphate of Quinia,** containing 7½ molecules of water of crystallization ($2\ C_{20}\ H_{24}\ N_2\ O_2—H_2\ SO_4—7½\ H_2\ O$), which latter is, as near as possible, the formula of the commercial pure Sulphate of Quinia. The amount of Sulphate of Quinia contained in the 100 pills examined, is therefore a trifle **in excess** of the required quantity, (3.8 grains, or 1.7 grain, according to whatever formula may be adopted for the crystallized salt).

Respectfully CHARLES RICE,
Chemist, Bellevue Hospital, N. Y."

NEW YORK, MARCH 30th, 1878.

"I have analyzed McKesson & Robbins' Gelatine-Coated 5 grs. Sulphate of Quinine Pills, from an original bottle of one hundred, and find that in two analyses of 10 pills each, the result in both cases was 51 grains of pure Sulphate of Quinine.

ED. POLENSKE, Ph. D."

NEW YORK, APRIL 13th, 1878.

"One hundred McKesson & Robbins' Gelatine-Coated 2 grs. Sulphate of Quinine Pills, analyzed by me to-day, contained 198 grains of Sulphate of Quinine. The Sulphate of Quinine obtained from these pills stood the Ether test, as laid down in the U. S. Ph.

ED. POLENSKE, Ph. D."

Circular of March 27th, 1878.

Since we changed, last fall, from Unbleached to Bleached Quinine in the manufacture of our Pills, we have heard from a large number of druggists and physicians stating that the therapeutical effects of the dark pills were better than the "bleached," dose for dose, where a tonic was indicated, and the antiperiodic effects of the former were as well marked. We made the change because we were disappointed in obtaining a uniform article of unbleached Quinine, were deceived in two shipments we received and the analyses of samples from the same package we submitted to different highly reputable chemists varied surprisingly, in fact, analysing Quinine *quantitively* is very difficult, as it depends very largely upon the different solubilities of the alkaloids in water, while the *qualitative* analysis is very simple and reliable.

The curative properties of the other alkaloids of Cinchona Barks have been well attested and the effect of the **combined alkaloids** has been repeatedly asserted to be greater than that of any **one alone.**

In view of these facts, we accordingly propose to offer Pills made of Hospital Quinine, which differs from that which has been known and understood as "unbleached," in the process of manufacture and in the proportion of Quinine. This Hospital Quinine will contain about 50 per cent. of Quinine Sulphate, and the balance, Cinchonidia Sulphate and traces of Quinidia Sulphate; the Cinchonia Sulphate, being less powerful than the other alkaloids is separated.

These pills on account of their lower price will relieve a difficulty, to which a large number of people living in malarious districts have been subjected—the inability to purchase Quinine Pills on account of price, especially when scarcity causes sudden and great advances, as at present—at the same time we believe that confidence may be felt on experiencing equal relief with similar doses.

We will continue, as now, to make our "Quinine Pills" of bleached Quinine, and the white color will readily identify them from our darker Hospital Quinines, which will be labelled "Hospital Quinine." The list of Hospital Quinine Pills we submit below is subject to same discount as our other pills, and will be reduced as soon as the market on Quinine will allow. We call special attention to our Pills of Cinchona Bark Alkaloids, which contain a definite quantity of each of the four alkaloids, one-half grain each Sulphates Quinia, Quinidia, Cinchonia and Cinchonidia.

We annex below list of our Pills of other Cinchona Alkaloids, and remain, soliciting your correspondence and valued orders, Yours respectfully,

March 27th, 1878. **McKESSON & ROBBINS.**

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

FOR SALE.—PROPERTY, PRACTICE and Drug Store, in one of the best towns in the Lehigh Valley. Population about 1500; business worth between $3000 and $4000 per year. Convenient to Railroad, Schools, Churches, etc. Heat and Water in the House. Basement rents for a Market House and a Grocery. Pays well. Not much competition. Good reasons for selling. For terms, particulars, etc., apply soon, to

THE MEDICAL NEWS

IS DEVOTED TO

Medicine, Surgery, Obstetrics, Microscopy, and the Collateral Sciences.

Besides publishing Original Communications by leading medical men, Selections are freely made from the best journals of our own and foreign countries. Every number contains translations from French and German Journals, made expressly for it. The editors labor to keep subscribers well posted in

THE PROGRESS OF MEDICINE.

A feature peculiar to THE MEDICAL NEWS is, that it has a Department devoted to

MICROSCOPY,

in which everything new pertaining to this interesting study is chronicled. This feature has led many scientific men, not physicians, to become subscribers, many of whom, both of this country and England, are contributors to the Microscopical Department. To those interested in Microscopy, the Microscopical Department alone is worth more than double the price of the journal.

Price $2.50 a year, in advance. Specimen copies 25 cents, without which no specimen copy will be sent.

Surgical Instruments,

Of the finest quality and most approved patterns. Orders from Country Physicians will receive particular attention. 1086-tf

Superiority and Reliability of WARNER & CO.'S SUGAR-COATED Quinine Pills.

QUININE PILLS of our make are prepared from SULPHATE OF QUINIA of American manufacture, noted for ITS PURITY AND EXCELLENCE. Each Pill contains the FULL COMPLEMENT OF MATERIAL as expressed on the label, without the necessity of adding any excess to compensate for impurities. They are PERFECTLY SOLUBLE, and physicians can depend upon obtaining the FULL BENEFIT of this valuable remedy in a PLEASANT FORM. Always specify WARNER & CO., AND AVOID THE SUBSTITUTION OF CHEAPER AND INFERIOR BRANDS.

SUGAR-COATED QUININE PILLS.

"I take pleasure in testifying that W. R. WARNER & Co.'s QUININE PILLS are practically just WHAT THEY CLAIM TO BE, whether judged by ANALYTICAL TESTS or by the THERAPEUTIC EFFECT obtained from their use.

Detroit, Mich. A. B. LYONS, M. D., *Analytical Chemist.*

SUGAR-COATED PILLS.

BRIDGEPORT, CONN., February 9th, 1877.

"I have used WARNER & Co.'s SUGAR-COATED PILLS for more than fifteen years, and I do not hesitate to say that, in respect of solubility, THEY ARE SUPERIOR TO ANY COATED PILLS I HAVE EVER TRIED, not excepting those coated by gelatine. They possess one quality which I do not find in most other pills, viz: a moist condition of the enclosed ingredients." ROBT. HUBBARD, M. D.

WARNER & CO.'S STANDARD PREPARATIONS.

SUGAR-COATED PILLS,—Warner & Co.'s
Reliable, Soluble and Permanent.

Warner & Co.'s—PHOSPHORUS PILLS,
In 24 combinations—unexampled for perfection.

PARVULES, (Minute Pills,)—Warner & Co.'s
Minimum doses for children and others.

Warner & Co.'s—INCLUVIN, (from gizzard of chicken,)
More efficacious than Pepsin, prescribed in the same manner and the same combinations.

DIALYSED IRON,—Warner & Co.'s
Superior, as attested by chemical analysis.

Warner & Co.'s—FLUID EXTRACT OF ERGOT,
From fresh Ergot of Rye—equal to the best in the market.

LIQUID PANCREOPEPSIN,—Warner & Co.'s
The combined principles of digestion.

FRESH AND RELIABLE VACCINE VIRUS--WARRANTED.
Mailed to any address on receipt of price, $1.25 per crust.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

AS SUPPLIED TO

IN THE

MOST DIGESTIBLE AND CONVENIENT FORM.

THE MOST PERFECT SUBSTITUTE FOR HEALTHY MOTHER'S MILK.

DATURA TATULA FOR ASTHMA, Etc.

A powerful and universally adopted Remedy

"By immediate contact with the air cells and passages, instant relief is given."—Dr. LATHAM, *Physician to the Queen.*

"A remedy of great power and usefulness in Asthma, Chronic Bronchitis, etc."—Dr. W. BARKER.

"The Smoke causes no nausea. I have never known an instance in which relief was not obtained." GENERAL ALEXANDER.

In Tins, for use by means of a pipe, Cigars and Cigarettes, and Pastilles, for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.

Agents for America, E. FOUGERA & CO., NEW YORK.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

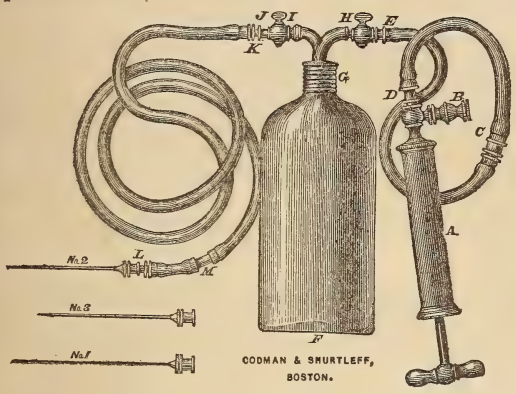

Fig. 77.

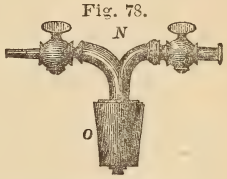
Fig. 68.

Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions.....$18 00

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions..... 16 00

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case.....$14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional..... 6 00

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

An illustrated Catalogue of Surgical Instruments, also a New Pamphlet on Atomization of Liquids, with description of Improved Apparatus and Formulæ of Remedies successfully employed, will be forwarded, post-paid, on application.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,			*With Hops (Plain)*,	$1.00

1063-1114eow

JEFFERSON MEDICAL COLLEGE,

PHILADELPHIA.

The Fifty-fourth Session of the Jefferson Medical College will begin on Tuesday, October 1, 1878, and will continue until March 1st, 1879. Preliminary Lectures will be held from Monday 2d September.

PROFESSORS.

JOSEPH PANCOAST, M.D., General, Descriptive and Surgical Anatomy (*Emeritus*).
SAMUEL D. GROSS, M.D., LL.D., D.C.L. Oxon., Institutes and Practice of Surgery.
ELLERSLIE WALLACE, M.D., Obstetrics and Diseases of Women and Children.
JOHN B. BIDDLE, M.D., Materia Medica and General Therapeutics.
J. AITKEN MEIGS, M.D., Institutes of Medicine and Medical Jurisprudence.
J. M. DA COSTA, M.D., Practice of Medicine.
WILLIAM H. PANCOAST, M.D., General, Descriptive and Surgical Anatomy.
ROBERT E. RODGERS, M.D., Medical Chemistry and Toxicology.

Continuous Instruction is given throughout the year (with the exception of the months of July and August), which is free to the matriculates of the Winter Session. The following special subjects are taught during the Preliminary Course in September:—

Medical Jurisprudence, by Professor Meigs.

Dermatology and Syphilitic Diseases, by Dr. F. F. Maury, one of the Surgeons to the Philadelphia Hospital.

Pathological Anatomy, by Dr. Longstreth, Pathologist to the Pennsylvania Hospital.

Operative Surgery, with Operations on the Cadaver, by Dr. John H. Brinton, one of the Surgeons to the Philadelphia Hospital.

Diseases of the Urino-Genital Organs, by Dr. S. W. Gross, one of the Surgeons to the Philadelphia Hospital.

Ophthalmology is treated both clinically and didactically during the entire course, by Dr. William Thomson, one of the Surgeons to the Wills Ophthalmic Hospital.

Laryngoscopy, with Diseases of the Throat, by Dr. J. Solis-Cohen.

The Demonstrator of Surgery, Dr. J. Ewing Mears, delivers a distinct course of ***Demonstrations of Surgery,*** with illustrations on the Cadaver, during the entire session.

Practical Chemistry, with Qualitative and Quantitative Analysis, the Examination of Normal and Abnormal Products, and Manipulation by the student himself, is taught by the Professor of Chemistry, assisted by the Demonstrator, G. M. Ward, M.D.

Practical Anatomy and Morbid Anatomy.—For the study of Practical Anatomy a full supply of material is furnished, free of charge. The anatomical rooms are spacious and provided with every convenience, and not only are subjects for dissection to be had without expense, but there are no incidental or extra charges of any kind. Demonstrator of Anatomy, T. H. Andrews, M.D.

Bedside Instruction is furnished to advanced students. The practical use of the laryngoscope is taught to all candidates for graduation, in classes of convenient size, at the College Hospital, by J. Solis-Cohen, and the use of the ophthalmoscope, by Dr. W. Thomson.

Laboratory Instruction is at the disposal of all the members of the class in the Chemical and Physiological Laboratories, and Practical Instruction in the use of the Microscope is also given.

Post-Mortem Examinations.—During the past winter opportunity was afforded to the graduating class of being present in sections, at autopsies, by Dr. Morris Longstreth, Pathologist to the Jefferson Medical College Hospital and to the Pennsylvania Hospital; and these facilities will be continued during the ensuing session.

The New Hospital of the Jefferson Medical College, which was begun in November, 1875, is now completed and in operation. It is situated immediately west of the College, fronting on Sansom Street, and is bounded on three sides by streets, and by a wide private passage way on the fourth side. It is 107 feet square, five stories in height, and is designed for the easy accommodation of 125 patients. In connection with the Hospital is the Out-door or Dispensary Department, which furnishes much valuable material for clinical instruction. The amphitheatre, provided for Clinical Lectures, is probably the largest and most convenient in the United States, and will seat more than six hundred students. The most approved appliances for heating, ventilation, etc., have been provided, and in architectural construction, and all desirable conveniences, this hospital will be found at least equal to any American clinical hospital. Daily Clinical Lectures are given at the hospital, through the entire year, by members of the Faculty and by the hospital staff, which is constituted as follows:—

Surgeons:	***Physicians:***
JOHN H. BRINTON, M.D.,	J. SOLIS-COHEN, M.D.,
F. F. MAURY, M.D.,	JAMES C. WILSON, M.D.,
S. W. GROSS, M.D.,	JOHN B. ROBERTS, M.D.,
R. J. LEVIS, M.D.	OLIVER P. REX, M.D.
Ophthalmic Surgeon:	***Gynæcologists:***
WILLIAM THOMSON, M.D.	F. H. GETCHELL, M.D.,
	J. EWING MEARS, M.D.,
Aural Surgeon:	***Pathologist:***
L. TURNBULL, M.D.	MORRIS LONGSTRETH, M.D.

A Summer Course of Supplementary Lectures is given, beginning 17th March, 1879, and extended through the months of April, May, and June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non-matriculates pay thirty-five dollars, which is, however, credited on the amount of fees paid for the ensuing winter course.

FEES.

For a Full Course	***$140 00***
Matriculation Fee (paid once only)	***5 00***
Graduation Fee	***30 00***

Students who have attended two full courses on Materia Medica, Institutes, Anatomy, or Chemistry, may be examined on any of these branches at the end of their second course.

The Annual Announcement will be sent, on application to

1116-1122eow1123, 1124, 1126 **J. B. BIDDLE, M.D., Dean.**

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

University of Pennsylvania,

MEDICAL DEPARTMENT.

113th ANNUAL SESSION, 1878–79.

The higher plan of medical education is now enforced, requiring attendance upon three graded courses of five months each. Didactic instruction is increased. Bedside instruction of each student in Physical Diagnosis, Clinical Medicine and Surgery, and Gynæcology is provided. The clinical and laboratory facilities are unrivaled in America. Pharmacy, Analytical and Medical Chemistry, Histology, Normal and Morbid Anatomy, and Operative Surgery are taught practically.

A Dental Department has recently been instituted.

NEW YORK STATE

INEBRIATE ASYLUM,

Binghamton, Broome County, N. Y.

This Asylum is admirably situated, overlooking a fine section of country, and is complete in all the appointments of a first-class home, with ample means to meet the wants of every case. It is located three miles from the city, and removed from all temptation. Its management is the same as all other State charities, under the control of a Board of Managers appointed by the Governor. The law provides for the maintenance of indigent inebriates, similar to that of the insane, but patients from other States may be admitted.

The experience of this Asylum, for the past ten years, indicates an increasing usefulness and necessity for such institutions, and the original intention of making this an Asylum Hospital, where this disorder may be thoroughly understood and treated on broad scientific principles is nearer realized than ever before. All rules are strictly enforced, and no patient permitted to go beyond the Asylum grounds without permission from the Superintendent, or in the care of an attendant.

THE CHARGES FOR BOARD

will include medical care, washing, lights, fuel, etc., with ordinary attention. The exigencies of each particular case will be acted upon, as it may present itself, to those of moderate and limited means as well as the rich.

All inquiries and applications for admission should be addressed to the Superintendent.

WILLARD PARKER, M.D.,

—o—

The Faculty of this College will inaugurate, with the session of 1878-9, commencing October 2d,

A SPECIAL COURSE,

extending over a period of five months; which course is designed especially for the instruction in Dentistry proper of Graduates in Medicine who propose to make

ORAL SURGERY

a specialty in practice, or those who may be disposed to unite this with a practice embracing General Surgery.

The Introductory to the course will be delivered Tuesday evening, October 2d, at 8 o'clock, by James E. Garretson, M.D., D.D.S., Professor of General Surgery.

—o—

FEE FOR THE COURSE, - - - - - - $100.

GRADUATION FEE, - - - - - - - $30.

Woman's Medical College

OF

PENNSYLVANIA.

—o—

The Twenty-Ninth Winter Session will open on Thursday, October 3d, 1878, in the commodious new college building.

Clinical instruction is given in the Woman's Hospital, Pennsylvania, Wills, Philadelphia, and Orthopædic Hospitals.

Spring Course of Lectures, Practical Demonstrations, and Winter Quizzes are free (except for expense of material) to all matriculants of the year.

Address

RACHEL L. BODLEY, A.M., Dean.

North College Ave. and 21st., St., Phila., Pa.

1104-1135eow

Pennsylvania College of Dental Surgery.

Twenty-third Annual Session, 1878-79.

The regular Winter Session for 1878-79 will commence on Tuesday, October 1, 1878, and continue five months, in the new and commodious college building, on Twelfth Street, below Arch. The size and equipment of the rooms in this building will enable the Faculty to offer the Dental student the advantages accruing from lecture-rooms with high ceilings and comfortable seatings, clinical rooms with an abundance of light, well-furnished laboratories, mechanical and chemical, and a large and well-lighted and well-ventilated dissecting room. For further information, address

C. N. PEARCE, Dean,

1617 Green Street, Philadelphia.

1128-1131eow

Cincinnati College of Medicine and Surgery.

FACULTY:

R. C. STOCKTON REED, M. D. Professor of Materia Medica and Therapeutics.

D. D. BRAMBLE, M.D., DEAN. Professor of Principles and Practice of Surgery an i Clinical Surgery.

ABIJAH J. MILES, M. D. SECRETARY, Professor of Diseases of Women and Children and Clinical Gynæcology.

JOHN A. THACKER, M.D. Professor of Principles and Practice of Medicine and Clinical Medicine.

JACOB TRUSH, M.D., Professor of Obstetrics and Clinical Professor of Dermatology.

CHAUNCEY R. STUNTZ, A.M. M.D., Professor of Chemistry and Toxicology.

WILLIAM ADAM ROTHACKER, M. D. Professor of Anatomy and Clinical Professor of Venereal Diseases.

JOSEPH AUB, M.D. Professor of Diseases of the Eye and Ear and Clinical Ophthalmology and Otology.

ASA BRAINARD ISHAM, M.D. Professor of Physiology,

JOSHUA W. UNDERHILL, M.D. Lecturer on Medical Jurisprudence.

BERNARD TAUBER, M.D. Lecturer on Laryngology,

W. A. ROTHACKER, M.D. Demonstrator of Anatomy.

THEODORE MARTIN WITTKAMP, M.D. Assistant to Chair of Diseases of Women and Children.

JOHN M. SHALLER, M.D. Assistant to Chair of Principles and Practice of Medicine.

EDWIN WALKER ELDRIDGE. Assistant to Chair of Obstetrics and Dermatology.

SAMUEL C. CHORLTON, M.D. Assistant to Chair of Surgery.

CONRAD STUMPMEYER, Janitor, College Building

The next Regular Session opens October 2d, 1878, and continues until the latter part of February, 1879. There will be a Preliminary Course, commencing September 4th, 1878. Students are urged to attend this course, as special instruction is given on subjects which cannot be so fully treated during the regular session.

FEES:

General Ticket	$40.00
Matriculation Ticket	5.00
Demonstrator's Ticket (including material)	10.00
Hospital Ticket	5.00
Graduation Fee	25.00

DR. GARRATT'S

Constant Electric Disks,

That any person may apply and wear with comfort, for relief of local *pains* and *weakness*, coldness and stiffness. It is also remarkable for its constant power to help weak lungs, heart, stomach, kidneys, sluggish liver, lame back, and other ills.

While worn, by night or day, this flexible pad is self-charging, applies a fine constant galvanism that wonderfully cures nervous ills. "For the price and purpose, there is nothing so good. It has no equal." So say physicians, druggists, and those now using this improved electric. Large Disk, $2.50; Children's Disk, $1.00; Long Disk, with straps for the body, $3.50. Do. for large body, $5.00. Can be sent by mail, on receipt of price, by GARRATT & Co., 6 Hamilton Place, Boston, Mass.

1075m-1y

ALWAYS SPECIFY "K. & M." IMPROVED EXTRACT OF MALT.

K. & M.
IMPROVED EXTRACT OF MALT.

Made from Canada Barley, selected, malted, dried, and extracted by, and under the immediate supervision of, Graduates of the Philadelphia College of Pharmacy. CONCENTRATED IN VACUO. This is as perfect an extract of the highest grade of carefully selected Barley Malt as can be PREPARED BY THE USE OF THE MOST IMPROVED VACUUM APPARATUS, recently designed for our own laboratory. As A FOOD in Syphilis, Typhoid and other fevers, Consumption and similar wasting diseases, it is without an equal for the rapid building up of a degenerate or depraved condition of the blood or tissues, since it acts not only as food itself, but its use converts and changes other kinds of food into a condition allowing easy assimilation.

We append the following letter from a gentleman well known to all:

Messrs. KEASBEY & MATTISON: PHILADELPHIA, September 25, 1877.

Gentlemen:—I have employed your Extract of Malt and Infant's Food in a large number of cases, much to my own satisfaction and to the benefit of the patient. The Infant's Food I regard as especially useful in cases of infants requiring artificial food, from any cause.

Yours, etc., W. B. ATKINSON, *Secretary American Medical Association.*

K. & M.
EXTRACT OF MALT WITH COD LIVER OIL.

ORIGINATED BY KEASBEY & MATTISON.

THE MOST NUTRITIVE EMULSION EVER MADE.

Our Improved Extract of Malt, with 50 per cent, of our fine Norwegian Oil, is pre-eminently the emulsion of Cod Liver Oil, since it has double the nutritive effect of any other emulsion of oil. It not only contains the largest amount of nutritive food in the smallest bulk of liquid, but, by the action of the Diastase contained in the malt, it is capable of transforming many times its bulk of amylaceous or graminaceous food into saccharine, thus rendering it easily digestible, even by the most delicate stomach of the invalid. The disagreeable eructations from the stomach, which constitute one of the greatest objections to the use of all preparations of Cod Liver Oil, are completely obviated in this preparation. We would direct the attention of physicians to the special fact that it unites perfectly with water in any proportion, and that the oil does not again separate, thus showing how perfectly the oil is emulsified.

Dose—A Dessert to a Tablespoonful immediately after Meals.

K. & M.
IMPROVED EXTRACT OF MALT WITH PEPSIN.

This is our Improved Extract of Malt, with the addition of five grains of our Saccharated Pepsin to the tablespoonful. For dyspeptic disorders it is found of great value, since it digests both albuminoid and amylaceous matter, thus furnishing a preparation that is needed in the majority of cases of dyspepsia and other derangements of the stomach dependent upon the non-assimilation of the food

Dose—A Dessert to a Tablespoonful immediately after Meals.

K. & M.
BEEF, IRON AND WINE, WITH EXTRACT OF MALT.

ORIGINATED BY KEASBEY AND MATTISON.

A Nourishing Diet for Invalids and Convalescents.

As a simple restorative food, where a tonic effect is desired, there is perhaps nothing in the whole line of tonic dietetics of so much real value as this preparation. It furnishes the diseased stomach with the power of assimilating amylaceous diet, and supplies readily assimilable food at the same time, in the articles of Malt Extract. The iron salt supplies the red corpuscles that are deficient in the blood, while to the nutrient effect of beef is added the stimulant effect of a fine sherry wine. Each tablespoonful represents two grains of the soluble citrate of iron, and one ounce of finely chopped raw lean beef, with equal quantities of our Improved Extract of Malt and sherry wine.

For sale by Druggists everywhere. Samples may be obtained of

Quinine, 1-4 and 1-2 gr.
Strychnia, 1-100, 1-60, 1-40 and 1-30 gr.
Sulphur, Iodide, 1-25 and 1-10 gr.
Tartar Emetic, 1-100, 1-20 and 1-4 gr.
Zinc, Phosphide, 1-6, 1-4 and 1-2 gr.

VARIOUS FORMULAS.

Ammonium, Valerianate, 1 gr.
A convenient form of administration.
Assafœtida, 2 and 4 grs.
Assafœtida and Nux Vomica.
Made of purified Assafœtida.
Caffeia, Citrate, 1 gr.
Remedy and preventive in sick headache.
Calcium, Sulphide, 1-10 gr.
Scrofulous sores, &c.
Camphor, Mono-Bromated, 2 and 3 grs.
Hysteria, headache, nymphomania.
Cannabis Indica Extract, 1-2 and 1 gr.
Rheumatism, hysteria, delirium tremens.
Cerium, Oxalate, 1 and 2 grs.
Vomiting in pregnancy.
Coca Extract. 1 gr.
Tonic and stimulant.
Copaiba and Oleo-Resin Cubeb, 3 and 5 grs.
Of pure materials; can be relied upon.
Ergotin, 3 grs.
Made of purified Ergotin.
Fucus Vesiculosus Extract, 3 grs.
To decrease excessive obesity.
Grindelia Robusta Extract, 3 grs.
Hay fever, asthmatic affections.
Guarana Extract. 3 grs.
Headache, neuralgia.
Hypophosphites Compound.
A convenient form of administration.
Iodide of Iron (Blancard's), 1 gr.
Freshly prepared; superior to the imported.
Iron, Dialysed, 2 grs.
Made of Merck's scales.
Jaborandi Extract. 3 grs.
Diaphoretic and sialogogue.
Lithium, Bromide. 2 grs.
A better hypnotic than Brom. Pot.
Phosphates Iron, Quinine and Strychnine.
A tonic more convenient than the syrup.
Phosphorus, 1-100, 1-50, 1-30, 1-20, 1-12 gr.
And over 20 combinations.
Salicin, 2 1-2 and 5 grs.
Useful in rheumatism.
Salicylic Acid, 2 1-2 and 5 grs.
Salicylic Acid and Morphine.
Valuable in rheumatism.
Sandal Wood Extract, 1 and 2 grs.
Contains both the oil and resin.
Sumbul Extract, 1 gr.
Hysteria, spasmodic disorders.
Zinc, Phosphide, 1-6, 1-4 and 1-2 gr.
Zinc, Phosphide and Extract Nux Vomica.
Brain diseases.

Our Formula Book, (fourth edition) containing complete list of all our pills with formulas and therapeutical notes, together with partial list of our fluid extracts, with doses, furnished upon application. As we desire to *improve* in *every* particular, we will be grateful to any Physician who will write us regarding his experience with our Gelatine-Coated Pills and other preparations, or make any suggestions.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

MEDICAL NEWS.

EDITORS

J. A. THACKER, A.M., M.D.,

R. C. S. REED, M.D.

THE MEDICAL NEWS

IS DEVOTED TO

Medicine, Surgery, Obstetrics, Microscopy, and the Collateral Sciences.

Besides publishing Original Communications by leading medical men, Selections are freely made from the best journals of our own and foreign countries. Every number contains translations from French and German Journals, made expressly for it. The editors labor to keep subscribers well posted in

THE PROGRESS OF MEDICINE.

A feature peculiar to THE MEDICAL NEWS is, that it has a Department devoted to

MICROSCOPY,

in which everything new pertaining to this interesting study is chronicled. This feature has led many scientific men, not physicians, to become subscribers, many of whom, both of this country and England, are contributors to the Microscopical Department. To those interested in Microscopy, the Microscopical Department alone is worth more than double the price of the journal.

Price $2.50 a year, in advance. Specimen copies 25 cents, without which no specimen copy will be sent.

THE THREE BEST TONICS OF THE PHARMACOPŒIA:

IRON, PHOSPHORUS, CALISAYA.

CASWELL, HAZARD & CO. call the attention of the Profession to their preparation of the above estimable Tonics, as combined in their elegant and palatable

FERRO-PHOSPHORATED ELIXIR OF CALISAYA BARK.

A combination of the Pyrophosphate of Iron and Calisaya never before attained, in which the nauseous inkiness of the iron and astringency of the Calisaya are overcome, without any injury to their active tonic principles, and blended into a beautiful Amber-colored Cordial, delicious to the taste and acceptable to the most delicate stomach. This preparation is made directly from the **ROYAL CALISAYA BARK**—not from **its ALKALOIDS OR THEIR SALTS**—being unlike other preparations called "Elixir of Calisaya and Iron" which are simply an **Elixir of Quinine and Iron.** Our Elixir can be depended upon as being a true Elixir of Calisaya Bark with Iron. Each dessertspoonful contains seven and a half grains Royal Calisaya Bark, and two grains Pyrophosphate of Iron.

Ferro-Phosphorated Elixir of Calisaya Bark with Strychnia. This preparation contains one grain of Strychnia added to each pint of our Ferro-Phosphorated Elixir of Calisaya Bark, greatly intensifying its tonic effect.

Ferro-Phosphorated Elixir of Calisaya with Bismuth, containing eight grains Ammonio-Citrate of Bismuth in each tablespoonful of the Ferro-Phosphorated Elixir of Calisaya Bark.

Elixir Phosphate Iron, Quinine and Strychnia. Each teaspoonful contains one grain Phosphate Iron, one grain Phosphate Quinine, and one sixty-fourth of a grain of Strychnia.

Ferro-Phosphororated Elixir of Gentian, containing one ounce of Gentian and one hundred and twenty-eight grains Pyrophosphate Iron to the pint, making in each dessertspoonful seven and one half grains Gentian and two grains Pyrophosphate Iron.

Ferro-Phosphorated Wine of Wild Cherry Bark. Each fluid-drachm contains twenty-five grains of the Bark, and two grains of Ferri-Pyrophosphate.

Elixir Taraxacum Comp. Each dessertspoonful contains fifteen grains of Taraxacum.

Elixir Pepsin, Bismuth, and Strychnine. Each fluid-drachm contains one sixty-fourth of a grain of Strychnine.

Juniper Tar Soap. Highly recommended by the celebrated Erasmus Wilson, and has been found very serviceable in chronic eczema and diseases of the skin generally. It is invaluable for chapped hands and roughness of the skin caused by change of temperature. It is manufactured by ourselves, from the purest materials, and is extensively and successfully prescribed by the most eminent Physicians.

CASWELL, HAZARD & CO.,
Family and Manufacturing Chemists, New York.

THE GREAT EUROPEAN NOVELTY.

HUNYADI JANOS.

NEW APERIENT WATER.

Specially recommended for richness in aperient salts, and its efficacy in Bilious attacks, prevention of Piles, etc., and as an ordinary Aperient, by LIEBIG, SCANZONI, VIRCHOW, *and* SIR HENRY THOMPSON, *and the entire Medical Profession in England and Germany.*

Approved by the Academy of Medicine of France, and its sale in France authorized by special order of the French Government.

DR. J. MARION SIMS, New York.—"As a laxative, I prefer it to every other mineral water."

DR. JAMES R. WOOD, New York.—"Certain, but gentle and painless; superior to any other bitter water."

DR. WILLIAM A. HAMMOND, New York.—"The most pleasant and efficient of all purgative waters."

DR. ALFRED L. LOOMIS, New York.—"The most prompt and most efficient; specially adapted for daily use."

DR. FORDYCE BARKER, New York.—"Requires less, is less disagreeable and unpleasant, than any other."

DR. LEWIS A. SAYRE, New York.—"Preferred to any other laxative."

A WINEGLASSFUL A DOSE.

Indispensable to the Traveling Public.

Sole Agents for United States and Canadas.

The Label on every Genuine Bottle is printed on BLUE paper.
For Sale by Dealers, Grocers and Druggists.

1117-1168eow

LEBAIGUE'S
DIALYSED IRON,
OR
PURE PEROXIDE OF IRON,
IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate, nor cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a **solution**, which is generally preferred; or of an **elixir**, when a slight stimulant is desired.

DOCTOR GIBERT'S
DEPURATORY SYRUP AND DRAGEES,
OF IODIZED DEUTO-IODIDE OF MERCURY.

These preparations have been approved by the Academy of Medicine of Paris, and have been thoroughly tested in the hospitals of Paris in the treatment of *Syphilitic, Scrofulous* and other affections requiring the use of iodized remedies.

They are recommended for the utmost accuracy of composition, and their perfect preservation.

Prepared by VAUQUELIN-DESLAURIERS, Chemist, Paris.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus**, which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

SOLD BY DRUGGISTS GENERALLY.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin.....8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine.....6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....per oz. $1.00
" (" ").....per doz. 10.00
" (in ½ lb ").....per lb. 12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

SEABURY & JOHNSON,

Originators and Manufacturers of

U. S. PHARMACOPŒIA MEDICINAL AND SURGICAL

PLASTERS, POROUS AND SPREAD IN RUBBER COMBINATION,

NEW YORK AND LONDON.

Received highest and only Award (Medal and Special Diploma of Merit) over all Foreign and Home Competitors in 1876.

THE JURORS' AWARD IS SUBSTANTIALLY

ORIGINALITY.—The successful application of Rubber as a base for all medicinal and mechanical plasters.

RELIABILITY and general excellence of manufactures.

FACTS CONCERNING MEDICINAL PLASTERS IN RUBBER COMBINATION.

India-rubber-spread and Porous Plasters possess indisputable advantages over all other Plasters: (1) The Rubber combination preserves the incorporated drug or extract from decomposition or volatilization; (2) They adhere closer and firmer; (3) They do not soil the skin or linen; (4) They are always pliable, and never become hard or brittle; (5) They adhere without heat or moisture; (6) An increased effect obtained by being porous, as the Plaster neither slides nor moves from its affixed position.

BELLADONNA PLASTER, U. S. P.

IN RUBBER COMBINATION.

Messrs. SEABURY & JOHNSON claim that theirs is the most thoroughly reliable and only strictly official Belladonna Plaster ever offered the medical profession. It is an improvement on other Belladonna Plasters in several important particulars. First, it is incorporated with the official alcoholic extract only. Secondly, it is freed from all stimulating qualities, thereby insuring the uninfluenced sedative action of Belladonna. Thirdly, it adheres with greater tenacity than others. Physicians have been prejudiced in favor of Allen's English Extract; but recent analysis, fairly conducted by competent chemists, emphatically condemns the Inspissated Extract as a mild and unstable product, representing but one-half or less than one-half of the strength of the U. S. P. Alcoholic Extract of Belladonna. The following result, published in the *American Journal of Pharmacy*, in April, 1876, page 145, is furnished for your consideration, which indicates the following percentage of Atropia in the respective extracts:—

Alcoholic Extract Belladonna, U. S. P......2,571
Allen's English Extract.....1,411
Herring's English Extract.....1,179

The practitioner, as well as ourselves, has but one choice.

Considering these features from a professional standpoint, we offer a Belladonna plaster which cannot be improved upon.

SALICYLATED SURGEONS' RUBBER ADHESIVE PLASTER

This article has met with unprecedented success, and has been emphatically pronounced by our most skillful General and Orthopædic Surgeons, as "the best Surgeons' Adhesive Plaster known." It is applied without heat or moisture, conforms quickly to the parts; is perfectly flexible and waterproof, and is ready for use at any moment. It is free from irritating properties and very healing. In counter-extension it has no equal, as it does not move or slide after being applied. Our India-rubber Adhesive Plaster is also spread on twilled linen, which resists the most powerful strain. In addition to these general improvements, the plaster being impervious to water, wounds can be cleansed without removing the plaster, obviating the necessity of constant redressing, saving labor and time. **Whenever continued powerful adhesion is required, it should be procured in porous form.**

MUSTARD PLASTER (spread on Cotton Cloth).

Our Mustard Plaster is a decided improvement over the best French makes; the mustard is manipulated so as to exclude all the moisture, retaining unimpaired by such treatment, its essential properties. They are always reliable, conform quickly to the part, and when thoroughly wet do not break into pieces, as is the case with all other mustard plasters. They do not crack or peel off, and can be removed without soiling the skin or linen. Being **manufactured only of pure mustard,** they are perfectly free from Croton Oil or other dangerous substitutes, often employed to induce intense irritation.

RUBBER BLISTER PLASTER (Camphorated) U. S. P. STRENGTH.

This article has a splendid reputation; its characteristic action is not impaired by age in any climate. The whole fly is incorporated, which, by constant manipulation is thoroughly and beautifully combined with the plaster. **Its properties are developed quicker, and it blisters in less time than the cerate.** It never fails to blister when used as directed. In addition to its superior efficacy as a vesicant, we incorporate a sufficient quantity of Camphor, which, with the Olive Oil used on the face of the plaster, **prevents Strangury.** This improvement will be appreciated by every practitioner. It is more reliable than any known cantharidal preparation.

CAPSICUM PLASTER.

Recently this article has crept into favor with our most esteemed physicians, and judging from results, it is doubtless the best rubefacient known. It has the specific action of mustard without its objections. The characteristic action of Capsicum is uniformly maintained from twenty-four to forty-eight hours, without blistering, being mild, continuous, and stimulating. This plaster is spread in rubber combination and in porous form. Experience has taught practitioners that the Oleo Resin of Capsicum is too violent, frequently vesicating; we incorporate the crude drug in sufficient quantity, without risk to the patient. Our Capsicum Plasters will be found more practical for general use than the **so-called Mustard or Capsicum Papers.**

SPECIAL NOTICE TO PHYSICIANS.

QUALITY IS OF GREAT IMPORTANCE TO THE PRACTITIONER; BY RELIABLE PREPARATIONS HE SUPPLEMENTS HIS OWN SKILL. You can therefore rest assured that every article we manufacture is of strict pharmacopœia strength, and incorporated with perfectly reliable Extracts and Drugs, well selected, carefully and conscientiously prepared, and manufactured invariably under the personal superintendence of one of our firm. OUR WHOLE ATTENTION AND STUDY IS DEVOTED ENTIRELY TO THE ART OF PLASTER MAKING, and we are ready at all times to receive suggestions from the fraternity, which may be of benefit to all.

SEABURY & JOHNSON,

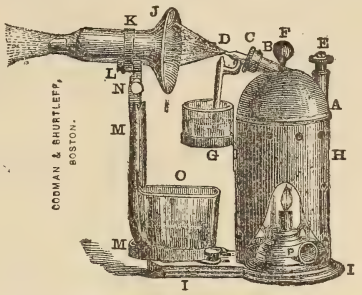
CODMAN & SHURTLEFF'S

ATOMIZING APPARATUS.

PRICES REDUCED.



THE COMPLETE STEAM ATOMIZER. (Patented March 24, 1868.)

All its joints are hard-soldered.

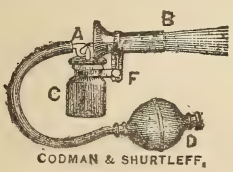
Every one is tested by hydrostatic pressure, to more than one hundred pounds to the square inch.

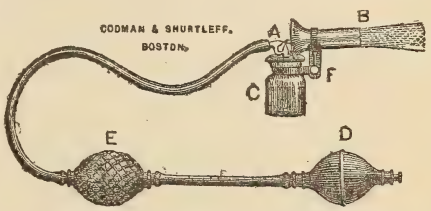
It cannot be injured by exhaustion of water, or any attainable pressure, and will last for many years.

It does not throw spirts of hot water, is convenient, durable, portable, compact, and cheap, in the best sense of the word. Price $5.00. Postage 59c.

Brass parts, nickel-plated, additional, $2.00.

Neatly made, strong Black Walnut Box, with convenient Handle, additional, $2.50. Postage 44c.





THE BOSTON ATOMIZER. (Patented.) *SHURTLEFF'S ATOMIZING APPARATUS. (Patented.)*

The most desirable Hand Apparatus. Rubber warranted of the very best quality. Valves imperishable, every one carefully fitted, and will work perfectly in all positions. Price $3.50.

The Bulbs are adapted to all the Atomizing Tubes made by us.

Each of the above Apparatus is supplied with two carefully-made annealed glass Atomizing Tubes, and accompanied with directions for use. Each Apparatus is carefully packed for transportation, and warranted perfect.

CODMAN & SHURTLEFF,

Makers and Importers of Superior Surgical Instruments, etc., etc.,

1088-1139-eow

13 and 15 TREMONT STREET, BOSTON.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

1090-1115eow

JEFFERSON MEDICAL COLLEGE,

PHILADELPHIA.

The Fifty-fourth Session of the Jefferson Medical College will begin on Tuesday, October 1, 1878, and will continue until March 1st, 1879. Preliminary Lectures will be held from Monday 2d September.

PROFESSORS.

JOSEPH PANCOAST, M.D., General, Descriptive and Surgical Anatomy (*Emeritus*).
SAMUEL D. GROSS, M.D., LL.D., D.C.L. Oxon., Institutes and Practice of Surgery.
ELLERSLIE WALLACE, M.D., Obstetrics and Diseases of Women and Children.
JOHN B. BIDDLE, M.D., Materia Medica and General Therapeutics.
J. AITKEN MEIGS, M.D., Institutes of Medicine and Medical Jurisprudence.
J. M. DA COSTA, M.D., Practice of Medicine.
WILLIAM H. PANCOAST, M.D., General, Descriptive and Surgical Anatomy.
ROBERT E. RODGERS, M.D., Medical Chemistry and Toxicology.

Continuous Instruction is given throughout the year (with the exception of the months of July and August), which is free to the matriculates of the Winter Session. The following special subjects are taught during the Preliminary Course in September:—

Medical Jurisprudence, by Professor Meigs.

Dermatology and Syphilitic Diseases, by Dr. F. F. Maury, one of the Surgeons to the Philadelphia Hospital.

Pathological Anatomy, by Dr. Longstreth, Pathologist to the Pennsylvania Hospital.

Operative Surgery, with Operations on the Cadaver, by Dr. John H. Brinton, one of the Surgeons to the Philadelphia Hospital.

Diseases of the Urino-Genital Organs, by Dr. S. W. Gross, one of the Surgeons to the Philadelphia Hospital.

Ophthalmology is treated both clinically and didactically during the entire course, by Dr. William Thomson, one of the Surgeons to the Wills Ophthalmic Hospital.

Laryngoscopy, with Diseases of the Throat, by Dr. J. Solis-Cohen.

The Demonstrator of Surgery, Dr. J. Ewing Mears, delivers a distinct course of ***Demonstrations of Surgery,*** with illustrations on the Cadaver, during the entire session.

Practical Chemistry, with Qualitative and Quantitative Analysis, the Examination of Normal and Abnormal Products, and Manipulation by the student himself, is taught by the Professor of Chemistry, assisted by the Demonstrator, G. M. Ward, M.D.

Practical Anatomy and Morbid Anatomy.—For the study of Practical Anatomy a full supply of material is furnished, free of charge. The anatomical rooms are spacious and provided with every convenience, and not only are subjects for dissection to be had without expense, but there are no incidental or extra charges of any kind. Demonstrator of Anatomy, T. H. Andrews, M.D.

Bedside Instruction is furnished to advanced students. The practical use of the laryngoscope is taught to all candidates for graduation, in classes of convenient size, at the College Hospital, by J. Solis-Cohen, and the use of the ophthalmoscope, by Dr. W. Thomson.

Laboratory Instruction is at the disposal of all the members of the class in the Chemical and Physiological Laboratories, and Practical Instruction in the use of the Microscope is also given.

Post-Mortem Examinations.—During the past winter opportunity was afforded to the graduating class of being present in sections, at autopsies, by Dr. Morris Longstreth, Pathologist to the Jefferson Medical College Hospital and to the Pennsylvania Hospital; and these facilities will be continued during the ensuing session.

The New Hospital of the Jefferson Medical College, which was begun in November, 1875, is now completed and in operation. It is situated immediately west of the College, fronting on Sansom Street, and is bounded on three sides by streets, and by a wide private passage way on the fourth side. It is 107 feet square, five stories in height, and is designed for the easy accommodation of 125 patients. In connection with the Hospital is the Out-door or Dispensary Department, which furnishes much valuable material for clinical instruction. The amphitheatre, provided for Clinical Lectures, is probably the largest and most convenient in the United States, and will seat more than six hundred students. The most approved appliances for heating, ventilation, etc., have been provided, and in architectural construction, and all desirable conveniences, this hospital will be found at least equal to any American clinical hospital. Daily Clinical Lectures are given at the hospital, through the entire year, by members of the Faculty and by the hospital staff, which is constituted as follows:—

Surgeons:	*Physicians:*
JOHN H. BRINTON, M.D.,	J. SOLIS-COHEN, M.D.,
F. F. MAURY, M.D.,	JAMES C. WILSON, M.D.,
S. W. GROSS, M.D.,	JOHN B. ROBERTS, M.D.,
R. J. LEVIS, M.D.	OLIVER P. REX, M.D.
Ophthalmic Surgeon:	*Gynæcologists:*
WILLIAM THOMSON, M.D.	F. H. GETCHELL, M.D.,
	J. EWING MEARS, M.D.,
Aural Surgeon:	*Pathologist:*
L. TURNBULL, M.D.	MORRIS LONGSTRETH, M.D.

A Summer Course of Supplementary Lectures is given, beginning 17th March, 1879, and extended through the months of April, May, and June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non matriculates pay thirty five dollars, which is, however, credited on the amount of fees paid for the ensuing winter course.

FEES.

For a Full Course	$140 00
Matriculation Fee (paid once only)	5 00
Graduation Fee	30 00

Students who have attended two full courses on Materia Medica, Institutes, Anatomy, or Chemistry, may be examined on any of these branches at the end of their second course.

The Annual Announcement will be sent, on application to

1116-1122eow1123, 1124, 1126 J. B. BIDDLE, M.D., Dean.

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

LIQUEFIED NITROUS OXIDE.

We are prepared to supply Liquefied Nitrous Oxide, of our own manufacture, **warranted pure**, in four sizes of Cylinders, viz., 100, 700, 1000, and 1400 gallons.

Surgeons' Cases of stout Morocco, neatly finished and lined with velvet, containing Cylinder, Tubing, Gas Bag and Inhaler.

Cylinders refilled with Gas.

A Descriptive Circular sent on application.

ALWAYS SPECIFY "K. & M." GRANULATED EFFERVESCENT SALTS.

K. & M.
GRANULATED EFFERVESCENT
PEPSIN, BISMUTH & STRYCHNIA.
ORIGINATED BY KEASBEY & MATTISON.

We again offer this preparation confidently to the profession. It has, for four years, enjoyed an extensive prescription among the most eminent of our practitioners. Its use has been attended with the most marked success, perhaps, of any of the various remedies recommended in dyspepsia, gastralgia, and kindred disorders. Its association with Carbonic Acid renders it palatable, and causes it to be retained by the most sensitive stomach. It is the only soluble form in which Pepsin and Bismuth should be ever given together, and is FIVE TIMES THE PEPSIN STRENGTH of the various elixirs, wines, liquors, etc., of the market. In reference to its reliability, we refer to the most prominent physicians in all sections of this country, who will very generally be found to be using it in their practice.

Always prescribe the GRANULATED EFFERVESCENT form, and always specify the "K. & M." Preparation.

Each drachm or heaping teaspoonful contains FIVE GRAINS Saccharated Pepsin, two grains soluble Citrate of Bismuth, and one-fiftieth grain Citrate of Strychnia.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 21, 1877.

Gentlemen:—I have used a large number of your preparations for several years past with great satisfaction, and am happy to commend them to others from what I know both of your drugs and of yourselves.

Very truly yours, W. W. KEEN, M. D.

K. & M.
GRANULATED EFFERVESCENT
CITRATE CAFFEINE.
ORIGINATED BY KEASBEY & MATTISON.

The recent extensive employment of this salt as a remedy, amounting almost to a specific in cases of sick headache, and its use in nervous diseases generally, have caused us to place it upon our list. Its value is much enhanced by its administration with Carbonic Acid, so agreeably and efficiently produced by this form.

A heaping teaspoonful, containing ONE GRAIN of Citrate of Caffeine, should be given in sick headache, every hour or two before and during the paroxysms.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 27, 1877.

Gentlemen:—It gives me pleasure to add my testimony in regard to your preparations, which I have used for a long time; they are thoroughly reliable.

Truly yours, THOMAS G. MORTON, M. D.

K. & M.
GRANULATED EFFERVESCENT
CITRATE LITHIA.

In the effervescent form this chemical is administered in a peculiarly advantageous manner. Its association with Carbonic Acid renders it much less liable to disturb the stomach, while in strength it is greatly superior to Lithia Water. A valuable diuretic and lithontriptic, its importance in the treatment of rheumatic, gouty, and analogous disorders can scarcely be over-estimated.

We have doubled the strength of this preparation, each drachm or heaping teaspoonful containing FOUR GRAINS of the chemically pure salt.

Messrs. KEASBEY & MATTISON:— PHILADELPHIA, September 25, 1877.

Gentlemen:—I have employed your Extract of Malt and Infants' Food, in a large number of cases, much to my own satisfaction, and to the benefit of the patient. The Infants' Food I regard as especially useful in cases of Infants requiring artificial food from any cause. Yours, etc., W. B. ATKINSON, M. D., *Sec. American Med. Asso.*

Rheumatism, hysteria, delirium tremens.
Cerium, Oxalate, 1 and 2 grs.
Vomiting in pregnancy.
Coca Extract, 1 gr.
Tonic and stimulant.
Copaiba and Oleo-Resin Cubeb, 3 and 5 grs.
Of pure materials; can be relied upon.
Ergotin, 3 grs.
Made of purified Ergotin.
Fucus Vesiculosus Extract, 3 grs.
To decrease excessive obesity.
Grindelia Robusta Extract, 3 grs.
Hay fever, asthmatic affections.
Guarana Extract, 3 grs.
Headache, neuralgia.
Hypophosphites Compound.
A convenient form of administration.
Iodide of Iron (Blancard's), 1 gr.
Freshly prepared; superior to the imported.
Iron, Dialysed, 2 grs.
Made of Merck's scales.
Jaborandi Extract. 3 grs.
Diaphoretic and sialogogue.
Lithium, Bromide, 2 grs.
A better hypnotic than Brom. Pot.
Phosphates Iron, Quinine and Strychnine.
A tonic more convenient than the syrup.
Phosphorus, 1-100, 1-50, 1-30, 1-20, 1-12 gr.
And over 20 combinations.
Salicin, 2 1-2 and 5 grs.
Useful in rheumatism.
Salicylic Acid, 2 1-2 and 5 grs.
Salicylic Acid and Morphine.
Valuable in rheumatism.
Sandal Wood Extract, 1 and 2 grs.
Contains both the oil and resin.
Sumbul Extract, 1 gr.
Hysteria, spasmodic disorders.
Zinc, Phosphide, 1-6, 1-4 and 1-2 gr.
Zinc, Phosphide and Extract Nux Vomica.
Brain diseases.

Our Formula Book, (fourth edition) containing complete list of all our pills with formulas and therapeutical notes, together with partial list of our fluid extracts, with doses, furnished upon application. As we desire to *improve* in *every* particular, we will be grateful to any Physician who will write us regarding his experience with our Gelatine-Coated Pills and other preparations, or make any suggestions.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

STAUFER'S UTERINE INSTRUMENTS.

The readers of this Journal are familiar with this Series of Instruments, during their rise and progress upwards of ten years. Many have introduced them into their practice, and have written complimentary letters even to this office.

The above late engraving represents—1. The new ***Retroversion Cup,*** with a broad lever of which the corners are rounded and less liable to irritate than the former. 2. ***An Intra-Uterine Stem Cup.*** The Intra-Uterine Stem (hard rubber) is made to order in length and thickness, after a pattern, when desired. The stem is supported as A. Fig. 1. On either belt, and same in price. (*See large plate.*) The stem is inserted after the cup is in position, and locks in a square socket. This gives a reliable and yet yielding base. ***Exchanges.***—To obviate the risk of purchasers, the Hard Rubber part is made exchangeable as all the others are on the catalogue, now aggregating about 150, in size and style of instruments. Over one half belong to the class of Uterine Supporters—the balance to examination and diagnosis. 3. ***Anterversion C.*** The modification consists in a concave rest for the cervix, to retain it in position.

☞*Obtained through this Office, and Catalogues sent on application.*

BURN-BRAE,

A PRIVATE HOSPITAL

FOR

MENTAL DISORDERS.

Location beautiful and salubrious. Grounds extensive and handsomely laid out. Distance from Chestnut Street Bridge, Philadelphia, six miles. Access by Baltimore Turnpike, or West Chester and Philadelphia Railroad; nearest station, Oak Lane.

BURN-BRAE accommodates twenty patients of each sex. Though possessing all the safeguards and appliances of a Public Hospital, the arrangements are domestic and familiar. No efforts spared to make the house a comfortable *Home* for its guests.

RELIABLE

ANIMAL VACCINE.

The undersigned respectfully announces that he has discontinued the practice of furnishing Vaccine *at his residence.*

Physicians can obtain the *Animal Vaccine* of MESSRS. CASWELL, HAZARD & CO., BROADWAY, CORNER 24TH STREET.

FRANK P. FOSTER, M.D.

By our arrangement with Dr. Foster, *all* Vaccine supplied by *us* is *absolutely fresh.*

We can furnish it in any quantity desired, either by express or by mail, if remittance is made to cover postage.

Dr. Foster's Animal Vaccine is the only kind that may be said to have the unqualified endorsement of the Medical Profession of New York.

QUILL SLIPS (half quill, charged on convex surface, at square-cut end).....25 cts.
CAPILLARY TUBES.....$2 00

For ordinary use *Quill Slips* are the most reliable of all forms of stored Vaccine, and in cases of failure with them in *primary* vaccination, if used within one week of their issue, and strictly in accordance with the printed directions, *being in the meantime kept cool and dry*, a second supply will be furnished gratis.

Tubes are intended chiefly for transportation to long distances, as the virus is preserved for a considerable length of time. They are superior to crusts, but inferior to quill slips.

Crusts are not recommended, and are not sold, for the reason that, however fresh, and however well formed they may be, they are apt to prove inefficient.

CASWELL, HAZARD & CO., New York.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

NEW HYPODERMIC SYRINGES.

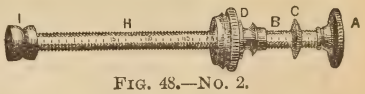

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$4.00* No. 2, *$4.50* Postage, .03
" No. 3, *3.00* No. 4, *4.00* " .02

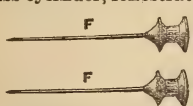
No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).



No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,			*With Hops (Plain)*,	$1.00

BRAIN.

A JOURNAL OF NEUROLOGICAL SCIENCE.

Edited by Drs. BUCKNILL, CREIGHTON-BROWN, FERRIER and HUGHLINGS JACKSON.

Published Quarterly. $1.25 per number. Annual Subscription $4.00; free by mail.

A sample copy of Number One sent on receipt of Seventy-five cents.

It will be the object of "BRAIN" to keep its readers well abreast of modern progress in Neurology, and to advance the knowledge of a class of diseases respecting which it is universally admitted that much has yet to be learned.

Sent free by mail to any address, on receipt of the price.

THE JOURNAL OF PHYSIOLOGY.

Edited, with the coöperation in England of Prof. A. GAMGEE, F. R. S., Prof. W. RUTHERFORD, F. R. S., Prof. J. B. SANDERSON, F. R S., and in America of Prof. H. P. BOWDITCH, of Boston, and Prof. H. N. MARTIN, of Baltimore; By Dr. M. FOSTER, F. R. S., Trinity College, Cambridge.

Vol. I., Part I., Now Ready, $3.00.

The Subscription Price per Volume will be, when paid in advance, $5.25. Sent free by mail.

The morphologists in England and America already possess an appropriate periodical literature; but the physiologists have hitherto been without an organ devoted exclusively to the publication in the English language of the results of physiological research. The want of such a periodical has long existed, and is daily increasing.

It is with a view of meeting this want that the JOURNAL OF PHYSIOLOGY has been established; and its conductors trust that the nature of the communications of which they hope to make it the medium will be at once readily understood by all workers in Biology.

THE PRACTITIONER.

A MONTHLY JOURNAL OF THERAPEUTICS AND PUBLIC HEALTH.

Edited by T. LAUDER BRUNTON, M. D., F. R. S.

"To hard-worked medical men, with little time for reading, and few opportunities for professional conversation, such a journal as this, bringing every month the latest ideas in medical practice and latest records of important cases, ought to be invaluable."—*London Guardian.*

Sample Copies, 40 cents. Annual Subscription, $4.00.

INSANITY AND ITS PREVENTION,

Insanity in Ancient and Modern Life. With Chapters on its Prevention. By D. H. TUKE, M. D. 12mo, cloth, $1.75.

PRACTICAL CHEMISTRY FOR MEDICAL STUDENTS.

By W. M. PATTISON MUIR, F. R. S. E. 18mo, cloth, limp, 60 cents.

CLINICAL MEDICINE.

Lectures on Clinical Medicine, delivered in the Royal and Western Infirmaries of Glasgow. By Dr. MCCALL ANDERSON, Author of the "Treatment of Diseases of the Skin." With Illustrations. 8vo, cloth, $3.00.

PRESCRIPTIONS AND PRESCRIBING.

Lessons on Prescriptions and the Art of Prescribing. By W. HANDSEL GRIFFITHS, PH. D., L. R. C. P. E. Third Edition. 18mo, cloth, $1.25.

PHYSIOLOGY.

A Text-Book of Physiology. By M. FOSTER, M. A., M. D., F. R. S. Second Edition, revised. 8vo, cloth, $6.50; sheep, $7.50.

"I recommend it to my students as the latest, and in some respects the best, Physiology in the English language."—*From a Letter from Prof. Burt G. Wilder.*

Any of the above works sent free by mail on receipt of the price.

MACMILLAN & CO.,

1117-1168m **22 BOND STREET, NEW YORK.**

THE ST. LOUIS
MEDICAL AND SURGICAL JOURNAL.

ESTABLISHED IN 1843.—PUBLISHED MONTHLY.

THOS. F. RUMBOLD, M.D., Editor and Proprietor; HIRAM CHRISTOPHER, M.D., Associate Editor.

The Journal will hereafter be published in Two Volumes, beginning with January and July.

Each Number will contain 80 or more pages, making each Volume about 500 pages, or nearly 1000 pages for the year's subscription.

TERMS :—$3.00 a year, payable in advance. Single Copies Thirty Cents. Postage prepaid in all cases.

SUBSCRIPTIONS MAY COMMENCE AT ANY TIME.

THE ST. LOUIS MEDICAL AND SURGICAL JOURNAL is the *Pioneer Medical Journal of the West.* It commences its Thirty-fourth Volume with an increase of 24 pages, which nearly *doubles its former contents,* but its Subscription Price is *not increased.* This has had the effect of greatly increasing its popularity and, as a consequence, its circulation.

THE JOURNAL WILL CONTAIN:

1. Original Contributions. 2. Translations from the German, French and Spanish. 3. Reports of Medical Societies. 4. Clinical Reports from Private Practice. 5. Clinical Reports from Hospital Practice. 6. Selections from Current Medical and Scientific Literature. 7. Editorials. 8. Obituary Notices of Prominent Men. 9. Reviews of Medical and Scientific Books. 10. Notices of Books and Pamphlets Received. 11. News Items. 12. Meteorological Observations taken in St. Louis. 13. Mortality Report of the City of St. Louis. 14. Comparative Mortality Rates of the ten largest cities in the United States.

The Translations from the German, French and Spanish medical and scientific journals, will be from those articles which contain the *advance* views of the medical and scientific men living in those countries.

The Journal will contain a full Report of the Proceedings of the St. Louis Medical Society, and a summary of all the societies in Missouri, and of many in Illinois and other States, thus placing before its readers the latest views and experiences of the profession in all the Departments of Medicine, practical as well as theoretical.

It will be the aim of the editors, in all respects, to maintain the high and honorable position it has so long held. No personalities shall ever soil its pages; when discussions cannot be carried on without these, space in its columns will be declined.

Contributions of Original Articles on both Medical and Scientific subjects are invited from all parts of the country.

Articles on the following subjects will appear in the present volume :—

Contributions on Fractures. By John T. Hodgen, M.D., Professor of Surgical Anatomy, Fractures and Dislocations in St. Louis Medical College.

Contributions on Syphilis. By Thomas Kennard, M.D., of St. Louis.

Contributions on Lithotomy. By David Prince, M.D., of Jacksonville, Illinois.

Contributions on Genito-Urethral and Rectal Surgery. By W. Hutson Ford, M.D., of St. Louis.

Contributions on the Present State of Pathology of Phthisis Pulmonalis. A series of papers. By J. Hilgard Tyndale, M.D., of New York City.

Contributions on Genesis. A series of papers. By the Associate Editor.

Contributions on Urinary and Renal Diseases. By John Bryson, M.D., of St. Louis.

Contributions on Medical Experts as Witnesses. By Fred. T. Ledergerber, Esq., of St. Louis.

Contributions on Nasal, Pharyngeal, Aural, Laryngeal and Bronchial Diseases. By the Editor.

From the above it will be seen that it is not the intention of the editors to confine the Journal to subjects relating to Medicine and Surgery alone; subjects collateral to these will receive attention, and such are invited from the profession. The departments of science are so closely connected as to make it almost impossible for a Physician or Surgeon to be proficient as such, without considerable knowledge of kindred branches.

Communications and all Subscriptions should be addressed to THE EDITOR, 1225 Washington Avenue, St. Louis, Mo.

1109-4tm

1879. BEGIN NOW! 1879.

UNEQUALED INDUCEMENTS!

NEW SUBSCRIBERS WILL RECEIVE

THE WEEKLY

MEDICAL AND SURGICAL REPORTER

From now until December 31st, 1879,

FOR $5.00!

The MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list, unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, double-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES.

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of *the whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

PRICES PER YEAR.

***The Weekly Medical and Surgical Reporter*.....$5.00**
***The Half-Yearly Compendium of Medical Science*..... 2.50**
***The Reporter and Compendium taken together*..... 7.00**

Payable in Advance.

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

[Unguentum Petrolei]

SAMPLES FURNISHED
ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

PREPARED BY

E. F. HOUGHTON & CO.,

1109-eow-tf 211 S. FRONT STREET, PHILADELPHIA.

IMPORTANT TO EVERY PHYSICIAN!

VOL. V BEGINS JAN. 1, 1879.

Gentlemen Subscribing for 1879 will receive the Gazette from the time of remitting their Subscription to Jan. 1, Gratis.

THE HOSPITAL GAZETTE,

A Weekly Journal of Medicine, Surgery, and the Collateral Sciences.

EDITED BY

EDWARD J. BERMINGHAM, A.M., M.D., and FREDERICK A. LYONS, A.M., M.D.

H. H. KANE, M.D., Associate Editor.

This journal is published regularly EVERY THURSDAY in the chief medical centre of this continent, and each number presents a faithful *weekly* epitome of the progress of Medical Science. The following Departments are represented: *Lectures, Editorials, Original Articles, Hospital Records, Translations, Periscope, Bibliography, Society Proceedings, Correspondence, News Items and Notes.*

Each number contains *twenty large, closely printed pages* of the choicest and most valuable reading matter, thus making *1040 pages annually,* which, owing to our very large circulation, we are enabled to furnish at the remarkably low price of

$2.00 PER YEAR, INCLUDING POSTAGE,

thus making it the cheapest journal published.

☞ We decline to notice requests for specimen copies, but shall be happy to give any gentleman desiring it a trial subscription of 3 months for 50 cents, payable in advance. This plan will give those contemplating subscribing an opportunity to thoroughly examine the merits of the journal.

Address all communications to

1125-m3t THE HOSPITAL GAZETTE, New York City.

LIQUEFIED NITROUS OXIDE.

We are prepared to supply Liquefied Nitrous Oxide, of our own manufacture, **warranted pure,** in four sizes of Cylinders, viz., 100, 700, 1000, and 1400 gallons.

Surgeons' Cases of stout Morocco, neatly finished and lined with velvet, containing Cylinder, Tubing, Gas Bag and Inhaler.

Cylinders refilled with Gas.

A Descriptive Circular sent on application.

MEDICAL DEPARTMENT.

113th ANNUAL SESSION, 1878–79.

The higher plan of medical education is now enforced, requiring attendance upon three graded courses of five months each. Didactic instruction is increased. Bedside instruction of each student in Physical Diagnosis, Clinical Medicine and Surgery, and Gynæcology is provided. The clinical and laboratory facilities are unrivaled in America. Pharmacy, Analytical and Medical Chemistry, Histology, Normal and Morbid Anatomy, and Operative Surgery are taught practicaliy.

A Dental Department has recently been instituted.

For particulars, see ANNOUNCEMENT, for which address

1105-1130eow

NEW YORK STATE
INEBRIATE ASYLUM,

Binghamton, Broome County, N. Y.

This Asylum is admirably situated, overlooking a fine section of country, and is complete in all the appointments of a first-class home, with ample means to meet the wants of every case. It is located three miles from the city, and removed from all temptation. Its management is the same as all other State charities, under the control of a Board of Managers appointed by the Governor. The law provides for the maintenance of indigent inebriates, similar to that of the insane, but patients from other States may be admitted.

The experience of this Asylum, for the past ten years, indicates an increasing usefulness and necessity for such institutions, and the original intention of making this an Asylum Hospital, where this disorder may be thoroughly understood and treated on broad scientific principles is nearer realized than ever before. All rules are strictly enforced, and no patient permitted to go beyond the Asylum grounds without permission from the Superintendent, or in the care of an attendant.

THE CHARGES FOR BOARD

will include medical care, washing, lights, fuel, etc., with ordinary attention. The exigencies of each particular case will be acted upon, as it may present itself, to those of moderate and limited means as well as the rich.

All inquiries and applications for admission should be addressed to the Superintendent.

WILLARD PARKER, M.D.,
New York, N. Y.,
President Board of Managers.

MOREAU MORRIS, M.D., *Superintendent,*
Binghamton, Broome Co., N. Y. 1105-1155eow

Cincinnati College of Medicine and Surgery.

1617 Green Street, Philadelphia.
1108-1131eow

ALWAYS SPECIFY "K. & M." IMPROVED EXTRACT OF MALT.

K. & M.
IMPROVED EXTRACT OF MALT.

Made from Canada Barley, selected, malted, dried, and extracted by, and under the immediate supervision of, Graduates of the Philadelphia College of Pharmacy. CONCENTRATED IN VACUO. This is as perfect an extract of the highest grade of carefully selected Barley Malt as can be PREPARED BY THE USE OF THE MOST IMPROVED VACUUM APPARATUS, recently designed for our own laboratory. As A FOOD in Syphilis, Typhoid and other fevers, Consumption and similar wasting diseases, it is without an equal for the rapid building up of a degenerate or depraved condition of the blood or tissues, since it acts not only as food itself, but its use converts and changes other kinds of food into a condition allowing easy assimilation.

We append the following letter from a gentleman well known to all:

Messrs. KEASBEY & MATTISON: PHILADELPHIA, September 25, 1877.

Gentlemen:—I have employed your Extract of Malt and Infant's Food in a large number of cases, much to my own satisfaction and to the benefit of the patient. The Infant's Food I regard as especially useful in cases of infants requiring artificial food, from any cause.

Yours, etc., W. B. ATKINSON, *Secretary American Medical Association.*

K. & M.
EXTRACT OF MALT WITH COD LIVER OIL.

ORIGINATED BY KEASBEY & MATTISON.

THE MOST NUTRITIVE EMULSION EVER MADE.

Our Improved Extract of Malt, with 50 per cent, of our fine Norwegian Oil, is pre-eminently the emulsion of Cod Liver Oil, since it has double the nutritive effect of any other emulsion of oil. It not only contains the largest amount of nutritive food in the smallest bulk of liquid, but, by the action of the Diastase contained in the malt, it is capable of transforming many times its bulk of amylaceous or graminaceous food into saccharine, thus rendering it easily digestible, even by the most delicate stomach of the invalid. The disagreeable eructations from the stomach, which constitute one of the greatest objections to the use of all preparations of Cod Liver Oil, are completely obviated in this preparation. We would direct the attention of physicians to the special fact that it unites perfectly with water in any proportion, and that the oil does not again separate, thus showing how perfectly the oil is emulsified.

Dose—A Dessert to a Tablespoonful immediately after Meals.

K. & M.
IMPROVED EXTRACT OF MALT WITH PEPSIN.

This is our Improved Extract of Malt, with the addition of five grains of our Saccharated Pepsin to the tablespoonful. For dyspeptic disorders it is found of great value, since it digests both albuminoid and amylaceous matter, thus furnishing a preparation that is needed in the majority of cases of dyspepsia and other derangements of the stomach dependent upon the non-assimilation of the food

Dose—A Dessert to a Tablespoonful immediately after Meals.

K. & M.
BEEF, IRON AND WINE, WITH EXTRACT OF MALT.

ORIGINATED BY KEASBEY AND MATTISON.

A Nourishing Diet for Invalids and Convalescents.

As a simple restorative food, where a tonic effect is desired, there is perhaps nothing in the whole line of tonic dietetics of so much real value as this preparation. It furnishes the diseased stomach with the power of assimilating amylaceous diet, and supplies readily assimilable food at the same time, in the articles of Malt Extract. The iron salt supplies the red corpuscles that are deficient in the blood, while to the nutrient effect of beef is added the stimulant effect of a fine sherry wine. Each tablespoonful represents two grains of the soluble citrate of iron, and one ounce of finely chopped raw lean beef, with equal quantities of our Improved Extract of Malt and sherry wine.

For sale by Druggists everywhere. Samples may be obtained of

Codeia, 1-16 and 1-5 gr.
Corros. Sublimate, 1-100, 1-40, 1-30 & 1-20 gr.
Digitalia, 1-60 gr.
Hydrastia, 1-2 gr.
Mercury, Bin-Iodide, 1-25 and 1-16 gr.
Mercury, Cyanide, 1-20 gr.
Mercury, Proto-Iodide, 1-5, 1-4 and 1-2 gr.
Morphia, Acetate, 1-8 and 1-4 gr.
Morphia, Muriate, 1-8 gr.
Morphia, Sulphate, 1-16, 1-10, 1-8, 1-6, 1-4 gr.
Morphia, Valerianate, 1-8 gr.
Podophyllin, 1-8 and 1-4 gr.
Quinine, 1-4 and 1-2 gr.
Strychnia, 1-100, 1-60, 1-40 and 1-30 gr.
Sulphur, Iodide, 1-25 and 1-10 gr.
Tartar Emetic, 1-100, 1-20 and 1-4 gr.
Zinc, Phosphide, 1-6, 1-4 and 1-2 gr.

VARIOUS FORMULAS.

Ammonium, Valerianate, 1 gr.
A convenient form of administration.
Assafœtida, 2 and 4 grs.
Assafœtida and Nux Vomica.
Made of purified Assafœtida.
Caffeia, Citrate, 1 gr.
Remedy and preventive in sick headache.
Calcium, Sulphide, 1-10 gr.
Scrofulous sores, &c.
Camphor, Mono-Bromated, 2 and 3 grs.
Hysteria, headache, nymphomania.
Cannabis Indica Extract, 1-2 and 1 gr.
Rheumatism, hysteria, delirium tremens.
Cerium, Oxalate, 1 and 2 grs.
Vomiting in pregnancy.
Coca Extract, 1 gr.
Tonic and stimulant.
Copaiba and Oleo-Resin Cubeb, 3 and 5 grs.
Of pure materials; can be relied upon.
Ergotin, 3 grs.
Made of purified Ergotin.
Fucus Vesiculosus Extract, 3 grs.
To decrease excessive obesity.
Grindelia Robusta Extract, 3 grs.
Hay-fever, asthmatic affections.
Guarana Extract, 3 grs.
Headache, neuralgia.
Hypophosphites Compound.
A convenient form of administration.
Iodide of Iron (Blancard's), 1 gr.
Freshly prepared; superior to the imported.
Iron, Dialysed, 2 grs.
Made of Merck's scales.
Jaborandi Extract. 3 grs.
Diaphoretic and sialogogue.
Lithium, Bromide, 2 grs.
A better hypnotic than Brom. Pot.
Phosphates Iron, Quinine and Strychnine.
A tonic more convenient than the syrup.
Phosphorus, 1-100, 1-50, 1-30, 1-20, 1-12 gr.
And over 20 combinations.
Salicin, 2 1-2 and 5 grs.
Useful in rheumatism.
Salicylic Acid, 2 1-2 and 5 grs.
Salicylic Acid and Morphine.
Valuable in rheumatism.
Sandal Wood Extract, 1 and 2 grs.
Contains both the oil and resin.
Sumbul Extract, 1 gr.
Hysteria, spasmodic disorders.
Zinc, Phosphide, 1-6, 1-4 and 1-2 gr.
Zinc, Phosphide and Extract Nux Vomica.
Brain diseases.

Our Formula Book, (fourth edition) containing complete list of all our pills with formulas and therapeutical notes, together with partial list of our fluid extracts, with doses, furnished upon application. As we desire to *improve* in *every* particular, we will be grateful to any Physician who will write us regarding his experience with our Gelatine-Coated Pills and other preparations, or make any suggestions.

McKESSON & ROBBINS, Manufacturing Chemists,

91 Fulton Street, New York.

CAUTION!!—SPECIFY McKESSON & ROBBINS'.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

FOR SALE—A PHYSICIAN'S OUTFIT, consisting of Horse, Wagon, Harness and Blankets, with a large stock of Medicines, in a village of 600 inhabitants; no opposition within four miles. Address "DOCTOR," office of the MEDICAL AND SURGICAL REPORTER. 1126-1t

PRACTICAL SURGERY,

INCLUDING

Surgical Dressings, Bandaging, Ligations, and Amputations,

BY J. EWING MEARS, M.D.,

Demonstrator of Surgery in Jefferson Medical College, Professor of Anatomy and Clinical Surgery in the Pennsylvania College of Dental Surgery, Surgeon to St. Mary's Hospital, etc.

In one 12mo volume. Profusely illustrated. Prepared with especial reference to the use of Students. For sale by Messrs Lindsay & Blakiston, Philadelphia Pa. 1126-1138

DR. GARRATT'S

Constant Electric Disks,

That any person may apply and wear with comfort, for relief of local *pains* and *weakness*, coldness and stiffness. It is also remarkable for its constant power to help weak lungs, heart, stomach, kidneys, sluggish liver, lame back, and other ills.

While worn, by night or day, this flexible pad is self-charging, applies a fine constant galvanism that wonderfully cures nervous ills. "For the price and purpose, there is nothing so good. It has no equal." So say physicians, druggists, and those now using this improved electric. Large Disk, $2 50; Children's Disk, $1.00; Long Disk, with straps for the body, $3.50. Do. for large body, $5.00. Can be sent by mail, on receipt of price, by GARRATT & Co., 6 Hamilton Place, Boston, Mass. 1075m-1y

Philadelphia Dental College,

N. W. Cor. of TENTH and ARCH Sts.

The Faculty of this College will inaugurate, with the session of 1878-9, commencing October 2d,

A SPECIAL COURSE,

extending over a period of five months; which course is designed especially for the instruction in Dentistry proper of Graduates in Medicine who propose to make

ORAL SURGERY

a specialty in practice, or those who may be disposed to unite this with a practice embracing General Surgery.

The Introductory to the course will be delivered Tuesday evening, October 1st, at 8 o'clock, by James E. Garretson, M.D., D.D.S., Professor of General Surgery.

FEE FOR THE COURSE, - - - - - - $100
GRADUATION FEE, - - - - - - - - $30.

J. H. McQUILLEN, Dean,
1126-1126 **2100 Arch Street.**

BURN-BRAE,

A PRIVATE HOSPITAL

FOR

MENTAL DISORDERS.

Location beautiful and salubrious. Grounds extensive and handsomely laid out. Distance from Chestnut Street Bridge, Philadelphia, six miles. Access by Baltimore Turnpike, or West Chester and Philadelphia Railroad; nearest station, Oak Lane.

BURN-BRAE accommodates twenty patients of each sex. Though possessing all the safeguards and appliances of a Public Hospital, the arrangements are domestic and familiar. No efforts spared to make the house a comfortable *Home* for its guests.

HIGHEST PRIZE

FOR

SUGAR-COATED PILLS

TO

WM. R. WARNER & CO.,

AT PARIS EXPOSITION.

This makes the 5th Grand Prize Awarded for their Superiority over all Competitors.

WARNER & CO.'S STANDARD PREPARATIONS.

SUGAR-COATED PILLS,—Warner & Co.'s
Reliable, Soluble and Permanent.

Warner & Co.'s—PHOSPHORUS PILLS,
In 24 Combinations—Unexampled for Perfection.

PARVULES (Minute Pills,) Warner & Co.'s
Minimum Doses for Children and Others.

Warner & Co.'s—INGLUVIN, (from Gizzard of Chicken,)
More Efficacious than Pepsin, Prescribed in the same Manner and the same Combinations.

DIALYSED IRON,—Warner & Co.'s
Superior, as attested by Chemical Analysis.

Warner & Co.'s—FLUID EXTRACT OF ERGOT,
From fresh Ergot of Rye—equal to the best in the market.

LIQUID PANCREOPEPSINE,—Warner & Co.'s
The combined principles of Digestion.

FRESH AND RELIABLE VACCINE VIRUS—WARRANTED.
Mailed to any address on receipt of Price, $1.25 per Crust.

WM. R. WARNER & CO.,

1228 MARKET STREET, PHILADELPHIA.

FLUID EXTRACT COCA.

NERVINE, STIMULANT.

USED IN PERU AND BOLIVIA AS A MASTICATORY.

This Extract contains the entire properties of the leaf of the **Erythroxylon Coca.**

COCA WINE.

This wine has been successfully used in France as a **Tonic,** and found very desirable where a more mild effect of the Coca than the Fluid Extract was desired.

FLUID EXTRACT OF FUCUS VESICULOSUS

(BLADDER WRACK).

SUCCESSFULLY USED FOR THE REDUCTION OF OBESITY.

It seems to have no appreciable effect on the general health other than the removal of the adipose tissue.

The above Extracts have been prepared by us, and special care given that their medical properties be not impaired.

FLUID EXTRACT OF VISCUM ALBUM,

THE NEW SUBSTITUTE FOR ERGOT.

PROF. LISTER'S ANTISEPTIC DRESSING,

PREPARED BY US.

We also have direct from Edinburgh Professor Lister's entire Antiseptic Dressing, consisting of Antiseptic Gauze, Mackintosh Cloth, Protection Silk, Carbolized Ligatures, and Spray Producers for Dr. Lister's Method.

LEBAIGUE'S
DIALYSED IRON,

OR

PURE PEROXIDE OF IRON,

IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate, nor cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a **solution,** which is generally preferred; or of an **elixir,** when a slight stimulant is desired.

DOCTOR GIBERT'S
DEPURATORY SYRUP AND DRAGEES,

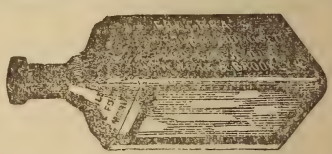
OF IODIZED DEUTO-IODIDE OF MERCURY.

These preparations have been approved by the Academy of Medicine of Paris, and have been thoroughly tested in the hospitals of Paris in the treatment of *Syphilitic, Scrofulous* and other affections requiring the use of iodized remedies.

They are recommended for the utmost accuracy of composition, and their perfect preservation.

Prepared by VAUQUELIN-DESLAURIERS, Chemist, Paris.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,

372 Seventh Street, Brooklyn, L. I.,

SOLE PROPRIETOR & MANUFACTURER of the ABOVE,

To whom all special communications should be addressed.

SOLD BY DRUGGISTS GENERALLY.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin.....8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine.....6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....per oz.	$1.00
" (" ").....per doz.	10.00
" (in ½ lb ").....per lb.	12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

THE NEW YORK PHARMACAL ASSOCIATION,

1088-1139eow

SEABURY & JOHNSON,

Originators and Manufacturers of

U. S. PHARMACOPŒIA MEDICINAL AND SURGICAL

PLASTERS, POROUS AND SPREAD IN RUBBER COMBINATION,

NEW YORK AND LONDON.

Received highest and only Award (Medal and Special Diploma of Merit) over all Foreign and Home Competitors in 1876.

THE JURORS' AWARD IS SUBSTANTIALLY

ORIGINALITY.—The successful application of Rubber as a base for all medicinal and mechanical plasters.

RELIABILITY and general excellence of manufactures.

FACTS CONCERNING MEDICINAL PLASTERS IN RUBBER COMBINATION.

India-rubber-spread and Porous Plasters possess indisputable advantages over all other Plasters: (1) The Rubber combination preserves the incorporated drug or extract from decomposition or volatilization; (2) They adhere closer and firmer; (3) They do not soil the skin or linen; (4) They are always pliable, and never become hard or brittle; (5) They adhere without heat or moisture; (6) An increased effect obtained by being porous, as the Plaster neither slides nor moves from its affixed position.

BELLADONNA PLASTER, U. S. P.

IN RUBBER COMBINATION.

Messrs. SEABURY & JOHNSON claim that theirs is the most thoroughly reliable and only strictly officinal Belladonna Plaster ever offered the medical profession. It is an improvement on other Belladonna Plasters in several important particulars. First, it is incorporated with the officinal alcoholic extract only. Secondly, it is freed from all stimulating qualities, thereby insuring the uninfluenced sedative action of Belladonna. Thirdly, it adheres with greater tenacity than others. Physicians have been prejudiced in favor of Allen's English Extract; but recent analysis, fairly conducted by competent chemists, emphatically condemns the Inspissated Extract as a mild and unstable product, representing but one-half or less than one-half of the strength of the U. S. P. Alcoholic Extract of Belladonna. The following result, published in the *American Journal of Pharmacy*, in April, 1876, page 145, is furnished for your consideration, which indicates the following percentage of Atropia in the respective extracts:—

Alcoholic Extract Belladonna, U. S. P......2,571
Allen's English Extract.....1,411
Herring's English Extract.....1,179

The practitioner, as well as ourselves, has but one choice.

Considering these features from a professional standpoint, we offer a Belladonna plaster which cannot be improved upon.

SALICYLATED SURGEONS' RUBBER ADHESIVE PLASTER

This article has met with unprecedented success, and has been emphatically pronounced by our most skillful General and Orthopædic Surgeons, as "the best Surgeons' Adhesive Plaster known." It is applied without heat or moisture, conforms quickly to the parts; is perfectly flexible and waterproof, and is ready for use at any moment. It is free from irritating properties and very healing. In counter-extension it has no equal, as it does not move or slide after being applied. Our India-rubber Adhesive Plaster is also spread on twilled linen, which resists the most powerful strain. In addition to these general improvements, the plaster being impervious to water, wounds can be cleansed without removing the plaster, obviating the necessity of constant redressing, saving labor and time. **Whenever continued powerful adhesion is required, it should be procured in porous form.**

MUSTARD PLASTER (spread on Cotton Cloth).

Our Mustard Plaster is a decided improvement over the best French makes; the mustard is manipulated so as to exclude all the moisture, retaining unimpaired by such treatment, its essential properties. They are always reliable, conform quickly to the part, and when thoroughly wet do not break into pieces, as is the case with all other mustard plasters. They do not crack or peel off, and can be removed without soiling the skin or linen. Being **manufactured only of pure mustard,** they are perfectly free from Croton Oil or other dangerous substitutes, often employed to induce intense irritation.

RUBBER BLISTER PLASTER (Camphorated)

U. S. P. STRENGTH.

This article has a splendid reputation; its characteristic action is not impaired by age in any climate. The whole fly is incorporated, which, by constant manipulation is thoroughly and beautifully combined with the plaster. **Its properties are developed quicker, and it blisters in less time than the cerate.** It never fails to blister when used as directed. In addition to its superior efficacy as a vesicant, we incorporate a sufficient quantity of Camphor, which, with the Olive Oil used on the face of the plaster, **prevents Strangury.** This improvement will be appreciated by every practitioner. It is more reliable than any known cantharidal preparation.

CAPSICUM PLASTER.

Recently this article has crept into favor with our most esteemed physicians, and judging from results, it is doubtless the best rubefacient known. It has the specific action of mustard without its objections. The characteristic action of Capsicum is uniformly maintained from twenty-four to forty-eight hours, without blistering, being mild, continuous, and stimulating. This plaster is spread in rubber combination and in porous form. Experience has taught practitioners that the Oleo Resin of Capsicum is too violent, frequently vesicating; we incorporate the crude drug in sufficient quantity, without risk to the patient. Our Capsicum Plasters will be found more practical for general use than the **so-called Mustard or Capsicum Papers.**

SPECIAL NOTICE TO PHYSICIANS.

QUALITY IS OF GREAT IMPORTANCE TO THE PRACTITIONER: BY RELIABLE PREPARATIONS HE SUPPLEMENTS HIS OWN SKILL. You can therefore rest assured that every article we manufacture is of strict pharmacopœia strength, and incorporated with perfectly reliable Extracts and Drugs, well selected, carefully and conscientiously prepared, and manufactured invariably under the personal superintendence of one of our firm. OUR WHOLE ATTENTION AND STUDY IS DEVOTED ENTIRELY TO THE ART OF PLASTER MAKING, and we are ready at all times to receive suggestions from the fraternity, which may be of benefit to all.

SEABURY & JOHNSON,

21 Platt Street, New York.

ALL THE ABOVE ARTICLES SOLD BY DRUGGISTS EVERYWHERE.

ALWAYS SPECIFY SEABURY & JOHNSON'S PLASTERS.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

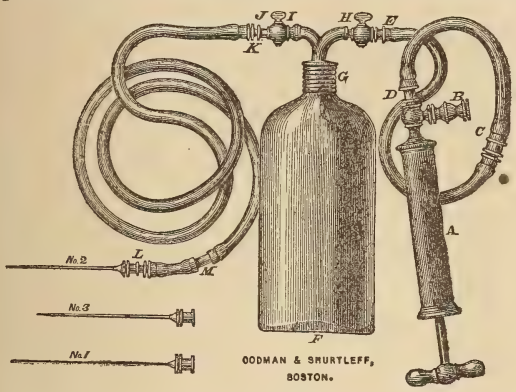

Fig. 77.

Fig. 68.

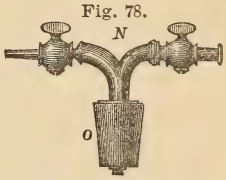

Fig. 78.

The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions.....$18 00

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions..... 16 00

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case.....$14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional..... 6 00

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

☞ In corresponding with Advertisers please mention the MEDICAL AND SURGICAL REPORTER.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

JEFFERSON MEDICAL COLLEGE,

PHILADELPHIA.

The Fifty-fourth Session of the Jefferson Medical College will begin on Tuesday, October 1, 1878, and will continue until March 1st, 1879. Preliminary Lectures will be held from Monday 2d September.

PROFESSORS.

JOSEPH PANCOAST, M.D., General, Descriptive and Surgical Anatomy (*Emeritus*).
SAMUEL D. GROSS, M.D., LL.D., D.C.L. Oxon., Institutes and Practice of Surgery.
ELLERSLIE WALLACE, M.D., Obstetrics and Diseases of Women and Children.
JOHN B. BIDDLE, M.D., Materia Medica and General Therapeutics.
J. AITKEN MEIGS, M.D., Institutes of Medicine and Medical Jurisprudence.
J. M. DA COSTA, M.D., Practice of Medicine.
WILLIAM H. PANCOAST, M.D., General, Descriptive and Surgical Anatomy.
ROBERT E. RODGERS, M.D., Medical Chemistry and Toxicology.

Continuous Instruction is given throughout the year (with the exception of the months of July and August), which is free to the matriculates of the Winter Session. The following special subjects are taught during the Preliminary Course in September:—

Medical Jurisprudence, by Professor Meigs.

Dermatology and Syphilitic Diseases, by Dr. F. F. Maury, one of the Surgeons to the Philadelphia Hospital.

Pathological Anatomy, by Dr. Longstreth, Pathologist to the Pennsylvania Hospital.

Operative Surgery, with Operations on the Cadaver, by Dr. John H. Brinton, one of the Surgeons to the Philadelphia Hospital.

Diseases of the Urino-Genital Organs, by Dr. S. W. Gross, one of the Surgeons to the Philadelphia Hospital.

Ophthalmology is treated both clinically and didactically during the entire course, by Dr. William Thomson, one of the Surgeons to the Wills Ophthalmic Hospital.

Laryngoscopy, with Diseases of the Throat, by Dr. J. Solis-Cohen.

The Demonstrator of Surgery, Dr. J. Ewing Mears, delivers a distinct course of ***Demonstrations of Surgery,*** with illustrations on the Cadaver, during the entire session.

Practical Chemistry, with Qualitative and Quantitative Analysis, the Examination of Normal and Abnormal Products, and Manipulation by the student himself, is taught by the Professor of Chemistry, assisted by the Demonstrator, G. M. Ward, M.D.

Practical Anatomy and Morbid Anatomy.—For the study of Practical Anatomy a full supply of material is furnished, free of charge. The anatomical rooms are spacious and provided with every convenience, and not only are subjects for dissection to be had without expense, but there are no incidental or extra charges of any kind. Demonstrator of Anatomy, T. H. Andrews, M.D.

Bedside Instruction is furnished to advanced students. The practical use of the laryngoscope is taught to all candidates for graduation, in classes of convenient size, at the College Hospital, by J. Solis-Cohen, and the use of the ophthalmoscope, by Dr. W. Thomson.

Laboratory Instruction is at the disposal of all the members of the class in the Chemical and Physiological Laboratories, and Practical Instruction in the use of the Microscope is also given.

Post-Mortem Examinations.—During the past winter opportunity was afforded to the graduating class of being present in sections, at autopsies, by Dr. Morris Longstreth, Pathologist to the Jefferson Medical College Hospital and to the Pennsylvania Hospital; and these facilities will be continued during the ensuing session.

The New Hospital of the Jefferson Medical College, which was begun in November, 1875, is now completed and in operation. It is situated immediately west of the College, fronting on Sansom Street, and is bounded on three sides by streets, and by a wide private passage way on the fourth side. It is 107 feet square, five stories in height, and is designed for the easy accommodation of 125 patients. In connection with the Hospital is the Out-door or Dispensary Department, which furnishes much valuable material for clinical instruction. The amphitheatre, provided for Clinical Lectures, is probably the largest and most convenient in the United States, and will seat more than six hundred students. The most approved appliances for heating, ventilation, etc., have been provided, and in architectural construction, and all desirable conveniences, this hospital will be found at least equal to any American clinical hospital. Daily Clinical Lectures are given at the hospital, through the entire year, by members of the Faculty and by the hospital staff, which is constituted as follows:—

Surgeons:	*Physicians:*
JOHN H. BRINTON, M.D.,	J. SOLIS-COHEN, M.D.,
F. F. MAURY, M.D.,	JAMES C. WILSON, M.D.,
S. W. GROSS, M.D.,	JOHN B. ROBERTS, M.D.,
R. J. LEVIS, M.D.	OLIVER P. REX, M.D.
Ophthalmic Surgeon:	*Gynæcologists:*
WILLIAM THOMSON, M.D.	F. H. GETCHELL, M.D.,
	J. EWING MEARS, M.D.,
Aural Surgeon:	*Pathologist:*
L. TURNBULL, M.D.	MORRIS LONGSTRETH, M.D.

A Summer Course of Supplementary Lectures is given, beginning 17th March, 1879, and extended through the months of April, May, and June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non-matriculates pay thirty-five dollars, which is, however, credited on the amount of fees paid for the ensuing winter course.

FEES.

For a Full Course	*$140 00*
Matriculation Fee (paid once only)	*5 00*
Graduation Fee	*30 00*

Students who have attended two full courses on Materia Medica, Institutes, Anatomy, or Chemistry, may be examined on any of these branches at the end of their second course.

The Annual Announcement will be sent, on application to

1116-1122eow1123, 1124, 1126 J. B. BIDDLE, M.D., Dean.

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

1879. BEGIN NOW! 1879.

UNEQUALED INDUCEMENTS!.

NEW SUBSCRIBERS WILL RECEIVE

THE WEEKLY

MEDICAL AND SURGICAL REPORTER

From now until December 31st, 1879,

FOR $5.00!

The MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list, unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, double-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES.

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of *the whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

PRICES PER YEAR.

The Weekly Medical and Surgical Reporter.....$5.00
The Half-Yearly Compendium of Medical Science..... 2.50
The Reporter and Compendium taken together..... 7.00

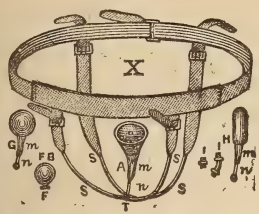
STAUFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.

SERIES OF UTERINE SUPPORTERS. *1.*



Spring Stem Cup A.—Complete on Belt X, $7.00; on XX, $9.00; on Y, $8.00; and on Z, $6.00. Without belt on SS, $5.00.

Anteversion C, Globe Top G, and Oblong H, in price the same as A, with similar attachments.

Retroversion E, on Belt X, $8.00; on XX, $10.00; on Y, $9.00; and on Z $7.00. Without Belt $6.00

Duplicate Cups—A, $2.00; E, 3.00; Globe Tops G, with attachments to screw on A or E Stem $2.00.

P. S.—Shifting Top, with solid or no Spring Stem, 50 cents less on either belt. No Shifting Top Stem sold alone.

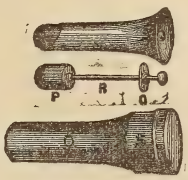
Self-Sustaining Globe B, or Cup D, $1.50 each.

Gums are mailed, 2 at 20 cts; 4 at 35 cts; and Springs at 3 cts. each.

Abdominal Supporters. *2.* *3.*

Price, $4.00. Price, $3.00.

SPECULUMS AND CASE. *6.*

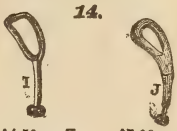


Prices.—The series encased, $14.00. With complete but non-shifting conductor, $2.50 each. Flesh color enameled inside.

Rectum Supporter and Ointment Holder. *4.*

$3.50.

STEM LEVERS. *14.*

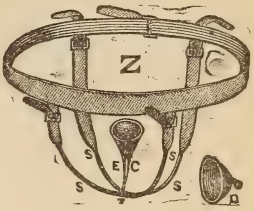


$4.50 on Z, $7.00 on X.

Permanent Stem I—The same in price as E C, Fig. 5, on all the belts.

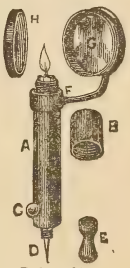
Spring Stem J—The same as Spring Stem Cup A, Fig. 1, on either belt.

SOLID STEM CUP SUPPORTER E. C. *5.*



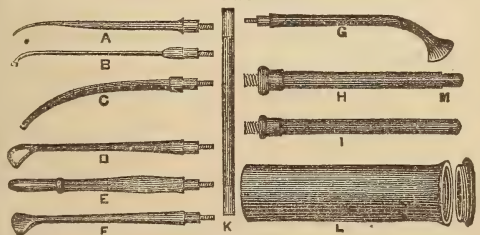
Price, $4.50. Including Cup D, $6.00. Or E C, on Abdominal Belt X, $5.50. X X, $7.50. Y, $6.50. Including D, on each, $1.50 extra.

REFLECTOR, OR DENTISTS' LIGHT. *10.*



Price, $3.50.

HARD RUBBER UTERINE EXAMINING CASE. *12.*



Prices.—Full case, $8.00; Quill Caustic holder H, or camel hair brush holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2.50.

Fenestrated Vaginal and Anal. *7.*

Prices.—Vaginal T, $2.00. Anal U, $1.50.

Caustic Bottle and Case. *11.*

Price, $1.50.

Hymen—Pointed. *8.*

Price, $1.50.

Vaginal and Vulva Dilator. *9.*

Price, $1.50.

Price, $1.00. *15.*

13.

STAUFER'S NON-EVAPORATING INKSTAND.

Price, $1.00.

Supporters E. C. or Economy.—Fig 5, on its elastic belt Z, is the least in price, and by the oblique construction of the cup sets direct within the angle of the axis of the uterus and vagina, (well seen by IU. Fig. 13.) If properly selected, or made so by the exchange privilege, (which admits the interchange of all the hard rubber parts in the catalogue, to cover the purchaser's risk.) It is warranted to correct and sustain even any ***Procidentia.*** The spring stems and shifting tops with their supplements, Fig. 1. Also, improved ***Retroversion, Cup E. Anterversion C.*** and ***Intra-Uterine Stem Cup, IU,*** Fig. 13. The stem locks in a square socket after the cup is in position, and is supported on the elastic gums SS, as A Fig. 1, and same in price. Stem Levers, Fig. 14, etc. All are fully explained in the catalogue. The ***Series*** comprises upwards of 150 in style and size instruments, of which two-thirds belong to the support and correction of the uterus. ***Speculums***—Thomas' objections p. 67—'76, are by them completely overcome. The case contains four. The clear and large view, and facility to work through them, far exceeds any other. The ***Ex. Case,*** and physician's favorite, is admirably represented by Fig. 12—weight but 4 oz. ***Catalogue*** sent free on application. In addition to the description of the above series of instruments, it contains important information on this line of treatment.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

PRACTICAL SURGERY,

INCLUDING

Surgical Dressings, Bandaging, Ligations, and Amputations,

BY J. EWING MEARS, M.D.,

Demonstrator of Surgery in Jefferson Medical College, Professor of Anatomy and Clinical Surgery in the Pennsylvania College of Dental Surgery, Surgeon to St. Mary's Hospital, etc.

In one 12mo volume. Profusely illustrated. Prepared with especial reference to the use of Students. For sale by Messrs Lindsay & Blakiston, Philadelphia Pa. 1126-1138

Pennsylvania College of Dental Surgery.

Twenty-third Annual Session, 1878-79.

The regular Winter Session for 1878-79 will commence on Tuesday, October 1, 1878, and continue five months, in the new and commodious college building, on Twelfth Street, below Arch. The size and equipment of the rooms in this building will enable the Faculty to offer the Dental student the advantages accruing from lecture-rooms with high ceilings and comfortable seatings, clinical rooms with an abundance of light, well-furnished laboratories, mechanical and chemical, and a large and well-lighted and well-ventilated dissecting room. For further information, address

C. N. PEARCE, Dean,

1617 Green Street, Philadelphia.

DR. GARRATT'S

Constant Electric Disks,

That any person may apply and wear with comfort, for relief of local *pains* and *weakness*, coldness and stiffness. It is also remarkable for its constant power to help weak lungs, heart, stomach, kidneys, sluggish liver, lame back, and other ills.

While worn, by night or day, this flexible pad is self-charging, applies a fine constant galvanism that wonderfully cures nervous ills. "For the price and purpose, there is nothing so good. It has no equal." So say physicians, druggists, and those now using this improved electric. Large Disk, $2.50; Children's Disk, $1.00; Long Disk, with straps for the body, $3.50. Do. for large body, $5.00. Can be sent by mail, on receipt of price, by GARRATT & Co., 6 Hamilton Place, Boston, Mass.

Mailed to any address on receipt of Price, $1.25 per Crust.

WM. R. WARNER & CO.,

1228 MARKET STREET, PHILADELPHIA.

SOLUTION
FERROUS CHLORIDE.

This Solution of Iron is the lowest form of Chloride. It is much less styptic in taste than Tr. Iron Chloride, consequently pleasanter to the patient; it is much more easily assimilated by weak and irritable stomachs.

Knowing how difficult it is to introduce into the blood, in a proper form, a sufficient quantity of iron to be beneficial, we have manufactured and introduce the **Ferrous Chloride** as being easily absorbed and acting with much efficacy, even when given in small doses.

Dr. Rabuteau, who has specially studied the protochloride of iron, and shown that it is the most natural of ferruginous salts, thinks that he has found the very thing required:—

EXTRACT FROM THE REPORTS OF THE ACADEMY OF SCIENCES OF PARIS.
(*Sitting of* 11 *December*, 1871.)

"..... The most important thing is the facility with which the protochloride of iron is absorbed by the stomach. Two or three hours after from 4 to 10 grains of this salt have been ingested, almost the whole is absorbed. Having finally observed that the reduced iron and the ferruginous oxyds and carbonates are changed into protochloride in the stomach by the contact with the hydrochloric acid of the gastric juice, I thought it necessary to substitute this salt for all the preceding for medicinal purposes. My observations in the wards of hospitals and in my own practice have convinced me of the successful results of the protochloride of iron, which is easily borne when pure and administered in a proper way."

For details, see the memoirs on the protochloride of iron published in the *Union Médicale, Paris,* 1871 and 1872.

Each fluid drachm contains two grains of the Anhydrous **Ferrous Chloride.**

LIGHT-BROWN COD LIVER OIL

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen, in Ireland.

"I have frequently prescribed Dr. De Jongh's Light-Brown Cod-Liver Oil. I consider it to be a very pure oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,
Author of
"The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-Liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties; and I am satisfied that for medicinal purposes no finer oil can be procured."

Dr. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor-Law Board of Great Britain.

"We think it a great advantage that there is one kind of Cod-Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by Dr. De Jongh. It has long been our practice, when prescribing the Oil, to recommend this kind, since, amidst so much variety and uncertainty, we have confidence in its genuineness."—(Extract from "Consumption: Its early and Remediable Stages.")

Dr. PROSSER JAMES,
Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-Liver Oil as the best on the subject, and adopted its conclusion as to the superiority of the Light-Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. De Jongh's Light-Brown Cod-Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. LETHEBY,
Medical Officer of Health, and Chief Analyst to the City of London.

"In all cases I have found Dr. De Jongh's Light-Brown Cod-Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable. It is, I believe, universally acknowledged that this Oil has great therapeutic power; and, from my investigations, I have no doubt of its being a pure and unadulterated article."

Dr. BANKS,
King's Professor of the Practice of Physic at the University of Dublin.

"I have, in the course of my practice, extensively employed Dr. De Jongh's Light-Brown Cod-Liver Oil, and I have no hesitation in stating that I consider it the best of all the specimens of oil which have ever come under my notice. The fact of so able and accurate an observer as Dr. De Jongh subjecting the Oil to careful analysis previous to its exposure to sale, is a sufficient guarantee of its purity and excellence."

Dr. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College, London.

"Dr. Sheppard has made extensive use of Dr. De Jongh's Light-Brown Cod-Liver Oil, and has great pleasure in testifying to its superiority over every other preparation to be met with in this country. It has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is supplied ONLY in bottles sealed with BETT'S Patent Capsule, impressed on the top with Dr. DE JONGH'S Stamp, and on the side with his Signature, and the Signature of ANSAR, HARFORD & CO. and bearing under the wrapper a Label with the same Stamp and Signatures. WITHOUT THESE MARKS NONE CAN POSSIBLY BE GENUINE.

Sold in IMPERIAL half-pints, $1.00, by the Principal Druggists in the UNITED STATES.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expenses of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly,
SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With*	*Hops (Plain)*,	- - - - - - -	$1.00
"	"	"	*Pyrophosphate of Iron (Ferrated)*, - - - -	1.00

VACCINE VIRUS.

In order to meet properly the continued demand upon us for ANIMAL VIRUS, we have established stables for its propagation upon carefully selected heifers. The lymph used is of the well-known "Beaugency" stock, imported by ourselves expressly for this purpose. The result of several years' experience in supplying this lymph leads us to believe that its excellence is unsurpassed. The establishment is under the care of a competent physician, who will spare no pains to produce a perfectly RELIABLE and PURE article, which we are prepared to furnish FRESH, DAILY.

We can also furnish, to those who prefer it, HUMANIZED VIRUS, from healthy children, procured for us by physicians of undoubted reliability.

All our Virus is put up in strong, *air-tight, sealed packages*, for safe conveyance by mail or express, and will be sent (post-paid if by mail) upon the following terms:—

From the Heifer, 10 large Ivory Points, well charged on both sides	$1.50
5 large Ivory Points, " " "	.80
Large Ivory Points, less than 5, " " " each	.25
1 Crust, new method, in air-tight Glass Capsule	2.00
From Healthy Infants, 10 small Ivory Points	1.50
1 Crust from Unruptured Vesicles	2.00

Directions for vaccinating with either form of Virus, derived from methods successfully employed, will be furnished with Virus if requested.

We will warrant every package of Points and every Crust, giving a fresh supply in case of failure reported within fifteen days for Points, thirty days for Human, and ninety days for Kine Crusts. We can usually furnish Crusts one remove from the heifer, if preferred.

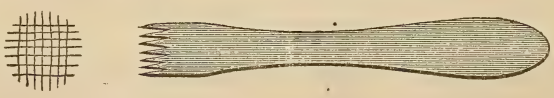
On account of their unreliability, we have hitherto furnished the usual form of Kine Crust unwillingly. Under our new method of taking and preserving them, however, after careful tests and an experience extending over several months, the results attained have been so satisfactory that we now offer them as not less active and reliable than other forms of Virus, while less liable to become inert with lapse of time. We now offer them on very favorable terms, and recommend them for transmission to a distance, and in all cases where it is desired to preserve Virus for some weeks or months, or to keep a supply at hand for emergencies.

We also furnish UNCHARGED IVORY POINTS, for physicians' use, at the following rates:—

Small	per 100, 25 cents;	per 1000 2.00
Large	per 100, 50 cents;	per 1000 4.00

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns, and Institutions.



SCARIFYING VACCINATOR, STEEL, NICKEL PLATED. See Cut. Each 25 cents.

New Illustrated Catalogue of Surgical Instruments sent, post-paid, on request.

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878–'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878–1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

*

1879. BEGIN NOW! 1879.

UNEQUALED INDUCEMENTS!

NEW SUBSCRIBERS WILL RECEIVE

THE WEEKLY

MEDICAL AND SURGICAL REPORTER

From now until December 31st, 1879,

FOR $5.00!

The MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list, unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, double-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES.

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of *the whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

PRICES PER YEAR.

The Weekly Medical and Surgical Reporter.....$5.00
The Half-Yearly Compendium of Medical Science..... 2.50
The Reporter and Compendium taken together..... 7.00

Payable in Advance.

[Unguentum Petrolei]

SAMPLES FURNISHED
ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

PREPARED BY
E. F. HOUGHTON & CO.,

University of Pennsylvania,
MEDICAL DEPARTMENT.
113th ANNUAL SESSION, 1878–79.

The higher plan of medical education is now enforced, requiring attendance upon three graded courses of five months each. Didactic instruction is increased. Bedside instruction of each student in Physical Diagnosis, Clinical Medicine and Surgery, and Gynæcology is provided. The clinical and laboratory facilities are unrivaled in America. Pharmacy, Analytical and Medical Chemistry, Histology, Normal and Morbid Anatomy, and Operative Surgery are taught practically.

A Dental Department has recently been instituted.

For particulars, see ANNOUNCEMENT, for which address

NEW YORK STATE
INEBRIATE ASYLUM,
Binghamton, Broome County, N. Y.

This Asylum is admirably situated, overlooking a fine section of country, and is complete in all the appointments of a first-class home, with ample means to meet the wants of every case. It is located three miles from the city, and removed from all temptation. Its management is the same as all other State charities, under the control of a Board of Managers appointed by the Governor. The law provides for the maintenance of indigent inebriates, similar to that of the insane, but patients from other States may be admitted.

The experience of this Asylum, for the past ten years, indicates an increasing usefulness and necessity for such institutions, and the original intention of making this an Asylum Hospital, where this disorder may be thoroughly understood and treated on broad scientific principles is nearer realized than ever before. All rules are strictly enforced, and no patient permitted to go beyond the Asylum grounds without permission from the Superintendent, or in the care of an attendant.

THE CHARGES FOR BOARD

will include medical care, washing, lights, fuel, etc., with ordinary attention. The exigencies of each particular case will be acted upon, as it may present itself, to those of moderate and limited means as well as the rich.

All inquiries and applications for admission should be addressed to the Superintendent.

WILLARD PARKER, M.D.,
New York, N. Y.,
President Board of Managers.

MOREAU MORRIS, M.D., *Superintendent,*

$1.00 Per Year. 1879. Semi-Monthly.

THE

Michigan Medical News

IS A SEMI-MONTHLY JOURNAL, DEVOTED TO

Therapeutics and Medical News.

Although established only late in January of this year, it already circulates over 3000 copies each month to *bona fide* subscribers. Its subscription list is also being added to at the rate of from seventy-five to a hundred names each month. It has subscribers in every State in the Union.

THIS SUCCESS ARGUES MERIT.

The editors of the NEWS are all active practitioners, and know from personal experience what the busy, practical physician wants in a medical journal. They know his time for reading is limited and does not permit of his struggling through much verbiage for the pith of an article. The NEWS aims to assist him in his every-day business of treating disease—to be his office companion.

The NEWS admits no long, tedious, theoretical, speculative compilations from the text books, but it never fails to post its readers on everything new and of value to the busy doctor.

Its Articles and Selections are Short, Practical and Pithy.

The NEWS is issued regularly on the 10th and 25th of each month, and at the exceedingly low rate of

ONE DOLLAR A YEAR.

Parties remitting $1.00 for 1879 will receive the NEWS gratis for the remainder of this year.

Send a 3-cent postage stamp for a specimen copy of the

BEST JOURNAL PUBLISHED FOR THE MONEY.

THE MEDICAL REGISTER AND DIRECTORY

OF THE

UNITED STATES,

SYSTEMATICALLY ARRANGED BY STATES:

COMPRISING

NAMES, POST-OFFICE ADDRESS, EDUCATIONAL AND PROFESSIONAL STATISTICS, OF MORE THAN 60,000 PHYSICIANS, WITH LISTS OF MEDICAL SOCIETIES, COLLEGES, HOSPITALS, AND OTHER MEDICAL INSTITUTIONS, WITH ABSTRACTS, OF THE MEDICAL LAWS OF EACH STATE, NOTES OF MINERAL SPRINGS. Etc.

BY

SAMUEL W. BUTLER, M. D.

SECOND EDITION, REVISED AND CORRECTED.

One Volume, large octavo, double columns, 874 pages. Price, Cloth, $5.50; Leather, $6.50.

The **SECOND EDITION** of this important work has been prepared at great cost of time and money. The lists have been carefully revised *by leading men in each State.* Nearly TEN THOUSAND new names have been added, and numerous corrections made. Those who have purchased the first edition will find this one to possess *all the value of a new work.*

This work has a *national* and *historic* value, as well as a present *business* one. Besides the names and addresses of all the physicians in the country, it contains the roster of the medical officers in the Army and Navy, list of the officers of State and County medical societies, a sketch of the medical geography of each State and Territory, analysis of the waters of all prominent mineral springs, and a mass of other information interesting to the profession. The collation of the *laws regulating the practice of medicine* in the various States is a feature of special interest and one not to be found in any other publication.

All who desire to reach medical men for business purposes, for instance, Life Insurance Companies, Medical Colleges, Wholesale Druggists, Importers and Manufacturers of Pharmaceutical Specialties, Dealers in Surgical Instruments, will find this book invaluable.

OPINIONS OF THE PRESS.

From the (London) *Lancet:*
This is the first work of the kind that has ever appeared on the other side of the Atlantic. The Editor and Compiler, Dr. S. W. Butler, and the publisher, are to be congratulated upon an undoubted success.

From the (London) *Medical Press and Circular:*
Upon opening its well-filled and well arranged pages our only surprise is that such a go-ahead race as our cousins have the credit of being, should have gone on so long without so valuable a book of reference.

From the (Philadelphia) *Medical Times:*
To publishers, druggists and those members of the profession whose sympathies and needs are wide enough to reach beyond their own immediate neighborhood, this book must be invaluable.

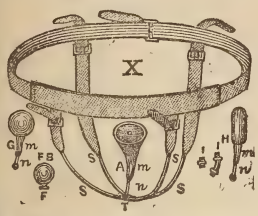
From the (Cincinnati) *Lancet and Observer:*
Of very great value, and will be to physicians what the city directory is to the man of business, a book he cannot get along very well without.

From the *Medical and Surgical Reporter:*
A volume of very considerable importance, the appreciation of which must grow in time, and it should find a place in every medical library of any pretensions of completeness.

Published by D. G. BRINTON,
115 South Seventh Street, Philadelphia.

STAUFFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.

SERIES OF UTERINE SUPPORTERS. *1.*



Spring Stem Cup A.—Complete on Belt X, $7.00; on XX, $9.00; on Y, $8.00; and on Z, $6 00. Without belt on SS, $5.00.

Anteversion C, Globe Top G, and Oblong H, in price the same as A, with similar attachments.

Retroversion E, on Belt X, $8 00; on XX, $10.00; on Y, $9.00; and on Z $7.00. Without Belt $6.00

Duplicate Cups—A, $2.00; E, 3 00; Globe Tops G, with attachments to screw on A or E Stem $2.00.

P. S.—Shifting Top, with solid or no Spring Stem, 50 cents less on either belt. No Shifting Top Stem sold alone.

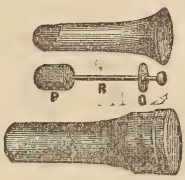
Self-Sustaining Globe B, or Cup D, $1.50 each.

Gums are mailed, 2 at 20 cts; 4 at 35 cts; and Springs at 3 cts. each.

Abdominal Supporters. *2.* *3.*

Price, $4.00. Price, $3.00.

SPECULUMS AND CASE. *6.*



Prices.—The series encased, $14.00. With complete but non-shifting conductor, $2.50 each. Flesh color enameled inside.

Price, $1.50.

Vaginal and Vulva Dilator. *9.*

Price, $1.50.

Caustic Bottle and Case. *11.*

Price, $1.50.

STAUFFER'S NON-EVAPORATING INKSTAND.

Price, $1.00.

Price, $1.00. *15.*

13.

Supporters E. C. or Economy.—Fig 5, on its elastic belt Z, is the least in price, and by the oblique construction of the cup sets direct within the angle of the axis of the uterus and vagina, (well seen by IU. Fig. 13) If properly selected, or made so by the exchange privilege, (which admits the interchange of all the hard rubber parts in the catalogue, to cover the purchaser's risk.) It is warranted to correct and sustain even any ***Procidentia.*** The spring stems and shifting tops with their supplements, Fig. 1. Also, improved ***Retroversion, Cup E. Anterversion C.*** and ***Intra-Uterine Stem Cup, I U,*** Fig 13. The stem locks in a square socket after the cup is in position, and is supported on the elastic gums SS, as A Fig 1, and same in price Stem Levers, Fig. 14, etc. All are fully explained in the catalogue. The ***Series*** comprises upwards of 150 in style and size instruments, of which two-thirds belong to the support and correction of the uterus. ***Speculums***—Thomas' objections p. 67—'76, are by them completely overcome. The case contains four. The clear and large view, and facility to work through them, far exceeds any other. The ***Ex. Case,*** and physician's favorite, is admirably represented by Fig. 12—weight but 4 oz. ***Catalogue*** sent free on application. In addition to the description of the above series of instruments, it contains important information on this line of treatment.

ALWAYS SPECIFY "K. & M." IMPROVED EXTRACT OF MALT.

K. & M.
IMPROVED EXTRACT OF MALT.

Made from Canada Barley, selected, malted, dried, and extracted by, and under the immediate supervision of, Graduates of the Philadelphia College of Pharmacy. CONCENTRATED IN VACUO. This is as perfect an extract of the highest grade of carefully selected Barley Malt as can be PREPARED BY THE USE OF THE MOST IMPROVED VACUUM APPARATUS, recently designed for our own laboratory. As A FOOD in Syphilis, Typhoid and other fevers, Consumption and similar wasting diseases, it is without an equal for the rapid building up of a degenerate or depraved condition of the blood or tissues, since it acts not only as food itself, but its use converts and changes other kinds of food into a condition allowing easy assimilation.

We append the following letter from a gentleman well known to all:

Messrs. KEASBEY & MATTISON: PHILADELPHIA, September 25, 1877.

Gentlemen:—I have employed your Extract of Malt and Infant's Food in a large number of cases, much to my own satisfaction and to the benefit of the patient. The Infant's Food I regard as especially useful in cases of infants requiring artificial food, from any cause.

Yours, etc., W. B. ATKINSON, *Secretary American Medical Association.*

K. & M.
EXTRACT OF MALT WITH COD LIVER OIL.

ORIGINATED BY KEASBEY & MATTISON.

THE MOST NUTRITIVE EMULSION EVER MADE.

Our Improved Extract of Malt, with 50 per cent, of our fine Norwegian Oil, is pre-eminently the emulsion of Cod Liver Oil, since it has double the nutritive effect of any other emulsion of oil. It not only contains the largest amount of nutritive food in the smallest bulk of liquid, but, by the action of the Diastase contained in the malt, it is capable of transforming many times its bulk of amylaceous or graminaceous food into saccharine, thus rendering it easily digestible, even by the most delicate stomach of the invalid. The disagreeable eructations from the stomach, which constitute one of the greatest objections to the use of all preparations of Cod Liver Oil, are completely obviated in this preparation. We would direct the attention of physicians to the special fact that it unites perfectly with water in any proportion, and that the oil does not again separate, thus showing how perfectly the oil is emulsified.

Dose—A Dessert to a Tablespoonful immediately after Meals.

K. & M.
IMPROVED EXTRACT OF MALT WITH PEPSIN.

This is our Improved Extract of Malt, with the addition of five grains of our Saccharated Pepsin to the tablespoonful. For dyspeptic disorders it is found of great value, since it digests both albuminoid and amylaceous matter, thus furnishing a preparation that is needed in the majority of cases of dyspepsia and other derangements of the stomach dependent upon the non-assimilation of the food

Dose—A Dessert to a Tablespoonful immediately after Meals.

K. & M.
BEEF, IRON AND WINE, WITH EXTRACT OF MALT.

ORIGINATED BY KEASBEY AND MATTISON.

A Nourishing Diet for Invalids and Convalescents.

As a simple restorative food, where a tonic effect is desired, there is perhaps nothing in the whole line of tonic dietetics of so much real value as this preparation. It furnishes the diseased stomach with the power of assimilating amylaceous diet, and supplies readily assimilable food at the same time, in the articles of Malt Extract. The iron salt supplies the red corpuscles that are deficient in the blood, while to the nutrient effect of beef is added the stimulant effect of a fine sherry wine. Each tablespoonful represents two grains of the soluble citrate of iron, and one ounce of finely chopped raw lean beef, with equal quantities of our Improved Extract of Malt and sherry wine.

For sale by Druggists everywhere. Samples may be obtained of

The finest, best, and most natural Artificial Eyes in the world, inserted, and sold at Wholesale and Retail, by Dr. THEO. ROTH, 336 N. Sixth St., Philadelphia, General Agent for the United States of L. Mueller's Celebrated German Artificial Eyes, which received the Gold Medal at Berlin, Vienna, Philadelphia (1876), etc. 1128-1140

PRACTICAL SURGERY,

INCLUDING

Surgical Dressings, Bandaging, Ligations, and Amputations,

BY J. EWING MEARS, M.D.,

Demonstrator of Surgery in Jefferson Medical College, Professor of Anatomy and Clinical Surgery in the Pennsylvania College of Dental Surgery, Surgeon to St. Mary's Hospital, etc.

In one 12mo volume. Profusely illustrated. Prepared with especial reference to the use of Students. For sale by Messrs Lindsay & Blakiston, Philadelphia Pa. 1126-1138

STAUFER'S
UTERINE INSTRUMENTS.

The readers of this Journal are familiar with this Series of Instruments, during their rise and progress upwards of ten years. Many have introduced them into their practice, and have written complimentary letters even to this office.

The above late engraving represents—1. The new ***Retroversion Cup,*** with a broad lever of which the corners are rounded and less liable to irritate than the former. 2. ***An Intra-Uterine Stem Cup.*** The Intra-Uterine Stem (hard rubber) is made to order in length and thickness, after a pattern, when desired. The stem is supported as A. Fig. 1. On either belt, and same in price. (*See large plate.*) The stem is inserted after the cup is in position, and locks in a square socket. This gives a reliable and yet yielding base. ***Exchanges.***—To obviate the risk of purchasers, the Hard Rubber part is made exchangeable as all the others are on the catalogue, now aggregating about 150, in size and style of instruments. Over one half belong to the class of Uterine Supporters—the balance to examination and diagnosis. 3. ***Anterversion C.*** The modification consists in a concave rest for the cervix, to retain it in position.

Obtained through this Office, and Catalogues sent on application.

BURN-BRAE,

A PRIVATE HOSPITAL

FOR

MENTAL DISORDERS.

Location beautiful and salubrious. Grounds extensive and handsomely laid out. Distance from Chestnut Street Bridge, Philadelphia, six miles. Access by Baltimore Turnpike, or West Chester and Philadelphia Railroad; nearest station, Oak Lane.

BURN-BRAE accommodates twenty patients of each sex. Though possessing all the safeguards and appliances of a Public Hospital, the arrangements are domestic and familiar. No efforts spared to make the house a comfortable *Home* for its guests.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

LIGHT-BROWN
COD LIVER OIL

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen, in Ireland.

"I have frequently prescribed Dr. De Jongh's Light-Brown Cod-Liver Oil. I consider it to be a very pure oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,
Author of
"The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-Liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties; and I am satisfied that for medicinal purposes no finer oil can be procured."

Dr. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor-Law Board of Great Britain.

"We think it a great advantage that there is one kind of Cod-Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by Dr. De Jongh. It has long been our practice, when prescribing the Oil, to recommend this kind, since, amidst so much variety and uncertainty, we have confidence in its genuineness."—(Extract from "Consumption: Its early and Remediable Stages.")

Dr. PROSSER JAMES,
Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-Liver Oil as the best on the subject, and adopted its conclusion as to the superiority of the Light-Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. De Jongh's Light-Brown Cod-Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. LETHEBY,
Medical Officer of Health, and Chief Analyst to the City of London.

"In all cases I have found Dr. De Jongh's Light-Brown Cod-Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable. It is, I believe, universally acknowledged that this Oil has great therapeutic power; and, from my investigations, I have no doubt of its being a pure and unadulterated article."

Dr. BANKS,
King's Professor of the Practice of Physic at the University of Dublin.

"I have, in the course of my practice, extensively employed Dr. De Jongh's Light-Brown Cod-Liver Oil, and I have no hesitation in stating that I consider it the best of all the specimens of oil which have ever come under my notice. The fact of so able and accurate an observer as Dr. De Jongh subjecting the Oil to careful analysis previous to its exposure to sale, is a sufficient guarantee of its purity and excellence."

Dr. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College, London.

"Dr. Sheppard has made extensive use of Dr. De Jongh's Light-Brown Cod-Liver Oil, and has great pleasure in testifying to its superiority over every other preparation to be met with in this country. It has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is supplied ONLY in bottles sealed with BETT'S Patent Capsule, impressed on the top with Dr. DE JONGH'S Stamp, and on the side with his Signature, and the Signature of ANSAR, HARFORD & CO. and bearing under the wrapper a Label with the same Stamp and Signatures. WITHOUT THESE MARKS NONE CAN POSSIBLY BE GENUINE.

Sold in IMPERIAL half-pints, $1.00, by the Principal Druggists in the UNITED STATES.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
1110-1135 92 CASS STREET, DETROIT.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine ..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D ,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....per oz. $1.00
" (" ").....per doz. 10.00
" (in ½ lb ").....per lb. 12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

THE NEW YORK PHARMACAL ASSOCIATION,

P. O. BOX 1574.

1088-1139eow

SEABURY & JOHNSON,

Originators and Manufacturers of

U. S. PHARMACOPŒIA MEDICINAL AND SURGICAL

PLASTERS, POROUS AND SPREAD IN RUBBER COMBINATION,

NEW YORK AND LONDON.

Received highest and only Award (Medal and Special Diploma of Merit) over all Foreign and Home Competitors in 1876.

THE JURORS' AWARD IS SUBSTANTIALLY

ORIGINALITY.—The successful application of Rubber as a base for all medicinal and mechanical plasters.

RELIABILITY and general excellence of manufactures.

FACTS CONCERNING MEDICINAL PLASTERS IN RUBBER COMBINATION.

India-rubber-spread and Porous Plasters possess indisputable advantages over all other Plasters: (1) The Rubber combination preserves the incorporated drug or extract from decomposition or volatilization; (2) They adhere closer and firmer; (3) They do not soil the skin or linen; (4) They are always pliable, and never become hard or brittle; (5) They adhere without heat or moisture; (6) An increased effect obtained by being porous, as the Plaster neither slides nor moves from its affixed position.

BELLADONNA PLASTER, U. S. P.

IN RUBBER COMBINATION.

Messrs. SEABURY & JOHNSON claim that theirs is the most thoroughly reliable and only strictly officinal Belladonna Plaster ever offered the medical profession. It is an improvement on other Belladonna Plasters in several important particulars. First, it is incorporated with the officinal alcoholic extract only. Secondly, it is freed from all stimulating qualities, thereby insuring the uninfluenced sedative action of Belladonna. Thirdly, it adheres with greater tenacity than others. Physicians have been prejudiced in favor of Allen's English Extract; but recent analysis, fairly conducted by competent chemists, emphatically condemns the Inspissated Extract as a mild and unstable product, representing but one-half or less than one-half of the strength of the U. S. P. Alcoholic Extract of Belladonna. The following result, published in the *American Journal of Pharmacy*, in April, 1876, page 145, is furnished for your consideration, which indicates the following percentage of Atropia in the respective extracts:—

Alcoholic Extract Belladonna, U. S. P......*2,571*
Allen's English Extract.....*1,411*
Herring's English Extract.....*1,179*

The practitioner, as well as ourselves, has but one choice.

Considering these features from a professional standpoint, we offer a Belladonna plaster which cannot be improved upon.

SALICYLATED SURGEONS' RUBBER ADHESIVE PLASTER

This article has met with unprecedented success, and has been emphatically pronounced by our most skillful General and Orthopædic Surgeons, as "the best Surgeons' Adhesive Plaster known." It is applied without heat or moisture, conforms quickly to the parts; is perfectly flexible and waterproof, and is ready for use at any moment. It is free from irritating properties and very healing. In counter-extension it has no equal, as it does not move or slide after being applied. Our India-rubber Adhesive Plaster is also spread on twilled linen, which resists the most powerful strain. In addition to these general improvements, the plaster being impervious to water, wounds can be cleansed without removing the plaster, obviating the necessity of constant redressing, saving labor and time. **Whenever continued powerful adhesion is required, it should be procured in porous form.**

MUSTARD PLASTER (spread on Cotton Cloth).

Our Mustard Plaster is a decided improvement over the best French makes; the mustard is manipulated so as to exclude all the moisture, retaining unimpaired by such treatment, its essential properties. They are always reliable, conform quickly to the part, and when thoroughly wet do not break into pieces, as is the case with all other mustard plasters. They do not crack or peel off, and can be removed without soiling the skin or linen. Being **manufactured only of pure mustard,** they are perfectly free from Croton Oil or other dangerous substitutes, often employed to induce intense irritation.

RUBBER BLISTER PLASTER (Camphorated) U. S. P. STRENGTH.

This article has a splendid reputation; its characteristic action is not impaired by age in any climate. The whole fly is incorporated, which, by constant manipulation is thoroughly and beautifully combined with the plaster. **Its properties are developed quicker, and it blisters in less time than the cerate.** It never fails to blister when used as directed. In addition to its superior efficacy as a vesicant, we incorporate a sufficient quantity of Camphor, which, with the Olive Oil used on the face of the plaster, **prevents Strangury.** This improvement will be appreciated by every practitioner. It is more reliable than any known cantharidal preparation.

CAPSICUM PLASTER.

Recently this article has crept into favor with our most esteemed physicians, and judging from results, it is doubtless the best rubefacient known. It has the specific action of mustard without its objections. The characteristic action of Capsicum is uniformly maintained from twenty-four to forty-eight hours, without blistering, being mild, continuous, and stimulating. This plaster is spread in rubber combination and in porous form. Experience has taught practitioners that the Oleo Resin of Capsicum is too violent, frequently vesicating; we incorporate the crude drug in sufficient quantity, without risk to the patient. Our Capsicum Plasters will be found more practical for general use than the **so-called Mustard or Capsicum Papers.**

SPECIAL NOTICE TO PHYSICIANS.

QUALITY IS OF GREAT IMPORTANCE TO THE PRACTITIONER: BY RELIABLE PREPARATIONS HE SUPPLEMENTS HIS OWN SKILL. You can therefore rest assured that every article we manufacture is of strict pharmacopœia strength, and incorporated with perfectly reliable Extracts and Drugs, well selected, carefully and conscientiously prepared, and manufactured invariably under the personal superintendence of one of our firm. OUR WHOLE ATTENTION AND STUDY IS DEVOTED ENTIRELY TO THE ART OF PLASTER MAKING, and we are ready at all times to receive suggestions from the fraternity, which may be of benefit to all.

SEABURY & JOHNSON,

21 Platt Street, New York.

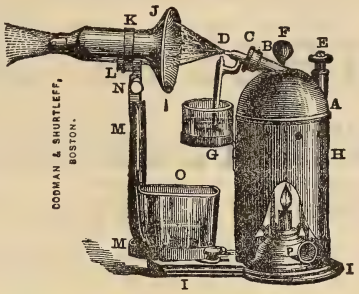
ALL THE ABOVE ARTICLES SOLD BY DRUGGISTS EVERYWHERE.

ALWAYS SPECIFY SEABURY & JOHNSON'S PLASTERS.

CODMAN & SHURTLEFF'S

ATOMIZING APPARATUS.

PRICES REDUCED.



THE COMPLETE STEAM ATOMIZER. (Patented March 24, 1868.)

All its joints are hard-soldered.

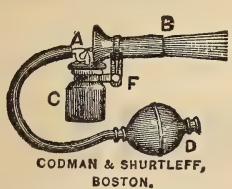
Every one is tested by hydrostatic pressure, to more than one hundred pounds to the square inch.

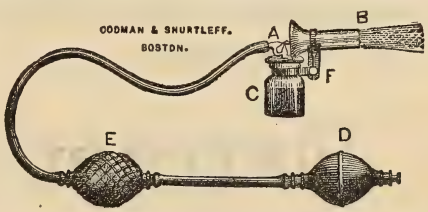
It cannot be injured by exhaustion of water, or any attainable pressure, and will last for many years.

It does not throw spirts of hot water, is convenient, durable, portable, compact, and cheap, in the best sense of the word. Price $5.00. Postage 59c.

Brass parts, nickel-plated, additional, $2.00.

Neatly made, strong Black Walnut Box, with convenient Handle, additional, $2.50. Postage 44c.





THE BOSTON ATOMIZER. (Patented.) *SHURTLEFF'S ATOMIZING APPARATUS. (Patented.)*

The most desirable Hand Apparatus. Rubber warranted of the very best quality. Valves imperishable, every one carefully fitted, and will work perfectly in all positions. Price $3.50.

The Bulbs are adapted to all the Atomizing Tubes made by us.

Each of the above Apparatus is supplied with two carefully-made annealed glass Atomizing Tubes, and accompanied with directions for use. Each Apparatus is carefully packed for transportation, and warranted perfect.

For full description see NEW PAMPHLET on Atomization of Liquids with Formulæ of many articles of the Materia Medica successfully employed in the practice of a well-known American practitioner, together with descriptions of the best forms of apparatus, which will be sent, post-paid, on application.

Plaster Bandages and Bandage Machines, Articles for Antiseptic Surgery, Aspirators, Clinical Thermometers, Crutches, Air Cushions, Wheel Chairs and Articles for Invalids, Mechanical Appliances for all deformities and deficiencies, Trusses, Elastic Hose, etc. Electric Instruments for all Medical and Surgical uses, Hypodermic Syringes, Ice and Hot Water Bags, Manikins, Models, Skeletons, Skulls, etc., etc. Naturalists' Instruments, Sphygmographs, Splints and Fracture Apparatus, Stethoscopes, Syringes of all kinds, Teeth Forceps, Test Cases, Transfusion Instruments, French Rubber Urinals, Urinometers, Vaccine Virus, Veterinary Instruments, Waldenburg's Pneumatic Apparatus, etc., etc.

Surgical Instruments and Medical Appliances of every description promptly repaired.

Having our Factory, with steam power, ample machinery, and experienced workmen, connected with our store, we can promptly make to order, in the best manner, and from almost any material, new instruments and apparatus, and supply new inventions on favorable terms. Instruments bearing our name are fully warranted. With hardly an exception they are the product of our own factory, and made under our personal supervision, by skilled workmen, who, being paid for their time, are not likely to slight their work through haste.

New Illustrated Catalogue, postpaid, on application.

CODMAN & SHURTLEFF,

1088-1139-eow

13 and 15 TREMONT STREET, BOSTON.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

1879. BEGIN NOW! 1879.

UNEQUALED INDUCEMENTS!

NEW SUBSCRIBERS WILL RECEIVE

THE WEEKLY

MEDICAL AND SURGICAL REPORTER

From now until December 31st, 1879,

FOR $5.00!

The MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list, unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, double-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES.

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of *the whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

PRICES PER YEAR.

***The Weekly Medical and Surgical Reporter*.....$5.00**
***The Half-Yearly Compendium of Medical Science*..... 2.50**
***The Reporter and Compendium taken together*..... 7.00**

Payable in Advance.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

We respectfully ask the Medical Profession to give the above preparation a trial, knowing they will find it just the thing long desired, and obtain splendid results in the wasting diseases indicated by malnutrition and assimilation. The *perfect* and *permanent* union of the Cod Liver Oil with the Hypophosphites, and the thorough manner in which the nauseous taste is disguised, renders it so palatable that the most delicate stomach can retain it. The notable advantage it possesses over all other preparations, is its *permanency* as an *emulsion*, remaining for an almost unlimited time without the slightest separation or change, which enables the Physician always to prescribe it in its proper proportions. The oil is prepared expressly for us, and guaranteed strictly pure. We will gladly furnish, express paid, a 4-oz. sample to any Physician in the country who may not have been supplied.

Formula.—50 per cent. of pure Cod Liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce.

SCOTT & BOWNE,
Manufacturing Chemists, 125 Hudson Street, N. Y.

essrs. Scott & Bowne: New York, September 4, 1876.

Gents—I have prescribed Scott's Emulsion of Cod Liver Oil with Hypophosphites in both private and hospital practice, and consider it a valuable preparation. It remains as a permanent emulsion, even in extremely hot weather, and is more palatable than any other preparation of oil that I have used. Yours, very respectfully,
ROBERT WATTS, M.D., President Medical Board, Charity Hospital.

Messrs. Scott & Bowne:

Gentlemen—Having given your Emulsion of Cod Liver Oil and Hypophosphites of Lime and Soda a fair trial during the past eighteen months, am very much pleased with the same, and consider it the best preparation of the kind in the market.
Yours, truly, J. H. HARTMAN, M.D., Baltimore, Md.

We also refer to the following Physicians, who use it and recommend it to the Profession:

G. C. SHATTUCK, M.D., 18 Stamford Street (Late Visiting Physician, Mass. General Hospital).
J. AYER, M.D., No. 6 Hancock Street, Boston.
G. W. GAY, M.D., 575 Tremont Street (Visiting Surgeon Boston City Hospital).
F. E. BUNDY, M.D., 99 Waltham Street, Boston.
W. B. MACKIE, M.D., 675 Tremont Street, Boston.
J. A. OCTERLONY, M.D., Louisville, Ky.
J. SIMONAUD, M.D., New Orleans.
G. LANE TANEYHILL, M.D., Baltimore.
EDWARD A. MARIS, M.D., Baltimore.

NOW IS THE TIME TO SUBSCRIBE

— FOR THE —

Cincinnati Lancet and Clinic,

THE LEADING WESTERN MEDICAL JOURNAL.

It has an able Corps of Contributors; Gives a Condensed Statement of the Progress of Medicine and Surgery; Reviews the Latest Medical Works; Publishes Society Proceedings, and keeps its Readers informed of the Medical News of the Day.

THE CINCINNATI LANCET AND CLINIC is issued *every Saturday*, and contains 20 large octavo double-columned pages of reading matter in every number, and is handsomely printed on fine tinted book paper, neither labor nor expense being spared to adapt it to the daily wants of the American practitioner of Medicine.

THE LANCET AND CLINIC is strictly an independent journal, not being controlled or published in the special interest of any College or Society, but is devoted to the advancement of science and progress of rational Medicine.

SPECIAL INDUCEMENTS.

NEW SUBSCRIBERS, who remit their names and subscription AT ONCE, will receive THE LANCET AND CLINIC from NOW until December 31, 1879,

FOR $3.50.

Price, $1.00. *15.*

13.

Supporters E. C. or Economy.—Fig 5, on its elastic belt Z, is the least in price, and by the oblique construction of the cup sets direct within the angle of the axis of the uterus and vagina, (well seen by IU. Fig 13.) If properly selected, or made so by the exchange privilege, (which admits the interchange of all the hard rubber parts in the catalogue, to cover the purchaser's risk.) It is warranted to correct and sustain even any ***Procidentia.*** The spring stems and shifting tops with their supplements, Fig. 1. Also, improved ***Retroversion, Cup E. Anterversion C.*** and ***Intra-Uterine Stem Cup, IU,*** Fig. 13. The stem locks in a square socket after the cup is in position, and is supported on the elastic gums SS, as A Fig. 1, and same in price. Stem Levers, Fig. 14, etc. All are fully explained in the catalogue. The ***Series*** comprises upwards of 150 in style and size instruments, of which two-thirds belong to the support and correction of the uterus. ***Speculums***—Thomas' objections p. 67—'76, are by them completely overcome. The case contains four. The clear and large view, and facility to work through them, far exceeds any other. The ***Exa. Case,*** and physician's favorite, is admirably represented by Fig. 12—weight but 4 oz. ***Catalogue*** sent free on application. In addition to the description of the above series of instruments, it contains important information on this line of treatment.

THE THREE BEST TONICS OF THE PHARMACOPŒIA:

IRON, PHOSPHORUS, CALISAYA.

CASWELL, HAZARD & CO. call the attention of the Profession to their preparation of the above estimable Tonics, as combined in their elegant and palatable

FERRO-PHOSPHORATED ELIXIR OF CALISAYA BARK.

A combination of the Pyrophosphate of Iron and Calisaya never before attained, in which the nauseous inkiness of the iron and astringency of the Calisaya are overcome, without any injury to their active tonic principles, and blended into a beautiful Amber-colored Cordial, delicious to the taste and acceptable to the most delicate stomach. This preparation is made directly from the **ROYAL CALISAYA BARK**—not from **its ALKALOIDS OR THEIR SALTS**—being unlike other preparations called "Elixir of Calisaya and Iron," which are simply an **Elixir of Quinine and Iron.** Our Elixir can be depended upon as being a true Elixir of Calisaya Bark with Iron. Each dessertspoonful contains seven and a half grains Royal Calisaya Bark, and two grains Pyrophosphate of Iron.

Ferro-Phosphorated Elixir of Calisaya Bark with Strychnia. This preparation contains one grain of Strychnia added to each pint of our Ferro-Phosphorated Elixir of Calisaya Bark, greatly intensifying its tonic effect.

Ferro-Phosphorated Elixir of Calisaya with Bismuth, containing eight grains Ammonio-Citrate of Bismuth in each tablespoonful of the Ferro Phosphorated Elixir of Calisaya Bark.

Elixir Phosphate Iron, Quinine and Strychnia. Each teaspoonful contains one grain Phosphate Iron, one grain Phosphate Quinine, and one sixty-fourth of a grain of Strychnia.

Ferro-Phosphororated Elixir of Gentian, containing one ounce of Gentian and one hundred and twenty-eight grains Pyrophosphate Iron to the pint, making in each dessertspoonful seven and one half grains Gentian and two grains Pyrophosphate Iron.

Ferro-Phosphorated Wine of Wild Cherry Bark. Each fluid-drachm contains twenty-five grains of the Bark, and two grains of Ferri-Pyrophosphate.

Elixir Taraxacum Comp. Each dessertspoonful contains fifteen grains of Taraxacum.

Elixir Pepsin, Bismuth, and Strychnine. Each fluid-drachm contains one sixty-fourth of a grain of Strychnine.

Juniper Tar Soap. Highly recommended by the celebrated Erasmus Wilson, and has been found very serviceable in chronic eczema and diseases of the skin generally. It is invaluable for chapped hands and roughness of the skin caused by change of temperature. It is manufactured by ourselves, from the purest materials, and is extensively and successfully prescribed by the most eminent Physicians.

APOLLINARIS
NATURAL MINERAL WATER.

THE QUEEN OF TABLE WATERS.

HIGHLY EFFERVESCENT.

APPROVED BY THE ACADEMY OF MEDICINE OF FRANCE, AND ITS SALE IN FRANCE AUTHORIZED BY SPECIAL ORDER OF THE FRENCH GOVERNMENT.

DR. LEWIS A. SAYRE.—"A delightful beverage."
DR. WILLIAM A. HAMMOND.—"Far superior to Vichy, Seltzer, or any other."
DR. ALFRED L. LOOMIS.—"Most grateful and refreshing."
DR. R. OGDEN DOREMUS.—"Absolutely pure and wholesome; superior to all for daily use; free from all the objections urged against Croton and artificially aerated waters."
PROF. WANKLYN, London, Eng.—"Impregnated only with its own gas."
DR. E. R. PEASLEE.—"Useful and very agreeable."
DR. AUSTIN FLINT, DR F. N. OTIS.—"Healthful, and well suited for Dyspepsia, and cases of acute disease."
DR. JAMES R. WOOD.—"Mildly antacid; agrees well with dyspeptics, and where there is a gouty diathesis."
DR. FORDYCE BARKER.—"By far the most agreeable, alone or mixed with wine; useful in Catarrhs of Stomach or Bladder, and in Gout."
DR. J. MARION SIMS.—"Not only a luxury, but a necessity."

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and Wholesale of

LEBAIGUE'S
DIALYSED IRON,
OR
PURE PEROXIDE OF IRON,
IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

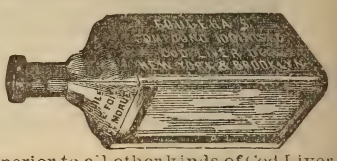
It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate, nor cause any disturbance of the digestive apparatus, and is to be preferred by persons who could not support any other preparation of iron. It is offered in the form of a **solution**, which is generally preferred; or of an **elixir**, when a slight stimulant is desired.

DOCTOR GIBERT'S
DEPURATORY SYRUP AND DRAGEES,
OF IODIZED DEUTO-IODIDE OF MERCURY.

These preparations have been approved by the Academy of Medicine of Paris, and have been thoroughly tested in the hospitals of Paris in the treatment of *Syphilitic, Scrofulous* and other affections requiring the use of iodized remedies.
They are recommended for the utmost accuracy of composition, and their perfect preservation.

Prepared by VAUQUELIN-DESLAURIERS, Chemist, Paris.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**
It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus**, which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.
Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.
(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.
Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

SOLD BY DRUGGISTS GENERALLY.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

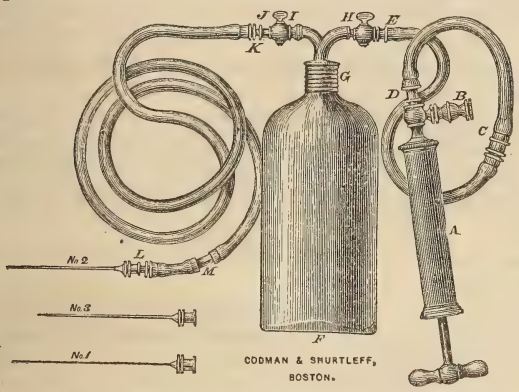

Fig. 77.

Fig. 68.

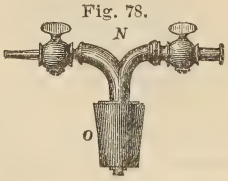

Fig. 78.

The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator. Nickel-plated, with two Needles, Tubes, etc., in case.....$14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

An illustrated Catalogue of Surgical Instruments, also a New Pamphlet on Atomization of Liquids, with description of Improved Apparatus and Formulæ of Remedies successfully employed, will be forwarded, post-paid, on application.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With*	*Hops (Plain)*,		$1.00
"	"	"	*Pyrophosphate of Iron (Ferrated)*,	1.00

L. REICH,

DIRECT IMPORTER OF THE

CHOICEST AND PUREST

Hungarian WINES

EVER BROUGHT TO THIS COUNTRY,

STRICTLY FOR MEDICINAL USE.

13 West 11th St., New York.

Mr. REICH will be pleased to see those of the Medical Profession who may desire to avail themselves of the opportunity of procuring **STRICTLY FIRST-CLASS WINES**, which have received the endorsement of the most eminent Medical men of the country, as is evidenced from the following letters of commendation which have been received:—

This is to certify, that I have examined Mr. L. REICH'S TOKAYER AUSBRUCH, TOKAYER MASLAS and BUDAI IMP. I take great pleasure in commending these Wines to the Medical Profession because of their purity.

R. OGDEN DOREMUS, M.D., LL.D.,
Prof. of Chem. and Toxicology in Bellevue Hosp. Med. Col., and Prof. of Chem. and Physics in Col. City of New York.

We have used in our practice the Hungarian Wines sold by Mr. LORENZ REICH, who puts them on the market unadulterated, just as they are imported. To this fact we attribute their great value as a medicine in diseases where such tonics are indicated, especially in those which are attended by defective digestion and imperfect assimilation. We cordially recommend Mr. REICH and his Wines to our professional brethren.

LIGHT-BROWN
COD LIVER OIL

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen, in Ireland.

"I have frequently prescribed Dr. De Jongh's Light-Brown Cod-Liver Oil. I consider it to be a very pure oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,
Author of
"The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-Liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties; and I am satisfied that for medicinal purposes no finer oil can be procured."

Dr. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor-Law Board of Great Britain.

"We think it a great advantage that there is one kind of Cod-Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by Dr. De Jongh. It has long been our practice, when prescribing the Oil, to recommend this kind, since, amidst so much variety and uncertainty, we have confidence in its genuineness."—(Extract from "Consumption: Its Early and Remediable Stages.")

Dr. PROSSER JAMES,
Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-Liver Oil as the best on the subject, and adopted its conclusion as to the superiority of the Light-Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. De Jongh's Light-Brown Cod-Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. LETHEBY,
Medical Officer of Health, and Chief Analyst to the City of London.

"In all cases I have found Dr. De Jongh's Light-Brown Cod-Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable. It is, I believe, universally acknowledged that this Oil has great therapeutic power; and, from my investigations, I have no doubt of its being a pure and unadulterated article."

Dr. BANKS,
King's Professor of the Practice of Physic at the University of Dublin.

"I have, in the course of my practice, extensively employed Dr. De Jongh's Light-Brown Cod-Liver Oil, and I have no hesitation in stating that I consider it the best of all the specimens of oil which have ever come under my notice. The fact of so able and accurate an observer as Dr. De Jongh subjecting the Oil to careful analysis previous to its exposure to sale, is a sufficient guarantee of its purity and excellence."

Dr. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College, London.

"Dr. Sheppard has made extensive use of Dr. De Jongh's Light-Brown Cod-Liver Oil, and has great pleasure in testifying to its superiority over every other preparation to be met with in this country. It has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is supplied ONLY in bottles sealed with BETT'S Patent Capsule, impressed on the top with Dr. DE JONGH'S Stamp, and on the side with his Signature, and the Signature of ANSAR, HARFORD & CO., and bearing under the wrapper a Label with the same Stamp and Signatures. WITHOUT THESE MARKS NONE CAN POSSIBLY BE GENUINE.

Sold in IMPERIAL half-pints, $1.00, by the Principal Druggists in the UNITED STATES.

1879. BEGIN NOW! 1879.

UNEQUALED INDUCEMENTS!

NEW SUBSCRIBERS WILL RECEIVE

THE WEEKLY

MEDICAL AND SURGICAL REPORTER

From now until December 31st, 1879,

FOR $5.00!

The MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list, unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, double-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES.

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of *the whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

PRICES PER YEAR.

The Weekly Medical and Surgical Reporter.....$5.00
The Half-Yearly Compendium of Medical Science..... 2.50

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

THE CHICAGO

MEDICAL JOURNAL AND EXAMINER.

(ESTABLISHED 1844.)

EDITORS:

WILLIAM H. BYFORD, A.M., M.D., | FERD. C. HOTZ, M.D.,
JAS. NEVINS HYDE, A.M., M.D., | E. FLETCHER INGALS, M.D.

ISSUED MONTHLY.

Two Volumes a year, of 672 pages each; beginning with the January and July Numbers.

PUBLISHED BY

The Medical Press Association,

FOR THE BENEFIT OF THE

Chicago Medical Library.

This is one of the largest and best medical journals in the country. It furnishes more reading matter for the money than any other journal in the United States, with one exception, and its excellence is attested by the fact that it is taken by nearly all the leading men in the West.

Notice to Contributors.

WE are glad to receive contributions from every one who knows anything of interest to the profession. Articles designed for publication in the JOURNAL AND EXAMINER should be handed in before the fifteenth of the month, in order to give the editors time for careful perusal. A limited number of EXTRA COPIES or reprints (not exceeding fifty) will be given the authors of accepted articles or reviews, provided they are ordered when the copy is forwarded to us. Rejected manuscript will be returned upon application and receipt of postage.

N.B.—New Subscribers, by enclosing a copy of this advertisement, may obtain the JOURNAL AND EXAMINER from now until December 31st, 1879, for $4.00.

TERMS:—$4.00 per annum, in advance. Single copies 35 cents.

Postage free. Subscriptions received for any period.

SEND FOR SPECIMEN PAGES.

Address **E. FLETCHER INGALS, M.D.,**
188 CLARK STREET, CHICAGO.

Journal of Nervous and Mental Diseases $5.00 per annum.

THE CHICAGO MEDICAL JOURNAL AND EXAMINER AND THE JOURNAL OF NERVOUS AND MENTAL DISEASES, $7.50 PER ANNUM.

1129-3tm

IMPORTANT TO EVERY PHYSICIAN!

VOL. V BEGINS JAN. 1, 1879.

Gentlemen Subscribing for 1879 will receive the Gazette from the time of remitting their Subscription to Jan. 1, Gratis.

THE HOSPITAL GAZETTE,

A Weekly Journal of Medicine, Surgery, and the Collateral Sciences.

EDITED BY

EDWARD J. BERMINGHAM, A.M., M.D., and FREDERICK A. LYONS, A.M., M.D.

H. H. KANE, M.D., Associate Editor.

This journal is published regularly EVERY THURSDAY in the chief medical centre of this continent, and each number presents a faithful *weekly* epitome of the progress of Medical Science. The following Departments are represented: ***Lectures, Editorials, Original Articles, Hospital Records, Translations, Periscope, Bibliography, Society Proceedings, Correspondence, News Items and Notes.***

Each number contains *twenty large, closely printed pages* of the choicest and most valuable reading matter, thus making ***1040 pages annually,*** which, owing to our very large circulation, we are enabled to furnish at the remarkably low price of

$2.00 PER YEAR, INCLUDING POSTAGE,

thus making it the cheapest journal published.

☞ We decline to notice requests for specimen copies, but shall be happy to give any gentleman desiring it a trial subscription of 3 months for 50 cents, payable in advance. This plan will give those contemplating subscribing an opportunity to thoroughly examine the merits of the journal.

Address all communications to

1125-m3t THE HOSPITAL GAZETTE, New York City.

NOW IS THE TIME TO SUBSCRIBE

— FOR THE —

Cincinnati Lancet and Clinic,

THE LEADING WESTERN MEDICAL JOURNAL.

It has an able Corps of Contributors; Gives a Condensed Statement of the Progress of Medicine and Surgery; Reviews the Latest Medical Works; Publishes Society Proceedings, and keeps its Readers informed of the Medical News of the Day.

THE CINCINNATI LANCET AND CLINIC is issued *every Saturday*, and contains 20 large octavo double-columned pages of reading matter in every number, and is handsomely printed on fine tinted book paper, neither labor nor expense being spared to adapt it to the daily wants of the American practitioner of Medicine.

THE LANCET AND CLINIC is strictly an independent journal, not being controlled or published in the special interest of any College or Society, but is devoted to the advancement of science and progress of rational Medicine.

SPECIAL INDUCEMENTS.

NEW SUBSCRIBERS, who remit their names and subscription AT ONCE, will receive THE LANCET AND CLINIC from NOW until December 31, 1879,

FOR $3.50.

Address all communications to

Dr. J. C. CULBERTSON,

1128-1153 *281 West Seventh Street, Cincinnati, Ohio.*

[Unguentum Petrolei]

SAMPLES FURNISHED
ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

E. F. HOUGHTON & CO.,

1109-eow-tf 211 S. FRONT STREET, PHILADELPHIA.

University of Pennsylvania,

MEDICAL DEPARTMENT.

113th ANNUAL SESSION, 1878–79.

The higher plan of medical education is now enforced, requiring attendance upon three graded courses of five months each. Didactic instruction is increased. Bedside instruction of each student in Physical Diagnosis, Clinical Medicine and Surgery, and Gynæcology is provided. The clinical and laboratory facilities are unrivaled in America. Pharmacy, Analytical and Medical Chemistry, Histology, Normal and Morbid Anatomy, and Operative Surgery are taught practically.

A Dental Department has recently been instituted.

For particulars, see ANNOUNCEMENT, for which address

JAMES TYSON, M. D.,
Secretary,

P. O. Box 2838, Philadelphia, Pa.
1105-1130eow

NEW YORK STATE

INEBRIATE ASYLUM,

Binghamton, Broome County, N. Y.

This Asylum is admirably situated, overlooking a fine section of country, and is complete in all the appointments of a first-class home, with ample means to meet the wants of every case. It is located three miles from the city, and removed from all temptation. Its management is the same as all other State charities, under the control of a Board of Managers appointed by the Governor. The law provides for the maintenance of indigent inebriates, similar to that of the insane, but patients from other States may be admitted.

The experience of this Asylum, for the past ten years, indicates an increasing usefulness and necessity for such institutions, and the original intention of making this an Asylum Hospital, where this disorder may be thoroughly understood and treated on broad scientific principles is nearer realized than ever before. All rules are strictly enforced, and no patient permitted to go beyond the Asylum grounds without permission from the Superintendent, or in the care of an attendant.

THE CHARGES FOR BOARD

will include medical care, washing, lights, fuel, etc., with ordinary attention. The exigencies of each particular case will be acted upon, as it may present itself, to those of moderate and limited means as well as the rich.

All inquiries and applications for admisston should be addressed to the Superintendent.

WILLARD PARKER, M.D.,
New York, N. Y.,
President Board of Managers.

MOREAU MORRIS, M.D., *Superintendent*,
Binghamton, Broome Co., N. Y. 1105-1155eow

LONDON M'F'G CO.'S
ESSENCES OF MEATS,

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN

Which consist solely of the finest juices from choice meats; extracted by a gentle heat, without the addition of water, or any substance whatever. They have been prescribed by the English Medical Profession for the past fifteen years, and since their introduction here have earned the highest commendations. They are peculiarly adapted

FOR INVALIDS—Natural, Pleasant, Refreshing.
FOR INFANTS—Strictly Pure; Prepared without Salt.
FOR DYSPEPTICS—Easily Assimilated.
IN CASES OF SEA SICKNESS—Afford Immediate Nourishment.
AFTER CHILDBIRTH—Meat Stimulant; Concentrated Form.

They retain the fine flavor and smell of the Meat. Are a heavy liquid in a warm temperature, and when placed upon ice take a jelly form, which is especially refreshing to Invalids. They are retained upon the stomach, in very critical cases, when the most carefully prepared soup is rejected. Children readily take them, and in many of their complaints requiring nourishment, "Essences" are UNEQUALED. *In summer, when opened, keep on Ice, leaving the lid partly raised.* DO NOT ADD WATER.

Taken cold direct from the Can, needing no Preparation whatever.

ENTIRELY TAKES THE PLACE OF BEEF TEA.

Physicians and Patrons are cordially invited to visit our Works.

PREPARED ONLY BY THE

LONDON MANUFACTURING COMPANY,

77 and 79 VARICK STREET, NEW YORK.

RELIABLE

ANIMAL VACCINE.

The undersigned respectfully announces that he has discontinued the practice of furnishing Vaccine *at his residence.*

Physicians can obtain the ***Animal Vaccine*** of MESSRS. CASWELL, HAZARD & CO., BROADWAY, CORNER 24TH STREET.

FRANK P. FOSTER, M.D.

By our arrangement with Dr. Foster, *all* Vaccine supplied by *us* is *absolutely fresh.*

We can furnish it in any quantity desired, either by express or by mail, if remittance is made to cover postage.

Dr. Foster's Animal Vaccine is the only kind that may be said to have the unqualified endorsement of the Medical Profession of New York.

QUILL SLIPS (half quill, charged on convex surface, at square-cut end).....25 cts.
CAPILLARY TUBES.....$2 00

For ordinary use ***Quill Slips*** are the most reliable of all forms of stored Vaccine, and in cases of failure with them in *primary* vaccination, if used within one week of their issue, and strictly in accordance with the printed directions, *being in the meantime kept cool and dry*, a second supply will be furnished gratis.

Tubes are intended chiefly for transportation to long distances, as the virus is preserved for a considerable length of time. They are superior to crusts, but inferior to quill slips.

Crusts are not recommended, and are not sold, for the reason that, however fresh, and however well formed they may be, they are apt to prove inefficient.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals an essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defective health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin.....8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine.....6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....per oz.	$1.00
" (" ").....per doz.	10.00
" (in ½ ℔ ").....per ℔.	12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

1088-1139eow

SEABURY & JOHNSON,

Originators and Manufacturers of

U. S. PHARMACOPŒIA MEDICINAL AND SURGICAL

PLASTERS, POROUS AND SPREAD IN RUBBER COMBINATION,

NEW YORK AND LONDON.

Received highest and only Award (Medal and Special Diploma of Merit) over all Foreign and Home Competitors in 1876.

THE JURORS' AWARD IS SUBSTANTIALLY

ORIGINALITY.—The successful application of Rubber as a base for all medicinal and mechanical plasters.

RELIABILITY and general excellence of manufactures.

FACTS CONCERNING MEDICINAL PLASTERS IN RUBBER COMBINATION.

India-rubber-spread and Porous Plasters possess indisputable advantages over all other Plasters: (1) The Rubber combination preserves the incorporated drug or extract from decomposition or volatilization; (2) They adhere closer and firmer; (3) They do not soil the skin or linen; (4) They are always pliable, and never become hard or brittle; (5) They adhere without heat or moisture; (6) An increased effect obtained by being porous, as the Plaster neither slides nor moves from its affixed position.

BELLADONNA PLASTER, U. S. P.

IN RUBBER COMBINATION.

Messrs. SEABURY & JOHNSON claim that theirs is the most thoroughly reliable and only strictly officinal Belladonna Plaster ever offered the medical profession. It is an improvement on other Belladonna Plasters in several important particulars. First, it is incorporated with the officinal alcoholic extract only. Secondly, it is freed from all stimulating qualities, thereby insuring the uninfluenced sedative action of Belladonna. Thirdly, it adheres with greater tenacity than others. Physicians have been prejudiced in favor of Allen's English Extract; but recent analysis, fairly conducted by competent chemists, emphatically condemns the Inspissated Extract as a mild and unstable product, representing but one-half or less than one-half of the strength of the U. S. P. Alcoholic Extract of Belladonna. The following result, published in the *American Journal of Pharmacy*, in April, 1876, page 145, is furnished for your consideration, which indicates the following percentage of Atropia in the respective extracts:—

Alcoholic Extract Belladonna, U. S. P......2,571
Allen's English Extract.....1,411
Herring's English Extract.....1,179

The practitioner, as well as ourselves, has but one choice.

Considering these features from a professional standpoint, we offer a Belladonna plaster which cannot be improved upon.

SALICYLATED SURGEONS' RUBBER ADHESIVE PLASTER

This article has met with unprecedented success, and has been emphatically pronounced by our most skillful General and Orthopædic Surgeons, as "the best Surgeons' Adhesive Plaster known." It is applied without heat or moisture, conforms quickly to the parts; is perfectly flexible and waterproof, and is ready for use at any moment. It is free from irritating properties and very healing. In counter-extension it has no equal, as it does not move or slide after being applied. Our India-rubber Adhesive Plaster is also spread on twilled linen, which resists the most powerful strain. In addition to these general improvements, the plaster being impervious to water, wounds can be cleansed without removing the plaster, obviating the necessity of constant redressing, saving labor and time. **Whenever continued powerful adhesion is required, it should be procured in porous form.**

MUSTARD PLASTER (spread on Cotton Cloth).

Our Mustard Plaster is a decided improvement over the best French makes; the mustard is manipulated so as to exclude all the moisture, retaining unimpaired by such treatment, its essential properties. They are always reliable, conform quickly to the part, and when thoroughly wet do not break into pieces, as is the case with all other mustard plasters. They do not crack or peel off, and can be removed without soiling the skin or linen. Being **manufactured only of pure mustard,** they are perfectly free from Croton Oil or other dangerous substitutes, often employed to induce intense irritation.

RUBBER BLISTER PLASTER (Camphorated) U. S. P. STRENGTH.

This article has a splendid reputation; its characteristic action is not impaired by age in any climate. The whole fly is incorporated, which, by constant manipulation is thoroughly and beautifully combined with the plaster. **Its properties are developed quicker, and it blisters in less time than the cerate.** It never fails to blister when used as directed. In addition to its superior efficacy as a vesicant, we incorporate a sufficient quantity of Camphor, which, with the Olive Oil used on the face of the plaster, **prevents Strangury.** This improvement will be appreciated by every practitioner. It is more reliable than any known cantharidal preparation.

CAPSICUM PLASTER.

Recently this article has crept into favor with our most esteemed physicians, and judging from results, it is doubtless the best rubefacient known. It has the specific action of mustard without its objections. The characteristic action of Capsicum is uniformly maintained from twenty-four to forty-eight hours, without blistering, being mild, continuous, and stimulating. This plaster is spread in rubber combination and in porous form. Experience has taught practitioners that the Oleo Resin of Capsicum is too violent, frequently vesicating; we incorporate the crude drug in sufficient quantity, without risk to the patient. Our Capsicum Plasters will be found more practical for general use than the **so-called Mustard or Capsicum Papers.**

SPECIAL NOTICE TO PHYSICIANS.

QUALITY IS OF GREAT IMPORTANCE TO THE PRACTITIONER; BY RELIABLE PREPARATIONS HE SUPPLEMENTS HIS OWN SKILL. You can therefore rest assured that every article we manufacture is of strict pharmacopœia strength, and incorporated with perfectly reliable Extracts and Drugs, well selected, carefully and conscientiously prepared, and manufactured invariably under the personal superintendence of one of our firm. OUR WHOLE ATTENTION AND STUDY IS DEVOTED ENTIRELY TO THE ART OF PLASTER MAKING, and we are ready at all times to receive suggestions from the fraternity, which may be of benefit to all.

SEABURY & JOHNSON,

21 Platt Street, New York.

ALL THE ABOVE ARTICLES SOLD BY DRUGGISTS EVERYWHERE.

ALWAYS SPECIFY SEABURY & JOHNSON'S PLASTERS.

NEW HYPODERMIC SYRINGES.

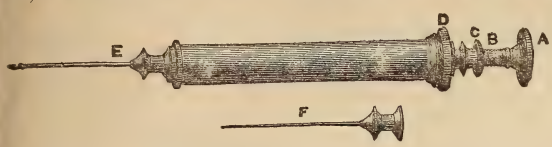

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

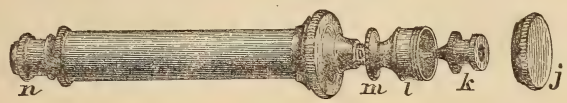
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3.50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).

No. 11.

As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case ..... *$3.50* Postage. .02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

Our new *Illustrated Catalogue of Surgical Instruments,* also a new Pamphlet on Inhalation of Atomized Liquids, by distinguished medical authority, with many valuable formulas, will be forwarded, postpaid, on application.

CODMAN & SHURTLEFF,

Makers and Importers of Superior Surgical Instruments,

1088-1139eow **13 & 15 TREMONT STREET, BOSTON, MASS.**

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

We respectfully ask the Medical Profession to give the above preparation a trial, knowing they will find it just the thing long desired, and obtain splendid results in the wasting diseases indicated by malnutrition and assimilation. The *perfect* and *permanent* union of the Cod Liver Oil with the Hypophosphites, and the thorough manner in which the nauseous taste is disguised, renders it so palatable that the most delicate stomach can retain it. The notable advantage it possesses over all other preparations, is its *permanency* as an *emulsion*, remaining for an almost unlimited time without the slightest separation or change, which enables the Physician always to prescribe it in its proper proportions. The oil is prepared expressly for us, and guaranteed strictly pure. We will gladly furnish, express paid, a 4-oz. sample to any Physician in the country who may not have been supplied.

Formula.—50 per cent. of pure Cod Liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce.

SCOTT & BOWNE.
Manufacturing Chemists, 125 Hudson Street, N. Y.

Messrs. Scott & Bowne: New York, September 4, 1876.

Gents—I have prescribed Scott's Emulsion of Cod Liver Oil with Hypophosphites in both private and hospital practice, and consider it a valuable preparation. It remains as a permanent emulsion, even in extremely hot weather, and is more palatable than any other preparation of oil that I have used.

Yours, very respectfully,
ROBERT WATTS, M.D., President Medical Board, Charity Hospital.

Messrs. Scott & Bowne:

Gentlemen—Having given your Emulsion of Cod Liver Oil and Hypophosphites of Lime and Soda a fair trial during the past eighteen months, am very much pleased with the same, and consider it the best preparation of the kind in the market.

Yours, truly,
J. H. HARTMAN, M.D., Baltimore, Md.

We also refer to the following Physicians, who use it and recommend it to the Profession:

G. C. SHATTUCK, M.D., 18 Stamford Street (Late Visiting Physician, Mass. General Hospital).
J. AYER, M.D., No. 6 Hancock Street, Boston.
G. W. GAY, M.D., 575 Tremont Street (Visiting Surgeon Boston City Hospital).
F. E. BUNDY, M.D., 90 Waltham Street, Boston.
W. B. MACKIE, M.D., 675 Tremont Street, Boston.
J. A. OCTERLONY, M.D., Louisville, Ky.
J. SIMONAUD, M.D., New Orleans.
G. LANE TANEYHILL, M D., Baltimore.
EDWARD A. MARIS, M D., Baltimore.

NOW IS THE TIME TO SUBSCRIBE

— FOR THE —

Cincinnati Lancet and Clinic,

THE LEADING WESTERN MEDICAL JOURNAL.

It has an able Corps of Contributors; Gives a Condensed Statement of the Progress of Medicine and Surgery; Reviews the Latest Medical Works; Publishes Society Proceedings, and keeps its Readers informed of the Medical News of the Day.

THE CINCINNATI LANCET AND CLINIC is issued *every Saturday*, and contains 20 large octavo double-columned pages of reading matter in every number, and is handsomely printed on fine tinted book paper, neither labor nor expense being spared to adapt it to the daily wants of the American practitioner of Medicine.

THE LANCET AND CLINIC is strictly an independent journal, not being controlled or published in the special interest of any College or Society, but is devoted to the advancement of science and progress of rational Medicine.

SPECIAL INDUCEMENTS.

NEW SUBSCRIBERS, who remit their names and subscription AT ONCE, will receive THE LANCET AND CLINIC from NOW until December 31, 1879,

FOR $3.50.

Address all communications to

Dr. J. C. CULBERTSON,
281 West Seventh Street, Cincinnati, Ohio.

LONDON M'F'G CO.'S
ESSENCES OF MEATS,

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN

Which consist solely of the finest juices from choice meats, extracted by a gentle heat, without the addition of water, or any substance whatever. They have been prescribed by the English Medical Profession for the past fifteen years, and since their introduction here have earned the highest commendations. They are peculiarly adapted

FOR INVALIDS—Natural, Pleasant, Refreshing.
FOR INFANTS—Strictly Pure; Prepared without Salt.
FOR DYSPEPTICS—Easily Assimilated.
IN CASES OF SEA SICKNESS—Afford Immediate Nourishment.
AFTER CHILDBIRTH—Meat Stimulant; Concentrated Form.

They retain the fine flavor and smell of the Meat. Are a heavy liquid in a warm temperature, and when placed upon ice take a jelly form, which is especially refreshing to Invalids. They are retained upon the stomach, in very critical cases, when the most carefully prepared soup is rejected. Children readily take them, and in many of their complaints requiring nourishment, "Essences" are UNEQUALED. *In summer, when opened, keep on Ice, leaving the lid partly raised.* DO NOT ADD WATER.

Taken cold direct from the Can, needing no Preparation whatever.

ENTIRELY TAKES THE PLACE OF BEEF TEA.

Physicians and Patrons are cordially invited to visit our Works.

PREPARED ONLY BY THE

LONDON MANUFACTURING COMPANY,

77 and 79 VARICK STREET, NEW YORK.

FOR SALE BY

MACMILLAN & CO.'S
NEW MEDICAL PUBLICATIONS.

BRAIN.

A JOURNAL OF NEUROLOGICAL SCIENCE.

Edited by Drs. BUCKNILL, CREIGHTON-BROWN, FERRIER and HUGHLINGS JACKSON.

Published Quarterly. $1.25 per number. Annual Subscription $4.00; free by mail.

A sample copy of Number One sent on receipt of Seventy-five cents.

It will be the object of "BRAIN" to keep its readers well abreast of modern progress in Neurology, and to advance the knowledge of a class of diseases respecting which it is universally admitted that much has yet to be learned.
Sent free by mail to any address, on receipt of the price.

THE JOURNAL OF PHYSIOLOGY.

Edited, with the coöperation in England of Prof. A. GAMGEE, F. R. S., Prof. W. RUTHERFORD, F. R. S., Prof. J. B. SANDERSON, F. R. S., and in America of Prof. H. P. BOWDITCH, of Boston, and Prof. H. N. MARTIN, of Baltimore; By Dr. M. FOSTER, F. R. S., Trinity College, Cambridge.

Vol. I., Part I., Now Ready, $3.00.

The Subscription Price per Volume will be, when paid in advance, $5.25. Sent free by mail.

The morphologists in England and America already possess an appropriate periodical literature; but the physiologists have hitherto been without an organ devoted exclusively to the publication in the English language of the results of physiological research. The want of such a periodical has long existed, and is daily increasing.
It is with a view of meeting this want that the JOURNAL OF PHYSIOLOGY has been established; and its conductors trust that the nature of the communications of which they hope to make it the medium will be at once readily understood by all workers in Biology.

THE PRACTITIONER.

A MONTHLY JOURNAL OF THERAPEUTICS AND PUBLIC HEALTH.

Edited by T. LAUDER BRUNTON, M. D., F. R. S.

"To hard-worked medical men with little time for reading, and few opportunities for professional conversation, such a journal as this, bringing every month the latest ideas in medical practice and latest records of important cases, ought to be invaluable."—*London Guardian.*

Sample Copies, 40 cents. Annual Subscription, $4.00.

INSANITY AND ITS PREVENTION,

Insanity in Ancient and Modern Life. With Chapters on its Prevention. By D. H. TUKE, M. D. 12mo, cloth, $1.75.

PRACTICAL CHEMISTRY FOR MEDICAL STUDENTS.

By W. M. PATTISON MUIR, F. R. S. E. 18mo, cloth, limp, 60 cents.

CLINICAL MEDICINE.

Lectures on Clinical Medicine, delivered in the Royal and Western Infirmaries of Glasgow. By Dr. MCCALL ANDERSON, Author of the "Treatment of Diseases of the Skin." With Illustrations. 8vo, cloth, $3.00.

PRESCRIPTIONS AND PRESCRIBING.

Lessons on Prescriptions and the Art of Prescribing. By W. HANDSEL GRIFFITHS, PH. D., L. R. C. P. E. Third Edition. 18mo, cloth, $1.25.

PHYSIOLOGY.

A Text-Book of Physiology. By M. FOSTER, M. A., M. D., F. R. S. Second Edition, revised. 8vo, cloth, $6.50; sheep, $7.50.

"I recommend it to my students as the latest, and in some respects the best, Physiology in the English language."—*From a Letter from Prof. Burt G. Wilder.*

Any of the above works sent free by mail on receipt of the price.

MEDICAL TEXT-BOOKS,

FOR THE STUDENT AND THE PRACTITIONER,

PUBLISHED BY

D. APPLETON & CO.,

549 and 551 Broadway, New York City.

Complete Catalogues will be forwarded upon application. All communications promptly answered.

BARKER (FORDYCE). On Puerperal Disease. Clinical Lectures delivered at Bellevue Hospital. A Course of Lectures, valuable alike to the Student and the Practitioner. Third edition. In 1 vol., 8vo. Cloth, $5.00; sheep, $6.00.

BARNES (ROBERT). Lectures on Obstetric Operations, including the Treatment of Hemorrhage, and forming a Guide to the Management of Difficult Labor. By Robert Barnes, M.D., F.R.C.P., Fellow and late Examiner in Midwifery at the Royal College of Physicians; Examiner in Midwifery at the Royal College of Surgeons, London. 1 vol. 8vo. Third edition, revised and extended. Illustrated. Cloth, $4.50.

BARTHOLOW'S Treatise on Materia Medica and Therapeutics. A new and revised edition. By Roberts Bartholow, M.A., M.D., Professor of the Theory and Practice of Medicine, and of Clinical Medicine, and formerly Professor of Materia Medica and Therapeutics in the Medical College of Ohio; Physician to the Hospital of the Good Samaritan; Corresponding Member of the New York Neurological Society, etc. 1 vol., 8vo., 548 pages. Cloth, $5.00; Sheep, $6.00.

BILLROTH (Dr. THEODOR). General Surgical Pathology and Therapeutics, in Fifty Lectures. A Text-book for Students and Physicians. By Dr. Theodor Billroth, Professor of Surgery in Vienna. Translated from the fourth German edition, by special permission of the author, by Charles E. Hackley, M.D., Surgeon to the New York Eye and Ear Infirmary; Physician to the New York Hospital; Fellow of the New York Academy, etc. 1 vol., 8vo. 152 Woodcuts. New edition. Cloth, $5.00; sheep, $6.00.

FLINT'S (AUSTIN, Jr.) Text-book of Human Physiology; designed for the Use of Practitioners and Students of Medicine. Illustrated by three Lithographic Plates, and 313 Woodcuts. 1 vol., imperial 8vo Cloth, $6.00; sheep, $7.00.

HAMMOND (W. A.). A Treatise on Diseases of the Nervous System. By Wm. A. Hammond, M.D., Professor of Diseases of the Nervous System and of Clinical Medicine in the Bellevue Hospital Medical College; Physician-in-Chief to the New York State Hospital for Diseases of the Nervous System, etc. New edition, with 109 illustrations. Rewritten, enlarged, and improved. 1 vol, large 8vo. Cloth, $6.00; sheep, $7.00

NEUMANN (ISIDOR). Hand-book of Skin Diseases. By Dr. Isidor Neumann. Translated by Lucius D. Bulkley, A.M., M.D. Illustrated with 66 Wood Engravings. 1 vol., 8vo. Cloth, $4.00; sheep, $5.00.

NIEMEYER (Dr. FELIX VON). A Text-book of Practical Medicine, with particular reference to Physiology and Pathological Anatomy. Containing all the author's Additions and Revisions in the eighth and last German edition. Translated from the German edition, by George H. Humphreys, M.D., and Charles E. Hackley, M.D. 2 vols., 8vo. Cloth, $9.00; sheep, $11.00.

PEASLEE (E. R.) A Treatise on Ovarian Tumors; their Pathology, Diagnosis and Treatment, with reference especially to Ovariotomy. By E. R. Peaslee, M.D., LL.D., Professor of Diseases of Women, in Dartmouth College; one of the Consulting Surgeons to the New York State Woman's Hospital; formerly Professor of Obstetrics and Diseases of Women in the New York Medical College; Corresponding Member of the Obstetrical Society of Berlin, etc. In one large vol., 8vo. With illustrations. Cloth, $5.00; sheep, $6.00.

SAYRE (LEWIS A., M.D.) Practical Manual of the Treatment of Club-Foot. By Lewis A. Sayre, M.D., Professor of Orthopedic Surgery in the Bellevue Hospital Medical College; Surgeon to Bellevue Hospital, etc. New edition. 1 vol., 12mo. Cloth, $1.25.

SAYRE (LEWIS A., M.D.) Lectures on Orthopedic Surgery and Diseases of the Joints, delivered at Bellevue Hospital Medical College, during the Winter Session of 1874-1875, by Lewis A. Sayre, M.D. Cloth, $5.00; sheep, $6.00.

SCHROEDER (Dr. KARL). A Manual of Midwifery, including the Pathology of Pregnancy and the Puerperal State. By Dr. Karl Schroeder, Professor of Midwifery, and Director of the Lying-in Institution, in the University of Erlangen. Translated into English from the third German edition, by Charles H. Carter, B.A., M.D., B.S., London; Member of the Royal College of Physicians, London, etc. With 26 Engravings on Wood. 1 vol., 8vo. Cloth, $3.50; sheep, $4.50.

STEINER. Compendium of Children's Diseases; a Hand-book for Practitioners and Students. By Dr. Johannes Steiner, Professor of Diseases of Children in the University of Prague, etc. Translated from the second German edition, by Lamson Tait, F.R.C.S., etc. 1 vol., 8vo. Cloth, $3.50; sheep, $4.50.

VAN BUREN (W. H.) Lectures upon Diseases of the Rectum, delivered at the Bellevue Hospital Medical College, Session 1869-1870, by W. H. Van Buren, A.M., M.D., Professor of the Principles of Surgery, with Diseases of the Genito-Urinary Organs, etc., in the Bellevue Hospital Medical College; one of the Consulting Surgeons of the New York Hospital; of the Bellevue Hospital; Member of the New York Academy of Medicine; of the Pathological Society of New York, etc. 1 vol., 12mo. Cloth, $1.50.

VAN BUREN, (W. H.) A Practical Treatise on the Surgical Diseases of the Genito-Urinary Organs, including Syphilis. Designed as a Manual for Students and Practitioners. With Engravings and Cases. By W. H. Van Buren, A.M., M.D., and Edward L. Keyes, A.M., M.D., Professor of Dermatology in Bellevue Hospital Medical College; Surgeon to the Charity Hospital, Venereal Division; Consulting Dermatologist to the Bureau of Out-Door Relief, Bellevue Hospital, etc. 1 vol., 8vo. Cloth, $5.00; sheep, $6.00.

VOGEL (A.) A Practical Treatise on the Diseases of Children. By Alfred Vogel, M.D., Professor of Clinical Medicine in the University of Dorpat, Russia. Translated and edited by H. Raphael, M.D., late House Surgeon to Bellevue Hospital; Attending Physician to the Eastern Dispensary for the Diseases of Children, etc. From the fourth German edition. Illustrated by Six Lithographic Plates. 1 vol., 8vo. Cloth, $4.50; sheep, $5.50.

WELLS (Dr. T. SPENCER.) Diseases of the Ovaries. 1 vol., 8vo. $4.50.

In corresponding with Advertisers please mention **The Medical and Surgical Reporter.**

1879. BEGIN NOW! 1879.

UNEQUALED INDUCEMENTS!

NEW SUBSCRIBERS WILL RECEIVE

THE WEEKLY

MEDICAL AND SURGICAL REPORTER

From now until December 31st, 1879,

FOR $5.00!

The MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list, unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, double-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES.

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of *the whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 800 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

PRICES PER YEAR.

The Weekly Medical and Surgical Reporter.....$5.00
The Half-Yearly Compendium of Medical Science..... 2.50
The Reporter and Compendium taken together..... 7.00

Payable in Advance.

Edited and Published by

D. G. BRINTON, M.D.,

115 SOUTH SEVENTH STREET, PHILADELPHIA.

PROPERTY, PRACTICE, ETC., FOR Sale—To an enterprising, energetic physician, I will sell my property, consisting of a large, frame house (14 rooms), the best office in the county, fine, large stabling, etc. Everything in good repair, and located in the richest and best paying section of Ohio, on the Columbus and Hocking Valley Railroad, within thirty minutes' ride of the Capital of the State. Practice worth from $4000 to $5000 per year. Will sell property, practice and good will for $3500, in payments to suit purchaser. Ill health the cause of wanting to sell. Address "H. S. C." Box 43, Groveport, Franklin Co., Ohio. 1130-1133

NUMBERS SHORT.—FULL PRICE 10 cents each, will be paid for any of the following numbers of the REPORTER:—1091, 1088, 1087, 1045, 1036, 999, 932, 880, 879, 672, 670, 562, 568, 561, 544, 524, 517, 503, 207, 185, 181. 1129

A GENTLEMAN ABOUT LEAVING PRACtice will sell at a low price a number of unusually fine instruments; to wit—General Operating Case, Tracheotomy Case, Obstetrical Case, Hypodermic Case, etc., of the best make. Apply to the Office of the MEDICAL AND SURGICAL REPORTER. 1128-tf

PRACTICAL SURGERY,

INCLUDING

DEXTRO-QUININE.

(A Separated Amorphous Alkaloid from High Grade Cinchona Barks.)

DEXTROGYRATE WITH POLARIZED LIGHT.

This article, prepared from commercial Chinoidine, is a derivative of the alkaloid Quinine, and consists of the *Amorphous Quinine* of Liebig, or the *Diconchinia* of Hesse. Its composition is represented by $C_{40}H_{46}N_4O_3$, and its analogy to Quinine is shown by the following well-known tests:—

It produces, in slightly acidulated solutions, the fine green coloration (due to the formation of thalleioquin) upon the addition of *fresh* chlorine water, followed by solution of Ammonic Hydrate.

When in applying the above test the addition of Ammonia is preceded by solution Potassic Ferrocyanide, an evanescent red color is produced.

It is almost entirely soluble in Ether; completely so in Alcohol, and has the power of neutralizing acids common to the ordinary commercial alkaloid Quinine. It dissolves freely in the dilute mineral acids, forming fluorescent, slightly colored solutions, with the characteristic intensely bitter taste of Quinine.

When examined with a polariscope, it deflects the ray of polarized light to the right instead of the left; and hence, from its dextro-gyratory powers, and from its close analogy, both chemically and therapeutically to Quinine, we have named this article

"DEXTRO-QUININE,"

And claim that it is equal to Sulphate of Quinine in the same dose, While it is less than one-half as costly as Sulphate of Quinine.

It may be obtained of Druggists throughout the country.
Samples for clinical use furnished free on application to

A convenient form of administration.
Iodide of Iron (Blancard's), 1 gr.
Freshly prepared; superior to the imported.
Iron, Dialysed, 2 grs.
Made of Merck's scales.
Jaborandi Extract. 3 grs.
Diaphoretic and sialogogue.
Lithium, Bromide, 2 grs.
A better hypnotic than Brom. Pot.
Phosphates Iron, Quinine and Strychnine.
A tonic more convenient than the syrup.
Phosphorus, 1-100, 1-50, 1-30, 1-20, 1-12 gr.
And over 20 combinations.
Salicin, 2 1-2 and 5 grs.
Useful in rheumatism.
Salicylic Acid, 2 1-2 and 5 grs.
Salicylic Acid and Morphine.
Valuable in rheumatism.
Sandal Wood Extract, 1 and 2 grs.
Contains both the oil and resin.
Sumbul Extract, 1 gr.
Hysteria, spasmodic disorders.
Zinc, Phosphide, 1-6, 1-4 and 1-2 gr.
Zinc, Phosphide and Extract Nux Vomica.
Brain diseases.

Our Formula Book, (fourth edition) containing complete list of all our pills with formulas and therapeutical notes, together with partial list of our fluid extracts, with doses, furnished upon application. As we desire to *improve* in *every* particular, we will be grateful to any Physician who will write us regarding his experience with our Gelatine-Coated Pills and other preparations, or make any suggestions.

LEBAIGUE'S
DIALYSED IRON,
OR
PURE PEROXIDE OF IRON,
IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate, nor cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a **solution,** which is generally preferred; or of an **elixir,** when a slight stimulant is desired.

DOCTOR GIBERT'S
DEPURATORY SYRUP AND DRAGEES,
OF IODIZED DEUTO-IODIDE OF MERCURY.

These preparations have been approved by the Academy of Medicine of Paris, and have been thoroughly tested in the hospitals of Paris in the treatment of *Syphilitic, Scrofulous* and other affections requiring the use of iodized remedies.
They are recommended for the utmost accuracy of composition, and their perfect preservation.

Prepared by VAUQUELIN-DESLAURIERS, Chemist, Paris.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**
It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.
Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.
(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.
Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

LIGHT-BROWN COD LIVER OIL

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen, in Ireland.

"I have frequently prescribed Dr. De Jongh's Light-Brown Cod-Liver Oil. I consider it to be a very pure oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,
Author of
"The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-Liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties; and I am satisfied that for medicinal purposes no finer oil can be procured."

Dr. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor-Law Board of Great Britain.

"We think it a great advantage that there is one kind of Cod-Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by Dr. De Jongh. It has long been our practice, when prescribing the Oil, to recommend this kind, since, amidst so much variety and uncertainty, we have confidence in its genuineness."—(Extract from "Consumption: Its Early and Remediable Stages.")

Dr. PROSSER JAMES,
Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-Liver Oil as the best on the subject, and adopted its conclusion as to the superiority of the Light-Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. De Jongh's Light-Brown Cod-Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. LETHEBY,
Medical Officer of Health, and Chief Analyst to the City of London.

"In all cases I have found Dr. De Jongh's Light-Brown Cod-Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable. It is, I believe, universally acknowledged that this Oil has great therapeutic power; and, from my investigations, I have no doubt of its being a pure and unadulterated article."

Dr. BANKS,
King's Professor of the Practice of Physic at the University of Dublin.

"I have, in the course of my practice, extensively employed Dr. De Jongh's Light-Brown Cod-Liver Oil, and I have no hesitation in stating that I consider it the best of all the specimens of oil which have ever come under my notice. The fact of so able and accurate an observer as Dr. De Jongh subjecting the Oil to careful analysis previous to its exposure to sale, is a sufficient guarantee of its purity and excellence."

Dr. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College, London.

"Dr. Sheppard has made extensive use of Dr. De Jongh's Light-Brown Cod-Liver Oil, and has great pleasure in testifying to its superiority over every other preparation to be met with in this country. It has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is supplied ONLY in bottles sealed with BETT'S Patent Capsule, impressed on the top with Dr. DE JONGH'S Stamp, and on the side with his Signature, and the Signature of ANSAR, HARFORD & CO., and bearing under the wrapper a Label with the same Stamp and Signatures. WITHOUT THESE MARKS NONE CAN POSSIBLY BE GENUINE.

Sold in IMPERIAL half-pints, $1.00, by the Principal Druggists in the UNITED STATES.

VACCINE VIRUS.

In order to meet properly the continued demand upon us for ANIMAL VIRUS, we have established stables for its propagation upon carefully selected heifers. The lymph used is of the well-known "Beaugency" stock, imported by ourselves expressly for this purpose. The result of several years' experience in supplying this lymph leads us to believe that its excellence is unsurpassed. The establishment is under the care of a competent physician, who will spare no pains to produce a perfectly RELIABLE and PURE article, which we are prepared to furnish FRESH, DAILY.

We can also furnish, to those who prefer it, HUMANIZED VIRUS, from healthy children, procured for us by physicians of undoubted reliability.

All our Virus is put up in strong, *air-tight, sealed packages*, for safe conveyance by mail or express, and will be sent (post-paid if by mail) upon the following terms:—

From the Heifer,	10 large Ivory Points, well charged on both sides	$1.50
	5 large Ivory Points, " " "	.80
	Large Ivory Points, less than 5, " " " each	.25
	1 Crust, new method, in air-tight Glass Capsule	2.00
From Healthy Infants,	10 small Ivory Points	1.50
	1 Crust from Unruptured Vesicles	2.00

Directions for vaccinating with either form of Virus, derived from methods successfully employed, will be furnished with Virus if requested.

We will warrant every package of Points and every Crust, giving a fresh supply in case of failure reported within fifteen days for Points, thirty days for Human, and ninety days for Kine Crusts. We can usually furnish Crusts one remove from the heifer, if preferred.

On account of their unreliability, we have hitherto furnished the usual form of Kine Crust unwillingly. Under our new method of taking and preserving them, however, after careful tests and an experience extending over several months, the results attained have been so satisfactory that we now offer them as not less active and reliable than other forms of Virus, while less liable to become inert with lapse of time. We now offer them on very favorable terms, and recommend them for transmission to a distance, and in all cases where it is desired to preserve Virus for some weeks or months, or to keep a supply at hand for emergencies.

We also furnish UNCHARGED IVORY POINTS, for physicians' use, at the following rates:—

Small	per 100, 25 cents; per 1000	2.00
Large	per 100, 50 cents; per 1000	4.00

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns, and Institutions.

SCARIFYING VACCINATOR, STEEL, NICKEL PLATED. See Cut. Each 25 cents.

New Illustrated Catalogue of Surgical Instruments sent, post-paid, on request.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expenses of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,			*With Hops (Plain),*	$1.00
"	"	"	*Pyrophosphate of Iron (Ferrated),*	1.00
"	"	"	*Cod Liver Oil,*	1.00
"	"	"	*Cod Liver Oil and Iodide of Iron,*	1.00
"	"	"	*Cod Liver Oil and Phosphorus,*	1.00
"	"	"	*Hypophosphites,*	1.50
"	"	"	*Iodides,*	1.50
"	"	"	*Alteratives,*	1.50
"	"	"	*Citrate of Iron and Quinia,*	1.50
"	"	"	*Pepsin,*	1.50

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

In 1879, THE LIVING AGE enters upon its thirty-sixth year, admittedly unrivalled and continuously successful. A WEEKLY MAGAZINE, of sixty-four pages, it gives more than

Three and a Quarter Thousand

double-column octavo pages of reading-matter yearly, forming four large volumes. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a *satisfactory completeness* attempted by no other publication, the best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

During the coming year, Serial and Short Stories by the **Most Eminent Foreign Authors** will be given, together with an amount

Unapproached by any other Periodical

in the world, of the most valuable Literary and Scientific matter of the day from the pens of the foremost Essayists, Scientists, Critics, Discoverers, and Editors, above-named and many others, representing every department of Knowledge and Progress

The importance of THE LIVING AGE to every American reader, as the only **satisfactorily fresh and complete** compilation of a generally inaccessible but indispensable current literature,—*indispensable* because it embraces the productions of

THE ABLEST LIVING WRITERS

in all branches of Literature, Science, Art, and Politics,—is sufficiently indicated by the following recent

Opinions.

"THE LIVING AGE supplies a better compendium of current discussion, information and investigation, and gives a greater amount and variety of reading-matter which it is well worth while to read, than any other publication. . . . It is simply indispensable."—*Boston Journal.*

"It contains the best results of the world's thinking."—*The Churchman, New York.*

"It affords the best, the cheapest, and most convenient means of keeping abreast with the progress of thought in all its phases. . . . It is the best work of its kind ever published in the country, and can hardly ever be improved upon."—*North American, Philadelphia.*

"The prince among magazines."—*New York Observer.*

"In it we find the best productions of the best writers upon all subjects ready to our hand. . . . Through its pages alone it is possible to be as thoroughly well informed in current literature as by the perusal of a long list of monthlies."—*Philadelphia Inquirer.*

"Its pages teem with the choicest literature of the day."—*New York Tribune.*

"Its frequent issue and ample space enable it to do fully what it proposes to do,—to give *all* that the very ablest of living writers furnish to periodical literature on science, history, biography, philosophy, poetry, theology, politics and criticism, and to add to this the full complement of the best that there is in fiction."—*The Interior, Chicago.*

"One cannot read everything. . . . . No man will be behind the literature of the times who reads THE LIVING AGE."—*Zion's Herald, Boston.*

"Every weekly number now-a-days is equal to a first-class monthly. For solid merit, it is the cheapest magazine in the land."—*The Advance, Chicago.*

"Gives the best of all at the price of one."—*New York Independent.*

"It focalizes the best literature of the age. . . . It is the most wonderful weekly publication of which we have any knowledge."—*St. Louis Observer.*

"In no other single publication can there be found so much of sterling literary excellence."—*N. Y. Evening Post.*

"It has no equal in any country."—*Philadelphia Press.*

"It is a *thorough compilation* of what is best in the literature of the day, whether relating to history, biography, fiction, poetry, wit, science, politics, theology, criticism, or art."—*Hartford Courant.*

"There is no other way of procuring the same amount of excellent literature for anything like the same price."—*Boston Advertiser.*

"There is no magazine published that gives so general a knowledge of what is going on in the literary world."—*Presbyterian Weekly, Baltimore.*

"The ablest essays, the most entertaining stories, the finest poetry of the English language are here gathered together."—*Illinois State Journal.*

"The reader finds little occasion to go beyond its columns for instructive or entertaining articles of any description."—*Boston Evening Traveller.*

"*With it alone* a reader may fairly keep up with all that is important in the literature, history, politics, and science of the day."—*The Methodist, New York.*

"To keep up with it, is to master the best thought of our time."—*Illustrated Christian Weekly, New York.*

"Its publication in weekly numbers gives to it a great advantage over its monthly contemporaries in the spirit and freshness of its contents."—*The Pacific, San Francisco.*

"A pure and perpetual reservoir and fountain of entertainment and instruction."—*Hon. Robert C. Winthrop.*

"The best and cheapest periodical in America."—*Evangelical Churchman, Toronto.*

"There is nothing comparable to it in true value in the whole range of periodical literature."—*Mobile Daily Register.*

"It is the only compilation that presents with a satisfactory completeness, as well as freshness, a literature embracing the productions of the ablest and most cultured writers living. *It is, therefore, indispensable to every one who desires a thorough compendium of all that is admirable and noteworthy in the literary world.*"—*Boston Post.*

"Ought to find a place in every American home."—*New York Times.*

PUBLISHED WEEKLY, at $8.00 a year *free of postage.* An extra copy sent *gratis* to any one getting up a club of five new subscribers.

EXTRA OFFER FOR 1879.

All new subscribers for 1879 will receive *gratis* the six numbers of 1878 containing, with other valuable matter, the first parts of "**Sir Gibbie,**" a new Serial of much interest by **GEORGE MACDONALD,** now appearing in THE LIVING AGE from the author's advance sheets. Other choice new serials by distinguished authors are engaged and will speedily appear.

CLUB PRICES FOR THE BEST HOME AND FOREIGN LITERATURE.

["Possessed of 'LITTELL'S LIVING AGE' and of one or other of our vivacious American monthlies, a subscriber will find himself *in command of the whole situation.*"] —*Philadelphia Evening Bulletin.*

For $10.50, THE LIVING AGE and *either* one of the *four-dollar* monthly Magazines (or *Harper's Weekly* or *Bazar*), will be sent for a year, *with postage prepaid on both;* or, for $9.50, THE LIVING AGE and the *St. Nicholas*, or *Appleton's Journal, both postpaid.*

Price, $1.50.

STAUFER'S NON-EVAPORATING INKSTAND.

Price, $1.00.

Supporters E. C. or Economy.—Fig 5, on its elastic belt Z, is the least in price, and by the oblique construction of the cup sets direct within the angle of the axis of the uterus and vagina, (well seen by IU. Fig. 13.) If properly selected, or made so by the exchange privilege, (which admits the interchange of all the hard rubber parts in the catalogue, to cover the purchaser's risk.) It is warranted to correct and sustain even any ***Procidentia.*** The spring stems and shifting tops with their supplements, Fig. 1. Also, improved ***Retroversion, Cup E. Anterversion C.*** and ***Intra-Uterine Stem Cup, IU,*** Fig. 13. The stem locks in a square socket after the cup is in position, and is supported on the elastic gums SS, as A Fig. 1, and same in price. Stem Levers, Fig. 14, etc. All are fully explained in the catalogue. The ***Series*** comprises upwards of 150 in style and size instruments, of which two-thirds belong to the support and correction of the uterus. ***Speculums***—Thomas' objections p. 67—'76, are by them completely overcome. The case contains four. The clear and large view, and facility to work through them, far exceeds any other. The ***Ex. Case,*** and physician's favorite, is admirably represented by Fig. 12—weight but 4 oz. ***Catalogue*** sent free on application. In addition to the description of the above series of instruments, it contains important information on this line of treatment.

[Unguentum Petrolei]

SAMPLES FURNISHED
ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

211 S. FRONT STREET, PHILADELPHIA.

University of Pennsylvania,

MEDICAL DEPARTMENT.

113th ANNUAL SESSION, 1878–79.

The higher plan of medical education is now enforced, requiring attendance upon three graded courses of five months each. Didactic instruction is increased. Bedside instruction of each student in Physical Diagnosis, Clinical Medicine and Surgery, and Gynæcology is provided. The clinical and laboratory facilities are unrivaled in America. Pharmacy, Analytical and Medical Chemistry, Histology, Normal and Morbid Anatomy, and Operative Surgery are taught practically.

A Dental Department has recently been instituted.

For particulars, see ANNOUNCEMENT, for which address

NEW YORK STATE

INEBRIATE ASYLUM,

Binghamton, Broome County, N. Y.

This Asylum is admirably situated, overlooking a fine section of country, and is complete in all the appointments of a first-class home, with ample means to meet the wants of every case. It is located three miles from the city, and removed from all temptation. Its management is the same as all other State charities, under the control of a Board of Managers appointed by the Governor. The law provides for the maintenance of indigent inebriates, similar to that of the insane, but patients from other States may be admitted.

The experience of this Asylum, for the past ten years, indicates an increasing usefulness and necessity for such institutions, and the original intention of making this an Asylum Hospital, where this disorder may be thoroughly understood and treated on broad scientific principles is nearer realized than ever before. All rules are strictly enforced, and no patient permitted to go beyond the Asylum grounds without permission from the Superintendent, or in the care of an attendant.

THE CHARGES FOR BOARD

will include medical care, washing, lights, fuel, etc., with ordinary attention. The exigencies of each particular case will be acted upon, as it may present itself, to those of moderate and limited means as well as the rich.

All inquiries and applications for admission should be addressed to the Superintendent.

WILLARD PARKER, M.D.,
New York, N. Y.,
President Board of Managers.

LONDON M'F'G CO.'S
ESSENCES OF MEATS,

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN

Which consist solely of the finest juices from choice meats, extracted by a gentle heat, without the addition of water, or any substance whatever. They have been prescribed by the English Medical Profession for the past fifteen years, and since their introduction here have earned the highest commendations. They are peculiarly adapted

FOR INVALIDS—Natural, Pleasant, Refreshing.
FOR INFANTS—Strictly Pure; Prepared without Salt.
FOR DYSPEPTICS—Easily Assimilated.
IN CASES OF SEA SICKNESS—Afford Immediate Nourishment.
AFTER CHILDBIRTH—Meat Stimulant; Concentrated Form.

They retain the fine flavor and smell of the Meat. Are a heavy liquid in a warm temperature, and when placed upon ice take a jelly form, which is especially refreshing to Invalids. They are retained upon the stomach, in very critical cases, when the most carefully prepared soup is rejected. Children readily take them, and in many of their complaints requiring nourishment, "Essences" are UNEQUALED. *In summer, when opened, keep on Ice, leaving the lid partly raised.* DO NOT ADD WATER.

Taken cold direct from the Can, needing no Preparation whatever.

ENTIRELY TAKES THE PLACE OF BEEF TEA.

Physicians and Patrons are cordially invited to visit our Works.

$1.00 Per Year. 1879. Semi-Monthly.

THE

Michigan Medical News

IS A SEMI-MONTHLY JOURNAL, DEVOTED TO

Therapeutics and Medical News.

Although established only late in January of this year, it already circulates over 3000 copies each month to *bona fide* subscribers. Its subscription list is also being added to at the rate of from seventy-five to a hundred names each month. It has subscribers in every State in the Union.

THIS SUCCESS ARGUES MERIT.

The editors of the NEWS are all active practitioners, and know from personal experience what the busy, practical physician wants in a medical journal. They know his time for reading is limited and does not permit of his struggling through much verbiage for the pith of an article. The NEWS aims to assist him in his every-day business of treating disease—to be his office companion.

The NEWS admits no long, tedious, theoretical, speculative compilations from the text books, but it never fails to post its readers on everything new and of value to the busy doctor.

Its Articles and Selections are Short, Practical and Pithy.

The NEWS is issued regularly on the 10th and 25th of each month, and at the exceedingly low rate of

ONE DOLLAR A YEAR.

Parties remitting $1.00 for 1879 will receive the NEWS gratis for the remainder of this year.

Send a 3-cent postage stamp for a specimen copy of the

BEST JOURNAL PUBLISHED FOR THE MONEY.

Podophyllin, 1-8 and 1-4 gr.
Quinine, 1-4 and 1-2 gr.
Strychnia, 1-100, 1-60, 1-40 and 1-30 gr.
Sulphur, Iodide, 1-25 and 1-10 gr.
Tartar Emetic, 1-100, 1-20 and 1-4 gr.
Zinc, Phosphide, 1-6, 1-4 and 1-2 gr.

VARIOUS FORMULAS.

Ammonium, Valerianate, 1 gr.
A convenient form of administration.
Assafœtida, 2 and 4 grs.
Assafœtida and Nux Vomica.
Made of purified Assafœtida.
Caffeia, Citrate, 1 gr.
Remedy and preventive in sick headache.
Calcium, Sulphide, 1-10 gr.
Scrofulous sores, &c.
Camphor, Mono-Bromated, 2 and 3 grs.
Hysteria, headache, nymphomania.
Cannabis Indica Extract, 1-2 and 1 gr.
Rheumatism, hysteria, delirium tremens.
Cerium, Oxalate, 1 and 2 grs.
Vomiting in pregnancy.
Coca Extract, 1 gr.
Tonic and stimulant.
Copaiba and Oleo-Resin Cubeb, 3 and 5 grs.
Of pure materials; can be relied upon.
Ergotin, 3 grs.
Made of purified Ergotin.
Fucus Vesiculosus Extract, 3 grs.
To decrease excessive obesity.
Grindelia Robusta Extract, 3 grs.
Hay fever, asthmatic affections.
Guarana Extract, 3 grs.
Headache, neuralgia.
Hypophosphites Compound.
A convenient form of administration.
Iodide of Iron (Blancard's), 1 gr.
Freshly prepared; superior to the imported.
Iron, Dialysed, 2 grs.
Made of Merck's scales.
Jaborandi Extract, 3 grs.
Diaphoretic and sialogogue.
Lithium, Bromide, 2 grs.
A better hypnotic than Brom. Pot.
Phosphates Iron, Quinine and Strychnine.
A tonic more convenient than the syrup.
Phosphorus, 1-100, 1-50, 1-30, 1-20, 1-12 gr.
And over 20 combinations.
Salicin, 2 1-2 and 5 grs.
Useful in rheumatism.
Salicylic Acid, 2 1-2 and 5 grs.
Salicylic Acid and Morphine.
Valuable in rheumatism.
Sandal Wood Extract, 1 and 2 grs.
Contains both the oil and resin.
Sumbul Extract, 1 gr.
Hysteria, spasmodic disorders.
Zinc, Phosphide, 1-6, 1-4 and 1-2 gr.
Zinc, Phosphide and Extract Nux Vomica.
Brain diseases.

Our Formula Book, (fourth edition) containing complete list of all our pills with formulas and therapeutical notes, together with partial list of our fluid extracts, with doses, furnished upon application. As we desire to *improve* in *every* particular, we will be grateful to any Physician who will write us regarding his experience with our Gelatine-Coated Pills and other preparations, or make any suggestions.

SOLUTION
FERROUS CHLORIDE.

This Solution of Iron is the lowest form of Chloride. It is much less styptic in taste than Tr. Iron Chloride, consequently pleasanter to the patient; it is much more easily assimilated by weak and irritable stomachs.

Knowing how difficult it is to introduce into the blood, in a proper form, a sufficient quantity of iron to be beneficial, we have manufactured and introduce the **Ferrous Chloride** as being easily absorbed and acting with much efficacy, even when given in small doses.

Dr. Rabuteau, who has specially studied the protochloride of iron, and shown that it is the most natural of ferruginous salts, thinks that he has found the very thing required:—

EXTRACT FROM THE REPORTS OF THE ACADEMY OF SCIENCES OF PARIS.
(*Sitting of* 11 *December*, 1871.)

"..... The most important thing is the facility with which the protochloride of iron is absorbed by the stomach. Two or three hours after from 4 to 10 grains of this salt have been ingested, almost the whole is absorbed. Having finally observed that the reduced iron and the ferruginous oxyds and carbonates are changed into protochloride in the stomach by the contact with the hydrochloric acid of the gastric juice, I thought it necessary to substitute this salt for all the preceding for medicinal purposes. My observations in the wards of hospitals and in my own practice have convinced me of the successful results of the protochloride of iron, which is easily borne when pure and administered in a proper way."

For details, see the memoirs on the protochloride of iron published in the *Union Medicale, Paris*, 1871 and 1872.

Each fluid drachm contains two grains of the Anhydrous **Ferrous Chloride.**

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin.....8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine.....6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect in every respect as it is possible to make a Belladonna Plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, whilst our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical:—

TABLE OF RESULTS.

	Test solution requisite for 100 c. c. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
HERRINGS & CO., "	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869.....	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts**, and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell Novelty Plaster Works; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna.

"R. OGDEN DOREMUS, M.D., LL.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

Dr. Knight's Atomizer	*(" 12)*	*2.50*
The Boston Atomizer (See Cut)	*(" 16)*	*2.50*
Atomizing Tubes in great variety		*25 cents to 15.00*

For full description see NEW PAMPHLET on Atomization of Liquids with Formulæ of many articles of the Materia Medica successfully employed in the practice of a well-known American practitioner, together with descriptions of the best forms of apparatus, which will be sent, post-paid, on application.

Plaster Bandages and Bandage Machines, Articles for Antiseptic Surgery, Aspirators, Clinical Thermometers, Crutches, Air Cushions, Wheel Chairs and Articles for Invalids, Mechanical Appliances for all deformities and deficiencies, Trusses, Elastic Hose, etc. Electric Instruments for all Medical and Surgical uses, Hypodermic Syringes, Ice and Hot Water Bags, Manikins, Models, Skeletons, Skulls, etc., etc. Naturalists' Instruments, Sphygmographs, Splints and Fracture Apparatus, Stethoscopes, Syringes of all kinds, Teeth Forceps, Test Cases, Transfusion Instruments, French Rubber Urinals, Urinometers, Vaccine Virus, Veterinary Instruments, Waldenburg's Pneumatic Apparatus, etc., etc.
Surgical Instruments and Medical Appliances of every description promptly repaired.
Having our Factory, with steam power, ample machinery, and experienced workmen, connected with our store, we can promptly make to order, in the best manner, and from almost any material, new instruments and apparatus, and supply new inventions on favorable terms. Instruments bearing our name are fully warranted. With hardly an exception they are the product of our own factory, and made under our personal supervision, by skilled workmen, who, being paid for their time, are not likely to slight their work through haste.
New Illustrated Catalogue, postpaid, on application.

CODMAN & SHURTLEFF,

Makers and Importers of Superior Surgical Instruments, etc., etc.,

1088-1139-eow 13 and 15 TREMONT STREET, BOSTON.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

1090-1115eow

In corresponding with Advertisers please mention **The Medical and Surgical Reporter.**

1879. BEGIN NOW! 1879.

UNEQUALED INDUCEMENTS!

NEW SUBSCRIBERS WILL RECEIVE

THE WEEKLY

MEDICAL AND SURGICAL REPORTER

From now until December 31st, 1879,

FOR $5.00!

The MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list, unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, double-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES.

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of *the whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

PRICES PER YEAR.

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

1110-1135

LINDSAY & BLAKISTON'S

Physician's Visiting List for 1879,

LINDSAY & BLAKISTON,

PUBLISHERS AND IMPORTERS OF MEDICAL BOOKS,

1128-4tm 25 South Sixth Street, Philadelphia.

LONDON M'F'G CO.'S
ESSENCES OF MEATS,

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN

Which consist solely of the finest juices from choice meats, extracted by a gentle heat, without the addition of water, or any substance whatever. They have been prescribed by the English Medical Profession for the past fifteen years, and since their introduction here have earned the highest commendations. They are peculiarly adapted

FOR INVALIDS—Natural, Pleasant, Refreshing.
FOR INFANTS—Strictly Pure; Prepared without Salt.
FOR DYSPEPTICS—Easily Assimilated.
IN CASES OF SEA SICKNESS—Afford Immediate Nourishment.
AFTER CHILDBIRTH—Meat Stimulant; Concentrated Form.

They retain the fine flavor and smell of the Meat. Are a heavy liquid in a warm temperature, and when placed upon ice take a jelly form, which is especially refreshing to Invalids. They are retained upon the stomach, in very critical cases, when the most carefully prepared soup is rejected. Children readily take them, and in many of their complaints requiring nourishment, "Essences" are UNEQUALED. *In summer, when opened, keep on Ice, leaving the lid partly raised.* DO NOT ADD WATER.

Taken cold direct from the Can, needing no Preparation whatever.

ENTIRELY TAKES THE PLACE OF BEEF TEA.

Physicians and Patrons are cordially invited to visit our Works.

PREPARED ONLY BY THE

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

We respectfully ask the Medical Profession to give the above preparation a trial, knowing they will find it just the thing long desired, and obtain splendid results in the wasting diseases indicated by malnutrition and assimilation. The *perfect* and *permanent* union of the Cod Liver Oil with the Hypophosphites, and the thorough manner in which the nauseous taste is disguised, renders it so palatable that the most delicate stomach can retain it. The notable advantage it possesses over all other preparations, is its *permanency* as an *emulsion*, remaining for an almost unlimited time without the slightest separation or change, which enables the Physician always to prescribe it in its proper proportions. The oil is prepared expressly for us, and guaranteed strictly pure. We will gladly furnish, express paid, a 4-oz. sample to any Physician in the country who may not have been supplied.

Formula.—50 per cent. of pure Cod Liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce.

SCOTT & BOWNE,
Manufacturing Chemists, 125 Hudson Street, N. Y.

Messrs. SCOTT & BOWNE: NEW YORK, September 4, 1876

Gents—I have prescribed Scott's Emulsion of Cod Liver Oil with Hypophosphites in both private and hospital practice, and consider it a valuable preparation. It remains as a permanent emulsion, even in extremely hot weather, and is more palatable than any other preparation of oil that I have used. Yours, very respectfully,
ROBERT WATTS, M.D., President Medical Board, Charity Hospital.

Messrs. SCOTT & BOWNE:

Gentlemen—Having given your Emulsion of Cod Liver Oil and Hypophosphites of Lime and Soda a fair trial during the past eighteen months, am very much pleased with the same, and consider it the best preparation of the kind in the market.
Yours, truly, J. H. HARTMAN, M.D., Baltimore, Md.

We also refer to the following Physicians, who use it and recommend it to the Profession:

G. C. SHATTUCK, M.D., 18 Stamford Street (Late Visiting Physician, Mass. General Hospital).
J. AYER, M.D., No 6 Hancock Street, Boston.
G. W. GAY, M.D., 575 Tremont Street (Visiting Surgeon Boston City Hospital.
F. E. BUNDY, M.D., 60 Waltham Street, Boston.
W. B. MACKIE, M.D., 675 Tremont Street, Boston.
J. A. OCTERLONY, M.D., Louisville, Ky.
J. SIMONAUD, M.D., New Orleans.
G. LANE TANEYHILL, M.D., Baltimore.
EDWARD A. MARIS, M.D., Baltimore.

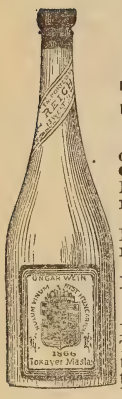
L. REICH,

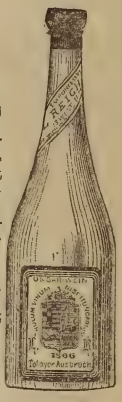
DIRECT IMPORTER OF THE

CHOICEST AND PUREST

Hungarian WINES

EVER BROUGHT TO THIS COUNTRY,





STRICTLY FOR MEDICINAL USE.

13 West 11th St., New York.

Mr. REICH will be pleased to see those of the Medical Profession who may desire to avail themselves of the opportunity of procuring **STRICTLY FIRST-CLASS WINES**, which have received the endorsement of the most eminent Medical men of the country, as is evidenced from the following letters of commendation which have been received:—

This is to Certify, that I have examined Mr. L. REICH'S TOKAYER AUSBRUCH, TOKAYER MASLAS and BUDAI IMP. I take great pleasure in commending these Wines to the Medical Profession because of their purity.

R. OGDEN DOREMUS, M.D., LL.D.,
Prof. of Chem. and Toxicology in Bellevue Hosp. Med. Col., and Prof. of Chem. and Physics in Col. City of New York.

We have used in our practice the Hungarian Wines sold by Mr. LORENZ REICH, who puts them on the market unadulterated, just as they are imported. To this fact we attribute their great value as a medicine in diseases where such tonics are indicated, especially in those which are attended by defective digestion and imperfect assimilation. We cordially recommend Mr. REICH and his Wines to our professional brethren.

DEXTRO-QUININE.

(A Separated Amorphous Alkaloid from High Grade Cinchona Barks.)

DEXTROGYRATE WITH POLARIZED LIGHT.

This article, prepared from commercial Chinoidine, is a derivative of the alkaloid Quinine, and consists of the *Amorphous Quinine* of Liebig, or the *Diconchinia* of Hesse. Its composition is represented by $C_{40}H_{46}N_4O_3$, and its analogy to Quinine is shown by the following well-known tests:—

It produces, in slightly acidulated solutions, the fine green coloration (due to the formation of thalleioquin) upon the addition of *fresh* chlorine water, followed by solution of Ammonic Hydrate.

When in applying the above test the addition of Ammonia is preceded by solution Potassic Ferrocyanide, an evanescent red color is produced.

It is almost entirely soluble in Ether; completely so in Alcohol, and has the power of neutralizing acids common to the ordinary commercial alkaloid Quinine. It dissolves freely in the dilute mineral acids, forming fluorescent, slightly colored solutions, with the characteristic intensely bitter taste of Quinine.

When examined with a polariscope, it deflects the ray of polarized light to the right instead of the left; and hence, from its dextro-gyratory powers, and from its close analogy, both chemically and therapeutically to Quinine, we have named this article

"DEXTRO-QUININE,"

And claim that it is equal to Sulphate of Quinine in the same dose, While it is less than one-half as costly as Sulphate of Quinine.

It may be obtained of Druggists throughout the country.
Samples for clinical use furnished free on application to

LEBAIGUE'S
DIALYSED IRON,
OR
PURE PEROXIDE OF IRON,
IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate, nor cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a **solution,** which is generally preferred; or of an **elixir,** when a slight stimulant is desired.

DOCTOR GIBERT'S
DEPURATORY SYRUP AND DRAGEES,
OF IODIZED DEUTO-IODIDE OF MERCURY.

These preparations have been approved by the Academy of Medicine of Paris, and have been thoroughly tested in the hospitals of Paris in the treatment of *Syphilitic, Scrofulous* and other affections requiring the use of Iodized remedies.

They are recommended for the utmost accuracy of composition, and their perfect preservation.

Prepared by VAUQUELIN-DESLAURIERS, Chemist, Paris.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER of the ABOVE,
To whom all special communications should be addressed.

SOLE GENERAL AGENTS for the ABOVE,
To whom all orders should be addressed.

SOLD BY DRUGGISTS GENERALLY.

In corresponding with Advertisers please mention **The Medical and Surgical Reporter.**

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

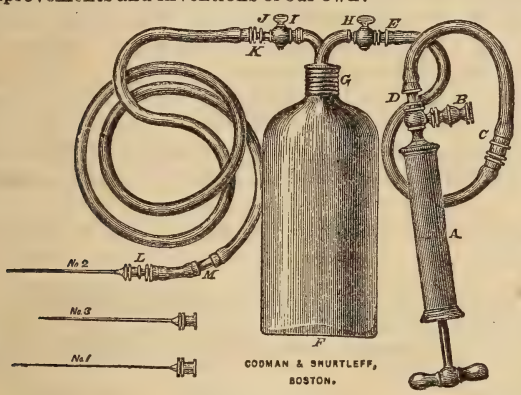

Fig. 68.

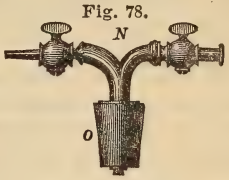
Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

Fig. 77.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case.....$14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

An illustrated Catalogue of Surgical Instruments, also a New Pamphlet on Atomization of Liquids, with description of Improved Apparatus and Formulæ of Remedies successfully employed, will be forwarded, post-paid, on application.

☞ In corresponding with Advertisers please mention the MEDICAL AND SURGICAL REPORTER.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With*	*Hops (Plain)*,	- - - - - - -	$1.00

"THE BEST LITERATURE OF THE DAY."—*New York Times.*

THE GREATEST LIVING AUTHORS, such as

Prof. MAX MULLER,	THE DUKE OF ARGYLL,	MATTHEW ARNOLD,
Rt. Hon. W. E. GLADSTONE,	WILLIAM BLACK,	J. NORMAN LOCKYER,
JAMES ANTHONY FROUDE,	MISS THACKERAY,	FRANCIS W. NEWMAN,
Prof. HUXLEY,	MRS. MULOCH-CRAIK,	ALFRED RUSSELL WALLACE,
RICHARD A. PROCTOR,	GEORGE MACDONALD,	HENRY KINGSLEY,
Prof. GOLDWIN SMITH,	MRS. OLIPHANT,	W. W. STORY,
EDWARD A. FREEMAN,	MRS. ALEXANDER,	IVAN TURGUENIEF,
Prof. TYNDALL,	JEAN INGELOW,	RUSKIN,
Dr. W. B. CARPENTER,	JULIA KAVANAGH,	TENNYSON,
FRANCES POWER COBBE,	THOMAS HARDY,	BROWNING,

and many others, are represented in the pages of

LITTELL'S LIVING AGE.

In 1879, THE LIVING AGE enters upon its thirty-sixth year, admittedly unrivalled and continuously successful. A WEEKLY MAGAZINE, of sixty-four pages, it gives more than

Three and a Quarter Thousand

double-column octavo pages of reading-matter yearly, forming four large volumes. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a *satisfactory completeness* attempted by no other publication, the best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

During the coming year, Serial and Short Stories by the **Most Eminent Foreign Authors** will be given, together with an amount

Unapproached by any other Periodical

in the world, of the most valuable Literary and Scientific matter of the day from the pens of the foremost Essayists, Scientists, Critics, Discoverers, and Editors, above-named and many others, representing every department of Knowledge and Progress

The importance of THE LIVING AGE to every American reader, as the only **satisfactorily fresh and complete** compilation of a generally inaccessible but indispensable current literature,—*indispensable* because it embraces the productions of

THE ABLEST LIVING WRITERS

in all branches of Literature, Science, Art, and Politics,—is sufficiently indicated by the following recent

Opinions.

"THE LIVING AGE supplies a better compendium of current discussion, information and investigation, and gives a greater amount and variety of reading-matter which it is well worth while to read, than any other publication. . . . It is simply indispensable."—*Boston Journal.*

"It contains the best results of the world's thinking."—*The Churchman, New York.*

"It affords the best, the cheapest, and most convenient means of keeping abreast with the progress of thought in all its phases. . . . . It is the best work of its kind ever published in the country, and can hardly ever be improved upon."—*North American, Philadelphia.*

"The prince among magazines."—*New York Observer.*

"In it we find the best productions of the best writers upon all subjects ready to our hand. . . . Through its pages alone it is possible to be as thoroughly well informed in current literature as by the perusal of a long list of monthlies."—*Philadelphia Inquirer.*

"Its pages teem with the choicest literature of the day."—*New York Tribune.*

"Its frequent issue and ample space enable it to do fully what it proposes to do,—to give *all* that the very ablest of living writers furnish to periodical literature on science, history, biography, philosophy, poetry, theology, politics and criticism, and to add to this the full complement of the best that there is in fiction."—*The Interior, Chicago.*

"One cannot read everything. . . . . No man will be behind the literature of the times who reads THE LIVING AGE."—*Zion's Herald, Boston.*

"Every weekly number now-a-days is equal to a first-class monthly. For solid merit, it is the cheapest magazine in the land."—*The Advance, Chicago.*

"Gives the best of all at the price of one."—*New York Independent.*

"It focalizes the best literature of the age. . . . It is the most wonderful weekly publication of which we have any knowledge."—*St. Louis Observer.*

"In no other single publication can there be found so much of sterling literary excellence."—*N. Y. Evening Post.*

"It has no equal in any country."—*Philadelphia Press.*

"It is a *thorough compilation* of what is best in the literature of the day, whether relating to history, biography, fiction, poetry, wit, science, politics, theology, criticism, or art."—*Hartford Courant.*

"There is no other way of procuring the same amount of excellent literature for anything like the same price."—*Boston Advertiser.*

'There is no magazine published that gives so general a knowledge of what is going on in the literary world."—*Presbyterian Weekly, Baltimore.*

"The ablest essays, the most entertaining stories, the finest poetry of the English language are here gathered together."—*Illinois State Journal.*

"The reader finds little occasion to go beyond its columns for instructive or entertaining articles of any description."—*Boston Evening Traveller.*

"*With it alone* a reader may fairly keep up with all that is important in the literature, history, politics, and science of the day."—*The Methodist, New York.*

"To keep up with it, is to master the best thought of our time."—*Illustrated Christian Weekly, New York.*

"Its publication in weekly numbers gives to it a great advantage over its monthly contemporaries in the spirit and freshness of its contents."—*The Pacific, San Francisco.*

"A pure and perpetual reservoir and fountain of entertainment and instruction."—*Hon. Robert C. Winthrop.*

"The best and cheapest periodical in America."—*Evangelical Churchman, Toronto.*

"There is nothing comparable to it in true value in the whole range of periodical literature."—*Mobile Daily Register.*

"It is the only compilation that presents with a satisfactory completeness, as well as freshness, a literature embracing the productions of the ablest and most cultured writers living. *It is, therefore, indispensable to every one who desires a thorough compendium of all that is admirable and noteworthy in the literary world.*"—*Boston Post.*

"Ought to find a place in every American home."—*New York Times.*

PUBLISHED WEEKLY, at $8.00 a year *free of postage.* An extra copy sent *gratis* to any one getting up a club of five new subscribers.

EXTRA OFFER FOR 1879.

All new subscribers for 1879 will receive *gratis* the six numbers of 1878 containing, with other valuable matter, the first parts of "Sir Gibbie," a new Serial of much interest by **GEORGE MACDONALD,** now appearing in THE LIVING AGE from the author's advance sheets. Other choice new serials by distinguished authors are engaged and will speedily appear.

CLUB PRICES FOR THE BEST HOME AND FOREIGN LITERATURE.

"[Possessed of 'LITTELL'S LIVING AGE' and of one or other of our vivacious American monthlies, a subscriber will find himself *in command of the whole situation.*"]—*Philadelphia Evening Bulletin.*

For $10.50, THE LIVING AGE and *either* one of the *four-dollar* monthly Magazines (or *Harper's Weekly* or *Bazar*), will be sent for a year, *with postage prepaid on both;* or, for $9.50, THE LIVING AGE and the *St. Nicholas*, or *Appleton's Journal, both postpaid.*

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,
92 CASS STREET, DETROIT.

1110-1135

1879. BEGIN NOW! 1879.

UNEQUALED INDUCEMENTS!

NEW SUBSCRIBERS WILL RECEIVE

THE WEEKLY

MEDICAL AND SURGICAL REPORTER

From now until December 31st, 1879,

FOR $5.00!

The MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list, unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, double-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES.

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of *the whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

PRICES PER YEAR.

The Weekly Medical and Surgical Reporter	*$5.00*
The Half-Yearly Compendium of Medical Science	*2.50*
The Reporter and Compendium taken together	*7.00*

Payable in Advance.

[Unguentum Petrolei]

SAMPLES FURNISHED
ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

THE CHICAGO

MEDICAL JOURNAL AND EXAMINER.

(ESTABLISHED 1844.)

EDITORS:

WILLIAM H. BYFORD, A.M., M.D., | FERD. C. HOTZ, M.D.,
JAS. NEVINS HYDE, A.M., M.D., | E. FLETCHER INGALS, M.D.

ISSUED MONTHLY.

Two Volumes a year, of 672 pages each; beginning with the January and July Numbers.

PUBLISHED BY

The Medical Press Association,

FOR THE BENEFIT OF THE

Chicago Medical Library.

This is one of the largest and best medical journals in the country. It furnishes more reading matter for the money than any other journal in the United States, with one exception, and its excellence is attested by the fact that it is taken by nearly all the leading men in the West.

Notice to Contributors.

WE are glad to receive contributions from every one who knows anything of interest to the profession. Articles designed for publication in the JOURNAL AND EXAMINER should be handed in before the fifteenth of the month, in order to give the editors time for careful perusal. A limited number of EXTRA COPIES or reprints (not exceeding fifty) will be given the authors of accepted articles or reviews, provided they are ordered when the copy is forwarded to us. Rejected manuscript will be returned upon application and receipt of postage.

N.B.—New Subscribers, by enclosing a copy of this advertisement, may obtain the JOURNAL AND EXAMINER from now until December 31st, 1879, for $4.00.

TERMS:—$4.00 per annum, in advance. Single copies 35 cents.

Postage free. Subscriptions received for any period.

SEND FOR SPECIMEN PAGES.

IMPORTANT TO EVERY PHYSICIAN!

VOL. V BEGINS JAN. 1, 1879.

Gentlemen Subscribing for 1879 will receive the Gazette from the time of remitting their Subscription to Jan. 1, Gratis.

THE HOSPITAL GAZETTE,

A Weekly Journal of Medicine, Surgery, and the Collateral Sciences.

EDITED BY

EDWARD J. BERMINGHAM, A.M., M.D., and FREDERICK A. LYONS, A.M., M.D.

H. H. KANE, M.D., Associate Editor.

This journal is published regularly EVERY THURSDAY in the chief medical centre of this continent, and each number presents a faithful *weekly* epitome of the progress of Medical Science. The following Departments are represented: ***Lectures, Editorials, Original Articles, Hospital Records, Translations, Periscope, Bibliography, Society Proceedings, Correspondence, News Items and Notes.***

Each number contains ***twenty large, closely printed pages*** of the choicest and most valuable reading matter, thus making ***1040 pages annually,*** which, owing to our very large circulation, we are enabled to furnish at the remarkably low price of

$2.00 PER YEAR, INCLUDING POSTAGE,

thus making it the cheapest journal published.

☞ We decline to notice requests for specimen copies, but shall be happy to give any gentleman desiring it a trial subscription of 3 months for 50 cents, payable in advance. This plan will give those contemplating subscribing an opportunity to thoroughly examine the merits of the journal.

Address all communications to

1125-m3t THE HOSPITAL GAZETTE, New York City.

NOW IS THE TIME TO SUBSCRIBE

— FOR THE —

Cincinnati Lancet and Clinic,

THE LEADING WESTERN MEDICAL JOURNAL.

It has an able Corps of Contributors; Gives a Condensed Statement of the Progress of Medicine and Surgery; Reviews the Latest Medical Works; Publishes Society Proceedings, and keeps its Readers informed of the Medical News of the Day.

THE CINCINNATI LANCET AND CLINIC is issued *every Saturday*, and contains 20 large octavo double-columned pages of reading matter in every number, and is handsomely printed on fine tinted book paper, neither labor nor expense being spared to adapt it to the daily wants of the American practitioner of Medicine.

THE LANCET AND CLINIC is strictly an independent journal, not being controlled or published in the special interest of any College or Society, but is devoted to the advancement of science and progress of rational Medicine.

SPECIAL INDUCEMENTS.

NEW SUBSCRIBERS, who remit their names and subscription AT ONCE, will receive THE LANCET AND CLINIC from NOW until December 31, 1879,

FOR $3.50.

LONDON M'F'G CO.'S
ESSENCES OF MEATS,

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN

Which consist solely of the finest juices from choice meats, extracted by a gentle heat, without the addition of water, or any substance whatever. They have been prescribed by the English Medical Profession for the past fifteen years, and since their introduction here have earned the highest commendations. They are peculiarly adapted

FOR INVALIDS—Natural, Pleasant, Refreshing.
FOR INFANTS—Strictly Pure; Prepared without Salt.
FOR DYSPEPTICS—Easily Assimilated.
IN CASES OF SEA SICKNESS—Afford Immediate Nourishment.
AFTER CHILDBIRTH—Meat Stimulant; Concentrated Form.

They retain the fine flavor and smell of the Meat. Are a heavy liquid in a warm temperature, and when placed upon ice take a jelly form, which is especially refreshing to Invalids. They are retained upon the stomach, in very critical cases, when the most carefully prepared soup is rejected. Children readily take them, and in many of their complaints requiring nourishment, "Essences" are UNEQUALED. *In summer, when opened, keep on Ice, leaving the lid partly raised.* DO NOT ADD WATER.

Taken cold direct from the Can, needing no Preparation whatever.

ENTIRELY TAKES THE PLACE OF BEEF TEA.

Physicians and Patrons are cordially invited to visit our Works.

PREPARED ONLY BY THE

LIGHT-BROWN

COD LIVER OIL

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen, in Ireland.

"I have frequently prescribed Dr. De Jongh's Light-Brown Cod-Liver Oil. I consider it to be a very pure oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,
Author of
"The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-Liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties; and I am satisfied that for medicinal purposes no finer oil can be procured."

Dr. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor-Law Board of Great Britain.

"We think it a great advantage that there is one kind of Cod-Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by Dr. De Jongh. It has long been our practice, when prescribing the Oil, to recommend this kind, since, amidst so much variety and uncertainty, we have confidence in its genuineness."—(Extract from "Consumption: Its Early and Remediable Stages.")

Dr. PROSSER JAMES,
Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-Liver Oil as the best on the subject, and adopted its conclusion as to the superiority of the Light-Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. De Jongh's Light-Brown Cod-Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. LETHEBY,
Medical Officer of Health, and Chief Analyst to the City of London.

"In all cases I have found Dr. De Jongh's Light-Brown Cod-Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable. It is, I believe, universally acknowledged that this Oil has great therapeutic power; and, from my investigations, I have no doubt of its being a pure and unadulterated article."

Dr. BANKS,
King's Professor of the Practice of Physic at the University of Dublin.

"I have, in the course of my practice, extensively employed Dr. De Jongh's Light-Brown Cod-Liver Oil, and I have no hesitation in stating that I consider it the best of all the specimens of oil which have ever come under my notice. The fact of so able and accurate an observer as Dr. De Jongh subjecting the Oil to careful analysis previous to its exposure to sale, is a sufficient guarantee of its purity and excellence."

Dr. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College, London.

"Dr. Sheppard has made extensive use of Dr. De Jongh's Light-Brown Cod-Liver Oil, and has great pleasure in testifying to its superiority over every other preparation to be met with in this country. It has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is supplied ONLY in bottles sealed with BETT'S Patent Capsule, impressed on the top with Dr. DE JONGH'S Stamp, and on the side with his Signature, and the Signature of ANSAR, HARFORD & CO., and bearing under the wrapper a Label with the same Stamp and Signatures. WITHOUT THESE MARKS NONE CAN POSSIBLY BE GENUINE.

STAUFER'S UTERINE INSTRUMENTS.

The readers of this Journal are familiar with this Series of Instruments, during their rise and progress upwards of ten years. Many have introduced them into their practice, and have written complimentary letters even to this office.

The above late engraving represents—1. The new ***Retroversion Cup,*** with a broad lever of which the corners are rounded and less liable to irritate than the former. 2. ***An Intra-Uterine Stem Cup.*** The Intra-Uterine Stem (hard rubber) is made to order in length and thickness, after a pattern, when desired. The stem is supported as A. Fig. 1 On either belt, and same in price. (*See large plate.*) The stem is inserted after the cup is in position, and locks in a square socket. This gives a reliable and yet yielding base. ***Exchanges.***—To obviate the risk of purchasers, the Hard Rubber part is made exchangeable as all the others are on the catalogue, now aggregating about 150, in size and style of instruments. Over one half belong to the class of Uterine Supporters—the balance to examination and diagnosis. 3. ***Anterversion C.*** The modification consists in a concave rest for the cervix, to retain it in position.

Obtained through this Office, and Catalogues sent on application.

ARTIFICIAL EYES.

The finest, best, and most natural Artificial Eyes in the world, inserted, and sold at Wholesale and Retail, by Dr. THEO. ROTH, 336 N. Sixth St., Philadelphia. General Agent for the United States of L. Mueller's Celebrated German Artificial Eyes, which received the Gold Medal at Berlin, Vienna, Philadelphia (1876), etc. 1128-1140

Starling Medical College,

COLUMBUS, OHIO.

The Thirty-second Annual Session of STARLING MEDICAL COLLEGE will begin on Oct. 2d, preceded by a Preliminary Session, beginning Sept. 4th.

FEES.

Matriculation	$5 00
Professors' Tickets, in full	40 00
Demonstrator's Ticket	5 00
Graduation Fee	25 00

For announcement and further information, address

F. CARTER, M.D., Dean,
1118-tf *181 State Street, Columbus, Ohio.*

UNIVERSITY OF MICHIGAN.

DEPARTMENT OF MEDICINE AND SURGERY.

The 30th annual course of lectures will commence on October 1st, 1879, and continue *nine months.*

Coarse separate, but equal, for women.

Matriculation Fee, *paid but once*—Residents of Michigan, $10; non-residents, $25. Annual Dues—Residents of Michigan, $20; non-residents, $25. Graduation Fee—for all alike, $10.

FACULTY.

James B. Angell, LL.D., President. Alonzo B Palmer, M.D., Professor of Pathology and the Practice of Medicine, Corydon L. Ford, M.D., Prof. of Anatomy and Physiology. Albert B. Prescott, M.D., Professor of Organic and Applied Chemisty and Pharmacy. George E. Frothingham M.D., Professor of Materia Medica, Ophthalmology and Otology. Donald Maclean, M.D., Professor of Surgery. Edward S. Dunster, M.D., Professor of Obstetrics and Diseases of Women and Children. John W. Langley, M.D., Professor of General Chemistry and Physics. Will. J. Herdman, M.D., Demonstrator of Anatomy. Charles H Stowell, M.D., Instructor in Physiological Laboratory. Victor C. Vaughan, PH.D., Instructor in Medical Chemistry.

RARE CHANCE FOR A PHYSICIAN!—Practice worth from $3000 to $4000 per annum guaranteed to a competent and energetic physician. Property consisting of large two-story frame house; barn that will conveniently stable four horses; loft that will hold two tons of hay, and a neat buggy shed; good well and out-houses, and everything conveniently arranged by a physician, who designed and built the property expressly for his own use. This property and practice is situated in southwestern Iowa, in a neat little village, and one of the best locations in the west for making money. For further particulars address C. W. M., Farmer City, Fremont county, Iowa. 1132-1135

$300 WILL BUY HORSE, CARRIAGE, harness, robe, blankets, etc., all in good condition, and practice worth $2000 yearly. Medicines, etc., included. Reasons for selling, going west. Immediate possession given. Address "Medicus," Office MEDICAL AND SURGICAL REPORTER. 1132-1133

PROPERTY, PRACTICE, ETC., FOR Sale—To an enterprising, energetic physician, I will sell my property, consisting of a large, frame house (14 rooms), the best office in the county, fine, large stabling, etc. Everything in good repair, and located in the richest and best paying section of Ohio, on the Columbus and Hocking Valley Railroad, within thirty minutes' ride of the Capital of the State. Practice worth from $4000 to $5000 per year. Will sell property, practice and good will for $3500, in payments to suit purchaser. Ill health the cause of wanting to sell. Address "H. S. C." Box 43, Groveport, Franklin Co., Ohio. 1130-1133

A GENTLEMAN ABOUT LEAVING PRACtice will sell at a low price a number of unusually fine instruments; to wit—General Operating Case, Tracheotomy Case, Obstetrical Case, Hypodermic Case, etc., of the best make. Apply to the Office of the MEDICAL AND SURGICAL REPORTER. 1128-tf

THE SCIENTIFIC AMERICAN.
THIRTY-FOURTH YEAR.
THE MOST POPULAR SCIENTIFIC PAPER IN THE WORLD.
Only $3.20 a Year, including postage. Weekly. 52 Numbers a Year. 4000 Book Pages.

THE SCIENTIFIC AMERICAN is a large First-class Weekly Newspaper of sixteen pages, printed in the most beautiful style, *profusely illustrated with splendid engravings*, representing the newest Inventions and the most recent Advances in the Arts and Sciences; including New and Interesting Facts in Agriculture, Horticulture, the Home, Health, Medical Progress, Social Science, Natural History, Geology, Astronomy. The most valuable practical papers, by eminent writers in all departments of Science, will be found in the Scientific American.

Terms, $3.20 per year, $1.60 half year, which includes postage. Discount to Agents. Single copies, ten cents. Sold by all News Dealers. Remit by postal order to MUNN & CO., Publishers, 37 Park Row, New York.

PATENTS. In connection with the Scientific American, Messrs. MUNN & Co are Solicitors of American and Foreign Patents, have had thirty-four years' experience, and now have the largest establishment in the world. Patents are obtained on the best terms. A special notice is made in the **Scientific American** of all Inventions patented through this Agency, with the name and residence of the Patentee. By the immense circulation thus given, public attention is directed to the merits of the new patent, and sales or introduction often easily effected.

Any person who has made a new discovery or invention, can ascertain, free of charge, whether a patent can probably be obtained, by writing to the undersigned. We also send *free* our Hand Book about the Patent Laws, Patents, Caveats, Trade Marks, their costs, and how procured, with hints for procuring advances on Inventions. Address for the Paper, or concerning Patents,

MUNN & CO, 37 Park Row, New York.
Branch Office, cor. F and 7th Sts., Washington, D.C.

BURN-BRAE,
A PRIVATE HOSPITAL
FOR
MENTAL DISORDERS.

Location beautiful and salubrious. Grounds extensive and handsomely laid out. Distance from Chestnut Street Bridge, Philadelphia, six miles. Access by Baltimore Turnpike, or West Chester and Philadelphia Railroad; nearest station, Oak Lane.

BURN-BRAE accommodates twenty patients of each sex. Though possessing all the safeguards and appliances of a Public Hospital, the arrangements are domestic and familiar. No efforts spared to make the house a comfortable *Home* for its guests.

Morphia, Valerianate, 1-8 gr.
Podophyllin, 1-8 and 1-4 gr.
Quinine, 1-4 and 1-2 gr.
Strychnia, 1-100, 1-60, 1-40 and 1-30 gr.
Sulphur, Iodide, 1-25 and 1-10 gr.
Tartar Emetic, 1-100, 1-20 and 1-4 gr.
Zinc, Phosphide, 1-6, 1-4 and 1-2 gr.

VARIOUS FORMULAS.

Ammonium, Valerianate, 1 gr.
A convenient form of administration.
Assafœtida, 2 and 4 grs.
Assafœtida and Nux Vomica.
Made of purified Assafœtida.
Caffeia, Citrate, 1 gr.
Remedy and preventive in sick headache.
Calcium, Sulphide, 1-10 gr.
Scrofulous sores, &c.
Camphor, Mono-Bromated, 2 and 3 grs.
Hysteria, headache, nymphomania.
Cannabis Indica Extract, 1-2 and 1 gr.
Rheumatism, hysteria, delirium tremens.
Cerium, Oxalate, 1 and 2 grs.
Vomiting in pregnancy.
Coca Extract, 1 gr.
Tonic and stimulant.
Copaiba and Oleo-Resin Cubeb, 3 and 5 grs.
Of pure materials; can be relied upon.
Ergotin, 3 grs.
Made of purified Ergotin.
Fucus Vesiculosus Extract, 3 grs.
To decrease excessive obesity.
Grindelia Robusta Extract, 3 grs.
Hay fever, asthmatic affections.
Guarana Extract, 3 grs.
Headache, neuralgia.
Hypophosphites Compound.
A convenient form of administration.
Iodide of Iron (Blancard's), 1 gr.
Freshly prepared; superior to the imported.
Iron, Dialysed, 2 grs.
Made of Merck's scales.
Jaborandi Extract. 3 grs.
Diaphoretic and sialogogue.
Lithium, Bromide, 2 grs.
A better hypnotic than Brom. Pot.
Phosphates Iron, Quinine and Strychnine.
A tonic more convenient than the syrup.
Phosphorus, 1-100, 1-50, 1-30, 1-20, 1-12 gr.
And over 20 combinations.
Salicin, 2 1-2 and 5 grs.
Useful in rheumatism.
Salicylic Acid, 2 1-2 and 5 grs.
Salicylic Acid and Morphine.
Valuable in rheumatism.
Sandal Wood Extract, 1 and 2 grs.
Contains both the oil and resin.
Sumbul Extract, 1 gr.
Hysteria, spasmodic disorders.
Zinc, Phosphide, 1-6, 1-4 and 1-2 gr.
Zinc, Phosphide and Extract Nux Vomica.
Brain diseases.

Our Formula Book, (fourth edition) containing complete list of all our pills with formulas and therapeutical notes, together with partial list of our fluid extracts, with doses, furnished upon application. As we desire to *improve* in *every* particular, we will be grateful to any Physician who will write us regarding his experience with our Gelatine-Coated Pills and other preparations, or make any suggestions.

CAUTION!!—SPECIFY McKESSON & ROBBINS'.

LIQUID
Pancreopepsine
(DIGESTIVE FLUID.)

THIS preparation contains, in an agreeable form, the natural digestive and assimilative principles, **Pancreatine, Pepsine, Lactic** and **Muriatic Acids.** The best means of re-establishing digestion in enfeebled stomachs, where the power to assimilate and digest food is impaired, is to administer principles capable of communicating the elements necessary to convert food into nutriment. The value of **Liquid Pancreopepsine** in this connection has been fully established and we can recommend it with confidence to the Profession as superior to Pepsin alone. It aids in digesting animal and vegetable cooked food, fatty and amylaceous substances, and may be employed in all cases where, from prolonged sickness or other causes, the alimentary processes are not in their normal condition.

It is usually given in tablespoonful doses after each meal.

PUT UP IN 16 OUNCE FRENCH SQUARE BOTTLES.

Price, $1.00 Per Bottle,
" 10.00 " Doz. Bottles.

WILLIAM R. WARNER & CO.

MANUFACTURERS OF

SUGAR-COATED PILLS.

1228 MARKET STREET,

PHILADELPHIA.

THE THREE BEST TONICS OF THE PHARMACOPŒIA:

IRON, PHOSPHORUS, CALISAYA.

CASWELL, HAZARD & CO. call the attention of the Profession to their preparation of the above estimable Tonics, as combined in their elegant and palatable

FERRO-PHOSPHORATED ELIXIR OF CALISAYA BARK.

A combination of the Pyrophosphate of Iron and Calisaya never before attained, in which the nauseous inkiness of the iron and astringency of the Calisaya are overcome, without any injury to their active tonic principles, and blended into a beautiful Amber-colored Cordial, delicious to the taste and acceptable to the most delicate stomach. This preparation is made directly from the **ROYAL CALISAYA BARK**—not from **its ALKALOIDS OR THEIR SALTS**—being unlike other preparations called "Elixir of Calisaya and Iron," which are simply an **Elixir of Quinine and Iron.** Our Elixir can be depended upon as being a true Elixir of Calisaya Bark with Iron. Each dessertspoonful contains seven and a half grains Royal Calisaya Bark, and two grains Pyrophosphate of Iron.

Ferro-Phosphorated Elixir of Calisaya Bark with Strychnia. This preparation contains one grain of Strychnia added to each pint of our Ferro-Phosphorated Elixir of Calisaya Bark, greatly intensifying its tonic effect.

Ferro-Phosphorated Elixir of Calisaya with Bismuth, containing eight grains Ammonio-Citrate of Bismuth in each tablespoonful of the Ferro-Phosphorated Elixir of Calisaya Bark.

Elixir Phosphate Iron, Quinine and Strychnia. Each teaspoonful contains one grain Phosphate Iron, one grain Phosphate Quinine, and one sixty-fourth of a grain of Strychnia.

Ferro-Phosphorated Elixir of Gentian, containing one ounce of Gentian and one hundred and twenty-eight grains Pyrophosphate Iron to the pint, making in each dessertspoonful seven and one half grains Gentian and two grains Pyrophosphate Iron.

Ferro-Phosphorated Wine of Wild Cherry Bark. Each fluid-drachm contains twenty-five grains of the Bark, and two grains of Ferri-Pyrophosphate.

Elixir Taraxacum Comp. Each dessertspoonful contains fifteen grains of Taraxacum.

Elixir Pepsin, Bismuth, and Strychnine. Each fluid-drachm contains one sixty-fourth of a grain of Strychnine.

Juniper Tar Soap. Highly recommended by the celebrated Erasmus Wilson, and has been found very serviceable in chronic eczema and diseases of the skin generally. It is invaluable for chapped hands and roughness of the skin caused by change of temperature. It is manufactured by ourselves, from the purest materials, and is extensively and successfully prescribed by the most eminent Physicians.

CASWELL, HAZARD & CO.,

Family and Manufacturing Chemists, New York.

APOLLINARIS

NATURAL MINERAL WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its sale in France authorized by special decree of the French Government.

"THE QUEEN OF TABLE WATERS."—*London Medical Record.*

PROFESSOR OSCAR LIEBREICH, Professor of Medical Chemistry, University of Berlin:—"After minute personal investigation, I can affirm that the Apollinaris Water is bottled according to all the rules of science, and is an entirely Natural Mineral Water."

PROFESSOR J. A. WANKLYN, Lecturer on Chemistry, St. George's Hospital, London:—"I have thoroughly examined the Apollinaris Spring and the method of bottling. The Apollinaris Water, as supplied to the public, is simply and purely a Natural Mineral water, impregnated only with its own gas."

PROFESSOR MOHR, Medical Councillor, University of Bonn:—"After exhaustive investigation, I declare the Apollinaris Water, as supplied to the public, to be purely natural in every respect, and of most excellent quality."

DR. THEODOR KYLL, Analytical Chemist, Town Councillor, Cologne (*expert appointed by United States Vice-Consul, October*, 1877), reported that "The Apollinaris Water, as bottled, deserves in every respect the name of an excellent natural acidulated water."

Every Genuine Bottle bears the REGISTERED YELLOW PICTORIAL LABEL of the Apollinaris Company, Limited, London.

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and Wholesale of

FREDK. DE BARY & CO., Sole Agents,

1117-1168 **41 and 43 WARREN STREET, NEW YORK.**

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine ..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....per oz.	$1.00
" (" ").....per doz.	10.00
" (in ½ lb ").....per lb.	12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect in every respect as it is possible to make a Belladonna Plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, whilst our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical:—

TABLE OF RESULTS.

	Test solution requisite for 100 c. c. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell Novelty Plaster Works; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna.

"R. OGDEN DOREMUS, M.D., LL.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

ALWAYS SPECIFY SEABURY & JOHNSON'S PLASTERS.

NEW HYPODERMIC SYRINGES.

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

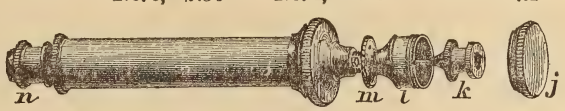
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3.50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



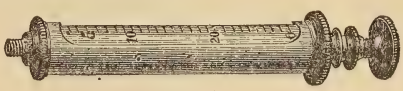
No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel plated metal mounting (see cut).



No. 11.

As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case ..... *$3.50* Postage. .02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

Our new *Illustrated Catalogue of Surgical Instruments,* also a new Pamphlet on Inhalation of Atomized Liquids, by distinguished medical authority, with many valuable formulas, will be forwarded, postpaid, on application.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

1879. BEGIN NOW! 1879.

UNEQUALED INDUCEMENTS!

NEW SUBSCRIBERS WILL RECEIVE

THE WEEKLY

MEDICAL AND SURGICAL REPORTER

From now until December 31st, 1879,

FOR $5.00!

The MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list, unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, double-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES.

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of *the whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

PRICES PER YEAR.

The Weekly Medical and Surgical Reporter.....$5.00
The Half-Yearly Compendium of Medical Science..... 2.50
The Reporter and Compendium taken together..... 7.00

Payable in Advance.

D. G. BRINTON, M.D.,

115 SOUTH SEVENTH STREET, PHILADELPHIA.

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878–'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878–1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,

1110-1135 92 CASS STREET, DETROIT.

BARKER (FORDYCE). On Puerperal Disease. Clinical Lectures delivered at Bellevue Hospital. A Course of Lectures, valuable alike to the Student and the Practitioner. Third edition. In 1 vol., 8vo. Cloth, $5.00; sheep, $6.00.

BARNES (ROBERT). Lectures on Obstetric Operations, including the Treatment of Hemorrhage, and forming a Guide to the Management of Difficult Labor. By Robert Barnes, M.D., F.R.C.P., Fellow and late Examiner in Midwifery at the Royal College of Physicians; Examiner in Midwifery at the Royal College of Surgeons, London. 1 vol. 8vo. Third edition, revised and extended. Illustrated. Cloth, $4.50.

BARTHOLOW'S Treatise on Materia Medica and Therapeutics. A new and revised edition. By Roberts Bartholow, M.A., M.D., Professor of the Theory and Practice of Medicine, and of Clinical Medicine, and formerly Professor of Materia Medica and Therapeutics in the Medical College of Ohio; Physician to the Hospital of the Good Samaritan; Corresponding Member of the New York Neurological Society, etc. 1 vol., 8vo., 548 pages. Cloth, $5.00; Sheep, $6.00.

BILLROTH (Dr. THEODOR). General Surgical Pathology and Therapeutics, in Fifty Lectures. A Text-book for Students and Physicians. By Dr. Theodor Billroth, Professor of Surgery in Vienna. Translated from the fourth German edition, by special permission of the author, by Charles E. Hackley, M.D., Surgeon to the New York Eye and Ear Infirmary; Physician to the New York Hospital; Fellow of the New York Academy, etc. 1 vol., 8vo. 152 Woodcuts. New edition. Cloth, $5.00; sheep, $6.00.

FLINT'S (AUSTIN, Jr.) Text-book of Human Physiology; designed for the Use of Practitioners and Students of Medicine. Illustrated by three Lithographic Plates, and 313 Woodcuts. 1 vol., imperial 8vo. Cloth, $6.00; sheep, $7.00.

HAMMOND (W. A.). A Treatise on Diseases of the Nervous System. By Wm. A. Hammond, M.D., Professor of Diseases of the Nervous System and of Clinical Medicine in the Bellevue Hospital Medical College; Physician-in-Chief to the New York State Hospital for Diseases of the Nervous System, etc. New edition, with 109 illustrations. Rewritten, enlarged, and improved. 1 vol, large 8vo. Cloth, $6.00; sheep, $7.00

NEUMANN (ISIDOR). Hand-book of Skin Diseases. By Dr. Isidor Neumann. Translated by Lucius D. Bulkley, A.M., M.D. Illustrated with 66 Wood Engravings. 1 vol., 8vo. Cloth, $4.00; sheep, $5.00.

NIEMEYER (Dr. FELIX VON). A Text-book of Practical Medicine with particular reference to Physiology and Pathological Anatomy. Containing all the author's Additions and Revisions in the eighth and last German edition. Translated from the German edition, by George H. Humphreys, M.D., and Charles E. Hackley, M.D. 2 vols., 8vo. Cloth, $9.00; sheep, $11.00.

PEASLEE (E. R.) A Treatise on Ovarian Tumors; their Pathology Diagnosis and Treatment, with reference especially to Ovariotomy. By E. R. Peaslee, M.D., LL.D., Professor of Diseases of Women, in Dartmouth College; one of the Consulting Surgeons to the New York State Woman's Hospital; formerly Professor of Obstetrics and Diseases of Women in the New York Medical College; Corresponding Member of the Obstetrical Society of Berlin, etc. In one large vol., 8vo. With illustrations. Cloth, $5.00; sheep, $6.00.

SAYRE (LEWIS A., M.D.) Practical Manual of the Treatment of Club-Foot. By Lewis A. Sayre, M.D., Professor of Orthopedic Surgery in the Bellevue Hospital Medical College; Surgeon to Bellevue Hospital, etc. New edition. 1 vol., 12mo. Cloth, $1.25.

SAYRE (LEWIS A., M.D.) Lectures on Orthopedic Surgery and Diseases of the Joints, delivered at Bellevue Hospital Medical College, during the Winter Session of 1874-1875, by Lewis A. Sayre, M.D. Cloth, $5.00; sheep, $6.00.

SCHROEDER (Dr. KARL). A Manual of Midwifery, including the Pathology of Pregnancy and the Puerperal State. By Dr. Karl Schroeder, Professor of Midwifery, and Director of the Lying-in Institution, in the University of Erlangen. Translated into English from the third German edition, by Charles H. Carter, B.A., M.D., B.S., London; Member of the Royal College of Physicians, London, etc. With 26 Engravings on Wood. 1 vol., 8vo. Cloth, $3.50; sheep, $4.50.

STEINER. Compendium of Children's Diseases; a Hand-book for Practitioners and Students. By Dr. Johannes Steiner, Professor of Diseases of Children in the University of Prague, etc. Translated from the second German edition, by Lamson Tait, F.R.C.S., etc. 1 vol., 8vo. Cloth, $3.50; sheep, $4.50.

VAN BUREN (W. H.) Lectures upon Diseases of the Rectum, delivered at the Bellevue Hospital Medical College, Session 1869-1870, by W. H. Van Buren, A.M., M.D., Professor of the Principles of Surgery, with Diseases of the Genito-Urinary Organs, etc., in the Bellevue Hospital Medical College; one of the Consulting Surgeons of the New York Hospital; of the Bellevue Hospital; Member of the New York Academy of Medicine; of the Pathological Society of New York, etc. 1 vol., 12mo. Cloth, $1.50.

VAN BUREN, (W. H.) A Practical Treatise on the Surgical Diseases of the Genito Urinary Organs, including Syphilis. Designed as a Manual for Students and Practitioners. With Engravings and Cases. By W. H. Van Buren, A.M., M.D., and Edward L. Keyes, A.M., M.D., Professor of Dermatology in Bellevue Hospital Medical College; Surgeon to the Charity Hospital, Venereal Division; Consulting Dermatologist to the Bureau of Out-Door Relief, Bellevue Hospital, etc. 1 vol., 8vo. Cloth, $5.00; sheep, $6.00.

VOGEL (A.) A Practical Treatise on the Diseases of Children. By Alfred Vogel, M.D., Professor of Clinical Medicine in the University of Dorpat, Russia. Translated and edited by H. Raphael, M.D., late House Surgeon to Bellevue Hospital; Attending Physician to the Eastern Dispensary for the Diseases of Children, etc. From the fourth German edition. Illustrated by six Lithographic Plates. 1 vol., 8vo. Cloth, $4.50; sheep, $5.50.

WELLS (Dr. T. SPENCER.) Diseases of the Ovaries. 1 vol., 8vo. $4.50. 1130-5t

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

We respectfully ask the Medical Profession to give the above preparation a trial, knowing they will find it just the thing long desired, and obtain splendid results in the wasting diseases indicated by malnutrition and assimilation. The *perfect* and *permanent* union of the Cod Liver Oil with the Hypophosphites, and the thorough manner in which the nauseous taste is disguised, renders it so palatable that the most delicate stomach can retain it. The notable advantage it possesses over all other preparations, is its *permanency* as an *emulsion*, remaining for an almost unlimited time without the slightest separation or change, which enables the Physician always to prescribe it in its proper proportions. The oil is prepared expressly for us, and guaranteed strictly pure. We will gladly furnish, express paid, a 4-oz. sample to any Physician in the country who may not have been supplied.

Formula.—50 per cent. of pure Cod Liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce.

SCOTT & BOWNE,
Manufacturing Chemists, 125 Hudson Street, N. Y.

Messrs. Scott & Bowne: NEW YORK, September 4, 1876.

Gents—I have prescribed Scott's Emulsion of Cod Liver Oil with Hypophosphites in both private and hospital practice, and consider it a valuable preparation. It remains as a permanent emulsion, even in extremely hot weather, and is more palatable than any other preparation of oil that I have used. Yours, very respectfully,
ROBERT WATTS, M.D., President Medical Board, Charity Hospital.

Messrs. Scott & Bowne:

Gentlemen—Having given your Emulsion of Cod Liver Oil and Hypophosphites of Lime and Soda a fair trial during the past eighteen months, am very much pleased with the same, and consider it the best preparation of the kind in the market.
Yours, truly, J. H. HARTMAN, M.D., Baltimore, Md.

We also refer to the following Physicians, who use it and recommend it to the Profession:

G. C. SHATTUCK, M.D., 18 Stamford Street (Late Visiting Physician, Mass. General Hospital).
J. AYER, M.D., No 6 Hancock Street, Boston.
G. W. GAY, M.D., 575 Tremont Street (Visiting Surgeon Boston City Hospital).
F. E. BUNDY, M.D., 99 Waltham Street, Boston.
W. B. MACKIE, M.D., 675 Tremont Street, Boston.
J. A. OCTERLONY, M.D., Louisville, Ky.
J. SIMONAUD, M.D., New Orleans.
G. LANE TANEYHILL, M.D., Baltimore.
EDWARD A. MARIS, M.D., Baltimore.

LONDON M'F'G CO.'S
ESSENCES OF MEATS,

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN

Which consist solely of the finest juices from choice meats, extracted by a gentle heat, without the addition of water, or any substance whatever. They have been prescribed by the English Medical Profession for the past fifteen years, and since their introduction here have earned the highest commendations. They are peculiarly adapted

FOR INVALIDS—Natural, Pleasant, Refreshing.
FOR INFANTS—Strictly Pure; Prepared without Salt.
FOR DYSPEPTICS—Easily Assimilated.
IN CASES OF SEA SICKNESS—Afford Immediate Nourishment.
AFTER CHILDBIRTH—Meat Stimulant; Concentrated Form.

They retain the fine flavor and smell of the Meat. Are a heavy liquid in a warm temperature, and when placed upon ice take a jelly form, which is especially refreshing to Invalids. They are retained upon the stomach, in very critical cases, when the most carefully prepared soup is rejected. Children readily take them, and in many of their complaints requiring nourishment, "Essences" are UNEQUALED. *In summer, when opened, keep on Ice, leaving the lid partly raised.* DO NOT ADD WATER.

Taken cold direct from the Can, needing no Preparation whatever.

ENTIRELY TAKES THE PLACE OF BEEF TEA.

Physicians and Patrons are cordially invited to visit our Works.

PREPARED ONLY BY THE

LONDON MANUFACTURING COMPANY,

77 and 79 VARICK STREET, NEW YORK.

FOR SALE BY

FRENCH, RICHARDS & CO., Philadelphia, Pa.; JOHNSTON, HOLLOWAY & CO., Philadelphia, Pa.;
1129-1180 BULLOCK & CRENSHAW, Philadelphia, Pa.; And all Retail Druggists.

LIQUEFIED NITROUS OXIDE.

We are prepared to supply Liquefied Nitrous Oxide, of our own manufacture, **warranted pure**, in four sizes of Cylinders, viz., 100, 700, 1000, and 1400 gallons.

Surgeons' Cases of stout Morocco, neatly finished and lined with velvet, containing Cylinder, Tubing, Gas Bag and Inhaler.

Cylinders refilled with Gas.

A Descriptive Circular sent on application.

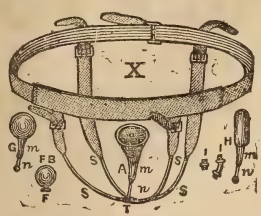
STAUFFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.

SERIES OF UTERINE SUPPORTERS. *1.*



Spring Stem Cup A.—Complete on Belt X, $7.00; on XX, $9.00; on Y, $8.00; and on Z, $6.00. Without belt on SS, $5.00.

Anteversion C, Globe Top G, and Oblong H, in price the same as A, with similar attachments.

Retroversion E, on Belt X, $8 00; on XX, $10.00; on Y, $9.00; and on Z $7.00. Without Belt $6.00

Duplicate Cups—A, $2.00; E, $3 00; Globe Tops G, with attachments to screw on A or E Stem $2.00.

P. S.—Shifting Top, with solid or no Spring Stem, 50 cents less on either belt. No Shifting Top Stem sold alone.

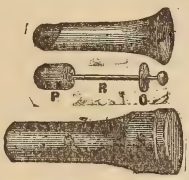
Self-Sustaining Globe B, or Cup D, $1.50 each.

Gums are mailed, 2 at 20 cts; 4 at 35 cts; and Springs at 3 cts. each.

Abdominal Supporters. *2.* *3.*

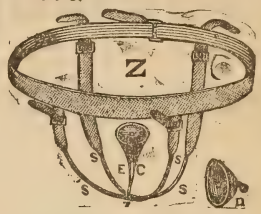
Price, $4.00. Price, $3.00.

SPECULUMS AND CASE. *6.*



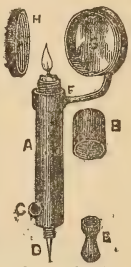
Prices.—The series encased, $14.00. With complete but non-shifting conductor, $2.50 each. Flesh color enameled inside.

SOLID STEM CUP SUPPORTER E. C. *5.*



Price, $4.50. Including Cup D, $6.00. Or E C, on Abdominal Belt X, $5.50. X X, $7.50. Y, $6.50. Including D, on each, $1.50 extra.

REFLECTOR, OR DENTISTS' LIGHT. *10.*



Price, $3.50.

Rectum Supporter and Ointment Holder. *4.*

$3.50.

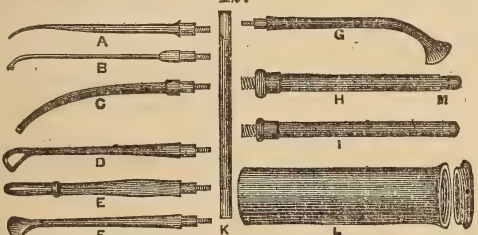
STEM LEVERS. *14.*

$4.50 on Z, $7.00 on X.

Permanent Stem I—The same in price as E C, Fig. 5, on all the belts.

Spring Stem J—The same as Spring Stem Cup A, Fig. 1, on either belt.

HARD RUBBER UTERINE EXAMINING CASE. *12.*



Prices.—Full case, $8.00; Quill Caustic holder H, or camel hair brush holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2.50.

Price, $1.00. *15.*

13.

Fenestrated Vaginal and Anal. *7.*

Prices.—Vaginal T, $2.00. Anal U, $1.50.

Hymen—Pointed. *8.*

Price, $1.50.

Vaginal and Vulva Dilator. *9.*

Price, $1.50.

Caustic Bottle and Case. *11.*

Price, $1.50.

STAUFFER'S NON-EVAPORATING INKSTAND.

Price, $1.00.

Supporters E. C. or Economy.—Fig 5, on its elastic belt Z, is the least in price, and by the oblique construction of the cup sets direct within the angle of the axis of the uterus and vagina, (well seen by IU. Fig. 18) If properly selected, or made so by the exchange privilege, (which admits the interchange of all the hard rubber parts in the catalogue, to cover the purchaser's risk.) It is warranted to correct and sustain even any ***Procidentia.*** The spring stems and shifting tops with their supplements, Fig. 1. Also, improved ***Retroversion, Cup E. Anterversion C.*** and ***Intra-Uterine Stem Cup, IU,*** Fig. 13. The stem locks in a square socket after the cup is in position, and is supported on the elastic gums SS, as A Fig. 1, and same in price. Stem Levers, Fig. 14, etc. All are fully explained in the catalogue. The ***Series*** comprises upwards of 150 in style and size instruments, of which two-thirds belong to the support and correction of the uterus. ***Speculums***—Thomas' objections p. 67—'76, are by them completely overcome. The case contains four. The clear and large view, and facility to work through them, far exceeds any other. The ***Ex. Case,*** and physician's favorite, is admirably represented by Fig. 12—weight but 4 oz. ***Catalogue*** sent free on application. In addition to the description of the above series of instruments, it contains important information on this line of treatment.

THE MEDICAL REGISTER AND DIRECTORY

OF THE

UNITED STATES,

SYSTEMATICALLY ARRANGED BY STATES:

COMPRISING

NAMES, POST-OFFICE ADDRESS, EDUCATIONAL AND PROFESSIONAL STATISTICS, OF MORE THAN 60,000 PHYSICIANS, WITH LISTS OF MEDICAL SOCIETIES, COLLEGES, HOSPITALS, AND OTHER MEDICAL INSTITUTIONS, WITH ABSTRACTS, OF THE MEDICAL LAWS OF EACH STATE, NOTES OF MINERAL SPRINGS Etc.

BY

SAMUEL W. BUTLER, M. D.

SECOND EDITION, REVISED AND CORRECTED.

One Volume, large octavo, double columns, 874 pages. Price, Cloth, $5.50; Leather, $6.50.

The **SECOND EDITION** of this important work has been prepared at great cost of time and money. The lists have been carefully revised *by leading men in each State.* Nearly TEN THOUSAND new names have been added, and numerous corrections made. Those who have purchased the first edition will find this one to possess *all the value of a new work.*

This work has a *national* and *historic* value, as well as a present *business* one. Besides the names and addresses of all the physicians in the country, it contains the roster of the medical officers in the Army and Navy, list of the officers of State and County medical societies, a sketch of the medical geography of each State and Territory, analysis of the waters of all prominent mineral springs, and a mass of other information interesting to the profession. The collation of the *laws regulating the practice of medicine* in the various States is a feature of special interest and one not to be found in any other publication.

All who desire to reach medical men for business purposes, for instance, Life Insurance Companies, Medical Colleges, Wholesale Druggists, Importers and Manufacturers of Pharmaceutical Specialties, Dealers in Surgical Instruments, will find this book invaluable.

OPINIONS OF THE PRESS.

From the (London) *Lancet:*
This is the first work of the kind that has ever appeared on the other side of the Atlantic. The Editor and Compiler, Dr. S. W. Butler, and the publisher, are to be congratulated upon an undoubted success.

From the (London) *Medical Press and Circular:*
Upon opening its well-filled and well arranged pages our only surprise is that such a go-ahead race as our cousins have the credit of being, should have gone on so long without so valuable a book of reference.

From the (Philadelphia) *Medical Times:*
To publishers, druggists and those members of the profession whose sympathies and needs are wide enough to reach beyond their own immediate neighborhood, this book must be invaluable.

From the (Cincinnati) *Lancet and Observer:*
Of very great value, and will be to physicians what the city directory is to the man of business, a book he cannot get along very well without.

From the *Medical and Surgical Reporter:*
A volume of very considerable importance, the appreciation of which must grow in time, and it should find a place in every medical library of any pretensions of completeness.

Published by D. G. BRINTON,

DEXTRO-QUININE.

(A Separated Amorphous Alkaloid from High Grade Cinchona Barks.)

DEXTROGYRATE WITH POLARIZED LIGHT.

This article, prepared from commercial Chinoidine, is a derivative of the alkaloid Quinine, and consists of the *Amorphous Quinine* of Liebig, or the *Diconchinia* of Hesse. Its composition is represented by $C_{40}H_{46}N_4O_6$, and its analogy to Quinine is shown by the following well-known tests:—

It produces, in slightly acidulated solutions, the fine green coloration (due to the formation of thalleioquin) upon the addition of *fresh* chlorine water, followed by solution of Ammonic Hydrate.

When in applying the above test the addition of Ammonia is preceded by solution Potassic Ferrocyanide, an evanescent red color is produced.

It is almost entirely soluble in Ether; completely so in Alcohol, and has the power of neutralizing acids common to the ordinary commercial alkaloid Quinine. It dissolves freely in the dilute mineral acids, forming fluorescent, slightly colored solutions, with the characteristic intensely bitter taste of Quinine.

When examined with a polariscope, it deflects the ray of polarized light to the right instead of the left; and hence, from its dextro-gyratory powers, and from its close analogy, both chemically and therapeutically to Quinine, we have named this article

"DEXTRO-QUININE,"

And claim that it is equal to Sulphate of Quinine in the same dose, While it is less than one-half as costly as Sulphate of Quinine.

It may be obtained of Druggists throughout the country. Samples for clinical use furnished free on application to

LIQUID
Pancreopepsine
(DIGESTIVE FLUID.)

THIS preparation contains, in an agreeable form, the natural digestive and assimilative principles, **Pancreatine, Pepsine, Lactic** and **Muriatic Acids.** The best means of re-establishing digestion in enfeebled stomachs, where the power to assimilate and digest food is impaired, is to administer principles capable of communicating the elements necessary to convert food into nutriment. The value of **Liquid Pancreopepsine** in this connection has been fully established and we can recommend it with confidence to the Profession as superior to Pepsin alone. It aids in digesting animal and vegetable cooked food, fatty and amylaceous substances, and may be employed in all cases where, from prolonged sickness or other causes, the alimentary processes are not in their normal condition.

It is usually given in tablespoonful doses after each meal.

PUT UP IN 16 OUNCE FRENCH SQUARE BOTTLES.

Price, $1.00 Per Bottle,
" 10.00 " Doz. Bottles.

WILLIAM R. WARNER & CO.

MANUFACTURERS OF

SUGAR-COATED PILLS.

1228 MARKET STREET,

PHILADELPHIA.

RELIABLE

ANIMAL VACCINE.

The undersigned respectfully announces that he has discontinued the practice of furnishing Vaccine *at his residence.*

Physicians can obtain the *Animal Vaccine* of MESSRS. CASWELL, HAZARD & CO., BROADWAY, CORNER 24TH STREET.

FRANK P. FOSTER, M.D.

By our arrangement with Dr. Foster, *all* Vaccine supplied by *us* is *absolutely fresh.*

We can furnish it in any quantity desired, either by express or by mail, if remittance is made to cover postage.

Dr. Foster's Animal Vaccine is the only kind that may be said to have the unqualified endorsement of the Medical Profession of New York.

QUILL SLIPS (half quill, charged on convex surface, at square-cut end).....25 cts.
CAPILLARY TUBES.....$2 00

For ordinary use *Quill Slips* are the most reliable of all forms of stored Vaccine, and in cases of failure with them in *primary* vaccination, if used within one week of their issue, and strictly in accordance with the printed directions, *being in the meantime kept cool and dry*, a second supply will be furnished gratis.

Tubes are intended chiefly for transportation to long distances, as the virus is preserved for a considerable length of time. They are superior to crusts, but inferior to quill slips.

Crusts are not recommended, and are not sold, for the reason that, however fresh, and however well formed they may be, they are apt to prove inefficient.

CASWELL, HAZARD & CO., New York.

APOLLINARIS

NATURAL MINERAL WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its sale in France authorized by special decree of the French Government.

"THE QUEEN OF TABLE WATERS."—*London Medical Record.*

PROFESSOR OSCAR LIEBREICH, Professor of Medical Chemistry, University of Berlin:—"After minute personal investigation, I can affirm that the Apollinaris Water is bottled according to all the rules of science, and is an entirely Natural Mineral Water."

PROFESSOR J. A. WANKLYN, Lecturer on Chemistry, St. George's Hospital, London:—"I have thoroughly examined the Apollinaris Spring and the method of bottling. The Apollinaris Water, as supplied to the public, is simply and purely a Natural Mineral water, impregnated only with its own gas."

PROFESSOR MOHR, Medical Councillor, University of Bonn:—"After exhaustive investigation, I declare the Apollinaris Water, as supplied to the public, to be purely natural in every respect, and of most excellent quality."

DR. THEODOR KYLL, Analytical Chemist, Town Councillor, Cologne (*expert appointed by United States Vice-Consul, October*, 1877), reported that "The Apollinaris Water, as bottled, deserves in every respect the name of an excellent natural acidulated water."

Every Genuine Bottle bears the REGISTERED YELLOW PICTORIAL LABEL of the Apollinaris Company, Limited, London.

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and Wholesale of

FREDK. DE BARY & CO., Sole Agents,

1117-1168 **41 and 43 WARREN STREET, NEW YORK.**

LEBAIGUE'S
DIALYSED IRON,
OR
PURE PEROXIDE OF IRON,
IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate, nor cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a **solution,** which is generally preferred; or of an **elixir,** when a slight stimulant is desired.

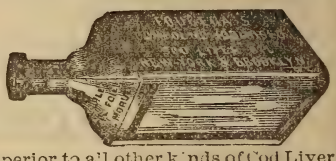
DOCTOR GIBERT'S
DEPURATORY SYRUP AND DRAGEES,
OF IODIZED DEUTO-IODIDE OF MERCURY.

These preparations have been approved by the Academy of Medicine of Paris, and have been thoroughly tested in the hospitals of Paris in the treatment of *Syphilitic, Scrofulous* and other affections requiring the use of iodized remedies.

They are recommended for the utmost accuracy of composition, and their perfect preservation.

Prepared by VAUQUELIN-DESLAURIERS, Chemist, Paris.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER of the ABOVE,
To whom all special communications should be addressed.

E. FOUGERA & CO.,
30 North William Street, New York,
SOLE GENERAL AGENTS for the ABOVE,
To whom all orders should be addressed.

SOLD BY DRUGGISTS GENERALLY.

VACCINE VIRUS.

In order to meet properly the continued demand upon us for ANIMAL VIRUS, we have established stables for its propagation upon carefully selected heifers. The lymph used is of the well-known "Beaugency" stock, imported by ourselves expressly for this purpose. The result of several years' experience in supplying this lymph leads us to believe that its excellence is unsurpassed. The establishment is under the care of a competent physician, who will spare no pains to produce a perfectly RELIABLE and PURE article, which we are prepared to furnish FRESH, DAILY.

We can also furnish, to those who prefer it, HUMANIZED VIRUS, from healthy children, procured for us by physicians of undoubted reliability.

All our Virus is put up in strong, *air-tight, sealed packages*, for safe conveyance by mail or express, and will be sent (post-paid if by mail) upon the following terms:—

From the Heifer, 10 large Ivory Points, well charged on both sides	$1.50
5 large Ivory Points, " " "	.80
Large Ivory Points, less than 5, " " " each	.25
1 Crust, new method, in air-tight Glass Capsule	2.00
From Healthy Infants, 10 small Ivory Points	1.50
1 Crust from Unruptured Vesicles	2.00

Directions for vaccinating with either form of Virus, derived from methods successfully employed, will be furnished with Virus if requested.

We will warrant every package of Points and every Crust, giving a fresh supply in case of failure reported within fifteen days for Points, thirty days for Human, and ninety days for Kine Crusts. We can usually furnish Crusts one remove from the heifer, if preferred.

On account of their unreliability, we have hitherto furnished the usual form of Kine Crust unwillingly. Under our new method of taking and preserving them, however, after careful tests and an experience extending over several months, the results attained have been so satisfactory that we now offer them as not less active and reliable than other forms of Virus, while less liable to become inert with lapse of time. We now offer them on very favorable terms, and recommend them for transmission to a distance, and in all cases where it is desired to preserve Virus for some weeks or months, or to keep a supply at hand for emergencies.

We also furnish UNCHARGED IVORY POINTS, for physicians' use, at the following rates:—

Small	per 100, 25 cents; per 1000	2.00
Large	per 100, 50 cents; per 1000	4.00

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns, and Institutions.

SCARIFYING VACCINATOR, STEEL, NICKEL PLATED. See Cut. Each 25 cents.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expenses of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With Hops (Plain)*,	- - - - - -	$1.00

INJURIES OF THE EYE

AND THEIR

MEDICO-LEGAL ASPECT,

By FERDINAND VON ARLT, M.D.,

Professor of Ophthalmology in the University of Vienna, Austria.

TRANSLATED, WITH THE PERMISSION OF THE AUTHOR,

By CHAS. S. TURNBULL, M.D.,

Surgeon to the Eye and Ear Department of the Howard and of the German Hospitals, of Philadelphia.

One Volume, 12mo, cloth, $1.25.

"Such a booklet has long been needed in our language, and I am glad you have supplied the want."—*Prof. S. D. Gross.*

"The translation certainly bears intrinsic evidence, as I am convinced from a careful examination of it, of having been well and faithfully executed, and I hope that it will meet with the large circulation which it deserves. It is a useful addition to the literature of medical jurisprudence."—*Prof. Jas. Aitken Meigs.*

From the Legal Intelligencer, Philadelphia.

"Previous to the appearance of Prof. Arlt's work there were none but antiquated monographs on the subject; the references to ocular injuries in the best text-books were exceedingly brief and superficial, while medico-legal opinions in individual cases were too sparsely scattered through the archives and other periodical publications to call that attention to the subject which it demands, or to serve as a guide in case such attention had been aroused. An Index made with care, and very full, completes the value and usefulness of the monograph."

From the Medical and Surgical Reporter, Philadelphia.

"Professor Arlt's opinions stand in the very front rank of those of men of his special branch in Germany, and as the translator has been at once his pupil and friend, the accuracy of their presentment cannot be questioned."

From the New York Medical Journal.

"It is a book, which, we take it for granted, every specialist in the department will provide himself with; and it will also be a valuable addition to any general surgeon's library."

From the Boston Medical and Surgical Journal.

"It was written for the general profession, and not solely for the specialist, and has its scope well presented in the title. Dr. Turnbull has furnished a translation unusually free from traces of the German idiom, and it is printed with clear type, on good paper.

From the San Francisco Pacific Medical and Surgical Journal.

"Every country practitioner would do well to possess it, as there are numerous injuries of the eye to which he *must* attend. It is particularly full on foreign bodies in the eye; one of the commonest kinds of injury. The translation is good English, and not mongrel Latin, German, and English, as most translations of German works.

WE ALSO HAVE FOR SALE THE FOLLOWING

STANDARD MEDICAL BOOKS,

AT REDUCED PRICES:

PRACTICAL ANATOMY. With illustrations. Second edition. By D. Hayes Agnew, M.D., 12mo, cloth..... $1.50

"THE BEST LITERATURE OF THE DAY."—*New York Times.*

THE GREATEST LIVING AUTHORS, such as

Prof. MAX MULLER,	THE DUKE OF ARGYLL,	MATTHEW ARNOLD,
Rt. Hon. W. E. GLADSTONE,	WILLIAM BLACK,	J. NORMAN LOCKYER,
JAMES ANTHONY FROUDE,	MISS THACKERAY,	FRANCIS W. NEWMAN,
Prof. HUXLEY,	MRS. MULOCH-CRAIK,	ALFRED RUSSELL WALLACE,
RICHARD A. PROCTOR,	GEORGE MACDONALD,	HENRY KINGSLEY,
Prof. GOLDWIN SMITH,	MRS. OLIPHANT,	W. W. STORY,
EDWARD A. FREEMAN,	MRS. ALEXANDER,	IVAN TURGUENIEF,
Prof. TYNDALL,	JEAN INGELOW,	RUSKIN,
Dr. W. B. CARPENTER,	JULIA KAVANAGH,	TENNYSON,
FRANCES POWER COBBE,	THOMAS HARDY,	BROWNING,

and many others, are represented in the pages of

LITTELL'S LIVING AGE.

In 1879, THE LIVING AGE enters upon its thirty-sixth year, admittedly unrivalled and continuously successful. A WEEKLY MAGAZINE, of sixty-four pages, it gives more than

Three and a Quarter Thousand

double-column octavo pages of reading-matter yearly, forming four large volumes. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a *satisfactory completeness* attempted by no other publication, the best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

During the coming year, Serial and Short Stories by the **Most Eminent Foreign Authors** will be given, together with an amount

Unapproached by any other Periodical

in the world, of the most valuable Literary and Scientific matter of the day from the pens of the foremost Essayists, Scientists, Critics, Discoverers, and Editors, above-named and many others, representing every department of Knowledge and Progress

The importance of THE LIVING AGE to every American reader, as the only **satisfactorily fresh and complete** compilation of a generally inaccessible but indispensable current literature,—*indispensable* because it embraces the productions of

THE ABLEST LIVING WRITERS

in all branches of Literature, Science, Art, and Politics,—is sufficiently indicated by the following recent

Opinions.

"THE LIVING AGE supplies a better compendium of current discussion, information and investigation, and gives a greater amount and variety of reading-matter which it is well worth while to read, than any other publication. . . . It is simply indispensable."—*Boston Journal.*

"It contains the best results of the world's thinking."—*The Churchman, New York.*

"It affords the best, the cheapest, and most convenient means of keeping abreast with the progress of thought in all its phases. . . . . It is the best work of its kind ever published in the country, and can hardly ever be improved upon."—*North American, Philadelphia.*

"The prince among magazines."—*New York Observer.*

"In it we find the best productions of the best writers upon all subjects ready to our hand. . . . Through its pages alone it is possible to be as thoroughly well informed in current literature as by the perusal of a long list of monthlies."—*Philadelphia Inquirer.*

"Its pages teem with the choicest literature of the day."—*New York Tribune.*

"Its frequent issue and ample space enable it to do fully what it proposes to do,—to give *all* that the very ablest of living writers furnish to periodical literature on science, history, biography, philosophy, poetry, theology, politics and criticism, and to add to this the full complement of the best that there is in fiction."—*The Interior, Chicago.*

"One cannot read everything. . . . . No man will be behind the literature of the times who reads THE LIVING AGE."—*Zion's Herald, Boston.*

"Every weekly number now-a-days is equal to a first-class monthly. For solid merit, it is the cheapest magazine in the land."—*The Advance, Chicago.*

"Gives the best of all at the price of one."—*New York Independent.*

"It focalizes the best literature of the age. . . . It is the most wonderful weekly publication of which we have any knowledge."—*St. Louis Observer.*

"In no other single publication can there be found so much of sterling literary excellence."—*N. Y. Evening Post.*

"It has no equal in any country."—*Philadelphia Press.*

"It is a *thorough compilation* of what is best in the literature of the day, whether relating to history, biography, fiction, poetry, wit, science, politics, theology, criticism, or art."—*Hartford Courant.*

"There is no other way of procuring the same amount of excellent literature for anything like the same price."—*Boston Advertiser.*

'There is no magazine published that gives so general a knowledge of what is going on in the literary world."—*Presbyterian Weekly, Baltimore.*

"The ablest essays, the most entertaining stories, the finest poetry of the English language are here gathered together."—*Illinois State Journal.*

"The reader finds little occasion to go beyond its columns for instructive or entertaining articles of any description."—*Boston Evening Traveller.*

"*With it alone* a reader may fairly keep up with all that is important in the literature, history, politics, and science of the day."—*The Methodist, New York.*

"To keep up with it, is to master the best thought of our time."—*Illustrated Christian Weekly, New York.*

"Its publication in weekly numbers gives to it a great advantage over its monthly contemporaries in the spirit and freshness of its contents."—*The Pacific, San Francisco.*

"A pure and perpetual reservoir and fountain of entertainment and instruction."—*Hon. Robert C. Winthrop.*

"The best and cheapest periodical in America."—*Evangelical Churchman, Toronto.*

"There is nothing comparable to it in true value in the whole range of periodical literature."—*Mobile Daily Register.*

"It is the only compilation that presents with a satisfactory completeness, as well as freshness, a literature embracing the productions of the ablest and most cultured writers living. *It is, therefore, indispensable to every one who desires a thorough compendium of all that is admirable and noteworthy in the literary world.*"—*Boston Post.*

"Ought to find a place in every American home."—*New York Times.*

PUBLISHED WEEKLY, at $8.00 a year *free of postage.* An extra copy sent *gratis* to any one getting up a club of five new subscribers.

EXTRA OFFER FOR 1879.

All new subscribers for 1879 will receive *gratis* the six numbers of 1878 containing, with other valuable matter, the first parts of "Sir Gibbie," a new Serial of much interest by GEORGE MACDONALD, now appearing in THE LIVING AGE from the author's advance sheets. Other choice new serials by distinguished authors are engaged and will speedily appear.

CLUB PRICES FOR THE BEST HOME AND FOREIGN LITERATURE.

'["Possessed of 'LITTELL'S LIVING AGE' and of one or other of our vivacious American monthlies, a subscriber will find himself *in command of the whole situation.*"]—*Philadelphia Evening Bulletin.*

For $10.50, THE LIVING AGE and *either* one of the *four-dollar* monthly Magazines (or *Harper's Weekly* or *Bazar*), will be sent for a year, *with postage prepaid on both;* or, for $9.50, THE LIVING AGE and the *St. Nicholas*, or *Appleton's Journal, both postpaid.*

LIGHT-BROWN
COD LIVER OIL

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen, in Ireland.

"I have frequently prescribed Dr. De Jongh's Light-Brown Cod-Liver Oil. I consider it to be a very pure oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,
Author of
"The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-Liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties; and I am satisfied that for medicinal purposes no finer oil can be procured."

Dr. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor-Law Board of Great Britain.

"We think it a great advantage that there is one kind of Cod-Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by Dr. De Jongh. It has long been our practice, when prescribing the Oil, to recommend this kind, since, amidst so much variety and uncertainty, we have confidence in its genuineness."—(Extract from "Consumption: Its Early and Remediable Stages.")

Dr. PROSSER JAMES,
Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-Liver Oil as the best on the subject, and adopted its conclusion as to the superiority of the Light-Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. De Jongh's Light-Brown Cod-Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. LETHEBY,
Medical Officer of Health, and Chief Analyst to the City of London.

"In all cases I have found Dr. De Jongh's Light-Brown Cod-Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable. It is, I believe, universally acknowledged that this Oil has great therapeutic power; and, from my investigations, I have no doubt of its being a pure and unadulterated article."

Dr. BANKS,
King's Professor of the Practice of Physic at the University of Dublin.

"I have, in the course of my practice, extensively employed Dr. De Jongh's Light-Brown Cod-Liver Oil, and I have no hesitation in stating that I consider it the best of all the specimens of oil which have ever come under my notice. The fact of so able and accurate an observer as Dr. De Jongh subjecting the Oil to careful analysis previous to its exposure to sale, is a sufficient guarantee of its purity and excellence."

Dr. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College, London.

"Dr. Sheppard has made extensive use of Dr. De Jongh's Light-Brown Cod-Liver Oil, and has great pleasure in testifying to its superiority over every other preparation to be met with in this country. It has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is supplied ONLY in bottles sealed with BETT'S Patent Capsule, impressed on the top with Dr. DE JONGH'S Stamp, and on the side with his Signature, and the Signature of ANSAR, HARFORD & CO., and bearing under the wrapper a Label with the same Stamp and Signatures. WITHOUT THESE MARKS NONE CAN POSSIBLY BE GENUINE.

Sold in IMPERIAL half-pints, $1.00, by the Principal Druggists in the UNITED STATES.

1879. BEGIN NOW! 1879.

UNEQUALED INDUCEMENTS!

NEW SUBSCRIBERS WILL RECEIVE

THE WEEKLY

MEDICAL AND SURGICAL REPORTER

From now until December 31st, 1879,

FOR $5.00!

The MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list, unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, double-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES.

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of *the whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

PRICES PER YEAR.

The Weekly Medical and Surgical Reporter.....$5.00
The Half-Yearly Compendium of Medical Science..... 2.50
The Reporter and Compendium taken together..... 7.00

Payable in Advance.

D. G. BRINTON, M.D.,

115 SOUTH SEVENTH STREET, PHILADELPHIA.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1878-79.

FACULTY.

PRELIMINARY AND REGULAR SESSIONS.

EDWARD W. JENKS, M.D., President,
Professor of Medical and Surgical Diseases of Women, and Obstetrics.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Toxicology.

THEODORE A. McGRAW, M.D., Treasurer,
Professor of Principles and Practice of Surgery and Clinical Surgery.

C. B. GILBERT, M.D.,
Professor of Materia Medica, Therapeutics and Clinical Diseases of Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy and Clinical Surgery.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Lecturer on Diseases of the Eye and Ear.

RECITATION SESSION.

H. O. WALKER, M.D.,
Lecturer on Genito-Urinary System and Rectum.

DANIEL LA FERTE, M.D.,
(Demonstrator of Anatomy) and Lecturer on Orthopedic Surgery and Tumors.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Differential Diagnosis.

E. L. SHURLY, M.D.,
Lecturer on Diseases of Throat and Lungs.

F. A. SPALDING, M.D,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

JAS. D. MUNSON, M.D.,
Demonstrator of Practical Physiology.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Microscopy.

The Collegiate Year is divided into three sessions.

PRELIMINARY SESSION opens Wednesday, September 4th, 1878, and continues one month. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The REGULAR SESSION opens Wednesday, October 2d, 1878, and continues five months. During this term all the branches of *General Medicine and Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The RECITATION SESSION begins second Wednesday in March, 1879, and continues four months. Daily during this term there will be held a lecture, recitation and one or two clinics. The lectures will be upon special subjects of medical or surgical interest.

The recitations will embrace the general subjects of the Regular Session, viz., Anatomy, Surgery, Midwifery, Diseases of Women, Physiology, Practice of Medicine, Materia Medica and Chemistry.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

FEES.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Board and Rooms can be obtained at low rates—according to accommodations—from $3 to $5 per week. Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., SECRETARY,

1110-1135 92 CASS STREET, DETROIT.

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, Jr., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

MEDICAL TEXT-BOOKS,

FOR THE STUDENT AND THE PRACTITIONER,

PUBLISHED BY

D. APPLETON & CO.,

549 and 551 Broadway, New York City.

Complete Catalogues will be forwarded upon application. All communications promptly answered.

***BARKER** (**FORDYCE**).* On Puerperal Disease. Clinical Lectures delivered at Bellevue Hospital. A Course of Lectures, valuable alike to the Student and the Practitioner. Third edition. In 1 vol., 8vo. Cloth, $5.00; sheep, $6.00.

***BARNES** (**ROBERT**).* Lectures on Obstetric Operations, including the Treatment of Hemorrhage, and forming a Guide to the Management of Difficult Labor. By Robert Barnes, M.D., F.R.C.P., Fellow and late Examiner in Midwifery at the Royal College of Physicians; Examiner in Midwifery at the Royal College of Surgeons, London. 1 vol. 8vo. Third edition, revised and extended. Illustrated. Cloth, $4.50.

***BARTHOLOW'S** Treatise on Materia Medica and Therapeutics. A new and revised edition. By Roberts Bartholow, M.A., M D., Professor of the Theory and Practice of Medicine, and of Clinical Medicine, and formerly Professor of Materia Medica and Therapeutics in the Medical College of Ohio; Physician to the Hospital of the Good Samaritan; Corresponding Member of the New York Neurological Society, etc. 1 vol., 8vo., 548 pages. Cloth, $5.00; Sheep, $6.00.

***BILLROTH** (**Dr. THEODOR**).* General Surgical Pathology and Therapeutics, in Fifty Lectures. A Text-book for Students and Physicians. By Dr. Theodor Billroth, Professor of Surgery in Vienna. Translated from the fourth German edition, by special permission of the author, by Charles E. Hackley, M.D., Surgeon to the New York Eye and Ear Infirmary; Physician to the New York Hospital; Fellow of the New York Academy, etc. 1 vol., 8vo. 152 Woodcuts. New edition. Cloth, $5.00; sheep, $6.00.

***FLINT'S** (**AUSTIN, Jr.**)* Text-book of Human Physiology; designed for the Use of Practitioners and Students of Medicine. Illustrated by three Lithographic Plates, and 313 Woodcuts. 1 vol., imperial 8vo. Cloth, $6.00; sheep, $7.00.

***HAMMOND** (**W. A.**).* A Treatise on Diseases of the Nervous System. By Wm. A. Hammond, M.D., Professor of Diseases of the Nervous System and of Clinical Medicine in the Bellevue Hospital Medical College; Physician-in-Chief to the New York State Hospital for Diseases of the Nervous System, etc. New edition, with 109 illustrations. Rewritten, enlarged, and improved. 1 vol., large 8vo. Cloth, $6.00; sheep, $7.00

***NEUMANN** (**ISIDOR**).* Hand-book of Skin Diseases. By Dr. Isidor Neumann. Translated by Lucius D. Bulkley, A.M., M.D. Illustrated with 66 Wood Engravings. 1 vol., 8vo. Cloth, $4.00; sheep, $5.00.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

NOW IS THE TIME TO SUBSCRIBE

— FOR THE —

Cincinnati Lancet and Clinic,

THE LEADING WESTERN MEDICAL JOURNAL.

It has an able Corps of Contributors; Gives a Condensed Statement of the Progress of Medicine and Surgery; Reviews the Latest Medical Works; Publishes Society Proceedings, and keeps its Readers informed of the Medical News of the Day.

THE CINCINNATI LANCET AND CLINIC is issued *every Saturday*, and contains 20 large octavo double-columned pages of reading matter in every number, and is handsomely printed on fine tinted book paper, neither labor nor expense being spared to adapt it to the daily wants of the American practitioner of Medicine.

THE LANCET AND CLINIC is strictly an independent journal, not being controlled or published in the special interest of any College or Society, but is devoted to the advancement of science and progress of rational Medicine.

SPECIAL INDUCEMENTS.

NEW SUBSCRIBERS, who remit their names and subscription AT ONCE, will receive THE LANCET AND CLINIC from NOW until December 31, 1879,

FOR $3.50.

LONDON M'F'G CO.'S
ESSENCES OF MEATS,

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN

Which consist solely of the finest juices from choice meats, extracted by a gentle heat, without the addition of water, or any substance whatever. They have been prescribed by the English Medical Profession for the past fifteen years, and since their introduction here have earned the highest commendations. They are peculiarly adapted

FOR INVALIDS—Natural, Pleasant, Refreshing.
FOR INFANTS—Strictly Pure; Prepared without Salt.
FOR DYSPEPTICS—Easily Assimilated.
IN CASES OF SEA SICKNESS—Afford Immediate Nourishment.
AFTER CHILDBIRTH—Meat Stimulant; Concentrated Form.

They retain the fine flavor and smell of the Meat. Are a heavy liquid in a warm temperature, and when placed upon ice take a jelly form, which is especially refreshing to Invalids. They are retained upon the stomach, in very critical cases, when the most carefully prepared soup is rejected. Children readily take them, and in many of their complaints requiring nourishment, "Essences" are UNEQUALED. *In summer, when opened, keep on Ice, leaving the lid partly raised.* DO NOT ADD WATER.

Taken cold direct from the Can, needing no Preparation whatever.

ENTIRELY TAKES THE PLACE OF BEEF TEA.

Physicians and Patrons are cordially invited to visit our Works.

PREPARED ONLY BY THE

LIQUID
Pancreopepsine
(DIGESTIVE FLUID.)

THIS preparation contains, in an agreeable form, the natural digestive and assimilative principles, **Pancreatine, Pepsine, Lactic** and **Muriatic Acids.** The best means of re-establishing digestion in enfeebled stomachs, where the power to assimilate and digest food is impaired, is to administer principles capable of communicating the elements necessary to convert food into nutriment. The value of **Liquid Pancreopepsine** in this connection has been fully established and we can recommend it with confidence to the Profession as superior to Pepsin alone. It aids in digesting animal and vegetable cooked food, fatty and amylaceous substances, and may be employed in all cases where, from prolonged sickness or other causes, the alimentary processes are not in their normal condition.

It is usually given in tablespoonful doses after each meal.

PUT UP IN 16 OUNCE FRENCH SQUARE BOTTLES.

Price, $1.00 Per Bottle,
" 10.00 " Doz. Bottles.

"THE QUEEN OF TABLE WATERS."—*London Medical Record.*

PROFESSOR OSCAR LIEBREICH, Professor of Medical Chemistry, University of Berlin:—"After minute personal investigation, I can affirm that the Apollinaris Water is bottled according to all the rules of science, and is an entirely Natural Mineral Water."

PROFESSOR J. A. WANKLYN, Lecturer on Chemistry, St. George's Hospital, London:—"I have thoroughly examined the Apollinaris Spring and the method of bottling. The Apollinaris Water, as supplied to the public, is simply and purely a Natural Mineral water, impregnated only with its own gas."

PROFESSOR MOHR, Medical Councillor, University of Bonn:—"After exhaustive investigation, I declare the Apollinaris Water, as supplied to the public, to be purely natural in every respect, and of most excellent quality."

DR. THEODOR KYLL, Analytical Chemist, Town Councillor, Cologne (*expert appointed by United States Vice-Consul, October,* 1877), reported that "The Apollinaris Water, as bottled, deserves in every respect the name of an excellent natural acidulated water."

Every Genuine Bottle bears the REGISTERED YELLOW PICTORIAL LABEL of the Apollinaris Company, Limited, London.

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and Wholesale of

FREDK. DE BARY & CO., Sole Agents,

1117-1168 41 and 43 WARREN STREET, NEW YORK.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D ,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....per oz. $1.00
" (" ").....per doz. 10.00
" (in ½ lb ").....per lb. 12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect in every respect as it is possible to make a Belladonna Plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, whilst our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical:—

TABLE OF RESULTS.

	Test solution requisite for 100 c. c. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
HERRINGS & CO., "	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869.....	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts**, and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell Novelty Plaster Works; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna.

"R. OGDEN DOREMUS, M.D., LL.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

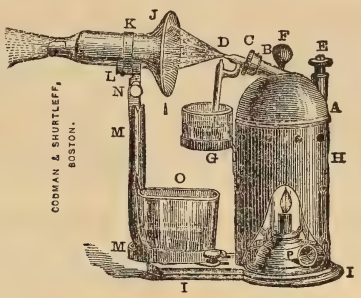
CODMAN & SHURTLEFF'S

ATOMIZING APPARATUS.

PRICES REDUCED.



THE COMPLETE STEAM ATOMIZER. (Patented March 24, 1868.)

All its joints are hard-soldered.

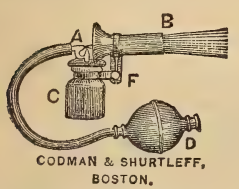
Every one is tested by hydrostatic pressure, to more than one hundred pounds to the square inch.

It cannot be injured by exhaustion of water, or any attainable pressure, and will last for many years.

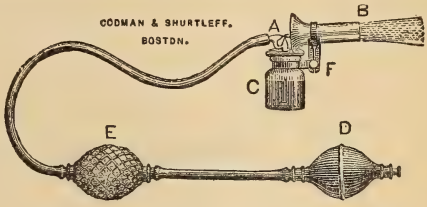
It does not throw spirts of hot water, is convenient, durable, portable, compact, and cheap, in the best sense of the word. Price $5.00. Postage 59c.

Brass parts, nickel-plated, additional, $2.00.

Neatly made, strong Black Walnut Box, with convenient Handle, additional, $2.50. Postage 44c.



THE BOSTON ATOMIZER. (Patented.)



SHURTLEFF'S ATOMIZING APPARATUS. (Patented.)

The most desirable Hand Apparatus. Rubber warranted of the very best quality. Valves imperishable, every one carefully fitted, and will work perfectly in all positions. Price $3.50.

The Bulbs are adapted to all the Atomizing Tubes made by us.

Each of the above Apparatus is supplied with two carefully-made annealed glass Atomizing Tubes, and accompanied with directions for use. Each Apparatus is carefully packed for transportation, and warranted perfect.

The Antiseptic Atomizer		*$15.00, $25.00, $45.00, and $50.00*
Atomizer by Compressed Air, with Regulating Self-acting Cut-off		*45.00*
Dr. Oliver's Atomizer		*4.00*
Dr. Clarke's Atomizer	*(Postage 20)*	*3.00*
The Constant Atomizer	*(" 20)*	*3.00*
Dr. Knight's Atomizer	*(" 12)*	*2.50*
The Boston Atomizer (See Cut)	*(" 16)*	*2.50*
Atomizing Tubes in great variety		*25 cents to 15.00*

For full description see NEW PAMPHLET on Atomization of Liquids with Formulæ of many articles of the Materia Medica successfully employed in the practice of a well-known American practitioner, together with descriptions of the best forms of apparatus, which will be sent, post-paid, on application.

Plaster Bandages and Bandage Machines, Articles for Antiseptic Surgery, Aspirators, Clinical Thermometers, Crutches, Air Cushions, Wheel Chairs and Articles for Invalids, Mechanical Appliances for all deformities and deficiencies, Trusses, Elastic Hose, etc. Electric Instruments for all Medical and Surgical uses, Hypodermic Syringes, Ice and Hot Water Bags, Manikins, Models, Skeletons, Skulls, etc., etc. Naturalists' Instruments, Sphygmographs, Splints and Fracture Apparatus, Stethoscopes, Syringes of all kinds, Teeth Forceps, Test Cases, Transfusion Instruments, French Rubber Urinals, Urinometers, Vaccine Virus, Veterinary Instruments, Waldenburg's Pneumatic Apparatus, etc., etc.

Surgical Instruments and Medical Appliances of every description promptly repaired.

Having our Factory, with steam power, ample machinery, and experienced workmen, connected with our store, we can promptly make to order, in the best manner, and from almost any material, new instruments and apparatus, and supply new inventions on favorable terms. Instruments bearing our name are fully warranted. With hardly an exception they are the product of our own factory, and made under our personal supervision, by skilled workmen, who, being paid for their time, are not likely to slight their work through haste.

New Illustrated Catalogue, postpaid, on application.

13 and 15 TREMONT STREET, BOSTON.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

1879. BEGIN NOW! 1879.

UNEQUALED INDUCEMENTS!

NEW SUBSCRIBERS WILL RECEIVE

THE WEEKLY

MEDICAL AND SURGICAL REPORTER

From now until December 31st, 1879,

FOR $5.00!

The MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list, unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, double-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES.

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of *the whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

PRICES PER YEAR.

***The Weekly Medical and Surgical Reporter*.....$5.00**
***The Half-Yearly Compendium of Medical Science*..... 2.50**
***The Reporter and Compendium taken together*..... 7.00**

Payable in Advance.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE

We respectfully ask the Medical Profession to give the above preparation a trial, knowing they will find it just the thing long desired, and obtain splendid results in the wasting diseases indicated by malnutrition and assimilation. The *perfect* and *permanent* union of the Cod Liver Oil with the Hypophosphites, and the thorough manner in which the nauseous taste is disguised, renders it so palatable that the most delicate stomach can retain it. The notable advantage it possesses over all other preparations, is its *permanency* as an *emulsion*, remaining for an almost unlimited time without the slightest separation or change, which enables the Physician always to prescribe it in its proper proportions. The oil is prepared expressly for us, and guaranteed strictly pure. We will gladly furnish, express paid, a 4-oz. sample to any Physician in the country who may not have been supplied.

Formula —50 per cent. of pure Cod Liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce.

SCOTT & BOWNE,
Manufacturing Chemists, 125 Hudson Street, N. Y.

Messrs. SCOTT & BOWNE: NEW YORK, September 4, 1876.

Gents—I have prescribed Scott's Emulsion of Cod Liver Oil with Hypophosphites in both private and hospital practice, and consider it a valuable preparation. It remains as a permanent emulsion, even in extremely hot weather, and is more palatable than any other preparation of oil that I have used. Yours, very respectfully,
ROBERT WATTS, M.D., President Medical Board, Charity Hospital.

Messrs. SCOTT & BOWNE:

Gentlemen—Having given your Emulsion of Cod Liver Oil and Hypophosphites of Lime and Soda a fair trial during the past eighteen months, am very much pleased with the same, and consider it the best preparation of the kind in the market.
Yours, truly, J. H. HARTMAN, M.D., Baltimore, Md.

We also refer to the following Physicians, who use it and recommend it to the Profession:

G. C. SHATTUCK, M.D., 18 Stamford Street (Late Visiting Physician, Mass. General Hospital).
J. AYER, M.D., No. 6 Hancock Street, Boston.
G. W. GAY, M.D., 575 Tremont Street (Visiting Surgeon Boston City Hospital).
F. E. BUNDY, M.D., 99 Waltham Street, Boston.
W. B. MACKIE, M.D., 675 Tremont Street, Boston.
J. A. OCTERLONY, M.D., Louisville, Ky.
J. SIMONAUD, M.D., New Orleans.
G. LANE TANEYHILL, M.D., Baltimore.
EDWARD A. MARIS, M.D., Baltimore.

NOW IS THE TIME TO SUBSCRIBE

— FOR THE —

Cincinnati Lancet and Clinic,

THE LEADING WESTERN MEDICAL JOURNAL.

It has an able Corps of Contributors; Gives a Condensed Statement of the Progress of Medicine and Surgery; Reviews the Latest Medical Works; Publishes Society Proceedings, and keeps its Readers informed of the Medical News of the Day.

THE CINCINNATI LANCET AND CLINIC is issued *every Saturday*, and contains 20 large octavo double-columned pages of reading matter in every number, and is handsomely printed on fine tinted book paper, neither labor nor expense being spared to adapt it to the daily wants of the American practitioner of Medicine.

THE LANCET AND CLINIC is strictly an independent journal, not being controlled or published in the special interest of any College or Society, but is devoted to the advancement of science and progress of rational Medicine.

SPECIAL INDUCEMENTS.

NEW SUBSCRIBERS, who remit their names and subscription AT ONCE, will receive THE LANCET AND CLINIC from NOW until December 31, 1879,

FOR $3.50.

Address all communications to

Dr. J. C. CULBERTSON,

LONDON M'F'G CO.'S

ESSENCES OF MEATS,

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN

Which consist solely of the finest juices from choice meats, extracted by a gentle heat, without the addition of water, or any substance whatever. They have been prescribed by the English Medical Profession for the past fifteen years, and since their introduction here have earned the highest commendations. They are peculiarly adapted

FOR INVALIDS—Natural, Pleasant, Refreshing.
FOR INFANTS—Strictly Pure; Prepared without Salt.
FOR DYSPEPTICS—Easily Assimilated.
IN CASES OF SEA SICKNESS—Afford Immediate Nourishment.
AFTER CHILDBIRTH—Meat Stimulant; Concentrated Form.

They retain the fine flavor and smell of the Meat. Are a heavy liquid in a warm temperature, and when placed upon ice take a jelly form, which is especially refreshing to Invalids. They are retained upon the stomach, in very critical cases, when the most carefully prepared soup is rejected. Children readily take them, and in many of their complaints requiring nourishment, "Essences" are UNEQUALED. *In summer, when opened, keep on Ice, leaving the lid partly raised.* DO NOT ADD WATER.

Taken cold direct from the Can, needing no Preparation whatever.

ENTIRELY TAKES THE PLACE OF BEEF TEA.

Physicians and Patrons are cordially invited to visit our Works.

$1.00 Per Year. 1879. Semi-Monthly.

THE

Michigan Medical News

IS A SEMI-MONTHLY JOURNAL, DEVOTED TO

Therapeutics and Medical News.

Although established only late in January of this year, it already circulates over 3000 copies each month to *bona fide* subscribers. Its subscription list is also being added to at the rate of from seventy-five to a hundred names each month. It has subscribers in every State in the Union.

THIS SUCCESS ARGUES MERIT.

The editors of the NEWS are all active practitioners, and know from personal experience what the busy, practical physician wants in a medical journal. They know his time for reading is limited and does not permit of his struggling through much verbiage for the pith of an article. The NEWS aims to assist him in his every-day business of treating disease—to be his office companion.

The NEWS admits no long, tedious, theoretical, speculative compilations from the text books, but it never fails to post its readers on everything new and of value to the busy doctor.

Its Articles and Selections are Short, Practical and Pithy.

The NEWS is issued regularly on the 10th and 25th of each month, and at the exceedingly low rate of

ONE DOLLAR A YEAR.

Parties remitting $1.00 for 1879 will receive the NEWS gratis for the remainder of this year.

Send a 3-cent postage stamp for a specimen copy of the

BEST JOURNAL PUBLISHED FOR THE MONEY.

DEXTRO-QUININE.

(A Separated Amorphous Alkaloid from High Grade Cinchona Barks.)

DEXTROGYRATE WITH POLARIZED LIGHT.

This article, prepared from commercial Chinoidine, is a derivative of the alkaloid Quinine, and consists of the *Amorphous Quinine* of Liebig, or the *Diconchinia* of Hesse. Its composition is represented by $C_{40}H_{46}N_4O_3$, and its analogy to Quinine is shown by the following well-known tests:—

It produces, in slightly acidulated solutions, the fine green coloration (due to the formation of thalleioquin) upon the addition of *fresh* chlorine water, followed by solution of Ammonic Hydrate.

When in applying the above test the addition of Ammonia is preceded by solution Potassic Ferrocyanide, an evanescent red color is produced.

It is almost entirely soluble in Ether; completely so in Alcohol, and has the power of neutralizing acids common to the ordinary commercial alkaloid Quinine. It dissolves freely in the dilute mineral acids, forming fluorescent, slightly colored solutions, with the characteristic intensely bitter taste of Quinine.

When examined with a polariscope, it deflects the ray of polarized light to the right instead of the left; and hence, from its dextro-gyratory powers, and from its close analogy, both chemically and therapeutically to Quinine, we have named this article.

"DEXTRO-QUININE,"

And claim that it is equal to Sulphate of Quinine in the same dose, While it is less than one-half as costly as Sulphate of Quinine.

It may be obtained of Druggists throughout the country.
Samples for clinical use furnished free on application to

LIQUID
Pancreopepsine
(DIGESTIVE FLUID.)

THIS preparation contains, in an agreeable form, the natural digestive and assimilative principles, **Pancreatine, Pepsine, Lactic** and **Muriatic Acids.** The best means of re-establishing digestion in enfeebled stomachs, where the power to assimilate and digest food is impaired, is to administer principles capable of communicating the elements necessary to convert food into nutriment. The value of **Liquid Pancreopepsine** in this connection has been fully established and we can recommend it with confidence to the Profession as superior to Pepsin alone. It aids in digesting animal and vegetable cooked food, fatty and amylaceous substances, and may be employed in all cases where, from prolonged sickness or other causes, the alimentary processes are not in their normal condition.

It is usually given in tablespoonful doses after each meal.

PUT UP IN 16 OUNCE FRENCH SQUARE BOTTLES.

Price, $1.00 Per Bottle,
" 10.00 " Doz. Bottles.

SOLUTION
FERROUS CHLORIDE.

This Solution of Iron is the lowest form of Chloride. It is much less styptic in taste than Tr. Iron Chloride, consequently pleasanter to the patient; it is much more easily assimilated by weak and irritable stomachs.

Knowing how difficult it is to introduce into the blood, in a proper form, a sufficient quantity of iron to be beneficial, we have manufactured and introduce the **Ferrous Chloride** as being easily absorbed and acting with much efficacy, even when given in small doses.

Dr. Rabuteau, who has specially studied the protochloride of iron, and shown that it is the most natural of ferruginous salts, thinks that he has found the very thing required:—

EXTRACT FROM THE REPORTS OF THE ACADEMY OF SCIENCES OF PARIS.
(*Sitting of* 11 *December*, 1871.)

"..... The most important thing is the facility with which the protochloride of iron is absorbed by the stomach. Two or three hours after from 4 to 10 grains of this salt have been ingested, almost the whole is absorbed. Having finally observed that the reduced iron and the ferruginous oxyds and carbonates are changed into protochloride in the stomach by the contact with the hydrochloric acid of the gastric juice, I thought it necessary to substitute this salt for all the preceding for medicinal purposes. My observations in the wards of hospitals and in my own practice have convinced me of the successful results of the protochloride of iron, which is easily borne when pure and administered in a proper way."

For details, see the memoirs on the protochloride of iron published in the *Union Médicale, Paris*, 1871 and 1872.

Each fluid drachm contains two grains of the Anhydrous **Ferrous Chloride.**

APOLLINARIS
NATURAL MINERAL WATER.
HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its sale in France authorized by special decree of the French Government.

"THE QUEEN OF TABLE WATERS."—*London Medical Record.*

PROFESSOR OSCAR LIEBREICH, Professor of Medical Chemistry, University of Berlin:—"After minute personal investigation, I can affirm that the Apollinaris Water is bottled according to all the rules of science, and is an entirely Natural Mineral Water."

PROFESSOR J. A. WANKLYN, Lecturer on Chemistry, St. George's Hospital, London:—"I have thoroughly examined the Apollinaris Spring and the method of bottling. The Apollinaris Water, as supplied to the public, is simply and purely a Natural Mineral water, impregnated only with its own gas."

PROFESSOR MOHR, Medical Councillor, University of Bonn:—"After exhaustive investigation, I declare the Apollinaris Water, as supplied to the public, to be purely natural in every respect, and of most excellent quality."

DR. THEODOR KYLL, Analytical Chemist, Town Councillor, Cologne (*expert appointed by United States Vice-Consul, October*, 1877), reported that "The Apollinaris Water, as bottled, deserves in every respect the name of an excellent natural acidulated water."

Every Genuine Bottle bears the REGISTERED YELLOW PICTORIAL LABEL of the Apollinaris Company, Limited, London.

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and Wholesale of

FREDK. DE BARY & CO., Sole Agents,
1117-1168 **41 and 43 WARREN STREET, NEW YORK.**

LEBAIGUE'S
DIALYSED IRON,
OR
PURE PEROXIDE OF IRON,
IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

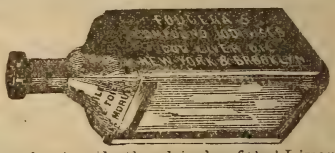
It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate, nor cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a **solution**, which is generally preferred; or of an **elixir**, when a slight stimulant is desired.

DOCTOR GIBERT'S
DEPURATORY SYRUP AND DRAGEES,
OF IODIZED DEUTO-IODIDE OF MERCURY.

These preparations have been approved by the Academy of Medicine of Paris, and have been thoroughly tested in the hospitals of Paris in the treatment of *Syphilitic, Scrofulous* and other affections requiring the use of iodized remedies.
They are recommended for the utmost accuracy of composition, and their perfect preservation.

Prepared by VAUQUELIN-DESLAURIERS, Chemist, Paris.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**
It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus**, which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.
Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.
Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

LIGHT-BROWN
COD LIVER OIL

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen, in Ireland.

"I have frequently prescribed Dr. De Jongh's Light-Brown Cod-Liver Oil. I consider it to be a very pure oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,
Author of
"The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-Liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties; and I am satisfied that for medicinal purposes no finer oil can be procured."

Dr. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor-Law Board of Great Britain.

"We think it a great advantage that there is one kind of Cod-Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by Dr. De Jongh. It has long been our practice, when prescribing the Oil, to recommend this kind, since, amidst so much variety and uncertainty, we have confidence in its genuineness."—(Extract from "Consumption: Its Early and Remediable Stages.")

Dr. PROSSER JAMES,
Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-Liver Oil as the best on the subject, and adopted its conclusion as to the superiority of the Light-Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. De Jongh's Light-Brown Cod-Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. LETHEBY,
Medical Officer of Health, and Chief Analyst to the City of London.

"In all cases I have found Dr. De Jongh's Light-Brown Cod-Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable. It is, I believe, universally acknowledged that this Oil has great therapeutic power; and, from my investigations, I have no doubt of its being a pure and unadulterated article."

Dr. BANKS,
King's Professor of the Practice of Physic at the University of Dublin.

"I have, in the course of my practice, extensively employed Dr. De Jongh's Light-Brown Cod-Liver Oil, and I have no hesitation in stating that I consider it the best of all the specimens of oil which have ever come under my notice. The fact of so able and accurate an observer as Dr. De Jongh subjecting the Oil to careful analysis previous to its exposure to sale, is a sufficient guarantee of its purity and excellence."

Dr. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College, London.

"Dr. Sheppard has made extensive use of Dr. De Jongh's Light-Brown Cod-Liver Oil, and has great pleasure in testifying to its superiority over every other preparation to be met with in this country. It has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is supplied ONLY in bottles sealed with BETT'S Patent Capsule, impressed on the top with Dr. DE JONGH'S Stamp, and on the side with his Signature, and the Signature of ANSAR, HARFORD & CO., and bearing under the wrapper a Label with the same Stamp and Signatures. WITHOUT THESE MARKS NONE CAN POSSIBLY BE GENUINE.

Sold in IMPERIAL half-pints, $1.00, by the Principal Druggists in the UNITED STATES.

SOLE CONSIGNEES,

ANSAR, HARFORD & Co., London.

AGENTS FOR THE UNITED STATES,

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

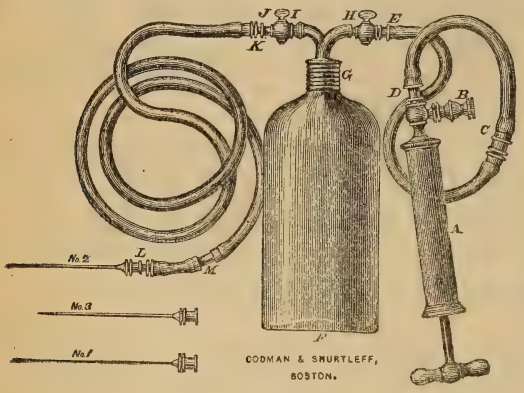

Fig. 68.

Fig. 78.

The Stopper and Cocks supplied with Apparatus No. 2.

Fig. 77.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case..... $14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

An illustrated Catalogue of Surgical Instruments, also a New Pamphlet on Atomization of Liquids, with description of Improved Apparatus and Formulæ of Remedies successfully employed, will be forwarded, post-paid, on application.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expenses of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,			*With Hops (Plain)*,	$1.00

TROMMER EXTRACT OF MALT CO.,

FREMONT, OHIO.

1063-1114eow

TO THE MEDICAL PROFESSION.

MALTINE.

(Extract of Malted Barley, Wheat & Oats.)

THIS PREPARATION

Contains from three to five times the Medicinal and Nutritive elements found in Extract of Malt.

MALTINE is a highly concentrated extract of malted *Barley*, *Wheat*, and *Oats*, containing, undiminished and unimpaired, all the medicinal and nutritious principles found in these cereals. By the most carefully conducted scientific process we are enabled to offer to the medical profession a perfect article, possessing from *three* to *five times* the therapeutic and nutritive merit of any foreign or domestic Extract of Malt.

In support of our claims we invite the attention of the profession to the following points, viz.:

FIRST.—In the manufacture of **MALTINE** the evaporation necessary to reduce it to its great density is conducted in vacuo, at a temperature ranging from 100° to 120° Fahr.; while most manufacturers of Extract of Malt resort to "open pan" or low pressure steam boiling, by neither of which processes can the extract be so produced as to preserve the Diastase, Phosphates, and Albuminoids, on which its remedial value so greatly depends, and the product is either of a dark color or of low specific gravity, possessing little virtue aside from the saccharine matter which it contains.*

SECOND.—*Carbon*, *Hydrogen*, *Nitrogen*, *Sulphur*, *Iron*, *Magnesium*, and *Potassium*, are essential elements in the food of man, and it is only in **MALTINE**, containing the combined properties of malted *Barley*, *Wheat*, and *Oats*, that all these principles can be found in the proper proportions; Extract of Malt made from *Barley alone* is wanting in some of the most important of these elements.

THIRD.—*Gluten* is the most nutritious principle found in the cereals, and is the only vegetable substance which will, alone, support life for any great length of time. It is composed of three distinct nitrogenous principles, together with fatty and inorganic matters, and is analogous to animal fibrin. **MALTINE** contains twenty times the quantity of *Gluten* found in any Extract of Malt.

FOURTH.—Liebig says, "Wheat and Oats stand first among our list of cereals in combining all the elements in proportions necessary to support animal life. They are especially rich in muscular and fat producing elements." The only reason we use Malted Barley, in the manufacture of **MALTINE**, is that it contains larger proportions of mineral matters (bone producers) and Diastase. It is deficient in all other essential elements.

We believe that any practitioner will readily recognize the superiority of MALTINE, and would request a trial and comparison of merits with any article offered for similar uses.

* As a sure test for Diastase, and the Albuminoids, a small quantity should be put in a test tube or small vial, largely diluted with water, and heated to the boiling point, when the Albumen, if present, will coagulate, and appear in little flocculent particles throughout the liquid. If the extract remains clear, it is proof that it has already been coagulated by excessive heat, and removed by filtration during the process of manufacturing. Any heat which will coagulate Albumen will inevitably destroy the digestive power of Diastase.

The Nitrogenous constituents of *MALTINE* have a composition identical with that of the chief constituents of the Blood, and therefore contain nearly every element requisite for the reproduction of the human body.

MALTINE AND ITS COMPOUNDS

can undoubtedly be used with greater success than any other remedy now known, in cases of general and nervous Debility, Indigestion, imperfect Nutrition and deficient Lactation; Pulmonary affections, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes and difficult expectoration; Cholera Infantum and wasting diseases of children and adults; Convalescence from Fevers, and whenever it is necessary to increase the vital forces and build up the system.

WE MANUFACTURE THE FOLLOWING PREPARATIONS, THE FORMULÆ AND DOSES OF WHICH ARE GIVEN IN OUR DOSE BOOKS, AND ON THE LABEL ATTACHED TO EACH BOTTLE:

MALTINE WITH HOPS.

MALTINE, FERRATED:

This combination is specially indicated in Anæmia and Chlorosis, and in all cases of defective nutrition where Iron is deficient in the system.

MALTINE WITH PHOSPHATES IRON AND QUINIA:

A powerful general and nutritive tonic.

MALTINE WITH PHOSPHATES IRON, QUINIA AND STRYCHNIA:

A powerful nutritive, general and nervous tonic.

MALTINE WITH PEPSIN AND PANCREATINE:

One of the most effective combinations in Dyspepsia, Cholera Infantum, and all diseases resulting from imperfect nutrition. It contains three of the all-important digestive agents, Diastase being one of the constituents of the *MALTINE*. We believe there are few cases of Dyspepsia which will not readily yield to the medicinal properties of the above combination, while the system is invigorated by its nutritive qualities.

MALTINE WITH BEEF AND IRON:

One of the most valuable combinations in cases of General Debility, when there is deficient nutrition and a deficiency of Iron in the system.

MALTINE WITH ALTERATIVES:

In this preparation *MALTINE* is combined with the most valuable Alteratives known, such as Iodides, Bromides and Chlorides, and will fully meet the requirements of the practitioners in Syphilis, Scrofula, and all depraved conditions of the blood.

MALTINE WINE.

This preparation contains all the medicinal and nutritive constituents of *MALTINE*, less 60 per cent. of the transformed starch or glucose, which renders the preparation lighter and more acceptable to some stomachs, and is recommended only in such cases.

MALTINE WINE WITH PEPSIN AND PANCREATINE:

(Each fluid ounce of MALTINE WINE contains 15 grains pure PEPSIN and 15 grains pure PANCREATINE).

We can recommend this preparation to the Medical Profession as being the most important remedy ever brought to their notice in all cases of Dyspepsia and Imperfect Nutrition, when the system needs invigorating and replenishing. It will be found, we believe, a perfect remedy in Vomiting in Pregnancy, Cholera Infantum and wasting diseases of children, and in Constipation and Chronic Diarrhœa resulting from mal-nutrition. It will agree with the most irritable stomach.

MALTO-YERBINE.

(Each pint of the above preparation contains 13 ounces MALTINE, 2 ounces CARRAGEEN and 1 ounce YERBINE).

With the nutritive, emollient and demulcent properties of *MALTINE* and *CARRAGEEN*, and the expectorant qualities of *YERBINE* (active principle of Yerba Santa), we offer this preparation to the Profession with the fullest confidence that it is the most perfect remedy yet produced in Chronic Pulmonary Affections, Irritation of the Mucous Membrane, Difficult Expectoration, Bronchitis and ordinary Coughs and Colds.

The Dose of all Preparations of *MALTINE* and compounds is from a dessert to a tablespoonful.

We also manufacture a perfectly prepared EXTRACT OF MALT, from *Barley only*.

MALTINE preparations are sold at the same prices as EXTRACT OF MALT and its combinations, and are put up in half-pint, pint and five-pint amber bottles; each bottle inclosed in a folding paper box.

RECENTLY PUBLISHED.

INJURIES OF THE EYE

AND THEIR

MEDICO-LEGAL ASPECT,

BY FERDINAND VON ARLT, M. D.,

Professor of Ophthalmology in the University of Vienna, Austria.

TRANSLATED, WITH THE PERMISSION OF THE AUTHOR,

By CHAS. S. TURNBULL, M.D.,

Surgeon to the Eye and Ear Department of the Howard and of the German Hospitals, of Philadelphia.

One Volume, 12mo, cloth, $1.25.

"Such a booklet has long been needed in our language, and I am glad you have supplied the want."—*Prof. S. D. Gross.*

"The translation certainly bears intrinsic evidence, as I am convinced from a careful examination of it, of having been well and faithfully executed, and I hope that it will meet with the large circulation which it deserves. It is a useful addition to the literature of medical jurisprudence."—*Prof. Jas. Aitken Meigs.*

From the Legal Intelligencer, Philadelphia.

"Previous to the appearance of Prof. Arlt's work there were none but antiquated monographs on the subject; the references to ocular injuries in the best text-books were exceedingly brief and superficial, while medico-legal opinions in individual cases were too sparsely scattered through the archives and other periodical publications to call that attention to the subject which it demands, or to serve as a guide in case such attention had been aroused. An Index made with care, and very full, completes the value and usefulness of the monograph."

From the Medical and Surgical Reporter, Philadelphia.

"Professor Arlt's opinions stand in the very front rank of those of men of his special branch in Germany, and as the translator has been at once his pupil and friend, the accuracy of their presentment cannot be questioned."

From the New York Medical Journal.

"It is a book, which, we take it for granted, every specialist in the department will provide himself with; and it will also be a valuable addition to any general surgeon's library."

From the Boston Medical and Surgical Journal.

"It was written for the general profession, and not solely for the specialist, and has its scope well presented in the title. Dr. Turnbull has furnished a translation unusually free from traces of the German idiom, and it is printed with clear type, on good paper.

From the San Francisco Pacific Medical and Surgical Journal.

"Every country practitioner would do well to possess it, as there are numerous injuries of the eye to which he *must* attend. It is particularly full on foreign bodies in the eye; one of the commonest kinds of injury. The translation is good English, and not mongrel Latin, German, and English, as most translations of German works.

WE ALSO HAVE FOR SALE THE FOLLOWING

STANDARD MEDICAL BOOKS,

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

1879. BEGIN NOW! 1879.

UNEQUALED INDUCEMENTS!

NEW SUBSCRIBERS WILL RECEIVE

THE WEEKLY

MEDICAL AND SURGICAL REPORTER

From now until December 31st, 1879,

FOR $5.00!

The MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list, unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, double-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES.

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of *the whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

PRICES PER YEAR.

The Weekly Medical and Surgical Reporter.....**$5.00**
The Half-Yearly Compendium of Medical Science..... **2.50**
The Reporter and Compendium taken together..... **7.00**

Payable in Advance.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

1109-eow-tf 211 S. FRONT STREET, PHILADELPHIA.

NOW IS THE TIME TO SUBSCRIBE

— FOR THE —

Cincinnati Lancet and Clinic,

THE LEADING WESTERN MEDICAL JOURNAL.

It has an able Corps of Contributors; Gives a Condensed Statement of the Progress of Medicine and Surgery; Reviews the Latest Medical Works; Publishes Society Proceedings, and keeps its Readers informed of the Medical News of the Day.

THE CINCINNATI LANCET AND CLINIC is issued *every Saturday*, and contains 20 large octavo double-columned pages of reading matter in every number, and is handsomely printed on fine tinted book paper, neither labor nor expense being spared to adapt it to the daily wants of the American practitioner of Medicine.

THE LANCET AND CLINIC is strictly an independent journal, not being controlled or published in the special interest of any College or Society, but is devoted to the advancement of science and progress of rational Medicine.

SPECIAL INDUCEMENTS.

NEW SUBSCRIBERS, who remit their names and subscription AT ONCE, will receive THE LANCET AND CLINIC from NOW until December 31, 1879,

FOR $3.50.

LONDON M'F'G CO.'S
ESSENCES OF MEATS,

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN

Which consist solely of the finest juices from choice meats, extracted by a gentle heat, without the addition of water, or any substance whatever. They have been prescribed by the English Medical Profession for the past fifteen years, and since their introduction here have earned the highest commendations. They are peculiarly adapted

FOR INVALIDS—Natural, Pleasant, Refreshing.
FOR INFANTS—Strictly Pure; Prepared without Salt.
FOR DYSPEPTICS—Easily Assimilated.
IN CASES OF SEA SICKNESS—Afford Immediate Nourishment.
AFTER CHILDBIRTH—Meat Stimulant; Concentrated Form.

They retain the fine flavor and smell of the Meat. Are a heavy liquid in a warm temperature, and when placed upon ice take a jelly form, which is especially refreshing to Invalids. They are retained upon the stomach, in very critical cases, when the most carefully prepared soup is rejected. Children readily take them, and in many of their complaints requiring nourishment, "Essences" are UNEQUALED. *In summer, when opened, keep on Ice, leaving the lid partly raised.* DO NOT ADD WATER.

Taken cold direct from the Can, needing no Preparation whatever.

ENTIRELY TAKES THE PLACE OF BEEF TEA.

Physicians and Patrons are cordially invited to visit our Works.

It will be the object of "BRAIN" to keep its readers well abreast of modern progress in Neurology, and to advance the knowledge of a class of diseases respecting which it is universally admitted that much has yet to be learned.
Sent free by mail to any address, on receipt of the price.

THE JOURNAL OF PHYSIOLOGY.

Edited, with the coöperation in England of Prof. A. GAMGEE, F. R. S., Prof. W. RUTHERFORD, F. R. S., Prof. J. B. SANDERSON, F. R S., and in America of Prof. H. P. BOWDITCH, of Boston, and Prof. H. N. MARTIN, of Baltimore; By Dr. M. FOSTER, F. R. S., Trinity College, Cambridge.

Vol. I., Part I., Now Ready, $3.00.

The Subscription Price per Volume will be, when paid in advance, $5.25. Sent free by mail.

The morphologists in England and America already possess an appropriate periodical literature; but the physiologists have hitherto been without an organ devoted exclusively to the publication in the English language of the results of physiological research. The want of such a periodical has long existed, and is daily increasing.
It is with a view of meeting this want that the JOURNAL OF PHYSIOLOGY has been established; and its conductors trust that the nature of the communications of which they hope to make it the medium will be at once readily understood by all workers in Biology.

THE PRACTITIONER.

A MONTHLY JOURNAL OF THERAPEUTICS AND PUBLIC HEALTH.

Edited by T. LAUDER BRUNTON, M. D., F. R. S.

"To hard-worked medical men, with little time for reading, and few opportunities for professional conversation, such a journal as this, bringing every month the latest ideas in medical practice and latest records of important cases, ought to be invaluable."—*London Guardian.*

Zinc, Phosphide and Extract Nux Vomica.
Brain diseases.

Our Formula Book, (fourth edition) containing complete list of all our pills with formulas and therapeutical notes, together with partial list of our fluid extracts, with doses, furnished upon application. As we desire to *improve* in *every* particular, we will be grateful to any Physician who will write us regarding his experience with our Gelatine-Coated Pills and other preparations, or make any suggestions.

McKESSON & ROBBINS, Manufacturing Chemists,

91 Fulton Street, New York.

CAUTION!!—SPECIFY McKESSON & ROBBINS'.

LIQUID
Pancreopepsine
(DIGESTIVE FLUID.)

THIS preparation contains, in an agreeable form, the natural digestive and assimilative principles, **Pancreatine, Pepsine, Lactic** and **Muriatic Acids.** The best means of re-establishing digestion in enfeebled stomachs, where the power to assimilate and digest food is impaired, is to administer principles capable of communicating the elements necessary to convert food into nutriment. The value of **Liquid Pancreopepsine** in this connection has been fully established and we can recommend it with confidence to the Profession as superior to Pepsin alone. It aids in digesting animal and vegetable cooked food, fatty and amylaceous substances, and may be employed in all cases where, from prolonged sickness or other causes, the alimentary processes are not in their normal condition.

It is usually given in tablespoonful doses after each meal.

PUT UP IN 16 OUNCE FRENCH SQUARE BOTTLES.

Price, $1.00 Per Bottle,
" 10.00 " Doz. Bottles.

APOLLINARIS

NATURAL MINERAL WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its sale in France authorized by special decree of the French Government.

"THE QUEEN OF TABLE WATERS."—*London Medical Record.*

PROFESSOR OSCAR LIEBREICH, Professor of Medical Chemistry, University of Berlin:—"After minute personal investigation, I can affirm that the Apollinaris Water is bottled according to all the rules of science, and is an entirely Natural Mineral Water."

PROFESSOR J. A. WANKLYN, Lecturer on Chemistry, St. George's Hospital, London:—"I have thoroughly examined the Apollinaris Spring and the method of bottling. The Apollinaris Water, as supplied to the public, is simply and purely a Natural Mineral water, impregnated only with its own gas."

PROFESSOR MOHR, Medical Councillor, University of Bonn:—"After exhaustive investigation, I declare the Apollinaris Water, as supplied to the public, to be purely natural in every respect, and of most excellent quality."

DR. THEODOR KYLL, Analytical Chemist, Town Councillor, Cologne (*expert appointed by United States Vice-Consul, October*, 1877), reported that 'The Apollinaris Water, as bottled, deserves in every respect the name of an excellent natural acidulated water."

Every Genuine Bottle bears the REGISTERED YELLOW PICTORIAL LABEL of the Apollinaris Company, Limited, London.

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and Wholesale of

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect in every respect as it is possible to make a Belladonna Plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, whilst our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical:—

TABLE OF RESULTS.

	Test solution requisite for 100 c. c. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
HERRINGS & CO., " ...	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts**, and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell Novelty Plaster Works; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna.

"R. OGDEN DOREMUS, M.D., LL.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

NEW HYPODERMIC SYRINGES.

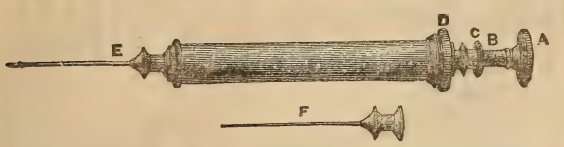

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

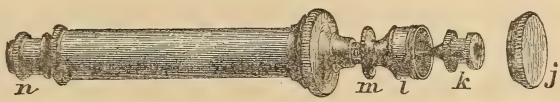
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3.50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02
No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).		

No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

CODMAN & SHURTLEFF,

Makers and Importers of Superior Surgical Instruments,

1088-1139eow **13 & 15 TREMONT STREET, BOSTON, MASS.**

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

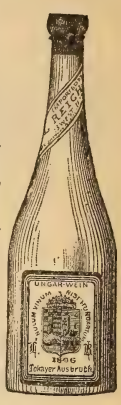
L. REICH,

DIRECT IMPORTER OF THE

CHOICEST AND PUREST

Hungarian WINES

EVER BROUGHT TO THIS COUNTRY,



STRICTLY FOR MEDICINAL USE.

13 West 11th St., New York.

Mr. REICH will be pleased to see those of the Medical Profession who may desire to avail themselves of the opportunity of procuring **STRICTLY FIRST-CLASS WINES**, which have received the endorsement of the most eminent Medical men of the country, as is evidenced from the following letters of commendation which have been received:—

This is to certify, that I have examined Mr. L. REICH'S TOKAYER AUSBRUCH, TOKAYER MASLAS and BUDAI IMP. I take great pleasure in commending these Wines to the Medical Profession because of their purity.

R. OGDEN DOREMUS, M.D., LL.D.,
Prof. of Chem. and Toxicology in Bellevue Hosp. Med. Col., and Prof. of Chem. and Physics in Col. City of New York.

We have used in our practice the Hungarian Wines sold by Mr. LORENZ REICH, who puts them on the market unadulterated, just as they are imported. To this fact we attribute their great value as a medicine in diseases where such tonics are indicated, especially in those which are attended by defective digestion and imperfect assimilation. We cordially recommend Mr. REICH and his Wines to our professional brethren.

1879. BEGIN NOW! 1879.

UNEQUALED INDUCEMENTS!

NEW SUBSCRIBERS WILL RECEIVE

THE WEEKLY

MEDICAL AND SURGICAL REPORTER

From now until December 31st, 1879,

FOR $5.00!

The MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list, unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, double-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES.

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of *the whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

PRICES PER YEAR.

The Weekly Medical and Surgical Reporter.....$5.00
The Half-Yearly Compendium of Medical Science..... 2.50
The Reporter and Compendium taken together..... 7.00

Payable in Advance.

115 SOUTH SEVENTH STREET, PHILADELPHIA.

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878-'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878-1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

THE CHICAGO

MEDICAL JOURNAL AND EXAMINER.

(ESTABLISHED 1844.)

EDITORS:

WILLIAM H. BYFORD, A.M., M.D.,
JAS. NEVINS HYDE, A.M., M.D.,
FERD. C. HOTZ, M.D.,
E. FLETCHER INGALS, M.D.

ISSUED MONTHLY.

Two Volumes a year, of 672 pages each; beginning with the January and July Numbers.

PUBLISHED BY

The Medical Press Association,

FOR THE BENEFIT OF THE

Chicago Medical Library.

This is one of the largest and best medical journals in the country. It furnishes more reading matter for the money than any other journal in the United States, with one exception, and its excellence is attested by the fact that it is taken by nearly all the leading men in the West.

Notice to Contributors. WE are glad to receive contributions from every one who knows anything of interest to the profession. Articles designed for publication in the JOURNAL AND EXAMINER should be handed in before the fifteenth of the month, in order to give the editors time for careful perusal. A limited number of EXTRA COPIES or reprints (not exceeding fifty) will be given the authors of accepted articles or reviews, provided they are ordered when the copy is forwarded to us. Rejected manuscript will be returned upon application and receipt of postage.

N.B.—New Subscribers, by enclosing a copy of this advertisement, may obtain the JOURNAL AND EXAMINER from now until December 31st, 1879, for $4.00.

TERMS:—$4.00 per annum, in advance. Single copies 35 cents.

Postage free. Subscriptions received for any period.

SEND FOR SPECIMEN PAGES.

Address **E. FLETCHER INGALS, M.D.,**
188 CLARK STREET, CHICAGO.

Journal of Nervous and Mental Diseases $5.00 per annum.

THE CHICAGO MEDICAL JOURNAL AND EXAMINER AND THE JOURNAL OF NERVOUS AND MENTAL DISEASES, $7.50 PER ANNUM.

"THE BEST LITERATURE OF THE DAY."—*New York Times.*

THE GREATEST LIVING AUTHORS, such as

Prof. MAX MULLER,	THE DUKE OF ARGYLL,	MATTHEW ARNOLD,
Rt. Hon. W. E. GLADSTONE,	WILLIAM BLACK,	J. NORMAN LOCKYER,
JAMES ANTHONY FROUDE,	MISS THACKERAY,	FRANCIS W. NEWMAN,
Prof. HUXLEY,	MRS. MULOCH-CRAIK,	ALFRED RUSSELL WALLACE,
RICHARD A. PROCTOR,	GEORGE MACDONALD,	HENRY KINGSLEY,
Prof. GOLDWIN SMITH,	MRS. OLIPHANT,	W. W. STORY,
EDWARD A. FREEMAN,	MRS. ALEXANDER,	IVAN TURGUENIEF,
Prof. TYNDALL,	JEAN INGELOW,	RUSKIN,
Dr. W. B. CARPENTER,	JULIA KAVANAGH,	TENNYSON,
FRANCES POWER COBBE,	THOMAS HARDY,	BROWNING,

and many others, are represented in the pages of

LITTELL'S LIVING AGE.

In 1879, THE LIVING AGE enters upon its thirty-sixth year, admittedly unrivalled and continuously successful. A WEEKLY MAGAZINE, of sixty-four pages, it gives more than

Three and a Quarter Thousand

double-column octavo pages of reading-matter yearly, forming four large volumes. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a *satisfactory completeness* attempted by no other publication, the best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

During the coming year, Serial and Short Stories by the **Most Eminent Foreign Authors** will be given, together with an amount

Unapproached by any other Periodical

in the world, of the most valuable Literary and Scientific matter of the day from the pens of the foremost Essayists, Scientists, Critics, Discoverers, and Editors, above-named and many others, representing every department of Knowledge and Progress.

The importance of THE LIVING AGE to every American reader, as the only **satisfactorily fresh and complete** compilation of a generally inaccessible but indispensable current literature,—*indispensable* because it embraces the productions of

THE ABLEST LIVING WRITERS

in all branches of Literature, Science, Art, and Politics,—is sufficiently indicated by the following recent

Opinions.

"THE LIVING AGE supplies a better compendium of current discussion, information and investigation, and gives a greater amount and variety of reading-matter which it is well worth while to read, than any other publication. . . . It is simply indispensable."—*Boston Journal.*

"It contains the best results of the world's thinking."—*The Churchman, New York.*

"It affords the best, the cheapest, and most convenient means of keeping abreast with the progress of thought in all its phases. . . . It is the best work of its kind ever published in the country, and can hardly ever be improved upon."—*North American, Philadelphia.*

"The prince among magazines."—*New York Observer.*

"In it we find the best productions of the best writers upon all subjects ready to our hand. . . . Through its pages alone it is possible to be as thoroughly well informed in current literature as by the perusal of a long list of monthlies."—*Philadelphia Inquirer.*

"Its pages teem with the choicest literature of the day."—*New York Tribune.*

"Its frequent issue and ample space enable it to do fully what it proposes to do,—to give *all* that the very ablest of living writers furnish to periodical literature on science, history, biography, philosophy, poetry, theology, politics and criticism, and to add to this the full complement of the best that there is in fiction."—*The Interior, Chicago.*

"One cannot read everything. . . . . No man will be behind the literature of the times who reads THE LIVING AGE."—*Zion's Herald, Boston.*

"Every weekly number now-a-days is equal to a first-class monthly. For solid merit, it is the cheapest magazine in the land."—*The Advance, Chicago.*

"Gives the best of all at the price of one."—*New York Independent.*

"It focalizes the best literature of the age. . . . It is the most wonderful weekly publication of which we have any knowledge."—*St. Louis Observer.*

"In no other single publication can there be found so much of sterling literary excellence."—*N. Y. Evening Post.*

"It has no equal in any country."—*Philadelphia Press.*

"It is a *thorough compilation* of what is best in the literature of the day, whether relating to history, biography, fiction, poetry, wit, science, politics, theology, criticism, or art."—*Hartford Courant.*

"There is no other way of procuring the same amount of excellent literature for anything like the same price."—*Boston Advertiser.*

"There is no magazine published that gives so general a knowledge of what is going on in the literary world."—*Presbyterian Weekly, Baltimore.*

"The ablest essays, the most entertaining stories, the finest poetry of the English language are here gathered together."—*Illinois State Journal.*

"The reader finds little occasion to go beyond its columns for instructive or entertaining articles of any description."—*Boston Evening Traveller.*

"*With it alone* a reader may fairly keep up with all that is important in the literature, history, politics, and science of the day."—*The Methodist, New York.*

"To keep up with it, is to master the best thought of our time."—*Illustrated Christian Weekly, New York.*

"Its publication in weekly numbers gives to it a great advantage over its monthly contemporaries in the spirit and freshness of its contents."—*The Pacific, San Francisco.*

"A pure and perpetual reservoir and fountain of entertainment and instruction."—*Hon. Robert C. Winthrop.*

"The best and cheapest periodical in America."—*Evangelical Churchman, Toronto.*

"There is nothing comparable to it in true value in the whole range of periodical literature."—*Mobile Daily Register.*

"It is the only compilation that presents with a satisfactory completeness, as well as freshness, a literature embracing the productions of the ablest and most cultured writers living. *It is, therefore, indispensable to every one who desires a thorough compendium of all that is admirable and noteworthy in the literary world.*"—*Boston Post.*

"Ought to find a place in every American home."—*New York Times.*

PUBLISHED WEEKLY, at $8.00 a year *free of postage.* An extra copy sent *gratis* to any one getting up a club of five new subscribers.

EXTRA OFFER FOR 1879.

All new subscribers for 1879 will receive *gratis* the six numbers of 1878 containing, with other valuable matter, the first parts of "Sir Gibbie," a new Serial of much interest by **GEORGE MACDONALD,** now appearing in THE LIVING AGE from the author's advance sheets. Other choice new serials by distinguished authors are engaged and will speedily appear.

CLUB PRICES FOR THE BEST HOME AND FOREIGN LITERATURE.

["Possessed of 'LITTELL'S LIVING AGE' and of one or other of our vivacious American monthlies, a subscriber will find himself *in command of the whole situation.*"]—*Philadelphia Evening Bulletin.*

For $10.50, THE LIVING AGE and *either* one of the *four-dollar* monthly Magazines (or *Harper's Weekly* or *Bazar*), will be sent for a year, *with postage prepaid on both;* or, for $9.50, THE LIVING AGE and the *St. Nicholas*, or *Appleton's Journal*, *both postpaid.*

ADDRESS **LITTELL & GAY, 17 Bromfield St., Boston.**

The Medical and Surgical Reporter and Littell's Living Age, for one year, $11.75.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

We respectfully ask the Medical Profession to give the above preparation a trial, knowing they will find it just the thing long desired, and obtain splendid results in the wasting diseases indicated by malnutrition and assimilation. The *perfect* and *permanent* union of the Cod Liver Oil with the Hypophosphites, and the thorough manner in which the nauseous taste is disguised, renders it so palatable that the most delicate stomach can retain it. The notable advantage it possesses over all other preparations, is its *permanency* as an *emulsion*, remaining for an almost unlimited time without the slightest separation or change, which enables the Physician always to prescribe it in its proper proportions. The oil is prepared expressly for us, and guaranteed strictly pure. We will gladly furnish, express paid, a 4-oz. sample to any Physician in the country who may not have been supplied.

Formula.—50 per cent. of pure Cod Liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce.

SCOTT & BOWNE,
Manufacturing Chemists, 125 Hudson Street, N. Y.

Messrs. SCOTT & BOWNE: NEW YORK, September 4, 1876.

Gents—I have prescribed Scott's Emulsion of Cod Liver Oil with Hypophosphites in both private and hospital practice, and consider it a valuable preparation. It remains as a permanent emulsion, even in extremely hot weather, and is more palatable than any other preparation of oil that I have used. Yours, very respectfully,

ROBERT WATTS, M.D., President Medical Board, Charity Hospital.

Messrs. SCOTT & BOWNE:

Gentlemen—Having given your Emulsion of Cod Liver Oil and Hypophosphites of Lime and Soda a fair trial during the past eighteen months, am very much pleased with the same, and consider it the best preparation of the kind in the market.

Yours, truly, J. H. HARTMAN, M.D., Baltimore, Md.

We also refer to the following Physicians, who use it and recommend it to the Profession:

G. C. SHATTUCK, M.D., 18 Stamford Street (Late Visiting Physician, Mass. General Hospital).
J. AYER, M.D., No 6 Hancock Street, Boston.
G. W. GAY, M.D., 575 Tremont Street (Visiting Surgeon Boston City Hospital).
F. E. BUNDY, M.D., 99 Waltham Street, Boston.
W. B. MACKIE, M.D., 675 Tremont Street, Boston.
J. A. OCTERLONY, M.D., Louisville, Ky.
J. SIMONAUD, M.D., New Orleans.
G. LANE TANEYHILL, M.D., Baltimore.
EDWARD A. MARIS, M.D., Baltimore.

NOW IS THE TIME TO SUBSCRIBE

— FOR THE —

Cincinnati Lancet and Clinic,

THE LEADING WESTERN MEDICAL JOURNAL.

It has an able Corps of Contributors; Gives a Condensed Statement of the Progress of Medicine and Surgery; Reviews the Latest Medical Works; Publishes Society Proceedings, and keeps its Readers informed of the Medical News of the Day.

THE CINCINNATI LANCET AND CLINIC is issued *every Saturday*, and contains 20 large octavo double-columned pages of reading matter in every number, and is handsomely printed on fine tinted book paper, neither labor nor expense being spared to adapt it to the daily wants of the American practitioner of Medicine.

THE LANCET AND CLINIC is strictly an independent journal, not being controlled or published in the special interest of any College or Society, but is devoted to the advancement of science and progress of rational Medicine.

SPECIAL INDUCEMENTS.

NEW SUBSCRIBERS, who remit their names and subscription AT ONCE, will receive THE LANCET AND CLINIC from NOW until December 31, 1879,

FOR $3.50.

Address all communications to

Dr. J. C. CULBERTSON,
281 West Seventh Street, Cincinnati, Ohio.

LONDON M'F'G CO.'S
ESSENCES OF MEATS,

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN

Which consist solely of the finest juices from choice meats, extracted by a gentle heat, without the addition of water, or any substance whatever. They have been prescribed by the English Medical Profession for the past fifteen years, and since their introduction here have earned the highest commendations. They are peculiarly adapted

FOR INVALIDS—Natural, Pleasant, Refreshing.
FOR INFANTS—Strictly Pure; Prepared without Salt.
FOR DYSPEPTICS—Easily Assimilated.
IN CASES OF SEA SICKNESS—Afford Immediate Nourishment.
AFTER CHILDBIRTH—Meat Stimulant; Concentrated Form.

They retain the fine flavor and smell of the Meat. Are a heavy liquid in a warm temperature, and when placed upon ice take a jelly form, which is especially refreshing to Invalids. They are retained upon the stomach, in very critical cases, when the most carefully prepared soup is rejected. Children readily take them, and in many of their complaints requiring nourishment, "Essences" are UNEQUALED. *In summer, when opened, keep on Ice, leaving the lid partly raised.* DO NOT ADD WATER.

Taken cold direct from the Can, needing no Preparation whatever.

ENTIRELY TAKES THE PLACE OF BEEF TEA.

Physicians and Patrons are cordially invited to visit our Works.

PREPARED ONLY BY THE

LONDON MANUFACTURING COMPANY,

77 and 79 VARICK STREET, NEW YORK.

FOR SALE BY

FRENCH, RICHARDS & CO., Philadelphia, Pa; JOHNSTON, HOLLOWAY & CO., Philadelphia, Pa.;
1129-1180 BULLOCK & CRENSHAW, Philadelphia, Pa.; And all Retail Druggists.

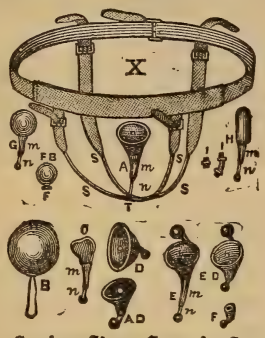
STAUFER'S

HARD RUBBER INSTRUMENTS AND PRICE LIST.

SERIES OF UTERINE SUPPORTERS. *1.*



Spring Stem Cup A.—Complete on Belt X, $7.00; on XX, $9.00; on Y, $8.00; and on Z, $6 00. Without belt on SS, $5.00.

Anteversion C, Globe Top G, and Oblong H, in price the same as A, with similar attachments.

Retroversion E, on Belt X, $8 00; on XX, $10.00; on Y, $9 00; and on Z $7.00. Without Belt $6.00

Duplicate Cups—A, $2.00; E, $3 00; Globe Tops G, with attachments to screw on A or E Stem $2.00.

P. S.—Shifting Top, with solid or no Spring Stem, 50 cents less on either belt. No Shifting Top Stem sold alone.

Self-Sustaining Globe B, or Cup D, $1.50 each.

Gums are mailed, 2 at 20 cts; 4 at 35 cts; and Springs at 3 cts. each.

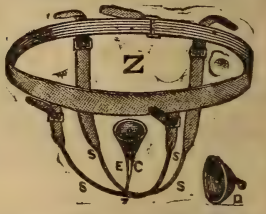
Abdominal Supporters. *2.* *3.*

Price, $4.00. Price, $3.00.

SPECULUMS AND CASE. *6.*

Prices.—The series encased, $14.00. With complete but non-shifting conductor, $2.50 each. Flesh color enameled inside.

SOLID STEM CUP SUPPORTER E. C. *5.*



Price, $4.50. Including Cup D, $6.00. Or E C, on Abdominal Belt X, $5.50. X X, $7.50. Y, $6.50. Including D, on each, $1.50 extra.

REFLECTOR, OR DENTISTS' LIGHT. *10.*

Price, $3.50.

Rectum Supporter and Ointment Holder. *4.*

$3.50.

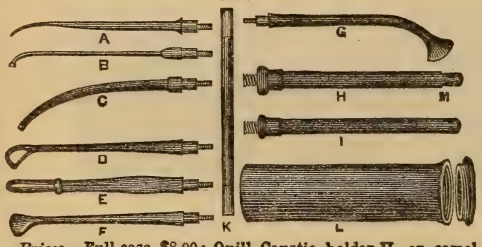
STEM LEVERS. *14.*

$4.50 on Z, $7.00 on X.

Permanent Stem I—The same in price as E C, Fig. 5, on all the belts.

Spring Stem J—The same as Spring Stem Cup A, Fig. 1, on either belt.

HARD RUBBER UTERINE EXAMINING CASE. *12.*



Prices.—Full case, $8.00; Quill Caustic holder H, or camel hair brush holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2.50.

Fenestrated Vaginal and Anal. *7.*

Prices.—Vaginal T, $2.00. Anal U, $1.50.

Caustic Bottle and Case. *11.*

Price, $1.50.

Hymen—Pointed.

8.

Price, $1.50.

Vaginal and Vulva Dilator.

9.

Price, $1.50.

STAUFER'S NON-EVAPORATING INKSTAND.

Price, $1.00.

Price, $1.00. *15.*

13.

Supporters E. C. or Economy.—Fig 5, on its elastic belt Z, is the least in price, and by the oblique construction of the cup sets direct within the angle of the axis of the uterus and vagina, (well seen by J U. Fig. 13.) If properly selected, or made so by the exchange privilege, (which admits the interchange of all the hard rubber parts in the catalogue, to cover the purchaser's risk.) It is warranted to correct and sustain even any *Procidentia.* The spring stems and shifting tops with their supplements, Fig. 1. Also, improved ***Retroversion, Cup E. Anterversion C.*** and ***Intra-Uterine Stem Cup, I U,*** Fig 13. The stem locks in a square socket after the cup is in position, and is supported on the elastic gums SS, as A Fig. 1, and same in price. Stem Levers, Fig. 14, etc. All are fully explained in the catalogue. The ***Series*** comprises upwards of 150 in style and size instruments, of which two-thirds belong to the support and correction of the uterus. ***Speculums***—Thomas' objections p. 67—'76, are by them completely overcome. The case contains four. The clear and large view, and facility to work through them, far exceeds any other. The ***Ex. Case,*** and physician's favorite, is admirably represented by Fig. 12—weight but 4 oz. ***Catalogue*** sent free on application. In addition to the description of the above series of instruments, it contains important information on this line of treatment.

Obtained through this Office (Med. and Surg. Reporter.)

MAILED ON RECEIPT OF PRICES.

NUMBERS OF THE HALF-YEARLY COMPENDIUM WANTED.—Any one sending us No. 16 or 19 of the COMPENDIUM will receive one dollar and postage. Address to

DEXTRO-QUININE.

(A Separated Amorphous Alkaloid from High Grade Cinchona Barks.)

DEXTROGYRATE WITH POLARIZED LIGHT.

This article, prepared from commercial Chinoidine, is a derivative of the alkaloid Quinine, and consists of the *Amorphous Quinine* of Liebig, or the *Diconchinia* of Hesse. Its composition is represented by $C_{40}H_{46}N_4O_3$, and its analogy to Quinine is shown by the following well-known tests:—

It produces, in slightly acidulated solutions, the fine green coloration (due to the formation of thalleioquin) upon the addition of *fresh* chlorine water, followed by solution of Ammonic Hydrate.

When in applying the above test the addition of Ammonia is preceded by solution Potassic Ferrocyanide, an evanescent red color is produced.

It is almost entirely soluble in Ether; completely so in Alcohol, and has the power of neutralizing acids common to the ordinary commercial alkaloid Quinine. It dissolves freely in the dilute mineral acids, forming fluorescent, slightly colored solutions, with the characteristic intensely bitter taste of Quinine.

When examined with a polariscope, it deflects the ray of polarized light to the right instead of the left; and hence, from its dextro-gyratory powers, and from its close analogy, both chemically and therapeutically to Quinine, we have named this article

"DEXTRO-QUININE,"

And claim that it is equal to Sulphate of Quinine in the same dose, While it is less than one-half as costly as Sulphate of Quinine.

It may be obtained of Druggists throughout the country.
Samples for clinical use furnished free on application to

Strychnia, 1-100, 1-60, 1-40 and 1-30 gr.
Sulphur, Iodide, 1-25 and 1-10 gr.
Tartar Emetic, 1-100, 1-20 and 1-4 gr.
Zinc, Phosphide, 1-6, 1-4 and 1-2 gr.

VARIOUS FORMULAS.

Ammonium, Valerianate, 1 gr.
A convenient form of administration.
Assafœtida, 2 and 4 grs.
Assafœtida and Nux Vomica.
Made of purified Assafœtida.
Caffeia, Citrate, 1 gr.
Remedy and preventive in sick headache.
Calcium, Sulphide, 1-10 gr.
Scrofulous sores, &c.
Camphor, Mono-Bromated, 2 and 3 grs.
Hysteria, headache, nymphomania.
Cannabis Indica Extract, 1-2 and 1 gr.
Rheumatism, hysteria, delirium tremens.
Cerium, Oxalate, 1 and 2 grs.
Vomiting in pregnancy.
Coca Extract, 1 gr.
Tonic and stimulant.
Copaiba and Oleo-Resin Cubeb, 3 and 5 grs.
Of pure materials; can be relied upon.
Ergotin, 3 grs.
Made of purified Ergotin.
Fucus Vesiculosus Extract, 3 grs.
To decrease excessive obesity.
Grindelia Robusta Extract, 3 grs.
Hay fever, asthmatic affections.
Guarana Extract, 3 grs.
Headache, neuralgia.
Hypophosphites Compound.
A convenient form of administration.
Iodide of Iron (Blancard's), 1 gr.
Freshly prepared; superior to the imported.
Iron, Dialysed, 2 grs.
Made of Merck's scales.
Jaborandi Extract, 3 grs.
Diaphoretic and sialogogue.
Lithium, Bromide, 2 grs.
A better hypnotic than Brom. Pot.
Phosphates Iron, Quinine and Strychnine.
A tonic more convenient than the syrup.
Phosphorus, 1-100, 1-50, 1-30, 1-20, 1-12 gr.
And over 20 combinations.
Salicin, 2 1-2 and 5 grs.
Useful in rheumatism.
Salicylic Acid, 2 1-2 and 5 grs.
Salicylic Acid and Morphine.
Valuable in rheumatism.
Sandal Wood Extract, 1 and 2 grs.
Contains both the oil and resin.
Sumbul Extract, 1 gr.
Hysteria, spasmodic disorders.
Zinc, Phosphide, 1-6, 1-4 and 1-2 gr.
Zinc, Phosphide and Extract Nux Vomica.
Brain diseases.

Our Formula Book, (fourth edition) containing complete list of all our pills with formulas and therapeutical notes, together with partial list of our fluid extracts, with doses, furnished upon application. As we desire to *improve* in *every* particular, we will be grateful to any Physician who will write us regarding his experience with our Gelatine-Coated Pills and other preparations, or make any suggestions.

INJURIES OF THE EYE

AND THEIR

MEDICO-LEGAL ASPECT,

By FERDINAND VON ARLT, M. D.,

Professor of Ophthalmology in the University of Vienna, Austria.

TRANSLATED, WITH THE PERMISSION OF THE AUTHOR,

By CHAS. S. TURNBULL, M.D.,

Surgeon to the Eye and Ear Department of the Howard and of the German Hospitals, of Philadelphia.

One Volume, 12mo, cloth, $1.25.

"Such a booklet has long been needed in our language, and I am glad you have supplied the want."—*Prof. S. D. Gross.*

"The translation certainly bears intrinsic evidence, as I am convinced from a careful examination of it, of having been well and faithfully executed, and I hope that it will meet with the large circulation which it deserves. It is a useful addition to the literature of medical jurisprudence."—*Prof. Jas. Aitken Meigs.*

From the Legal Intelligencer, Philadelphia.

"Previous to the appearance of Prof. Arlt's work there were none but antiquated monographs on the subject; the references to ocular injuries in the best text-books were exceedingly brief and superficial, while medico-legal opinions in individual cases were too sparsely scattered through the archives and other periodical publications to call that attention to the subject which it demands, or to serve as a guide in case such attention had been aroused. An Index made with care, and very full, completes the value and usefulness of the monograph."

From the Medical and Surgical Reporter, Philadelphia.

"Professor Arlt's opinions stand in the very front rank of those of men of his special branch in Germany, and as the translator has been at once his pupil and friend, the accuracy of their presentment cannot be questioned."

From the New York Medical Journal.

"It is a book, which, we take it for granted, every specialist in the department will provide himself with; and it will also be a valuable addition to any general surgeon's library."

From the Boston Medical and Surgical Journal.

"It was written for the general profession, and not solely for the specialist, and has its scope well presented in the title. Dr. Turnbull has furnished a translation unusually free from traces of the German idiom, and it is printed with clear type, on good paper.

From the San Francisco Pacific Medical and Surgical Journal.

"Every country practitioner would do well to possess it, as there are numerous injuries of the eye to which he *must* attend. It is particularly full on foreign bodies in the eye; one of the commonest kinds of injury. The translation is good English, and not mongrel Latin, German, and English, as most translations of German works.

WE ALSO HAVE FOR SALE THE FOLLOWING

STANDARD MEDICAL BOOKS,

AT REDUCED PRICES:

PRACTICAL ANATOMY. With illustrations. Second edition. By D. Hayes Agnew, M.D., 12mo, cloth..... $1.50

Bellevue Hospital Medical College,

CITY OF NEW YORK.

MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.

SESSIONS OF 1878–'79.

THE COLLEGIATE YEAR in this Institution embraces a preliminary Autumnal Term, the Regular Winter Session, and a Spring Session.

THE PRELIMINARY AUTUMNAL TERM for 1878–1879, will open on Wednesday, September 18, 1878, and continue until the opening of the Regular Session. During this term, instruction, consisting of didactic lectures upon special subjects and daily clinical lectures, will be given, as heretofore, by the entire Faculty. Students expecting to attend the Regular Session are strongly recommended to attend the Preliminary Term, but attendance during the latter is not required. *During the Preliminary Term, clinical and didactic lectures will be given in precisely the same number and order as in the Regular Session.*

THE REGULAR SESSION will begin on Wednesday, Oct. 2, 1878, and end about the 1st of March, 1879.

FACULTY.

ISAAC E. TAYLOR, M. D.,
Emeritus Professor of Obstetrics and Diseases of Women, and President of the Faculty.

JAMES R. WOOD, M. D., LL. D.,
Emeritus Professor of Surgery.

FORDYCE BARKER, M. D.,
Professor of Clinical Midwifery and Diseases of Women.

AUSTIN FLINT, M. D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine.

W. H. VAN BUREN, M. D.,
Professor of Principles and Practice of Surgery, Diseases of Genito-Urinary System, and Clinical Surgery.

LEWIS A. SAYRE, M. D.,
Professor of Orthopedic Surgery and Clinical Surgery.

ALEXANDER B. MOTT, M. D.,
Professor of Clinical and Operative Surgery.

WILLIAM T. LUSK, M. D.,
Professor of Obstetrics and Diseases of Women and Children, and Clinical Midwifery.

WILLIAM M. POLK, M. D.,
Professor of Materia Medica and Therapeutics, and Clinical Medicine.

AUSTIN FLINT, JR., M. D.,
Professor of Physiology and Physiological Anatomy, and Secretary of the Faculty.

JOSEPH D. BRYANT, M. D.,
Professor of General, Descriptive, and Surgical Anatomy.

R. OGDEN DOREMUS, M. D., LL. D.,
Professor of Chemistry and Toxicology.

EDWARD G. JANEWAY, M. D.,
Professor of Pathological Anatomy and Histology, Diseases of the Nervous System, and Clinical Medicine.

PROFESSORS OF SPECIAL DEPARTMENTS, ETC.

HENRY D. NOYES, M. D.,
Professor of Ophthalmology and Otology.

JOHN P. GRAY, M. D., LL. D.,
Professor of Psychological Medicine and Medical Jurisprudence.

ERSKINE MASON, M. D.,
Clinical Professor of Surgery.

EDWARD L. KEYES, M. D.,
Professor of Dermatology, and Adjunct to the Chair of Principles of Surgery.

J. LEWIS SMITH, M. D.,
Clinical Professor of Diseases of Children.

LEROY MILTON YALE, M. D.,
Lecturer Adjunct upon Orthopedic Surgery.

A distinctive feature of the method of instruction in this College is the union of clinical and didactic teaching. All the lectures are given within the Hospital grounds. During the Regular Winter Session, in addition to four didactic lectures on every week-day, except Saturday, two or three hours are daily allotted to clinical instruction.

The Spring Session consists chiefly of Recitations from Text-books. This term continues from the first of March until the first of June. During this Session, daily recitations in all the departments are held by a corps of examiners appointed by the Faculty. Regular clinics are also given in the Hospital and the College building.

FEES FOR THE REGULAR SESSION.

Fees for Tickets to all the Lectures during the Preliminary and Regular Term, including Clinical Lectures,	$140.00
Matriculation Fee	5.00
Demonstrator's Ticket (including material for dissection)	10.00
Graduation Fee	30.00

FEES FOR THE SPRING SESSION.

Matriculation (Ticket good for the following Winter)	$5.00
Recitations, Clinics, and Lectures	35.00
Dissection (Ticket good for the following Winter)	10.00

☞ Students who have attended two full Winter courses of lectures may be examined at the end of their second course, upon Materia Medica, Physiology, Anatomy, and Chemistry, and, if successful, they will be examined at the end of their third course upon Practice of Medicine, Surgery, and Obstetrics only.

For the Annual Circular and Catalogue, giving regulations for graduation and other information, address Prof. AUSTIN FLINT, Jr., Secretary, Bellevue Hospital Medical College.

LIQUID
Pancreopepsine
(DIGESTIVE FLUID.)

THIS preparation contains, in an agreeable form, the natural digestive and assimilative principles, **Pancreatine, Pepsine, Lactic** and **Muriatic Acids.** The best means of re-establishing digestion in enfeebled stomachs, where the power to assimilate and digest food is impaired, is to administer principles capable of communicating the elements necessary to convert food into nutriment. The value of **Liquid Pancreopepsine** in this connection has been fully established and we can recommend it with confidence to the Profession as superior to Pepsin alone. It aids in digesting animal and vegetable cooked food, fatty and amylaceous substances, and may be employed in all cases where, from prolonged sickness or other causes, the alimentary processes are not in their normal condition.

It is usually given in tablespoonful doses after each meal.

PUT UP IN 16 OUNCE FRENCH SQUARE BOTTLES.

Price, $1.00 Per Bottle,
" 10.00 " Doz. Bottles.

WILLIAM R. WARNER & CO.

MANUFACTURERS OF

SUGAR-COATED PILLS.

1228 MARKET STREET,

PHILADELPHIA.

THE THREE BEST TONICS OF THE PHARMACOPŒIA:

IRON, PHOSPHORUS, CALISAYA.

CASWELL, HAZARD & CO. call the attention of the Profession to their preparation of the above estimable Tonics, as combined in their elegant and palatable

FERRO-PHOSPHORATED ELIXIR OF CALISAYA BARK.

A combination of the Pyrophosphate of Iron and Calisaya never before attained, in which the nauseous inkiness of the iron and astringency of the Calisaya are overcome, without any injury to their active tonic principles, and blended into a beautiful Amber-colored Cordial, delicious to the taste and acceptable to the most delicate stomach. This preparation is made directly from the **ROYAL CALISAYA BARK** no from **its ALKALOIDS OR THEIR SALTS**—being unlike other preparations called "Elixir of Calisaya and Iron" which are simply an **Elixir of Quinine and Iron.** Our Elixir can be depended upon as being a true Elixir of Calisaya Bark with Iron. Each dessertspoonful contains seven and a half grains Royal Calisaya Bark, and two grains Pyrophosphate of Iron.

Ferro-Phosphorated Elixir of Calisaya Bark with Strychnia. This preparation contains one grain of Strychnia added to each pint of our Ferro-Phosphorated Elixir of Calisaya Bark, greatly intensifying its tonic effect.

Ferro-Phosphorated Elixir of Calisaya with Bismuth, containing eight grains Ammonio-Citrate of Bismuth in each tablespoonful of the Ferro Phosphorated Elixir of Calisaya Bark.

Elixir Phosphate Iron, Quinine and Strychnia. Each teaspoonful contains one grain Phosphate Iron, one grain Phosphate Quinine, and one sixty-fourth of a grain of Strychnia.

Ferro-Phosphorated Elixir of Gentian, containing one ounce of Gentian and one hundred and twenty eight grains Pyrophosphate Iron to the pint, making in each dessertspoonful seven and one half grains Gentian and two grains Pyrophosphate Iron.

Ferro-Phosphorated Wine of Wild Cherry Bark. Each fluid-drachm contains twenty-five grains of the Bark, and two grains of Ferri-Pyrophosphate.

Elixir Taraxacum Comp. Each dessertspoonful contains fifteen grains of Taraxacum.

Elixir Pepsin, Bismuth, and Strychnine. Each fluid-drachm contains one sixty-fourth of a grain of Strychnine.

Juniper Tar Soap. Highly recommended by the celebrated Erasmus Wilson, and has been found very serviceable in chronic eczema and diseases of the skin generally. It is invaluable for chapped hands and roughness of the skin caused by change of temperature. It is manufactured by ourselves, from the purest materials, and is extensively and successfully prescribed by the most eminent Physicians.

CASWELL, HAZARD & CO.,
Family and Manufacturing Chemists, New York.

APOLLINARIS

NATURAL MINERAL WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its sale in France authorized by special decree of the French Government.

"THE QUEEN OF TABLE WATERS."—*London Medical Record.*

PROFESSOR OSCAR LIEBREICH, Professor of Medical Chemistry, University of Berlin:—"After minute personal investigation, I can affirm that the Apollinaris Water is bottled according to all the rules of science, and is an entirely Natural Mineral Water."

PROFESSOR J. A. WANKLYN, Lecturer on Chemistry, St. George's Hospital, London:—"I have thoroughly examined the Apollinaris Spring and the method of bottling. The Apollinaris Water, as supplied to the public, is simply and purely a Natural Mineral water, impregnated only with its own gas."

PROFESSOR MOHR, Medical Councillor, University of Bonn:—"After exhaustive investigation, I declare the Apollinaris Water, as supplied to the public, to be purely natural in every respect, and of most excellent quality."

DR. THEODOR KYLL, Analytical Chemist, Town Councillor, Cologne (*expert appointed by United States Vice-Consul, October*, 1877), reported that "The Apollinaris Water, as bottled, deserves in every respect the name of an excellent natural acidulated water."

Every Genuine Bottle bears the REGISTERED YELLOW PICTORIAL LABEL of the Apollinaris Company, Limited, London.

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and Wholesale of

FREDK. DE BARY & CO., Sole Agents,

1117-1168 **41 and 43 WARREN STREET, NEW YORK.**

LEBAIGUE'S
DIALYSED IRON,
OR
PURE PEROXIDE OF IRON,
IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate, nor cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a **solution,** which is generally preferred; or of an **elixir,** when a slight stimulant is desired.

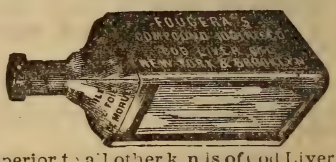
DOCTOR GIBERT'S
DEPURATORY SYRUP AND DRAGEES,
OF IODIZED DEUTO-IODIDE OF MERCURY.

These preparations have been approved by the Academy of Medicine of Paris, and have been thoroughly tested in the hospitals of Paris in the treatment of *Syphilitic, Scrofulous* and other affections requiring the use of iodized remedies.

They are recommended for the utmost accuracy of composition, and their perfect preservation.

Prepared by VAUQUELIN-DESLAURIERS, Chemist, Paris.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,

LIGHT-BROWN
COD LIVER OIL

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen, in Ireland.

"I have frequently prescribed Dr. De Jongh's Light-Brown Cod-Liver Oil. I consider it to be a very pure oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,
Author of
"The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-Liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties; and I am satisfied that for medicinal purposes no finer oil can be procured."

Dr. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor-Law Board of Great Britain.

"We think it a great advantage that there is one kind of Cod-Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by Dr. De Jongh. It has long been our practice, when prescribing the Oil, to recommend this kind, since, amidst so much variety and uncertainty, we have confidence in its genuineness."—(Extract from "Consumption: Its Early and Remediable Stages.")

Dr. PROSSER JAMES,
Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-Liver Oil as the best on the subject, and adopted its conclusion as to the superiority of the Light-Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. De Jongh's Light-Brown Cod-Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. LETHEBY,
Medical Officer of Health, and Chief Analyst to the City of London.

"In all cases I have found Dr. De Jongh's Light-Brown Cod-Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable. It is, I believe, universally acknowledged that this Oil has great therapeutic power; and, from my investigations, I have no doubt of its being a pure and unadulterated article."

Dr. BANKS,
King's Professor of the Practice of Physic at the University of Dublin.

"I have, in the course of my practice, extensively employed Dr. De Jongh's Light-Brown Cod-Liver Oil, and I have no hesitation in stating that I consider it the best of all the specimens of oil which have ever come under my notice. The fact of so able and accurate an observer as Dr. De Jongh subjecting the Oil to careful analysis previous to its exposure to sale, is a sufficient guarantee of its purity and excellence."

Dr. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College, London.

"Dr. Sheppard has made extensive use of Dr. De Jongh's Light-Brown Cod-Liver Oil, and has great pleasure in testifying to its superiority over every other preparation to be met with in this country. It has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is supplied ONLY in bottles sealed with BETT'S Patent Capsule, impressed on the top with Dr. DE JONGH'S Stamp, and on the side with his Signature, and the Signature of ANSAR, HARFORD & CO., and bearing under the wrapper a Label with the same Stamp and Signatures. WITHOUT THESE MARKS NONE CAN POSSIBLY BE GENUINE.

Sold in IMPERIAL half-pints, $1.00, by the Principal Druggists in the UNITED STATES.

SOLE CONSIGNEES,

TO THE MEDICAL PROFESSION.

MALTINE.

(Extract of Malted Barley, Wheat & Oats.)

THIS PREPARATION

Contains from three to five times the Medicinal and Nutritive elements found in Extract of Malt.

MALTINE is a highly concentrated extract of malted *Barley, Wheat,* and *Oats,* containing, undiminished and unimpaired, all the medicinal and nutritious principles found in these cereals. By the most carefully conducted scientific process we are enabled to offer to the medical profession a perfect article, possessing from *three* to *five times* the therapeutic and nutritive merit of any foreign or domestic Extract of Malt.

In support of our claims we invite the attention of the profession to the following points, viz :

FIRST.—In the manufacture of **MALTINE** the evaporation necessary to reduce it to its great density is conducted in vacuo, at a temperature ranging from 100° to 120° Fahr.; while most manufacturers of Extract of Malt resort to "open pan" or low pressure steam boiling, by neither of which processes can the extract be so produced as to preserve the Diastase, Phosphates, and Albuminoids, on which its remedial value so greatly depends, and the product is either of a dark color or of low specific gravity, possessing little virtue aside from the saccharine matter which it contains *

SECOND.—*Carbon, Hydrogen, Nitrogen, Sulphur, Iron, Magnesium.* and *Potassium,* are essential elements in the food of man, and it is only in **MALTINE,** containing the combined properties of malted *Barley, Wheat,* and *Oats,* that all these principles can be found in the proper proportions; Extract of Malt made from *Barley alone* is wanting in some of the most important of these elements.

THIRD.—*Gluten* is the most nutritious principle found in the cereals, and is the only vegetable substance which will, alone, support life for any great length of time. It is composed of three distinct nitrogenous principles, together with fatty and inorganic matters, and is analogous to animal fibrin. **MALTINE** contains twenty times the quantity of *Gluten* found in any Extract of Malt.

FOURTH.—Liebig says, "Wheat and Oats stand first among our list of cereals in combining all the elements in proportions necessary to support animal life. They are especially rich in muscular and fat producing elements." The only reason we use Malted Barley, in the manufacture of **MALTINE,** is that it contains larger proportions of mineral matters (bone producers) and Diastase. It is deficient in all other essential elements.

We believe that any practitioner will readily recognize the superiority of MALTINE, and would request a trial and comparison of merits with any article offered for similar uses.

* As a sure test for Diastase, and the Albuminoids, a small quantity should be put in a test tube or small vial, largely diluted with water, and heated to the boiling point, when the Albumen, if present, will coagulate, and appear in little flocculent particles throughout the liquid. If the extract remains clear, it is proof that it has already been coagulated by excessive heat, and removed by filtration during the process of manufacturing. Any heat which will coagulate Albumen will inevitably destroy the digestive power of Diastase.

The Nitrogenous constituents of *MALTINE* have a composition identical with that of the chief constituents of the Blood, and therefore contain nearly every element requisite for the reproduction of the human body.

MALTINE AND ITS COMPOUNDS

can undoubtedly be used with greater success than any other remedy now known, in cases of general and nervous Debility, Indigestion, imperfect Nutrition and deficient Lactation; Pulmonary affections, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes and difficult expectoration; Cholera Infantum and wasting diseases of children and adults; Convalescence from Fevers, and whenever it is necessary to increase the vital forces and build up the system.

WE MANUFACTURE THE FOLLOWING PREPARATIONS, THE FORMULÆ AND DOSES OF WHICH ARE GIVEN IN OUR DOSE BOOKS, AND ON THE LABEL ATTACHED TO EACH BOTTLE:

MALTINE WITH HOPS.

MALTINE, FERRATED:

This combination is specially indicated in Anæmia and Chlorosis, and in all cases of defective nutrition where Iron is deficient in the system.

MALTINE WITH PHOSPHATES IRON AND QUINIA:

A powerful general and nutritive tonic.

MALTINE WITH PHOSPHATES IRON, QUINIA AND STRYCHNIA:

A powerful nutritive, general and nervous tonic.

MALTINE WITH PEPSIN AND PANCREATINE:

One of the most effective combinations in Dyspepsia, Cholera Infantum, and all diseases resulting from imperfect nutrition. It contains three of the all-important digestive agents, Diastase being one of the constituents of the *MALTINE*. We believe there are few cases of Dyspepsia which will not readily yield to the medicinal properties of the above combination, while the system is invigorated by its nutritive qualities.

MALTINE WITH BEEF AND IRON:

One of the most valuable combinations in cases of General Debility, when there is deficient nutrition and a deficiency of Iron in the system.

MALTINE WITH ALTERATIVES:

In this preparation *MALTINE* is combined with the most valuable Alteratives known, such as Iodides, Bromides and Chlorides, and will fully meet the requirements of the practitioner's in Syphilis, Scrofula, and all depraved conditions of the blood.

MALTINE WINE.

This preparation contains all the medicinal and nutritive constituents of *MALTINE*, less 60 per cent. of the transformed starch or glucose, which renders the preparation lighter and more acceptable to some stomachs, and is recommended only in such cases.

MALTINE WINE WITH PEPSIN AND PANCREATINE:

(Each fluid ounce of MALTINE WINE contains 15 grains pure PEPSIN and 15 grains pure PANCREATINE).

We can recommend this preparation to the Medical Profession as being the most important remedy ever brought to their notice in all cases of Dyspepsia and Imperfect Nutrition, when the system needs invigorating and replenishing. It will be found, we believe, a perfect remedy in Vomiting in Pregnancy, Cholera Infantum and wasting diseases of children, and in Constipation and Chronic Diarrhœa resulting from mal-nutrition. It will agree with the most irritable stomach.

MALTO-YERBINE.

(Each pint of the above preparation contains 13 ounces MALTINE, 2 ounces CARRAGEEN and 1 ounce YERBINE).

With the nutritive, emollient and demulcent properties of *MALTINE* and *CARRAGEEN*, and the expectorant qualities of *YERBINE* (active principle of Yerba Santa), we offer this preparation to the Profession with the fullest confidence that it is the most perfect remedy yet produced in Chronic Pulmonary Affections, Irritation of the Mucous Membrane, Difficult Expectoration, Bronchitis and ordinary Coughs and Colds.

The Dose of all Preparations of *MALTINE* and compounds is from a dessert to a tablespoonful.

We also manufacture a perfectly prepared EXTRACT OF MALT, from *Barley only*.

MALTINE preparations are sold at the same prices as EXTRACT OF MALT and its combinations, and are put up in half-pint, pint and five-pint amber bottles; each bottle inclosed in a folding paper box.

VACCINE VIRUS.

In order to meet properly the continued demand upon us for ANIMAL VIRUS, we have established stables for its propagation upon carefully selected heifers. The lymph used is of the well-known "Beaugency" stock, imported by ourselves expressly for this purpose. The result of several years' experience in supplying this lymph leads us to believe that its excellence is unsurpassed. The establishment is under the care of a competent physician, who will spare no pains to produce a perfectly RELIABLE and PURE article, which we are prepared to furnish FRESH, DAILY.

We can also furnish, to those who prefer it, HUMANIZED VIRUS, from healthy children, procured for us by physicians of undoubted reliability.

All our Virus is put up in strong, *air-tight, sealed packages*, for safe conveyance by mail or express, and will be sent (post-paid if by mail) upon the following terms:—

From the Heifer,	10 large Ivory Points, well charged on both sides	$1.50
	5 large Ivory Points, " " "	.80
	Large Ivory Points, less than 5, " " " each	.25
	1 Crust, new method, in air-tight Glass Capsule	2.00
From Healthy Infants,	10 small Ivory Points	1.50
	1 Crust from Unruptured Vesicles	2.00

Directions for vaccinating with either form of Virus, derived from methods successfully employed, will be furnished with Virus if requested.

We will warrant every package of Points and every Crust, giving a fresh supply in case of failure reported within fifteen days for Points, thirty days for Human, and ninety days for Kine Crusts. We can usually furnish Crusts one remove from the heifer, if preferred.

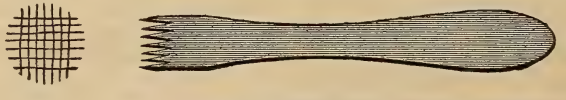
On account of their unreliability, we have hitherto furnished the usual form of Kine Crust unwillingly. Under our new method of taking and preserving them, however, after careful tests and an experience extending over several months, the results attained have been so satisfactory that we now offer them as not less active and reliable than other forms of Virus, while less liable to become inert with lapse of time. We now offer them on very favorable terms, and recommend them for transmission to a distance, and in all cases where it is desired to preserve Virus for some weeks or months, or to keep a supply at hand for emergencies.

We also furnish UNCHARGED IVORY POINTS, for physicians' use, at the following rates:—

Small	per 100, 25 cents;	per 1000 2.00
Large	per 100, 50 cents;	per 1000 4.00

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns, and Institutions.



SCARIFYING VACCINATOR, STEEL, NICKEL PLATED. See Cut. Each 25 cents.

New Illustrated Catalogue of Surgical Instruments sent, post-paid, on request.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,			*With Hops (Plain),*	$1.00
"	"	"	*Pyrophosphate of Iron (Ferrated),*	1.00
"	"	"	*Cod Liver Oil,*	1.00

[Unguentum Petrolei]

SAMPLES FURNISHED ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

LONDON M'F'G CO.'S
ESSENCES OF MEATS,

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN

Which consist solely of the finest juices from choice meats, extracted by a gentle heat, without the addition of water, or any substance whatever. They have been prescribed by the English Medical Profession for the past fifteen years, and since their introduction here have earned the highest commendations. They are peculiarly adapted

FOR INVALIDS—Natural, Pleasant, Refreshing.
FOR INFANTS—Strictly Pure; Prepared without Salt.
FOR DYSPEPTICS—Easily Assimilated.
IN CASES OF SEA SICKNESS—Afford Immediate Nourishment.
AFTER CHILDBIRTH—Meat Stimulant; Concentrated Form.

They retain the fine flavor and smell of the Meat. Are a heavy liquid in a warm temperature, and when placed upon ice take a jelly form, which is especially refreshing to Invalids. They are retained upon the stomach, in very critical cases, when the most carefully prepared soup is rejected. Children readily take them, and in many of their complaints requiring nourishment, "Essences" are UNEQUALED. *In summer, when opened, keep on Ice, leaving the lid partly raised.* DO NOT ADD WATER.

Taken cold direct from the Can, needing no Preparation whatever.

ENTIRELY TAKES THE PLACE OF BEEF TEA.

Physicians and Patrons are cordially invited to visit our Works.
